LOCKINGE HENGIST—GRAND CHAMPION SHIRE STALLION. In a series of contests in which competition was very sharp and the exhibits had an extraordinary degree of soundness and draft elegance, LOCKINGE HENGIST won first prize as an aged stallion, with twelve others in the ring: he also won the championship of the breed. He was the largest stallion exhibited, and, although weighing 2,320 pounds, he was just a well-balanced and extraordinarily powerful draft horse. Exhibited by Trumans' Pioneer Stud Farm, Bushnell, Ill. In this connection we desire to invite attention to the first column of page 2, which refers to the Book of Live Stock Champions, which is published as a premium supplement to The National Farmer and Stock Grower. That book contains seven hundred and fifty half-tone pictures of champions in live stock and of equal in fame to LOCKINGE HENGIST, and all of them equally good pictures. The book is elegantly bound in blue cloth with gilt title.

Live Stock Champions.

The Book of Live Stock Champions which is referred to on page 2 of this edition contains no less than 250 Chicago International champions, besides 500 champions at other shows. Every picture is a half-tone engraving taken from life photographs, and all the famous animal photo artists are represented in the book with their best work. Such a book, bound, as it is, elegantly in blue cloth, could be readily sold to a limited extent at five dollars a copy, but the book is a supplement to The National Farmer and Stock Grower, and the publisher would rather sell fifty thousand books at a dollar than sell probably two thousand copies at five dollars a copy. The Book of Live Stock Champions was published to encourage the improvement in live stock. Breeders are encouraging the sale of this book for that reason.

and Stock GROWER

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912—True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

This is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, mother of champions, or winner in the prize ring.

The Book of Live Stock Champions is receiving the highest praise from the live stock breeders' associations and from officials of the Department of Agriculture. It is being adopted as a text book at high schools and colleges. Active, up-to-date stockmen having an interest in their business and a desire to do their share towards live stock improvement are subscribing for the Book of Live Stock Champions themselves and recommending others to do so.

Issued as a Souvenir Suppleemnt.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special inducements to paid-in-advance subscribers, to old friends and patrons. We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. This is an extraordinary offer.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Book of Live Stock Champions, cloth-bound edition of 1912.

SUGAR BEETS vs. WHEAT.

Exporting Wheat is Selling Our Soil Fertility, Whereas Imported Sugar Brings in Nothing of the Kind in Exchange—Showing Entirely in Favor of the Sugar Beet.

Senate Document No. 890, Sixty-second Congress, second session, entitled "Sugar at a Glance," graphically sets forth a most remarkable and monumental folly on the part of the American farmers. The document, prepared by Truman G. Palmer, embraces sixty-seven large pages and besides a number of photogravure illustrations it makes use of forty-two charts to drive home in an impressive manner a number of startling truths.

For instance, Chart No. 40 pictures to the eye the prodigality of American farmers in dissipating their soil fertility, and contrasts this foolishness with the wise frugality and thrift of the German farmers in constantly building up the fertility and productivity of their lands.

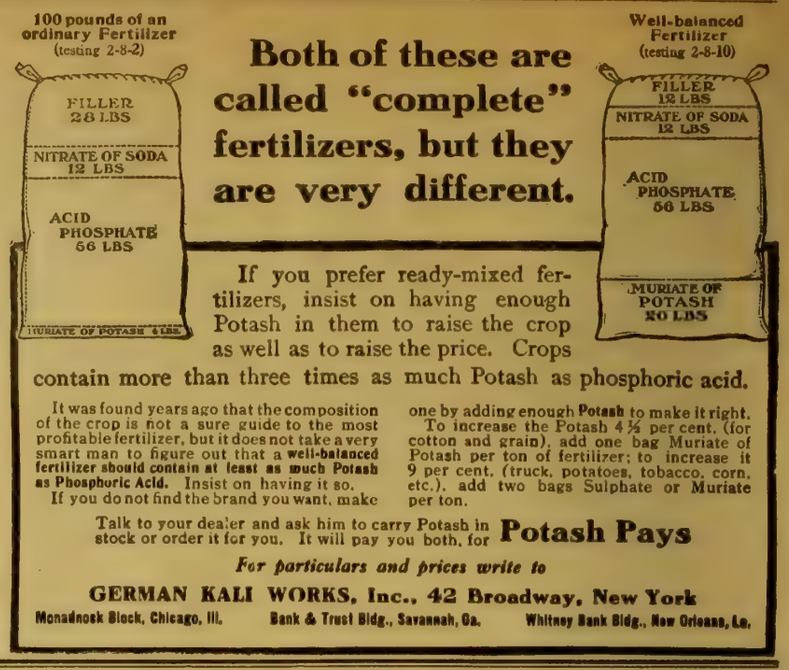
This chart shows that in 1909 American farmers exported wheat, cotton-seed meal and linseed meal to the value of $93,203,226 and imported foreign raw sugar to the amount of $93,379,029 — almost identical amounts. Now this $93,203,226 worth of wheat, cotton-seed meal and oil meal contained $35,793,342 worth of nitrogen, phosphoric acid and potash, the three principal elements of soil fertility, which they had taken from the soil upon which they grew; while the $93,379,029 worth of raw sugar imported contained not a dollar's worth of soil fertility. In other words, we shipped abroad thirty-six million dollars' worth of soil fertility and got not one dollar's worth in return.

On the other hand, during the same year, Germany exported $49,339,542 worth of raw sugar, carrying away not a particle of soil fertility, since the pulp of the beets from which it has been extracted were fed to cattle and converted into beef and butter and cheese that were consumed at home and the manure spread upon the home farms. And during that year German farmers imported cotton-seed meal and linseed meal valued at $48,552,952, and containing $28,770,564 worth of soil fertility. These meals were fed to the stock of German farmers and their soil fertility was recovered in the manure and applied to the German farms.

Chart No. 39 shows at a glance the result of a long series of years of this sort of crop exchange, during which time the German farmers have rapidly increased in productive capacity at the expense of American farms, so that the 42,776,000 acres of wheat, rye, barley, oats and potatoes in Germany yielded 2,975,742,000 bushels, valued at $1,810,878,000; while in the same year the 85,546,000 acres in the same crops in this country yielded only 1,874,635,000 bushels, worth $1,178,005,000. In other words, with only half as many acres in these five crops, Germany produced over a million bushels more than we did the same, their average yield per acre of these crops being more than double ours.

And yet Chart No. 31 shows that while the prices of other farm crops, particularly potatoes, extensively grown for export in this country, fluctuated widely, the price paid for sugar beets at the factory has steadily increased from year to year with the single exception of the year 1901, when the price was 13 cents per ton less than in 1900. The factories paid $4.10 per ton in 1897; $4.30 in 1898; $4.60 in 1899; $4.73 in 1900; $4.60 in 1901; $4.98 in 1902; since which time the price has risen every year, reaching $6.00 per ton in 1910. The price of Irish potatoes is not nearly so reliable, having dropped from 55 cents a bushel in 1897 to 43 cents in 1900 and then jumped to 77 cents in 1901 and fallen to 47 cents the next year, and since then the average price has continued to fluctuate between widely-separated extremes.

Altogether this document would seem to be an unanswerable argument in favor of the production of our own sugar supply and in favor of feeding all of our highly-concentrated feeding stuffs on American farms and reaping the three-fold benefit of the feeders' profit, increasd fertility of our lands and greatly reduced tonnage on which to pay transportation charges, for four or five tons of feedstuffs can be condensed into one ton of meat or butter or cheese.



100 pounds of an ordinary Fertilizer (testing 2-8-2)
FILLER 28 LBS
NITRATE OF SODA 12 LBS
ACID PHOSPHATE 56 LBS
MURIATE OF POTASH 4 LBS
Both of these are called "complete" fertilizers, but they are very different.
Well-balanced Fertilizer (testing 2-8-10)
FILLER 12 LBS
NITRATE OF SODA 12 LBS
ACID PHOSPHATE 56 LBS
MURIATE OF POTASH 20 LBS

If you prefer ready-mixed fertilizers, insist on having enough Potash in them to raise the crop as well as to raise the price. Crops contain more than three times as much Potash as phosphoric acid.

It was found years ago that the composition of the crop is not a sure guide to the most profitable fertilizer, but it does not take a very smart man to figure out that a **well-balanced fertilizer should contain at least as much Potash as Phosphoric Acid.** Insist on having it so. If you do not find the brand you want, make one by adding enough **Potash** to make it right. To increase the Potash 4½ per cent. (for cotton and grain), add one bag Muriate of Potash per ton of fertilizer; to increase it 9 per cent. (truck, potatoes, tobacco, corn, etc.), add two bags Sulphate or Muriate per ton.

Talk to your dealer and ask him to carry Potash in stock or order it for you. It will pay you both, for **Potash Pays**

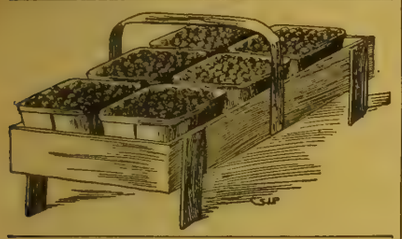
FRUIT-GROWING BOOK.

The Strawberry Crop Surpasses in Yield and Value All Other Small Fruits Combined.

The Strawberry Culturist is a handy little jewel of a book. It is by Andrew S. Fuller, one of the greatest horticulturists. It contains all the necessary information to enable everybody to raise their own strawberries. It is fully illustrated;



bound in flexible cloth; is 5x7 inches. The strawberry crop is equal to all the other small fruit crops combined. This little book contains that which a beginner should have to start on and an expert needs to rely on. We will send a copy of the Strawberry Culturist post free by mail and The National Farmer and Stock Grower for one year for fifty (50) cents. This is a splendid opportunity to get a good farm paper and a valuable book as a premium. An average crop of strawberries is 1,701 quarts to the acre. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

WORN-OUT PASTURES.

How to Restore Them to Fertile Conditions and to Produce Good Yields.

In most farming districts of the Middle Western States the observant traveler notices old pastures which yield little beyond weeds, and really do not produce sufficient value in pasturage to pay taxes on the land. Obviously, the best thing to do with such lands is to break them up and take them into the crop rotation. But for some reason it may not be practicable to do this, and it is desired to improve the yield of grass and clover at the least cost compatible with the attainment of grazing land.

Pasture land upon which clover, timothy and Kentucky blue grass has failed, and sheep sorrel appears, and briars and bushes generally, is sure to be acid. Upon acid land no good pasture can be secured. The first step therefore is to remedy the acidity. This is best accomplished with lime in the caustic state, from 500 to 1,000 pounds per acre; the lime should be water-slaked upon the land, using about three gallons of water for each 100 pounds of burnt lime. The lime should be guaranteed to contain not less than 90 per cent. of lime carbonate; some lime water contains over 30 per cent. of magnesia, which is injurious to most crops. The "agricultural lime" sold as such often is a mixture of trash, ashes and ground limestone. It should be remembered that a ton of burnt lime will absorb about one-fourth its weight in water, and upon this the farmer must pay freight and cartage.

Old pastures are likely to be deficient in phosphoric acid; this element of plant food is abundant in bones, and is therefore carried off in the bones of cattle grazed upon the land. Upon sandy soil, and likewise upon wet bottoms, the soil is likely to be lacking in potash, an element of vegetable life specially valuable in grasses and leguminous crops. Thus, the three minerals which are most needed to restore a worn-out pasture are lime, phosphates and potash. A little nitrogen is desirable with the seeding to hasten early growth, but as a rule this substance is not needed for the renovation of old pastures.

The procedure we recommend is as follows: Grub up all bushes, and on the sites of such use a double share of lime. Then go over the entire field with a harrow as often as requisite to cut up the old sod, but do not turn it up. Upon this broadcast the lime and harrow once more, using a heavy cutting harrow; let it stand for a week, until the caustic lime has become carbonate; then harrow in the following fertilizer, per acre:

Nitrate of soda, 50 pounds.
Acid phosphate, 250 to 500 pounds.
Muriate of potash, 150 to 250 pounds.

The above mixture is for upland soil; if the pasture is on wet bottom land, use the following formula, per acre:

Steamed bone meal, 500 pounds.
Muriate of potash, 250 pounds.

Directions—Harrow in with a light harrow and immediately sow on the land the following mixture of seeds, per acre:

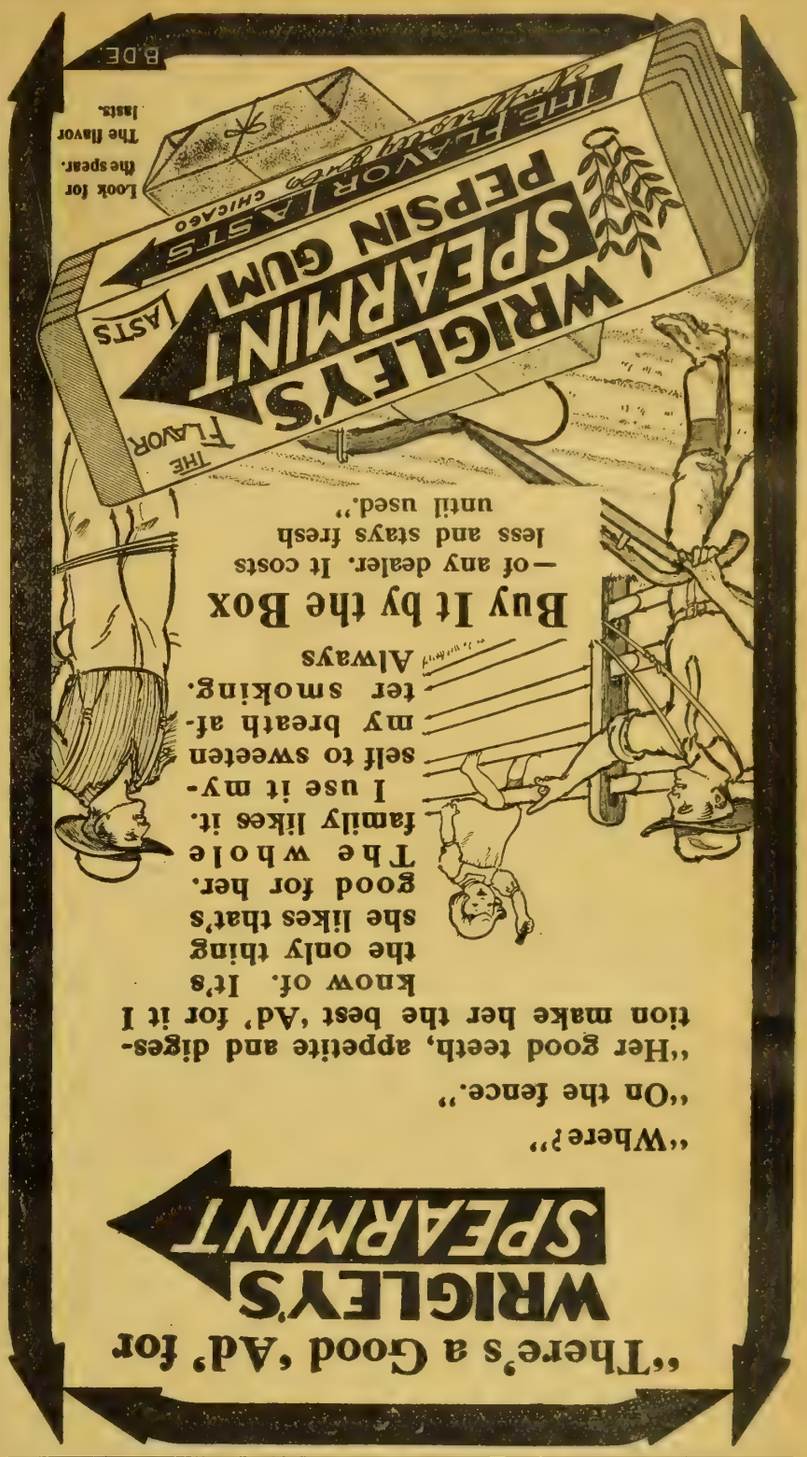
Red clover, five pounds.
Spotted medic or bur clover, three pounds.
White clover, two pounds.

If for bottom lands, the following seed mixture will be better:

Alsike clover, four pounds.
White clover, three pounds.
Winter vetch, six pounds.

Cover in with a light smoothing harrow. It will not pay to sow tame grass upon an old sod, since when the land becomes suitable the grass will spontaneously reappear. If the renovation is completed in the fall, a nurse crop of one bushel of rye may be added to the above formula; if the seed is sown in spring, use oats. The fall or late summer is the best time, where the clover does not winter kill.

If the renovated pasture is to endure more than one year, an annual top dressing of about 100 pounds of muriate of potash and 250 pounds of acid phosphate must be given, but no nitrogen. The land should be harrowed each fall to spread droppings; if Canada thistle appears it must be grubbed up; the best time to do this is when the weeds are in full bloom.—Gerald MacCarthy.



"There's a Good 'Ad' for WRIGLEY'S SPEARMINT
"Where?"
"On the fence."
"Her good teeth, appetite and digestion make her the best 'Ad' for it I know of. It's the only thing she likes that's good for her. The whole family likes it. I use it myself to sweeten my breath after smoking. Always Buy It by the Box —of any dealer. It costs less and stays fresh until used."

WHEAT-GROWING BONANZA.

The Crop That Won the Big Four Tractor and the Emerson Gang Plow.

Joseph P. Nash and Chas. Bridgeman, partners, ranchers and wheat farmers up in the Shields River Valley of Montana, seventy-five miles north of Yellowstone National Park, were winners of the prize, valued at $5,000, for the best five bushels of wheat grown in the American Northwest during 1912 and exhibited at the Minneapolis "Land Show." The exhibit was Turkey red, weighed the full sixty pounds and a few ounces more to the bushel. The commercial score card gave it 92½ points. It milled 104.7, and fifty-nine and one-third bushels per acre was the average on fifty-two acres.

This announcement of the award was made by President Lewis Penwell, of the Northwest Development League, after the many samples of wheat of all varieties had passed under the eyes of four different judges, then ground into flour and baked into bread. Affidavits were furnished by the growers from the County Surveyor of Park county, Montana, who measured the field, and from the threshermen who measured 3,085 bushels of the wheat they threshed from the fifty-two acres.

The prize-winning wheat was not the highest scoring wheat by the commercial score card, but it was 4.7 points better than No. 2 Northern Spring, the millers' standard on the milling test. The wonderful yield which Nash & Bridgeman realized from carefully selecting their seed and the natural fertility of the soil of the Shields River Valley placed the prize in the hands of the Montanans.

The prize won consists of a Big Four "30" Farm Tractor and a set of the famous Emerson engine gang plows, donated by the Emerson-Brantingham Implement Company of Rockford, Ill. The ranchers will start in with the opening of spring to "rip up all of Park county and plant it in Turkey red wheat," as Mr. Nash expressed it when asked what they would do if they won the outfit. They own 1,160 acres.

The sample of Nash & Bridgeman wheat scored 104.7. The laboratory found the prize-winning wheat contained but 12 per cent. moisture. It had a cleaning loss of only half of one per cent. and a net flour yield of 76.6 per cent. The No. 2 Northern Spring, to which it was compared, has an average of 13 per cent. moisture and a flour yield of 72 per cent.

Twelve ounces of flour made from the Nash & Bridgeman Turkey red produced a loaf of bread containing 168 cubic inches and weighed 18.25 ounces when it came from the oven.

The Island of Jamaica exports twice as many bananas as any other country, and the United States imports more bananas than any other country by five times as many.

The Universal Magazine contains many interesting items. Read about it on page 29.

THE OATS MARKET SITUATION.

Although the Prices Are Comparatively Low, the Market is as Strong as Farmers Care to Make It.

Comparatively speaking, only a few farmers sell oats that are bought for the purpose of sending into the grain markets. Seventy per cent. of the oats crop does not appear in the big cities and is consumed in localities where grown. If we knew all the farmers having oats to sell it would be very easy to advance oats prices three to five cents a bushel. Notwithstanding the crop is the largest ever grown and of the best quality, the total amount in pounds is small.

A bushel of oats on paper looks as large as a bushel of anything else, but in actual weight it requires nearly two bushels of oats to equal a bushel of wheat.

In the form of oatmeal oats are selling at $10 to $12 a bushel in restaurants, and the retail dealer in feed thinks nothing of adding ten cents a bushel to oatmeal as a retail profit, and farmers are dumping their oats, when, if they would put the price up and starve the market a month or so, there would be no resistance to a reasonable advance. Fortunes are made out of oats, but it is not the farmer who is making the fortune.

Last July, when the size of the crop became apparent, no one thought that the market would continue above thirty cents, but it has not gone down to the figures of two years ago. For five months the market has not changed enough to talk about. The cash market on December 31st, at St. Louis, at 33 to 33½ cents, was a cent or two higher than on August 31st, 1912.

On December 31st the Chicago quotation closed out at 32¼ cents. The next May quotation was 32¾ cents, and the July, 1913, quotation was 32½ cents, and none of these figures was higher since the extent of the crop was announced.

Don't be afraid to advance the price of oats. If you cannot get more money, keep the oats. Don't be unreasonable. Do not expect to get double the price. All movements are gradual and a few cents a bushel is a large advance in market. The actual price of oats is under control of farmers, and they can hold the oats and feed them at a profit.

THE CORN MARKET SITUATION.

Notwithstanding the Reduced Prices, the Market Seemed Firm on the Closing Day of 1912.

The immense corn crop reduced prices by its own weight. Nobody disputes it, and those who are buyers and consumers think it is a good thing. But 45 cents in market and 75 cents in market are 30 cents apart, and the man who has corn in the crib to sell knows the difference better than anyone else.

On May 31st, 1912, the December corn option was quoted at 62⅞ cents a bushel, and in seven months by a gradual process it declined until on the last day of the year the closing price was 45½ cents a bushel. On the same day, at St. Louis, cash corn, which had sold as high as 82 cents during the year, was selling as low as 45 cents flat. Such is life in the corn trade, and we must make the best of it.

The only apparent satisfaction in the market situation is that the May, 1913, and the July, 1913, quotations held the same figures at the close of 1912 as they did thirty days previous. It is almost equal to saying that the market for corn has reached the low point and there is safety, if not riches, in the future.

For the next two months not much change is expected to take place in the corn market, but look out for March, the month that shows the visible supply. On December 31st, 1912, the May option was quoted at 48⅜ cents and the July option at 49¼ cents.

CASH GRAIN QUOTATIONS

At St. Louis on the Last Day of December, 1912.

Wheat.—No. 2 red wheat, $1.06 to $1.10; No. 3 red, $1.03 to $1.06; No. 4 red, 90 to 98c.; No. 2 hard, 88 to 92½c.; No. 3 hard, 88c.

Corn.—No. 2 corn, 45c.; No. 3 corn, 44 to 44¼c.; No. 4 corn, 42½c.; No. 2 yellow, 45c.; No. 3 yellow, 44 to 44¼c.; No. 4 yellow, 43c.; No. 2 white, 48½c.; No. 3 white, 47c.; No. 4 white, 43½ to 44c.

Oats.—No. 2 oats, 33 to 33½c.; No. 3 oats, 32½c.; No. 4 oats, 31½c.; No. 2 white, 34½c.; standard, 33¾ to 34½c.; No. 3 white, 33 to 33¾c.; No. 4 white, 32½ to 32¾c.

Rye.—No. 2 rye, 62c.

Horse and Mule Shipment.

During the month of December, 1912, Mr. C. L. Bevel, a North Carolina horse and mule dealer, bought an entire train of mules in one shipment. Mr. Bevel is a large operator in the Southern horse and mule trade and used to buy when the market was on Broadway.

Closing Year Hog Prices.

On December 31st, at the St. Louis National Stock Yards, a few hogs sold at $7.55 per 100 pounds, which was the top of the market. The bulk of sales went at $7.25 to $7.40, weights ranging largely from 190 to 240 pounds. The top hogs weighed 268 pounds. Best lights under 165 pounds brought $7.00 to $7.35 per 100 pounds; best grade of pigs under 125 pounds went at $6.85 to $7.10 per 100 pounds; fair kinds, $6.25 to $6.65 per 100 pounds; and the rough, heavy packers, $7.00 to $7.15 per 100 pounds, as a rule.

Yearly Cattle Receipts.

Hog receipts at the great Western markets were pretty strong in 1912. Chicago received 7,179,000; St. Louis, 2,529,000; Kansas City, 2,523,000; Omaha, 2,886,000; St. Joseph, 1,960,000; and Indianapolis, 1,800,000. Omaha increased 22 per cent.; Chicago, 1 per cent.; St. Louis lost 19 per cent.; and Kansas City compared with the previous year.

Liberal Cattle Receipts.

Cattle receipts during the year 1912 at the St. Louis National Stock Yards do not indicate a cattle famine. The total arrivals were 1,999,900 head, showing a gain of 11 per cent. over the previous year. Chicago receipts decreased 8 per cent.; Kansas City, 9; Omaha, 14; St. Joseph, 3; and Indianapolis, 1 per cent.

Mexican Yearling Sheep.

On Decemebr 31st, at the St. Louis National Stock Yards, J. H. Starr, of Centralia, Boone county, Mo., was on the market with a string of Mexican yearling sheep from his feed lots in Saline county, Missouri, 477 head, that weighed 85 pounds, and brought $7.75 per 100 pounds. This is the highest price paid this fall or winter for yearlings.

20 Reasons Why You Should Investigate the SANDOW Kerosene Stationary ENGINE

It runs on kerosene (coal oil), gasoline, alcohol or distillate without change of equipment—starts without cranking—runs in either direction—throttle governed—hopper cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—only three moving parts—portable—light weight—great power—starts easily at 40 degrees below zero—complete, ready to run—children operate them—5-year iron-clad guarantee—15-day money-back trial. Sizes 2 to 20 H. P. Send a postal today for free catalog, which shows how Sandow will be useful to you. Our special advertising proposition saves you one-half cost of first engine sold in your county. (167)

GRAND SUBSCRIPTION OFFER.

A Splendid Magazine One Year—The Ladies' World—National Farmer and Stock Grower One Year——Eight Standard Grapevines—All For One Dollar.

This is a startling subscription offer, especially valuable to farmers' wives and families and to anyone who owns a home. **The Ladies' World** is a monthly magazine, forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, lovely stories, splendidly edited. instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. No better cleaner or more useful paper can possibly enter the farm home.

The National Farmer and Stock Grower is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets and instructive matter concerning general farming, stock raising, dairy, poultry keeping and all the especial features that keep a farmer posted on his own interests in dealing with the world of business.

The subscription offer includes a magnificent collection of **Eight Two-year Standard Grapevines.** These grapevines are ready for planting. They are two - year - old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe; **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar.

SUBSCRIPTION COUPON.

Please Cut Out and Mail to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar ($1.00), for which send me **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Eight Two-year-old Standard Grapevines** as advertised.

Wholesale For Millstuffs.

Millstuffs are sold at the price stated per 100 pounds. On January 1st, at St. Louis, quotations were as follows: Ten cars 100-pound hard bran sold at $1.01, and five cars soft bran at $1.04, East St. Louis basis; two cars 100-pound soft middlings, prompt shipment, at $1.15; eighty sacks 100-pound middlings on track at $1.15; one track car 100-pound middlings at $1.21; one split car 100-pound hard on track at $1.01 for bran and $1.05 for middlings (on direct orders—four cars 100-pound shorts at $1.07). Quote 100-pound mixed feed nominally $1.04 to $1.09, and 100-pound middlings $1.05 to $1.25 (fancy white worth more); 100-pound white hominy feed held a. $20.50 and yellow at $19 per ton; 100-pound alfalfa meal quotable at $16.50 to $17.50 for brown to $20 to $21 for green. At mills, in city trade, quote 100-pound bran at $1.06 to $1.08, and middlings at $1.15 to $1.40.

THE WHEAT MARKET SITUATION.

A Little Chat About the Market as It Stood Upon the Close of 1912 and the Opening of 1913.

The year 1912 has passed, and with the year went the December wheat option that was closed out at 87¼ cents a bushel. On the Board of Trade at Chicago they began to do business in the December option last May, when on the last day of the month the December wheat option was quoted at $1.06¼ cents a bushel. It will be seen that from the time the new wheat crop was estimated the December option declined. But the month of December was not so bad on the December option, because it was quoted at 81¼ cents a bushel on November 30th, and when it was closed out by the time limit the last quotation was three cents higher.

"The King is dead! Long live the King!" That means December is dead and May is King. May is the quotation that all eyes are centered upon. Between January 1st and May 31st, the people who buy and sell wheat have to mind what they are about. The next crop is an unknown quantity, but it will show something of an influence before the option deals are closed. The amount of wheat in farmers' hands is an unknown quantity until March 8th, and the rapidity of consumption here and everywhere are influences that will cause the May quotation to go up and go down.

If we commence to make a list of market influences we would require more space than The National Farmer and Stock Grower has altogether, and as a matter of fact, these monthly reviews are for the purpose of stating facts as they are in order to make a record of them, rather than to speculate on what might have been, or to even figure if the quotations are justified by the situation. Sometimes we seem to see the future but we do not bet upon it, but look at the subject without prejudice and accept the situation. A farmer should be able to review the past; he should be posted upon the present, and he should have sufficient information concerning the prospect to look the future in the face.

May to us grain growers is now the near future. The first May wheat quotation that we saw quoted was in the month of August, 1912, and we made the remark that the quotation on August 31st was 97¼ cents. But the first people who traded in May wheat of 1913 will probably lose several cents a bushel when the May option is ripe, unless they may have sold out some time ago. On the last day of December, 1912, the May option was quoted at 91½ cents a bushel and there we must leave it until we pick it up again next month.

Beyond the May trading is the July wheat option, and the figure quoted on December 31st was 88⅞ cents a bushel. There, so far as the great wheat trading is concerned, you have the dead December quotation of 87¼ cents, the active May quotation of 91½ cents, and the future July quotation of 88⅞ cents. No man on December 31st, 1912, was better posted.

On December 31st, at St. Louis, in the so-called cash market for consignments sold and delivered on track, the hard wheat was selling in line with the other quotations at 88 to 92½ cents a bushel; but the soft wheat, No. 2 red, was selling at $1.06 to $1.10 a bushel. The reason for the difference between soft and hard wheat, as we understand it, is, that the daily demands for soft wheat from millers who cannot grind hard wheats are in excess of the daily supplies of No. 2 red, and the commission men selling the wheat ignore the hard-wheat quotations and force buyers to pay all that is possible to get out of them. Soft wheat does not always outsell hard wheat, but on December 31st, 1912, the difference was 18 cents a bushel in favor of No. 2 red.

GENERAL STOCK NOTES.

Mr. H. T. Brown, of Cloverdale Farm, Lexington, Ky., has just returned with a large shipment of pure-bred and registered stallions and mares and a lot of high-grade mares. Cloverdale Farm has just sold to Senor Jose Y.Lezama, of the Island of Cuba, the three-year-old mammoth jack, Kentucky King. This jack was a winner at the Blue Grass Fair at Lexington in 1912 and is one of the best jacks that this farm has ever sent to the island.

Mr. Chas. Ford, Mortonsville, Ky., breeder of Tamworth hogs, had his usual success at the Fairs in 1912. At the Chicago International he won first and championship on both single and pen of barrows. Mr. Ford has over 100 head for sale, and from the best strains known to the breed.

Woodland Plantation, at Hammond, La., under the management of M. Nielsen, is one of the representative breeding establishments of the South, raising pure-bred Jersey cattle, Berkshire and O. I. C. swine, not forgetting White Wyandotte poultry that won the female championships and other prizes at the New Orleans Poultry Show, December, 1912.

Cotton mules, 14.3 to 15.2, good quality and fat, are in demand at the St. Louis National Stock Yards. So say Holland, Nugent & Maxwell Bros., and they sell thousands of them.

Parcels Post Potato.

In one of the first packages received at St. Louis under the new parcels post law, and the first package received by The National Farmer and Stock Grower, was a fourteen-ounce "Green Mountain" potato from the Bowker Fertilizer Company, of Boston, Mass. The potato was from the crop of L. A. Littlefield, Lincoln, Me., which won the Bowker first prize of $200 in the contest of 1912. An account of this contest will appear in the February edition of this paper.

Sheep Receipts at St. Louis.

During the year 1912 the St. Louis National Stock Yards received 1,040,000 head of sheep, passing the million mark for the first time in the history of the trade. In one day, June 25th, 1912, the market received a total of 16,121 sheep.

3 Minutes Sharpens Dull Ax

"It took just 3 minutes to put very dull ax in perfect order", writes J. A. sudan, of Newark, Del. Thousands more like this. DIMO-GRIT, the new artificial diamond sharpening wheels, quickly sharpens plow points, saws, discs, sickles, ensilage knives, and all farm tools at a saving of work, time and money.

14 Tools in One

LUTHER DIMO-GRIT GRINDER has metal frame, enclosed shaft drive, dust proof bearings, runs easy as sewing machine, 25 times faster than grind-stone, 10 times better than emery, will not draw temper. Special attachments, such as forge, milk tester, jig saw, rip saw, lathe, drill, etc., furnished if desired; fully guaranteed. Write for free book on tool grinding and liberal free trial offer.

OUR INDUSTRIAL POLICY.

We Are in Favor of All Foreign Farm Productions Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

THE NATIONAL FARMER AND STOCK GROWER is in favor of the United States Custom House collecting a reasonable range of duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government.

By the tariff policy we advocate fully one-half the money required for the support of the national government should be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed upon our own people.

Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time foreign goods are placed on the free list there is the same result. With moderate import duties received by the United States on various products as now collected the total that is covered into the United States treasury is over three hundreds of millions of dollars a year, and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty results in higher prices to the American consumer and higher taxation also upon our own products to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and be the greatest sufferers.

State Leader For Missouri Farm Advisers.

The Board of Curators of the University of Missouri has appointed Mr. D. H. Doane State Farm Management Leader for Missouri. Mr. Doane will represent both the College of Agriculture and the United States Department of Agriculture and will have supervision of the Farm Advisers in Missouri counties. For several years he was connected with the United States Department of Agriculture in farm management investigations. For the past two years he has been in charge of the farm management investigations and instructor in the University of Missouri.

The Missouri College of Agriculture has completed arrangements for a very comprehensive plan of co-operation with the United States Department of Agriculture for the location of Farm Advisers in Missouri counties. The success already attained in Cape Girardeau and Pettis counties has aroused statewide interest in this plan. The College of Agriculture and the United States Department of Agriculture believe this to be the most successful plan so far devised for bringing to the farmer on his own farm the benefits of the investigations made in the College and the Experiment Station.

On January 13th to 17th, 1913, during Farmers' Week, there will be held at Columbia, Mo., the first annual gathering of County Farm Advisers and all others who are interested.

As yet there are but few counties that have Advisers, so the major portion of this meeting will be devoted to explaining how the work may be started in other counties, how the Advisers work and what they accomplish. We will hear from Messrs. S. M. Jordan and C. M. McWilliams what they have done in Pettis and Cape Girardeau counties. Also from some of the farmers and business men, telling why they have said: "The employment of our County Farm Adviser is the best investment our county has ever made." On each afternoon and during the whole day Thursday the programme will be devoted entirely to the County Farm Adviser work.

A meeting, preliminary to the one here announced, was held by the Pettis County Bureau of Agriculture at Sedalia,, November 11th, 1912. At this meeting plans were made and resolutions adopted, which had for its object the gathering at the state meeting of every farmer, Judge of the County Court, banker, school superintendent, teacher, railroad official and Commercial Club member in Missouri. Accordingly, we hereby extend to those mentioned, and all others interested, a most cordial invitation to be with us January 13th to 17th, to help push Missouri's greatest agricultural undertaking. (Signed) D. H. Doane, State Leader.

Butter made on farms decreased 77,000,000 pounds, comparing 1909 with 1899. In the same time butter made in factories increased 204,000,000 pounds.

Corn and cows are a winning combination in the Ozarks.

MR. Hosmer and his son bought a farm near Rolla, Mo., a few years back, at an average of $10 to $15 per acre. To-day that farm couldn't be bought for $75 to $150 per acre, and is bringing an annual net income of over $5,000.

When the Hosmers took hold of this place, it was said that the corn couldn't be grown high enough to hide a 10-year old boy — but now they are making from 60 to 80 bushels *per acre* regularly. And they are averaging around $90 per year per cow!

H. S. Harris says: "My milk production for the six months from April to November (milking an average of 15 cows, about one-half of which are two-year olds), was 8,135 gallons, which sold at 16 cents per gallon, or $1,301.60. *Feed all raised on my farm*; except salt."

Mr. Holloway, another Ozark dairyman, says: "I find this country the best for farming and *far* the best for dairying. The healthful, mild climate cannot be beat. I know this, for I have traveled a great deal; have been in nearly every State in the Union."

These experiences prove what an expert on dairy husbandry said a while back: "Not only are the Ozarks adapted for dairying but are certain to be noted far and wide in the future for this industry Butter fat can be produced cheaper in the Ozarks than anywhere else."

With plenty of good pasture land, an unlimited amount of pure water, with soil that will grow every variety of grains and grasses, with short, mild winters that permit grazing most of the year and make expensive shelter unnecessary — stock raising of every kind is more profitable in the Ozarks.

Ozark farmers are producing pork at 2½ cents a pound, and selling it at 8 cents or more. They are making around $12 per ewe; with the sheep feeding almost entirely on native wild grass.

The closeness of Kansas City, Memphis and St. Louis — offering tip-top prices — has a great deal to do with the big net profits which Ozark farmers get.

But all these advantages mean more when it is realized that good land can be bought now in the Ozarks at $12 to $15 per acre. It's a proposition that deserves any man's serious thought and investigation right *now!*

A free book for you!

It's not the kind you can pick up anywhere. Double sized pages, 75 actual photo pictures of farms—some in full color. Written by a man who knows farming. Takes up the Ozark sections, county by county, and describes the farming conditions there. Also tells actual experiences of Ozark farmers. I haven't many copies of this book on hand; please drop me a postal to-day for your free copy.

Overland

65% go to Farmers

IN the past five years we have built 60,000 cars. This year's output of 40,000 makes a grand total of 100,000 cars. *Sixty-five per cent. of this great production will be bought by the modern American farmer.*

Take Minnesota as one example: Minnesota is one of the nation's greatest and richest farming states. In the automobile registrations of the fiscal year Overland cars in the entire state of Minnesota show *a gain of 98 per cent.* The nearest competitor can show a gain of *only* 87 per cent. and the next *only* 55 per cent.

In Minnesota towns and villages of 1,000 inhabitants, or less, Overland cars, for the year, show a gain of 136 per cent. The Overland's nearest competitor shows a gain of *only* 104 per cent. and the second nearest a gain of *only* 73 per cent. And so you find it all over the country.

The Overland has the approval of the majority of America's big farmers—the most substantial and practical class of people in America.

The 1913 Overland at $985 is the exact equal of any $1200 car manufactured. It has a powerful thirty horsepower motor. Seats five large people comfortably. This car has center control and tires of ample size. The springs are of the finest steel—three-quarter elliptic in the rear. The wheel-base is 110 inches. The rear axle is three-quarter floating, drop-forged and fitted with the famous Hyatt bearings; the front axle is an "I" beam, fitted with Timken bearings. Overland brakes are unusually large and strong. It is completely equipped with top, windshield, Warner speedometer, Prest-O-Lite tank, and the very best of everything. Nothing is lacking.

Forty thousand cars in 1913 alone make possible this big value.

Look up the nearest Overland dealer at once. Secure a demonstration. Let us prove to you that the Overland is the most economical car you can buy. A post card will bring additional information, our 1913 catalogue and the dealer's address. Please address the factory, Dept. 89.

The Willys-Overland Company

Toledo, Ohio

Our Big Instruction Book---Free

For a postal card you may have our big automobile instruction book—*absolutely free.* It contains over 100 pages; each page is illustrated with simple diagrams. The language is not technical; the young people will read it with interest and can understand every word. It tells you how to purchase, operate and care for an automobile.

We want you to have this book because it will help you and because it will help us. A thorough reading will prepare you to appreciate the good and bad features of automobiles. And such knowledge will only emphasize to you the very high Overland standard. Write for this free book—today.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly by
THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.
Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.
E. T. R. Murfey, 1123 Masonic Temple, Chicago, Ill., Western Representative.
Frank C. Avery, P. O. Box 284, Coronado, Calif., Pacific Coast Representative.

Entered at Postoffice at St. Louis, Mo., as second-class mail matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar. Canada and foreign subscriptions 75 cents a year.

New Year's Resolution.

What the year 1913 will bring to farmers remains to be proven, but each farmer may rely upon nature, just as he can rely on himself. The best resolution a farmer can make is to be ahead of the game with his own work. If you wish the rain to germinate the seed, the seed must be in the ground when the rain comes.

Ladies' World and Grapevines.

We are again offering a very valuable subscription combination in the matter of one-year's subscription to the Ladies' World; one-year's subscription to The National Farmer and Stock Grower; and eight selected two-year grapevines, which are grown at the best grape nursery in New York state,all for one dollar ($1.00.) There are magazines published at $1.50 a year that are not equal to the Ladies' World, and the grapevines will be satisfactory to all who get them. Such a combination ought to bring us ten thousand subscriptions in the month of January. See page 5.

Our Seed Corn Premiums.

On page 20 our readers will find mention of our seed corn premiums. We do this work to encourage experimental farming and to encourage farmers in sending subscriptions to this paper. On forty thousand farms in the United States there are corn-growing plots that have had considerable influence in the enlargement of the corn crop of the United States, and the seed was sent out by The National Farmer and Stock Grower.

We Must Work Together.

All those farmers who believe in "Our Industrial Policy" as published on page 6 should do their part towards it by recommending the paper to others who believe the same. Every time we publish that article we lose some subscribers who do not believe in the protection of American Interests. Where we lose one we ought to get two in return. Very few farm papers have any industrial policy to speak of, but The National Farmer and Stock Grower has a policy and does not hesitate to place it before our legislators for their information.

Potash Pays the Farmer.

On page 2 will be found an example of fertilizers containing enough potash and another example of fertilizers not containing enough potash. Many low-grade fertilizers are stuffed with phosphoric acid, because it is cheap, and the other elements, nitrogen and potash, are short. Read the advertisement of the German Kali Works on page 2.

A Farm Level Necessary.

A farm level is just as useful and as necessary as a two-foot rule. Every farmer does not have to be a surveyor or an engineer to conduct a farm, but he should know enough to establish his grades and levels in laying out his fields for cultivation, in terracing to prevent the land washing, in ditching and draining, etc. The best farm level on the market is made by the Bostrom-Brady Mfg. Co., Atlanta, Ga. It is sold through hardware dealers, but the way to get acquainted with the uses and purposes of a farm level is to answer the advertisement on page 6.

Our Almanac and Encyclopedia.

Anyone sending us 50 cents for one-year's subscription to The National Farmer and Stock Grower can select The National Farmer and Stock Grower Almanac and Encyclopedia as a free premium. We will send it by mail postage paid, safe delivery guaranteed. See page 25.

Our Good Combinations.

The National Farmer and Stock Grower contains considerable clean-cut inforamtion of value to farmers, and is worth several times what it costs. We also offer some very good premiums that all farmers ought to have and can have in connection with a subscription to the paper.

The Crocodile Wrench.

We have only recently used the Crocodile Wrench as advertised on page 15 as a subscription premium. Although it is heavy, weighing twelve ounces, we send it as merchandise by parcels post and it is a welcome wrench on every farm.

Stockmen Are Stylish.

All stockmen desire to have stylish hats, boots and gloves. Most of the best gloves on farms and ranches are "Hansen's." Hansen, of Milwaukee, has a card on page 14. Hansen issues a free book on gloves. To buy Hansen's gloves you don't have to go to Milwaukee. He will tell you where to see and feel them before you buy. Use the coupon or write a post card to O. C. Hansen Mfg. Co., 132 Detroit street, Milwaukee, Wis., and ask for free glove book.

Empire Fertilizers.

Every farmer should know something about fertilizers. It is the easiest experimental work in the world—one field fertilized, another one not; both the same soil, the same seed bed, the same time of planting, the same cultivation, the same season, the same method in harvesting. Compare one with another. Write to the Empire Carbon Works, 421 Locust street, St. Louis, Mo., for a book on fertilizers, with formulas for all crops. Use some of these fertilizers and get your experience, so that you may know if it is profitable, and to what extent it is urofitable, to use commercial fertilizers. Write for the book anyway. It costs nothing, and it will teach you something.

The Reliable Poultry Journal.

The poultry journals are all excellent, but the best of them all is the Reliable Poultry Journal, published at 50 cents a year. Another publication almost as good has advanced the price to $1.00 a year, but we stand by the Reliable and club it with our own paper. See page 18. The club offered is like buying gold dollars at 10 cents each.

Parcels Post Here.

Parcels post is here, but it will be three months before it will be understood outside of the local zones, where one pound or less will cost five cents and each additional pound one cent more until for eleven pounds the package will cost fifteen cents. The fifty-mile zone rate also begins at five cents for the first pound and three cents additional for each pound up to thirty-five cents for eleven pounds. Small packages—one, two and three ounces—will be considerably higher than before; thus, a two-ounce package formerly going anywhere in the United States for two cents will now cost five cents in the nearest zone and twelve cents (being charged as a pound) in the farthest zone. There are some hard places and some soft places in the parcels post, and the express companies have not yet been heard from. The zone system will probably turn out to be an intolerable nuisance, and we expect to see it done away with.

CLASSIFIED ADVERTISING.

CALIFORNIA HONEY, sample 10c. Leaflet free quoting prices, freight prepaid. Agents wanted. **Spencer Apiaries Co., Box 181, Nordhoff, Cal.**

FREE PILLOWS with every order. Great proposition. Fine goods. Mail us $10 and we send you new 36-lb. feather bed and give you 6-lb. pair pillows **FREE.** New feathers. NEW ROLLED GOLD DOLLAR SPECTACLES AND EYE GLASSES guaranteed to suit or money refunded. Send your age and $1, with 4c. postage. **FREDRICK & CO., Dept. S. N. G., Toledo, Ohio.**

FARM AND RANCH LANDS.

POLOMAS VALLEY, ARIZONA, FARM LANDS sold on easy payments. Perfect titles guaranteed. Abundance of water year round. Canals all in. Land level; easily irrigated; all cleared and ready for plowing. Soil rich, dark, sandy loam, 25 to 30 feet deep, free from alkali, and adapted to alfalfa, small grain, oranges, lemons, olives, dates; also wheat, barley, oats and live stock. Climate ideal. Pure well water. Land all fenced in 80 and 160-acre tracts. Write for maps, lists, prices, terms and full information. Sent free. Address the owner, **POLOMAS LAND CO., 1535 E Street, San Diego, Calif.**

ALABAMA.—2,240 acres fertile farm land. Thirty-three tenant houses. 900 acres fenced. Fine land for alfalfa, corn, cotton or cane. One-fourth mile from station. Buy from owner and save commissions. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—405 acres of land, nine miles from Warren, Bradley county. 100 acres in cultivation, balance in pine, oak, gum and hickory; estmated at $500.00. Good four-room house, wire and rail fence. Part of land has good growth of switch cane. Ideal stock stock proposition; unlimited range. Prices for sixty days, $12.50 per acre, cash. **A. L. Greene Company,** Warren, Ark.

ARKANSAS.—A great agricultural state not half appreciated, but a splendid, mild-climate country that is affordng fertile farms at low prices. Arkansas has 214,648 farms in all, averaging 81 acres, averaging $2,116 in value and three-fourths free and clear of debt. Increase in value in ten years, 53 per cent. Write for Free Book about Arkansas to **A. Hilton, G. P. A.,** 1512 Frisco Building, St. Louis, Mo.

ARKANSAS.—Land is low in value but continually advancing. The Cotton Belt Route is one of the great railroad systems leading to the Southwest from St. Louis and is capable of the greatest degree of development. Read about Cotton Belt Excursions on page 14 and write to **E. W. LaBeaume,** G. P. A., 1466 Pierce Bldg., St. Louis, Mo., for Free Book on Arkansas and Texas.

CALIFORNIA.—THE FAMOUS SANTA CLARA VALLEY. "WE SELL IT." Write for list of places and literature. **E. D. Crawford & Co.,** 415 Bankers' Investment Bldg., San Francisco, Calif. Branches; San Jose and Gilroy.

CANADIAN LANDS.—Sold to settlers only. No opportunity for land grabbers. Rich farms on easy payments; money loaned experienced farmers to erect buildings. See page 22 and write to **C. M. Thornton,** Commissioner, 112 W. Adams Street, Chicago, Ill., and write for free maps.

ILLINOIS.—For Sale: 20, 40, 80, 120, 160, 200, 240, Illinois farms, priced right. **L. M. Forth,** Wayne City, Ill.

KANSAS, MISSOURI, OKLAHOMA, TEXAS, NEW MEXICO, ARKANSAS AND LOUISIANA Lands for sale on the Rock Island Route. This great railroad system has wonderful opportunities for farmers to consider. There is an Agricultural Expert on duty to assist and guide settlers in their work. See page 23 and write to **L. M. Allen,** P. T. A., 513 LaSalle Station, Chicago, Ill., for crop information.

MISSONRI.—For Sale: Farms of 40 to 600 acres at reasonable prices and terms. Choice locations on main line Frisco Railway. List mailed free on application. **John Ross,** Bourbon, Mo.

MISSOURI LANDS IN THE OZARKS.—Corn and cows are winning a combination. Farmers in older states who wish to obtain new locations for one-third of actual value should write for Free Book of the Ozarks. Address, **A. Hilton, G. P. A.,** 1512 Frisco Building, St. Louis, Mo. See page 6.

TEXAS.—Farms in Texas on the Cotton Belt Route can be had cheap. Most of the fruit and vegetable farms sending early shipments to St. Louis are from the sections traversed by this road. Write for Free Book on Texas and Excursion Rates to **E. W. LaBeaume,** G. P. A., 1466 Pierce Bldg., St. Louis, Mo.

FARM WANTED.—I am looking for a good Farm at a reasonable price. Give full description in first letter. Address, **CASH FARM BUYER, Box 7910, Cherry Valley, Ill.**

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago.**

CANADA'S OFFERING
To The Settler

The American Rush to Western Canada is Increasing

Free Homesteads In the new Districts of Manitoba, Saskatchewan and Alberta, there are thousands of Free Homesteads left, which to the man making entry in 3 years' time will be worth from $20 to $25 per acre. These lands are well adapted to grain growing and cattle raising.

Excellent Railway Facilities

In many cases the railways in Canada have been built in advance of settlement, and in a short time there will not be a settler who need be more than ten or twelve miles from a line of railway. Railway Rates are regulated by Government Commission.

SOCIAL CONDITIONS. The American Settler is at home in Western Canada. He is not a stranger in a strange land, having nearly a million of his own people already settled there. If you desire to know why the condition of the Canadian Settler is so prosperous write to any of the Canadian Government Agents and send for literature, rates, &c., to

Canadian Government Agent

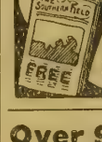
or address Supt. of Immigration, Ottawa, Canada.

Southern Farm Facts

Land at $10 an acre up

Alfalfa makes 4 to 6 tons per acre; Corn 60 to 100 bu. All hay crops yield heavily. Beef and Pork produced at 3 to 4 cents per lb.—Apples pay $100 to $500 an acre; Truck crops $100 to $400; other yields in proportion.



THE SOUTHERN RAILWAY Mobile & Ohio R.R. or Ga. So. & Fla. Ry. will help you find a home in this land of opportunity. Booklets and other facts—free.

M. V. RICHARDS, Land and Industrial Agent
Room 71, Washington, D. C.

Over 90% of the HORSE CLIPPERS

Used in the world are the

STEWART Ball Bearing MACHINES

Before you put your horses at the spring work, take off the winter coat that holds the wet sweat and dirt. They will look better, get more good from their food, rest better, feel better, do better work.

The Stewart Clipper turns easy, clips fast and stays sharp. Gears are all file hard and cut from solid steel bar. They are enclosed, protected and run in oil; little friction, little wear. Has six feet of new style, easy running flexible shaft and the celebrated Stewart single tension clipping head, highest grade.

PRICE **$7.50**

Get one from your dealer or send $2 and we will ship C.O.D. for balance.

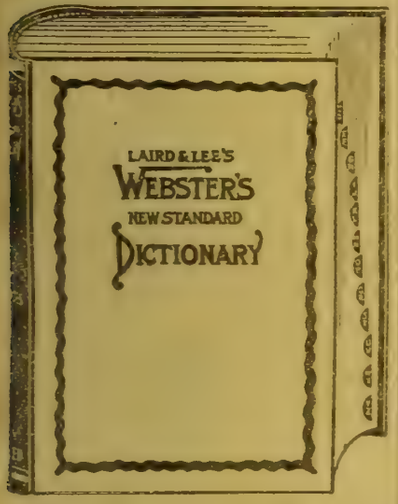
Webster's NEW STANDARD Dictionary

One of the Greatest Books Ever Issued—A Premium Offered by the Subscription Department of This Paper.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 750 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces.



Our offer to you: Send us One Dollar and we will send you The National Farmer and Stock Grower for two years, and we will also send you, postpaid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

GOOD BOOKS AND PAPERS.

TRAPPING—INSIDE SECRETS OF.—A special service is now offered without cost to men who wish to learn the inside secrets of profitable trapping. Pamphlets have been prepared which give accurate and complete data on fur prices, game laws, trappers' supplies and the best methods of trapping. Men who wish these pamphlets can get them free by writing to Funsten Brothers & Co., 633 Funsten Bldg., St. Louis, U. S. A. These booklets tell how trappers buy supplies at factory prices.

GOLDEN ARROW SEED CATALOGUE.—This is the time of year to obtain the new seed catalogues, showing all the tested varieties and all the new and promising field and garden seeds. For the Golden Arrow Seed Catalogue address A. W. Schisler Grain Co., 708 North Fourth street, St. Louis, Mo.

INTERNATIONAL HARVESTER COMPANY CALENDARS FOR 1913.—These calendars, one for Champion, Milwaukee, Osborne, McCormick, Deering or Plano Harvesters, can be had by applying to the nearest I. H. C. agents; also a copy of the I. H. C. Almanac and Encyclopedia. The Almanac contains articles as follows: "What a Good Seed Bed Means to Plant Growth;" "Deep Plowing" by Elmer O. Fippin; "Care of Farm Machines;" "Hints on Alfalfa Growing;" "The Farm Water Supply," and so on. In addition, of course, the Almanac includes information on astronomical observations, tables of weights and measures, postal information and other useful data.

THE BEGINNER IN POULTRY is a new book by C. S. Valentine and is issued by the Macmillan Company, 66 Fifth Avenue, New York City, N. Y., at $1.50, net, per copy. It is a poultry book to read, enjoy and derive profit therefrom. It is elegantly printed; about 40 chapters; 150 illustrations; pages 4x7½ inches, and elegantly bound in cloth. The writer, a master in poultry raising, knows how to lead the beginner safely towards success.

OPERA STORIES.—All operas are founded upon stories, true, false and mythical. All these stories are interesting, no matter whether one has an opportunity to attend a performance, and when one does attend, the story is all the more necessary. Henry L. Mason, of 492 Boylston street, Boston, Mass., has collected the stories of 132 leading operas, with the portraits of leading singers, and the price per copy is only fifty cents. The illustrations are of the leading characters, such as Carmen Melis as Aida; Enrico Caruso as Manrico; Mary Garden as Thais; Huberdeau as Mephistofeles, etc.

THE SOUTHERN FIELD.—The National Corn Show will be held at Columbia, S. C., commencing January 27, and it will attract considerable atention to Southern agriculture. **THE SOUTHERN FIELD** is a bi-monthly publication, issued in the interest of the development of the Southern States. It contains a list of low-priced farms that are worth looking into. By writing to M. V. Richards, Land and Industrial Agent, Southern Railway, Room 71, Southern Railway, Washington, D. C., and mentioning this paper you can obtain a free subscription to **THE SOUTHERN FIELD.** It contains the information desired.

POTATO PRODUCTION.—This is an illustrated pamphlet of fifteen pages, issued for free distribution to farmers by Middle West Soil Committee, 916 Postal Telegraph Bldg., Chicago, Ill. It shows the type of potato that brings the best price in market and how to grow that kind; it gives the experience and illustrations of farm of C. B. Congdon, Desplaines, Ill., where 242 bushels of potatoes were produced to the acre. The cost of every detail in plowing, disking, harrowing, preparing seed, planting, seed, spraying, cultivation and hoeing, cost of fertilizer, of digging, and interest on money in land, are all given, together with market results. All who are interested should write for a copy.

South American Crops.

A cablegram, dated December 28, 1912, from the International Institute of Agriculture, Rome, Italy, has been received by the United States Department of Agriculture, giving the following information:

In Argentina the estimated production, this season, of wheat is 235,161,000 bushels; oats, 115,882,000 bushels; flaxseed, 51,180,000 bushels.

In Brazil the estimated production of coffee, this season, is 1,322,720,000 pounds.

Four-wheel Corn Planter.

On page 12 will be found a card relating to the Hayes Corn Planter that never misses a hill. Over 160,000 are in use and farmers are delighted with them. Send at once to Hayes Pump and Planter Company, Galva, Ill., and ask for free booklet Z. You will then learn what a perfect corn planter is.

Sheep at Principal Markets.

During the year 1912 Chicago received 6,057,000 sheep; Omaha, 2,950,000; Kansas City, 2,136,000; St. Louis, 1,030,000; St. Joseph, 730,000; and Indianapolis, 155,000. Chicago, St. Louis, St. Joseph and Indianapolis gained in receipts over the previous year.

Honey Values at St. Louis.

The wholesale market quotations for honey at St. Louis, January 1st, 1913, were as follows: Southern extracted and strained—Bright amber in barrels at 7c. per pound and in cans at 7½ to 8c.; dark in barrels at 6 to 6½c. Comb—Amber at 14c.; dark and inferior at 9 to 11c. per pound; broken and leaking at 7 to 8c.; fancy clover at 15 to 16c.

Rose Subscription Premiums.

On page 31 we are offering our usual rose subscription premiums. This year we ask only the subscription price of the paper, 50 cents a year, and if you select them as a premium we will send them to you, postage paid, at the proper time for digging and transplanting. The Rose Garden we buy from has assigned The National Farmer and Stock Grower five thousand sets of roses, which is more than we sent out last year. Don't fail to send in your order early.

How to Train Scary, Vicious, Balky, Tricky Horses and QUICKLY DOUBLE THEIR VALUE!

Write for Prof. Jesse Beery's FREE "HORSE-TRAINER'S PROSPECTUS"

If you are the owner of a vicious, tricky, kicking, balky, dangerous and unsaleable horse or colt, don't get rid of the **horse**—get rid of its **bad habits.** Write for Prof. Jesse Beery's "Horse-Trainer's Prospectus," a large, handsome, illustrated book written by the

King of World's Horse-Trainers

Prof. Jesse Beery won world-wide fame and was tremendously successful giving exhibitions of his marvelous skill in mastering man-killing stallions, training wild horses to drive without bridle or reins. The whole country was thrilled by his daring deeds.

Secret of His Power Revealed at Last

In the grand Free "Horse-Trainers' Prospectus" Prof. Beery now reveals the secret of his power and shows the way to duplicate his dazzling success.

Prof. Jesse Beery

What His Graduates Have Done

Prof. Beery's Correspondence Course in Horse-Training and Colt-Breaking is the only instruction of the kind in the world. Thousands of his graduates are reaping the profits and benefits of his wonderful course. For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional horse-trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy a home and an automobile solely through earnings from training horses as taught by your excellent methods."

Buys "Man-Killers" Cheap, Trains and Re-Sells at Big Profit

A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several different men. I got them for $115, gave them a few lessons and have been offered $300 for the pair."

S. M. Ryder, Mercersburg, Pa., writes: "I am making money buying 2-year-old horses cheap, handling them for a few days and selling them, perfectly broken, at a large profit."

Scores of Beery graduates are making money as trainers and breeders, giving exhibitions. Write and we will tell you about more of them. It's intensely interesting.

Train a Colt in 8 Hours!

You can do it by the Beery System. There is lots of money in breaking colts. The field is unlimited.

Bang! Bang! Bang!
The Beery System Drives Out Fear

Retires from the Arena—Now Teaching Horse-Training by Mail

Prof. Beery has retired from the arena, after a career of unparalleled success, and is devoting his time to teaching his methods to a limited number of selected pupils—both men and women—by correspondence.

Graduates Making $1,200 to $3,000 a Year at Home or Traveling

The wonderful success of Prof. Beery's graduates—taught by mail at home during spare time—proves beyond question the value of his instruction. People place value on his instruction to $25 a head to have horses tamed, trained, cured of bad habits, and colts broken to harness.

A Penny Postal May Make Your Fortune

No matter who you are or where you live, if you love horses and are ambitious to earn more money in a profession you will be proud of, write for the wonderful Free "Horse-Trainer's Prospectus" today, without fail. Tell me all about your horse.

PROF. JESSE BEERY, Box 67, PLEASANT HILL, OHIO

Don't Fool With Wood Shingles

Buy STEEL Shingles

They Cost Less, Last Longer, Are Easier to Put On and Are Fireproof

This is the Age of Steel. Wood shingles have gone out of date. Cost too much. Too much bother to put on. Rot out in a few years. And they multiply by 10 the danger of fire.

Thoughtful men are nailing **STEEL Shingles** right over their old wooden roofs.

And those putting up new buildings are likewise careful to choose STEEL SHINGLES.

Edwards STEEL Shingles

come in big sheets of 100 shingles or more. Don't have to put them on **one at a time** like wood shingles. Just nail the whole sheet right over old roof or on sheathing. No **extras**, no **painting**, no **tools** needed. **And money** can't buy a more handsome roof.

Absolutely Rust-Proof

Don't judge Edwards **Steel** Shingles by common galvanized iron roofing—the kind that rusts. We have invented a method that absolutely **prevents** rust from getting a foothold, as 100,000 delighted owners of Edwards Roofs have found. It's the famous Edwards **Tightcote Process.**

Protection From Fire

Don't take chances of **fire** from defective chimneys, flying sparks and lightning. Roof your buildings with these STEEL Shingles and make them safe. Remember, nine out of every ten fires start with the roof. We specifically **guarantee** every Edwards Steel Shingle Roof against **lightning.** This guaranty is by a $10 000 Cash Bond.

Write for Special Factory Prices —Freight Prepaid

We sell direct from factory to user, thus saving you 40% And our business is so big that we cut our profit-per-sale to about half the maker's usual profit. **And we pay the freight.** Amazing as it may seem, these STEEL Shingles actually cost LESS than **wood** shingles.

Send postal at once for our latest Roofing Book No. **157** and Special Factory Prices. Give size of roof, if you can.

HEALTH IN THE COW STABLE.

How to Get It and Keep It—The Value of Cement in Dairy Construction.

Health in the cow stable means health among the people that use the milk drawn in the cow stable. Fortunately for the people that use milk, many of our states and municipalities are taking steps to make sure that cow stables are kept clean. Previously many serious epidemics have been spread through the milk that has come out of dirty stables.

Only healthy cows should be used in the production of milk. In the past, cows that were under suspicion of having tuberculosis were frequently disposed of to canners after they had been kept in dairies as long as they would give a fair mess of milk. Without doubt, many a case of tuberculosis has been transmitted to human beings from such cows. The writer has in mind the daughter of a gentleman at the head, previously, of an agricultural college. The daughter was receiving the milk from a family cow, but in time came down with tuberculosis, which seemed to have its inception in the stomach. The cow was under suspicion. She was tested with tuberculin and reacted. She was killed and her udder was found festering with the tubercles of the dreadful disease, which finally killed the little girl referred to. Every farmer and every dairyman should feel it a duty to make sure that none of his cows are diseased.

Clean cows are the exception on farms and in dairies. It is only the energetic farmer or dairyman that goes to the trouble of keeping his cows clean. The writer has been in many stables where the cows were so dirty that it seemed a wonder how the farmers themselves could drink the milk drawn under such conditions. The movement now is for more cleanliness, and there is room for improvement. The man that begins to improve will find that certain things are necessary, such as cement gutters and a good supply of running water, by which he can keep everything washed out clean.

This supply of running water is important in every stable where many cows are kept, especially if the stable has cement floors and cement mangers and standing places. Most stables are so situated that they can have a good supply of running water from some source. The windmill or the gasoline engine can be had to fill the supply tank, from which the hydraulic pressure can be secured for the hose used in cleaning and for the other purposes. It is surprising that all thrifty farmers do not avail themselves of such conveniences.

The floors of the cow stable are now recognized as of very great importance. The old wooden floors, full of cracks and catching all kinds of filth, are a thing of the past. Cement is the only material that makes it possible to keep out all filth and germ breeders. Wood, if frequently wet, soon begins to rot. The pores of the wood take in the liquids and the action of heat produces odors that are sure to get into the milk and reappear later in the butter. Cement floors properly laid can be kept so clean that no bad oders will be perceptible. But the grades of the floors must be right, and the drainage outlets must be perfect, else stagnant pools will form that will prove injurious to the conditions in the stable.

Good ventilation is an essential, for the carbon thrown off from the lungs of the cows will prove injurious if the ventilation facilities are not good. All manure should be removed from the stable daily, and no food that has a disagreeable odor, such as silage, should be kept in the stable.

ELGIN QUOTATIONS.

Report That the Weekly Butter Prices Are to be Discontinued.

On December 16th, at a meeting of the Elgin Board of Trade, a motion was put and carried to discontinue all official butter quotations. This action was not arrived at without opposition, and a considerable number of members objected and bolted the meeting. The objectors were largely representing the creamery buttermaking interest, which indicates that the producers of butter regarded the quotation as arrived at and published every Monday for many years as being a general, all-around benefit, lending stability to the butter trade and establishing a fair and uniform basis in buying cream on the one hand and in selling butter at wholesale on the other. The Elgin Board of Trade undoubtedly exercised an influence by organized effort far out of proportion to what Elgin is or ever was as a butter-concentrating and selling center. Whether the weekly Elgin quotation was in reality a good or bad influence we were never absolutely determined in our own mind, but after considering the subject over and over again we were content to "let well enough alone." The Elgin quotation was not based on sales, but on conditions, and sales followed to correspond. The buyers and sellers were both represented on the Board that determined the quotation, and conditions generally justified the quotations as made.

There will undoubtedly be much discontent and demoralization because of the missing Elgin butter quotation, but in the absence of the usual quotation guide the business will adjust itself upon the basis of actual sales at important centers. The tail has quit wagging the dog, and now the question is: "Which is the dominant market for actual sales of top grades of creamery butter?"

The Best Combination Pruning Tool—for Sawing and Clipping

When pruning, a well-made, efficient tool will enable you to do the work with greater ease, in less time and soon save its cost.

The *Disston* "Orchard" Pruning Hook and Saw combines two tools in one and can be used with or without a pole. Light in weight, but strong and durable. The long, slender teeth *draw* the saw into the lightest branch.

This is only one of the many varieties of saws and tools we make for farm use. Our book gives detailed descriptions, as well as valuable information on the proper care of tools.

Write for the "DISSTON Farm Tool Book"—it will be sent free by return mail.

A Point in Cheese Making.

Too much water incorporated into Wisconsin cheese for November affected its quality, according to the scores announced by Prof. C. E. Lee, of the College of Agriculture of the University of Wisconsin, in charge of the scoring exhibition.

The average score of all exhibits made from milk delivered daily was 92.66, and the average moisture was 36.5. The average score of cheese made from milk two days old was 90.55, and the moisture 37.2. It is advisable to receive milk daily, even if only 1,000 to 1,500 pounds are delivered.

It is now reported that a cattle shortage is facing the world.

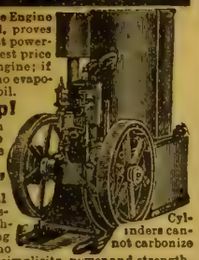
15.95 AND UPWARD
AMERICAN SEPARATOR

THIS OFFER IS NO CATCH. It is a solid proposition to send, **on trial, fully guaranteed,** a new, well made, easy running separator for $15.95. Skims hot or cold milk; making heavy or light cream. Designed especially for **small dairies, hotels** and **private families.** Different from this picture, which illustrates our large capacity machines. The bowl is **a sanitary marvel, easily cleaned.** Gears thoroughly protected. **Western orders filled from Western points.** Whether your dairy is large or small, write us and obtain our handsome free catalog. Address:

AMERICAN SEPARATOR CO. Box 1102 BAINBRIDGE, N.Y.

Use KEROSENE Engine Free!

Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing. No waste, no evaporation, no explosion from coal oil.



Gasoline Going Up!

Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline.

Amazing "DETROIT"

—only engine running on coal oil successfully, uses alcohol, gasoline and benzine, too. Starts without cranking. Only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Cylinders cannot carbonize. Mounted on skids. All sizes, 2 to 20 h. p., in stock ready to ship. Engine tested before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric lighting plant. Prices (stripped), $29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investicate the money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, you get Special Extra-Low Introductory price. Write! (138)

GOOD PROFITS IN COW TESTING.

Increase of $4.50 a Year Per Cow by Weeding Out Unprofitable Milkers.

Bulletin No. 233 of the California Station treats of three-years' experience of the Ferndale Cow Testing Association of Humboldt county, California.

An estimate that the average butter-fat production per cow in California was 150 pounds per year, worth 30 cents a pound, or a total of $45, awakened California dairymen to the fact that many of their cows were being kept and milked at a dead loss of good money; for if a yield of $45 be the average, many of them must yield less than that sum, and all such surely fail to pay any profit on the feed and care given them.

How to detect and weed out the unprofitable cows is a problem for which there is but one solution; namely, the scales and the Babcock test—weigh each cow's milk and test its richness. At a meeting of fifty dairymen in Humboldt county it was found that only twelve had a Babcock tester and only one of these was using it.

Therefore, it was resolved to jointly employ an expert teacher, equip him with implements and chemicals and a horse and buggy, and make him the association's official detective to run down and arrest the cows that were beating their board bills. This cost the association $1,091, which was about $1.00 per cow. But it paid them well, for it got them rid of nearly one-half their cows on which they were losing money and enabled them to replace these with cows that yield good profits. The average increase in profits has been $4.50 per cow kept per year. While there are only 1,100 cows belonging to members of this association, there are 10,000 in the district, and hence if all of them had joined in the test and reaped its benefits, the total increase in profits would have been $45,000 a year.

At the close of the weeding-out process there was not a cow in the Ferndale Association that yielded less than 200 pounds of butter-fat a year, and many of them yielded higher quantities up to 609 pounds a year.

Yet this highly profitable process is of comparatively recent origin. The first testing association was organized in Denmark in 1895; but by 1909 Denmark had 530 such associations; Sweden, 662; Germany, 207; Norway, 146; Finland, 99; Russia, 52; Scotland, 13. The first testing association in this country was organized in Michigan in 1905. California has but three associations. This bulletin gives directions for forming an association and a set of by-laws for same.

The Oleo Situation.

The buttermaking interests and the oleomargarine interests ought to be able to get together and relieve Congress of some of the difficulties which arise from having to settle disputed points which ought not now to be in dispute. Both butter and oleo are factory products, and both butter and oleo are cow products. In Denmark, where the best butter is made and is a most important export product, farmers are selling butter and eating oleomargarine; furthermore, oleomargarine as an economical food product is just as necessary to people of small means as the top grades of creamery butter are to people of larger means.

Ten years ago, every pound of oleo that was sold for home consumption displaced an equal quantity of butter, because the butter and oleo were both surplus products and irregularly increasing in quantity of output, whereas to-day the maximum in oleo has been reached and passed and butter is not increasing very fast, because of the increased demand for cream for other purposes.

The population in this country has now reached a total that insures permanent prosperity to the buttermaking interest under existing tariff laws, and it is also a sure thing that with the probability of a beef famine in sight the oleo competition cannot be anywhere as fierce as it has been. Conditions in regard to butter and oleo are distinctly different, and under present circumstances the representatives of each interest ought to get together, for the reason that within the next ten years the capacity of the people to consume both products will be far greater than at any time in the history of the country.

We hope this will not be construed as advocating selling oleo for butter, or colored to the regulation butter tinge, or the removal of safeguards against fraud, but a suggestion that parties at interest can reach an agreement far easier and better than Congress can do, with both parties to the subject pulling in opposite directions and leaving Congress the partisan question that they must decide either for or against one or the other of the products, whereas both have merits that cannot be disregarded.

Good Calf Sells High.

The Missouri College of Agriculture has recently sold a yearling son of Carlotta Pontiac to go to Old Mexico. The purchaser is the owner of a large dairy herd of 800 cows, furnishing milk to the City of Mexico. The sale price was $400. Carlotta Pontiac is a Holstein cow, bred and owned by the College of Agriculture. During the past year she has produced 93 barrels of milk, containing 708 pounds of fat, which is equivalent to 827 pounds of butter.

Holstein-Friesian Records.

In the recent testing of Holstein-Friesian cows, 129 females, of which one-half were heifers with first or second calves, produced in seven days a total of 53,053 pounds of milk, 3.48 per ecnt. fat, representing 1,845 pounds of butter-fat. The Superintendent of Advanced Registry said: "The average production for each animal was 411.3 pounds milk, containing 14.302 pounds of butter-fat, equivalent to 58¾ pounds or 28 quarts of milk per day, and 16.7 pounds of the best commercial butter per week. Even if there are but few large records, it will be seen that the averages keep up well; and the fact that twenty-two junior two-year-olds average over 12 pounds fat is in itself remarkable."

DE LAVAL CREAM SEPARATORS

There's no good reason why you should wait till spring before getting one

On the contrary, you may buy a DE LAVAL NOW and save half its cost by spring. Moreover, if you can't conveniently pay cash you can buy a DE LAVAL machine on such liberal terms that it will actually pay for itself.

As to your NEED of a separator, if you have the milk of even a single cow to cream you are wasting quantity and quality of product every day you go without one. This waste is usually greatest in cold weather and with cows old in lactation, and it counts most, of course, when butter prices are high. Then with a separator there is always the sweet warm skimmilk, and saving of time and labor, in addition.

When it comes to a choice of separators DE LAVAL superiority is now universally recognized. Those who "know" buy the DE LAVAL to begin with. Those who don't "know" replace their other separator with a DE LAVAL later—thousands of users do that every year. If you already have some other machine the sooner you exchange it for a DE LAVAL the better.

Why not start 1913 right in dairying? SEE and TRY a DE LAVAL NOW when you have plenty of time to investigate thoroughly. The nearest DE LAVAL agent will be glad to set up a machine for you and give you a free trial of it.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

THE DE LAVAL SEPARATOR CO.

NEW YORK CHICAGO SAN FRANCISCO SEATTLE

The Oleo Output.

During the fiscal year ending June 30, 1912, there were produced 122,365,414 pounds of uncolored and 6,235,639 pounds of colored oleomargarine, as against 115,331,800 pounds and 5,830,995 pounds, respectively, in the fiscal year 1911, making a total increase of 7,438,258 pounds of both classes. The total production for 1912 was 128,601,053 pounds, being 13,261,227 pounds less than the quantity produced during 1910, which was the high-water mark since the enactment of the present law, with 141,862,280 pounds produced.

RAINFALL ITEM.

Giving Some Idea of the Immense Quantity of Water Required For the Growth of Plants.

The interesting fact that ninety thousand pounds of water are needed to grow one bushel of wheat is brought out in an article in a recent Journal of Geography, published at the University of Wisconsin. To produce one pound of clover 576 pounds of water are needed. Rainfall is measured in inches, and it has been estimated that an inch of rainfall over an acre of land weighs 227,000 pounds. If all this rainfall could be so stored in the soil as to be available for crops, an inch of rainfall would produce two and a half bushels of wheat per acre. However, by no known system of tillage can all the rainfall be conserved for plant production.

Since the water that is stored in the ground is lost by evaporation much more quickly when the surface of the soil is wet, one of the ways to conserve water in portions of the country where dry farming must be practiced is by forming a protective mulch or thin layer of dry soil over the surface. This dry layer prevents the deeper soil water from reaching the surface, by destroying the capillary movement of soil water.

If dry farming is to succeed, the farm must be located in a section having a rainfall of ten inches or more, and with the least possible wind movement. The soil should not contain layers of gravel or hardpan, but must be uniform in texture to a depth of eight feet. Throughout the entire growing season the man who practices dry farming must spare no pains to preserve the protective dry soil covering.

FOREIGN SOILS AND PLANTS.

Concerning Special Discoveries by Agents of the United States Department of Agriculture.

More strange and curious fruits and plants than usual are noted in the inventory of foreign seed and plant introduction just issued by David Fairchild, Chief of the Bureau of Plant Industry of the Department of Agriculture, Washington, D. C. The present inventory contains a number of finds of Frank N. Myer, the agricultural explorer, who recently returned from two years in Manchuria and Siberia.

One of his finds is a new variety of winter Durum wheat obtained from the Russian Agricultural Experiment Station in the government of Samara. It is called Teakaia, and has been bred for cold resistance. It lived out through the snowless winters, where all other varieties of wheat were either killed outright or severely injured. It is thought this will be especially valuable for cold, dry regions of this country, where no wheat has been grown heretofore.

Many of Mr. Myers' finds, coming from the interior of Siberia, are adapted to a cold and semi-arid region, and therefore are likely to be of use in extending the dry-farming belt of the United States. One of them is a forage plant of the astragalus family, a branchy, upright plant eaten by cattle, and that seems able to stand any amount of cold drouth.

Now that Alaska is getting so thickly settled there is a demand for fruits that will live there, and Mr. Fairchild speaks of the Siberia cherry that has been found by Mr. Myers as very promising. It is a bush cherry, growing no more than four feet high, but the fruit, while small, makes an excellent preserve. It lives outdoors at a temperature of 40 below zero. The natives use the preserve instead of sugar in hot tea, and Mr. Myers says the combination is by no means as bad as it sounds. But the Arctic cherry is gone one better by an Arctic black currant that he found growing out at a temperature of 58 degrees below zero. This, it also is thought, will do well in Alaska.

One of the curious finds that has come from South America is a fiber plant that grows on the dry plateau back of Bahia. It is said to be more resistant to sea water than the best Manila hemp, stands drouth and grows a large crop to the acre.

Dr. Gustave Eisen, of the California Academy of Sciences, has contributed a new plum from Naples called the Papagone. It grows three inches long, has a small stone and is reputed to be the finest-flavored plum in the world.

Another curious thing that comes from South America is a new variety of tall forest tree. The wood is purple and very oily, with a slight sweet scent. The most remarkable feature of it is that it is proof against the attack of ants and is absolutely everlasting. Posts made from it never rot.

There are scores of other remarkable botanical finds. All of them are being tried out in the experimental gardens, and such of them as seem adapted to any particular locality will be given a trial under actual field conditions.—Philip Jarvis.

This Planter Never Misses a Hill—

No matter how carefully you prepare the soil, select the seed or cultivate the corn—no matter how rich the soil or favorable the weather, you lose money by planting with a planter that misses even an occasional hill. Don't be blinded to this fact—figure it out yourself. How much did the bare spots cost you last year? Eliminate this waste! Get right down to the bottom of the planter question.

The HAYES Drop never fails. It is the simplest, most durable and most efficient ever made. Fewer parts than any other. Has no clutch to miss and give trouble. Never cracks or grinds the seed. Will drop accurately any size or shape kernel.

The HAYES leaves no bare spots in your fields. No re-planting necessary. Increased yields soon pay for it. Farmers who have been disappointed with edge drop planters are now buying the HAYES never-fail drop.

FOUR Wheels—Bigger Yields

Runners set back between the wheels regulating depth of planting to the fraction of an inch.

The HAYES is the only planter made that will plant every kernel exactly the same depth. Corn all comes up at the same time. Cultivation 2 to 4 days earlier. No missing hills from uneven planting.

Wheels running on an angle pack the dirt around the corn, leaving a loose ridge on top. Will cover where all ordinary open wheels fail—even in wet and sticky soil.

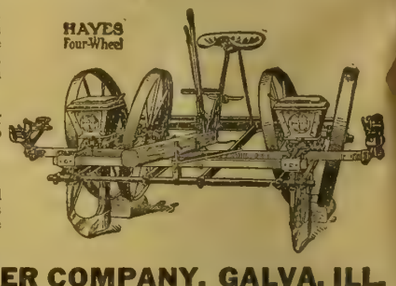
Ridge over the corn prevents wash-outs in hilly fields, gives greater sun surface and loose soil on top allows corn to sprout and come up several days quicker.

CHECKS With Absolute Accuracy

No matter how fast you drive, the HAYES always plants in perfect check, the corn comes up straighter the cross rows than the way you drive. Easiest handled planter for man and team. Also shortest coupled, making it the lightest draft and can be turned in shortest space. For these reasons you can plant from three to five more acres a day with the HAYES and get your corn in earlier—very important, for in some years this makes a big difference in the size of your crop.

LEADS All Other Planters

Over 160,000 in use and every one is giving satisfactory, time-saving, money-making service. Compare the HAYES with every other planter made. Note its strong frame. See for yourself that it has fewer cast iron parts than any other planter—malleable iron and steel are used almost exclusively. The HAYES is practically exempt from breakage, delays and repair bills.



Can be furnished with perfect working Fertilizer and Cow Pea Attachments also Stub Runners or Discs if preferred.

Mail Postal For Booklet

Investigate the HAYES, NOW. Send for free booklet "Z" that gives reasons backed by proof of use, also valuable planter facts. A postal brings it.

HAYES PUMP & PLANTER COMPANY, GALVA, ILL.

Hayes Four Wheel Corn Planter

What Millers Get For Flour.

The high cost of living is not because of the market for flour, which is cheap enough. Bakers buy flour at about two cents a pound. Wholesale quotations, January 1st, were as follows: Quote in jute sacks: Soft patents at $4.65 to $4.85; straights at $4.20 to $4.35; fancy at $3.20 to $3.00; low grades at $3.00 to $3.10; hard patents, $3.95 to $4.05; straights, $3.65 to $3.80; clears, $3.15 to $3.30; low grades, $2.85 to $3.00; spring patents at $4.10 to $4.30, and clears at $3.85 to $4.05 in jute. The foregoing prices are for lots from first hands on track or at depot—special brands on orders charged more.

Automobile Perfection.

Our readers will probably understand that the "high cost of living" does not relate to automobiles. Cars are now brought to perfection in large factories and have been reduced one-half in cost, and the makes that are advertised in this paper are the best possible value for the money. See page 7 and page 19. Investigate this subject thoroughly.

Southwest Steer Cattle.

On December 31st, at St. Louis, G. W. Rousch, of Pulaski county, Southwest Missouri, sold a string of 1,249-pound beeves at $8.00 per 100 pounds and thereby made the top for shipments from his territory. The cattle were of Mr. Rousch's own feeding and had acquired a condition seldom seen on Southwest Missouri stock.

Book of Champions on page 2.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks, how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

FREE TO STOCK OWNERS.

Big Try-out Box of Wilbur's Stock and Poultry Tonic Free For the Asking.

The Wilbur Stock Food Company of Milwaukee have decided to give every owner of live stock an opportunity to try their product absolutely without expense. In other words, they have such unbounded faith in the merit of their stock and poultry tonic that they are going to send out half a million large-size boxes absolutely free. Anyone who owns live stock of any kind may obtain one of these try-out boxes merely by requesting it.

Wilbur's Stock and Poultry Tonic has been on the market for about a quarter of a century and is known the world over as an excellent conditioner for all kinds of live stock—cows, horses, sheep, hogs, poultry. It aids digestion and enables the animal to assimilate every particle of value in the feed it eats. The manufacturers make exceptionally strong claims for Wilbur's Stock and Poultry Tonic, and these claims are backed up by convincing evidence from users in all parts of the coutnry.

As stated above, every farmer and stock owner may obtain absolutely free a large try-out box of this remarkable stock tonic by asking for it.

Simply send your name and address and tell the number of cows, horses, hogs, poultry, etc., you own and the big free box will be sent you. Address, Wilbur Stock Food Company, 621 Huron street, Wilwaukee, Wisconsin.

VEGETABLE PRICES.

Farmers' Local Deliveries and Shipments From Outside Points to the St. Louis Market.

On January 1st the following wholesale prices were quoted for vegetables on the St. Louis market:

Potatoes.—Car lots, sacked, on track: Wisconsin Rural at 51 to 53c.; Minnesota Rural and Burbank at 50 to 52c.; Idaho Rural at 57 to 59c.; frosted, rough, mixed or inferior stock sells at a discount on quotations.

Onions.—Sacked Red Globe at 30 to 42c. per bushel, delivered, according to quality—badly sprouted less. Sacked white nominal at 60c., delivered.

Spanish onions.—At $1.15 per crate, delivered.

Anise plant.—New Orleans at $2.25 to $2.50 per sugar barrel.

Beets.—New Orleans at 20 to 30c. per dozen bunches. Old home-grown at 35 to 40c. per bushel box loose.

Brussels sprouts.—At 5 to 12½c. per quart.

Cabbage.—New York Danish and Wisconsin Holland seed at $8.50 to $9.00 per ton, in bulk, delivered—frozen less. On orders, 75c. per 100 pounds sacked for Holland seed. Red cabbage offered at $17 per ton, delivered.

Carrots.—Sacked Eastern at 50c. per 100 pounds, delivered; New Orleans at 25c. per dozen bunches. Home-grown at 35 to 40c. per bushel box.

Cauliflower.—Choice fresh California at $2.65 to $2.75 per crate, delivered.

Celery.—California Golden Heart at $3.25 to $3.75 per crate, delivered; New York in the rough at $2.00 to $3.00, delivered; Michigan (cooler stock) at $1.25 to $2.00, delivered. Celery roots at 15c. per dozen for small to 35 to 40c. for large.

Cucumbers.—Eastern (Boston) at $1.25 per dozen. Florida hampers at $4.00 to $4.25 for fancy; $2.50 to $3.00 for No. 2.

Eggplant.—Florida 1½-bushel crates at $2.00.

Endive and Escarol.—New Orleans at $2.00 to $2.25 per sugar barrel. Imported at $2.00 to $2.25 per basket.

Gumbo.—Florida six-basket crates at $3.00 to $3.25.

Horseradish.—Home-grown from wagons at $3.15 to $3.25 per barrel loose.

Lettuce.—New Orleans sugar barrels at $1.00 to $1.50—fancy worth more; Florida hampers sold mainly at $1.50 and crates (heated) at $1.00 to $1.25.

Mustard greens.—Kenner and New Orleans at 15 to 30c. per dozen, according to size of bunches; Alabama sacks at 60 to 75c.

Parsnips.—Home-grown washed at 50 to 60c. per bushel loose.

Parsley.—New Orleans plain at 10c. and curly at 15c. per dozen bunches, and at $2.00 to $2.50 per barrel.

Peppers.—Florida 1½-bushel crates at $3.00 for fancy; six-basket crates at $1.75—poor less.

Radishes.—New Orleans and Kenner White Tips at 20 to 30c. per dozen bunches.

Romaine.—New Orleans at $1.50 to $2.00 per sugar barrel.

Rutabagas.—In bulk at 35 to 38c. per bushel, delivered.

Shallots.—New Orleans and Kenner at 15 to 25c. per dozen bunches.

Spinach.—Home-grown at 15c. per bushel loose; New Orleans at 10c. per dozen bunches.

String beans.—Florida hampers pale green at $1.75 and dark green at $2.25 to $2.50. Few hampers Texas sold at 60c.

Sweet potatoes.—Home-grown Bermuda at 75 to 85c.; Queen and Yellow at 90c. to $1.00, and Red Nansemond at $1.00 to $1.10 per bushel loose; Southern Illinois Queen at $2.50 per barrel.

Turnips.—Home-grown unwashed at 35c. per bushel loose and washed at 50c. per bushel box. New Orleans (new) at 25c. per dozen bunches.

Tomatoes.—Fancy Florida at $1.85 to $2.00, and choice at $1.50 per six-basket crate; Cuban six-basket crates at $1.75 to $2.00 for fancy and $1.50 for choice.

Sauerkraut.—City make in jobbing way delivered: Kegs at 60c.; half barrels at $1.50; barrels at $2.90; casks at $4.25.

Hay Market at St. Louis.

Sales on track at St. Louis, December 31st: One car Red Top mixed at $8.50, switched. Timothy—One car grassy mixed at $8.50; one car No. 3 at $10.50; one car scant No. 2 at $11; three cars No. 2 at $12; three cars at $12.50; one car No. 1 at $14.50; two cars at $15; one car at $15.50. Prairie—Part car coarse at $8.50; one car No. 2 at $10.50; one car at $12.25. Clover—Part car No. 2 at $13; one car part No. 2 clover at $13 and part No. 1 timothy at $14.50. Alfalfa—One car No. 2 at $12.50; six cars No. 1 at $15; one car at $15.50; one high car at $16. On East Side: Three cars No. 2 clover-mixed at $11.50. Timothy—One car threshed at $8.00; four cars No. 2 at $12; one car at $13; one car No. 1 at $14.50; two cars at $15; two good cars at $16; one car part No. 1 timothy at $16, and part straw at $7.50; one car choice at $17. Clover—Three cars common at $11. Alfalfa—Two cars No. 2 at $13; two cars at $14; one good car at $14.50; two cars No. 1 at $15; five cars choice at $17.

FREE-FARM ACCOUNT BOOK

Know How Much You Make This Year

No one shall pay a cent for ***Bickmore's Farm Account Book.*** It will be sent free to any farmer who will be good enough to tell who and where he is. The cost of a crop never demanded closer attention. Business farming puts money in the bank. This book is arranged to keep all accounts in simple form—more simple, and certainly more practical, than trying to remember them; shows what to charge against crop production; has a laborer's time record and section for personal accounts. ***64 pages; for ink or pencil.*** Not a cheap affair. It is meant for business. Its quality is in keeping with

BE SURE AND WORK THE HORSE

BICKMORE'S GALL CURE

a remedy that ***cures,*** and the horse works all the time. Users keep it in their stables the year round—they believe in it. It is always ready for Harness or Saddle Galls, Chafe, Rope Burns, Cuts, Scratches, Grease Heel, etc. In cows use it for Sore Teats. Don't buy a substitute. For the sake of your horse's health, be sure to ask for ***Bickmore's*** Gall Cure at the store. But write now for Bickmore's Farm Account Book—it is ready for ***you.*** No cost. No obligation. Send your name and address—that's all.

Mr. Jeffries got 93 bu. of corn per acre

on a tract of land near Clarendon, Ark. Of course, that's some yield; but taking seasons *as they come*, you could raise as much corn down there on $20 land as you can on the *best* corn lands of Iowa or Illinois.

[*Frank Tate's corn Camden, Ark.*]

Take the case of Chas. E. Crigger of Blytheville. His 200 acres, ready for the plow, stood him only $3000. "Now I am getting 50 bu. of corn per acre regularly," says Mr. Crigger. Last year my crops brought me $10,400." You could get *twice* as much profit from land that cost *half* as much — along the

Cotton Belt Route in Arkansas and Texas

— besides cutting your winter expenses *'way down*, on account of the milder climate.

Frank Tate, near Camden, Ark., told me he made 63 bu. of corn per acre. Mr. Tilson, who owns a Red River Valley farm in East Texas, says his section has the irrigated lands northwest beat a mile for alfalfa. He is getting $50 per acre from alfalfa on his *low*-priced land—with no need for irrigation.

These lands won't stay cheap always. They have already doubled in value since 1905; but even this year you can buy at $12 to $25 per ac. as good land there as you are farming now. And you'd have *every* advantage of schools, churches, close neighbors, good local markets, phones, rural free delivery, etc. This proposition deserves serious thought.

On the 1st and 3rd Tuesdays of each month there are low round trip excursions to Arkansas and Texas via Cotton Belt Route, allowing 25 days' time and free stopovers. Go on the *next* one.

Get our free books!

Written by a farm man who knows farming from A to Z. He traveled over thousands of miles in these sections to learn where the *real* farm opportunities were—the kind he knew *you* would grasp if you saw them. He tells you, in plain words, all about them. 100 pages and farm pictures. Send a postal today for your *free* copies.

COTTON BELT ROUTE

HOGS DRESSING 79¼ PER CENT.

Collin County, Texas, Hogs Dressing a High Percentage of Meat to Carcass.

During the last week in November the Forth Worth (Texas) Live Stock Reporter said:

"The Fisher hogs from Collin county were subjected to a slaughter test by Armour & Co., and dressed out 79.25 per cent. H. G. Kalhorn, Armour's head hog buyer, says this is the best dressing-out percentage he has ever seen, after sixteen-years' connection with the trade, most of that time at Chicago, Omaha and St. Louis, where the hogs are supposed to be the best in the world. 'I won't say that these Collin county hogs were absolutely the best, but they were the best I have ever seen tested,' he said. 'We may have had as good hogs, or better, but we don't know it for a fact, for not many hogs are given the dressing-out test, which calls for a good deal of extra work and expense.'

Anyhow, the Collin county hogs will stand at the head until some other hogs make a better showing.

These hogs were sent in by R. C. Fisher, who lives in Collin county. Mr. Fisher topped the market on three days last week. On Tuesday he had here thirty-nine of 388 pounds average, and thirty-six of 377. These were the hogs that were treated by Armour & Co., and which, according to Mr. Kalhorn, dressed out better than any he had ever seen. On Wednesday Mr. Fisher had another shipment, thirty-five head, averaging 411 pounds, and fifty comparatively little fellows bringing up the end at 269. Then on Thursday he had a third shipment in, thirty-eight head, averaging 274 and fifty-nine averaging 216 pounds. Nobody accompanied them, and no information could be obtained as to how they were fed.

Such big hogs are fine to look upon, but they do not make as much money for the man who raises them as prime 225 to 250-pound hogs."

A FRUIT ITEM.

Fall Bearing For Strawberries—Winter Strawberry Shortcake.

Fall-bearing strawberries—yielding delicious fruit right up to frost time—are perhaps by far the most interesting things to be seen on the big place owned by Mr. W. F. Allen, near Salisbury, Maryland, where millions of berry plants, small fruits, shrubs and privet are raised annually for shipment to nearly every part of the country.

These fall-bearing berries, however, are something more than a mere curiosity. They are sturdy, prolific stock, very practical and extremely profitable to the grower, as anyone familiar with the berry market during late August and September, and even into early October, can easily understand.

Full information, and very interesting information it is, regarding these fall strawberries may be obtained from the very attractive berry book gotten out by Mr. Allen for 1913, and everyone interested in berries, small fruits and shrubs should by all means send for a copy, if for no other reason than to learn something of this new kind of berry. Just drop Mr. Allen a postal at Salisbury, Maryland, and ask for the berry book. By return mail you will get a handsomely illustrated, fifty-page book that is a veritable reference work on berries.

It is with the more standard varieties, however, that Mr. Allen has achieved his greatest success and on which the reputation of his plants rests. For twenty-eight years this berry grower has been breeding up his varieties, until to-day he has 120 acres in strawberries alone, to say nothing of the acres in raspberries, blackberries, currants, shrubs, privet, asparagus, etc. Almost anything in this line can be secured from the Allen place, in any quantity, at almost any time. Every farm home should have Allen's 1913 Berry Book. It is worth money for its information on berries. Write for a copy to-day. Address, W. F. Allen, 116 Market street, Salisbury, Maryland.

Stumps cost you too much money. Pull them out! Get a Hercules. *Now is the time.* I'm making a very special sacrifice-price offer. Only a few men will get in on this proposition. Never such an opportunity before. Same 30-day free trial offer—same 3-year unqualified guarantee against breakage. Write me!

All-Steel Triple Power **HERCULES**

is the only all-steel triple power puller made. 400% stronger—60% lighter than others. Pulls biggest stump in 5 minutes—pulls an acre or more of stumps a day—pulls 3 acres of stumps without moving machine. Has double safety ratchets—is self or stump anchored, built low to the ground and is carefully turned and polished to make light draft.

Send in Your Name

Let me send you my fine book and price. My book will please you. Read all the letters and see all the photos sent in by Hercules owners. Compare the regular catalog price with the special figure I'll quote you and see how much you save. Address me personally—a postal will do.

The National Corn Show.

Prof. I. O. Schaub, of the North Carolina Agricultural and Mechanical College, has been appointed Superintendent of Judges for the Fifth National Corn Exposition, to take place at Columbia, S. C., in January and February. The Judges' Council, of which Prof. Schaub will be Chairman, will be composed of between forty-five and fifty judges, selected by various states which will enter the Exposition. Each one of these will be assigned to the consideration of a certain portion of the competitive exhibits.

Prof. Schaub is a native of North Carolina and is a graduate of the Agricultural and Mechanical College of that state. He spent two years in teaching and university work in Iowa, and was one of the judges at the Fourth National Corn Exposition held at Columbus, Ohio. He is at present in charge of the boys' and girls' extension work at the North Carolina Agricultural and Mechanical College. Prof. Schaub has a thorough knowledge of the technique of judging and is well qualified for the position of Superintendent.

Competitive exhibits at the National Corn Exposition come up through successful competition in the various State Shows. The preliminary judging will have been completed by the opening of the Exposition, January 27th, and the awards will be announced early in the first week.

Eleven thousand acres in strawberries and other small fruits averaged one hundred dollars an acre in Illinois.

HANSEN'S PROTECTOR

Do Better Work—Easier

YOU don't go barefoot—how about your hands? Times are too busy—work too important for you to neglect your hands. And nothing will help them like the right pair of Hansen's Gloves or Mittens—the glove or mitten that makes you forget you're wearing it. Secure, easy, perfect fitting and protects from injury. There is a special style lined or unlined built for every special purpose.

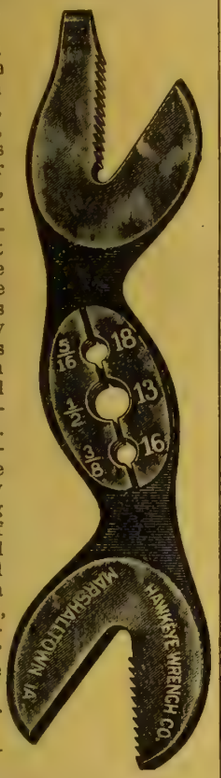
NECESSARY ON A FARM.

The Crocodile Wrench—Actually Six Handy Farm Tools in One.

Yes, an absolute necessity. The Crocodile Wrench means business. Every farm ought to have an extra wrench or two, especially when the wrench is a Crocodile Wrench premium, which is a pipe wrench, a nut wrench, has three dies for cleaning or cutting threads, and a screwdriver. The picture is small, but the Crocodile Wrench is twice as long, and it is full size for any purpose. It is drop-forged from the best tool steel, scientifically tempered. Requires no adjustment. Simple and always ready for use. Nothing to get out of order. Dies will fit threads on all standard farm machinery. Light, strong and durable. No farmer can afford to be without it.



Special Inducements.

Our Subscription Proposition: Send us One Dollar and we will send you THE NATIONAL FARMER AND STOCK GROWER for two years, and we will send you, postage paid, safe delivery guaranteed, ONE CROCODILE WRENCH. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Avoid the Circle.

Running around in a circle is the great way not to make progress. The man who tells you he knows his method is right because he has been doing it that way for half a century, is not necessarily right. He may have been making the same old mistakes year after year.

In fact, if we look back in human history, we find that the running around in a circle is what has kept nations stagnant for centuries at a stretch. The Chinese have been running around in an educational circle for some thousands of years and standing still as to progress.

Probably the Chinese would yet be standing still if they had not come into contact with other nations and thus had the charm of their mystic circle broken.

It takes a genius among men to get out of the circular rut in which he is running. Such men have been the leaders of progress in all ages.

In agriculture, note how the tendency has been to run around in a circle. There are yet sections of the world where men are still reaping their wheat by the help of the sickle, as in the days of Ruth. They have remained desperately poor because of the repetition of the old methods year after year, which could never bring them more than a bare existence.

In spite of the fact that we have in our country broken away from the circle in many things, it is also true that very many farmers, as well as others, still persistently run in the circle.

But it is a difficult thing to get out of the circle in which one has been running in the ruts for many years, doing the same things over and over, thinking the same thoughts over and over, making the same plans year after year, always with the same partial results.

But how shall a man break away from the ruts in the circle he is following?

By getting in touch with others, by reading or by talking with others, and so get new view-points on whatever he is doing. That is why the boy in an agricultural college makes remarkable progress away from the ruts in which he and his ancestors have been moving. The course of study in a college is constantly being changed to include all new information and all new methods. The farm boy that is sent to an agricultural college quickly finds himself walking in new paths. He is getting the advantage of the experience of thousands of men. He can therefore stop running around in a circle and move forward in a comparatively straight line.

The man that cannot have the advantage of an agricultural college course can get out of the rutted circle by reading. Every Experiment Station can furnish a list of books on a multitude of agricultural subjects, which, if secured and read, will enable the reader to break out of the circle in which he has been moving.

It is in this way that Western civilization has broken out of the ruts of centuries and has moved forward, revolutionizing the world in doing so.

To Keep Rust From Asparagus.

Breeders and growers of asparagus are advised by the United States Department of Agriculture, through Bulletin 263, Bureau of Plant Industry, to take up pedigree breeding and to use careful methods of production in order to keep rust from the plant. On the subject the bulletin says:

"Although the breeding work carried on with asparagus will eventually lead to the control of rust in commercial plantings, several years must elapse before this result will become effective. Meanwhile it is necessary to take all measures practicable to prevent the destruction of existing fields of asparagus by the rust. To this end the main factor is to keep the rust away from the fields in summer just as long as possible.

"Wild asparagus growing around the borders of the fields, along fences and ditches, is one of the worst enemies of the grower. These wild plants act as infection centers, and their influence can be easily traced later in the season when the cutting beds have grown up. Wild plants, wherever found, should be dug up and burned. New beds should be planted at only rare intervals of time, and then, if possible, where they will be to windward of a cutting bed. Keep the seedlings out of the cutting bed, at least let none stay in at the time the bed is allowed to grow up after the cutting season. Allow no poor shoots to grow up in the cutting field. Keep down every shoot of asparagus until the middle of June and see the neighboring farmers do the same. In the fall the tops should be removed carefully from one-year-old beds that are not to be cut the next year. This will in a large measure reduce the liability of infection from this source."

Reap the benefits of Available Plant Food

In a favorable season crops will make enormous gains if they are given the available plant food necessary to support them. No soil contains available fertility enough for a bumper crop. It must be added, (not in raw rock phosphate or other unavailable forms, for there is enough of that sort already in the soil) but in available fertilizers which will yield up their plant food as fast as wanted; and the bigger the crop the greater its need. If it is obliged to wait for this sort of plant food to be developed out of the soil, remember, **it waits at your expense!**

EMPIRE FERTILIZERS

These fertilizers supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather and the fertility supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

Agents wanted where we have none. Address for prices and terms,

Quality Before Weight.

During holiday week in December, Holland, Nugent & Maxwell Bros. had about 600 horses and mules in said in his circular: "The market was good on chunks and drafters, 1,300 to 1,500 pounds. The extremely big horses did not sell as well as they should. We sold some extra quality that would weigh 1,700 pounds, from $275 to $315, that looked like they ought to have brought more money, but the chunks from 1,200 to 1,400 pounds sold as well as they have any time in the past six weeks. Southerners were in fair demand, and all the finished fat stuff sold good. Plain, common, thin, little stuff was a little draggy, yet we could sell it to hold the money together for the shipper."

Nuts at Wholesale.

On December 31st, consignments of nuts arriving at St. Louis were quoted as follows: Pecans at 9c. per pound; black walnuts at 35c. per bushel; hickory nuts, shell-bark, at 50c.; large, 40c.; bull, 25c.; peanuts, at 3 to 3½c. per pound for farmers' stock; Italian chestnuts, 7½c. per pound; hazelnuts, 4c. per pound.

EVERY FARMER A CHEMIST.

Knowledge of Chemistry Necessary For the Conduct of a First-class Farm—How to Acquire It.

The time will come when every farmer will be, to some extent, a chemist, for every farmer needs to know about the composition of his soils, the composition of things grown on his farm, and the composition of the bodies of the farm animals. Fortunately, the way is now open for every farm to have its farm chemist, that chemist to be the man that is the owner of the farm or is its manager.

Chemistry is a great mystery to many people. That is because it is not generally studied. Everything is a mystery till it is found out. Enough of chemistry has been found out to make it no longer a mystery to any man who wishes to pursue it.

The farmer needs a knowledge of chemistry to thoroughly understand the nature of the soils he is working. Many a farm has on it several kinds of soil, which need different kinds of treatment to enable them to produce paying crops. The failure to understand the chemistry of soils has kept many a farmer poor, who, had he had the right kind of knowledge of soils, could have been prosperous.

The writer has seen poor muck soils farmed year after year, producing very light crops, which soils produced big crops every year after a chemist had analyzed the soil and found it needed only a supply of potash to make it exceedingly productive. That same soil had been farmed for more than two generations in the same faulty way.

The farmer needs a knowledge of chemistry sufficient to impress on him the difference in the value of the chemical and other fertilizers he may apply to his land. Then the applications of fertilizers will be according to knowledge and not contrary to all knowledge.

In the feeding of farm animals a good appreciation of feeding values is necessary, and this can be known only by acquiring a knowledge of some of the fundamental principles of chemistry. Hundreds of millions of dollars' worth of feed have been wasted by American farmers because of their ignorance of the relative feeding values of hays and grains. Thus, for a hundred years or more, New England farmers raised timothy hay or other varieties of so-called "tame hay" for feeding to dairy cows, when clover hay would have been much easier raised and have had a far greater feeding value for dairy purposes. Not till the chemist came along and lifted up his hands in remonstrance against such waste did the New England farmers turn extensively to the raising of clover hay for the dairy cow.

The farmer that is a chemist figures on every crop that goes off his land. He says: "Such a crop took from my land so many pounds of nitrogen, so many pounds of phosphorus and so many pounds of potassium. What will it cost me to put it back?" Then he goes to work and puts it back and thus keeps up the fertility of his soil.

There are many ways by which every farmer can acquire a knowledge of chemistry. (1) He can get a book on agricultural chemistry, of which there are many, and study up the matter himself. (2) He can take a few-weeks' course in an agricultural college. There are "short courses" adapted to such work. (3) He can send his son to an agricultural college, where he can learn the things needful for the farmer to know. This son will become a teacher of those around him and will open the way to the rejuvenation of the old farm.

First-class Commission House.

The best-organized live stock market is St. Louis, and one of the best firms doing business in that market is the Milton, Marshall Live Stock Commission Company. Shippers who consign stock to this firm to be sold can be assured of obtaining the best results possible. Mr. A. J. Milton, the President of the company, is an expert cattle salesman, and, assisted by his brother, L. H. Milton, make splendid sales. J. S. Jackson and J. S. Mulberry, selling hogs, are equally expert in their department; and Thos. Freels, Sheep Salesman, is noted for skill, ability and good judgment. It is a finely-equipped firm, doing business efficiently in the interest of their customers. All who will apply to Mr. R. E. Marshall, Secretary, P. O. Box 94, National Stock Yards, Ill., stating what they have to ship, will receive special information concerning the market prospect, coming directly from the salesmen.

St. Louis Forging Ahead.

The National Live Stock Reporter of January 1st said:

"For the first time in modern packing days St. Louis has forged ahead of Kansas City in volume of hog receipts. The 1912 supply at the St. Louis National Stock Yards totaled 2,529,897 head, against 2,523,331 head at Kansas City. A few years ago Kansas City hog receipts were running half a million to a million head larger than those of St. Louis. But times have changed and St. Louis is growing faster as a hog market than the Missouri river point.

"Total car-load receipts of live stock at Kansas City in 1912 aggregated 121,969 cars, showing a loss of 13 per cent. from the year 1911. Total car receipts at St. Louis in 1912 were 84,400 cars, showing a loss from 1911 of only 4 per cent.

"Kansas City cattle receipts in 1912 showed a loss of 9 per cent. from 1911. St. Louis cattle receipts gained 11 per cent. in the same time.

"Kansas City horse and mule receipts in 1912 lost 14 per cent., as compared with 1911. St. Louis' horse and mule receipts in 1912 lost only 4 per cent. from 1911."

St. Louis Horse Market.

The St. Louis horse and mule market closed the year 1912 with a total of 165,000 head received during the year and wound up with the second largest receipts in one day. Holland, Nugent & Maxwell Bros., horse and mule commission firm, holding horse auctions each Monday and Tuesday in the year, reported a steady market December 31st, with prices paid equal to those paid any time during the past three months, but not equal to the high time. Southern drivers were in brisk inquiry and the Eastern demand was exceptionally good for chunks, 1,250 pounds. Mr. T. H. Holland, Auctioneer and Manager, says that a few more car-loads of chunks and stylish draft horses can be sold better at St. Louis than anywhere else in the world, and invites shippers of heavy horses to write him. Address, T. H. Holland, National Stock Yards, Ill.

Great Sires of Speed.

Included in the great sires of trotters making records in 1912 are the stallions Walnut Hall, Peter the Great, Bingen, Axworthy, Allerton, Joe Patchen, Moko, The Bondsman, Vice Commodore, Dan Patch, John R. Gentry, Admiral Dewey, General Watts, John A. McKerron, Cresceus and Redlac. All these and 730 more champions are in the Book of Live Stock Champions, advertised on page 2.

Silage For Breeding Ewes.

At the Missouri Experiment Station, in the winter of 1911-1912, one lot of ewes were fed on corn silage and grain; one on corn silage, grain and clover hay; and one on corn silage and clover hay. The grain consisted of corn six parts, bran three parts and oilcake one part, by weight. The ewes were put on feed December 9th and kept on these rations until lambing.

The grain and silage lot ate on the average per day .39 pound grain and 4.07 pounds silage per 100 pounds live weight. In this lot of twelve ewes, eleven were with lamb and produced eleven lambs. So, of the ewes that lambed there was 100 per cent. of lambs, ten, or 90 per cent., of which were strong and vigorous.

The lot receiving grain, hay and silage ate on the average per day .34 pound grain, 2.05 pounds clover hay and 1.85 corn silage per 100 pounds live weight. In this lot, ten of the eleven ewes were with lamb and produced fourteen lambs, or 140 per cent., of which thirteen, or 92.8 per cent., were strong and thrifty.

In the lot receiving clover hay and silage, fifteen of the sixteen ewes lambed and produced nineteen lambs in all, or 126.66 per cent. Fifteen, or 78.9 per cent., were strong, and four, or 21 per cent., were weak. The average amount of feed eaten each day by these ewes was 2.29 clover hay and 2.83 pounds silage for each 100 pounds live weight.

From the results obtained with the lot receiving only silage and hay it would seem that unless the ewes are in extraordinarily good condition the addition of grain during part of the winter, at least, would be advisable. Silage without hay for this one year proved to be satisfactory roughness for pregnant ewes when fed with grain. Considering, however, that no twin lambs were born to this lot, the silage and grain ration must be considered inferior to the ration composed of silage, hay and grain. The experience of practical feeders and the results at other Experiment Stations bear out these conclusions.

It should be further stated that in the three lots receiving silage, eleven ewes were lost during the last week in December, and as far as could be determined the loss was caused by moldy silage. From the first week in January to the first of April the ewes were fed silage without further ill effects.

A few cautions must be observed in feeding silage to pregnant ewes. The silage must be of good quality. Moldy or sour silage is very dangerous. Two or three inches should be used off the top of the silage daily, otherwise it will ferment and mold. Frozen silage is dangerous to feed, as it chills the digestive tract and may cause abortion.—By H. Hackedorn, Missouri Agricultural Experiment Station.

No More Hog Cholera —No Hog Worms— Bigger Pork Profits

By Feeding Daily Merry War POWDERED Lye

E. Myers, President, E. Myers Lye Company.

Are you going to wait until there is an outbreak of hog cholera in *your* neighborhood—when it spreads from herd to herd killing off hogs like flies—or will you take steps *right now* to *prevent* any possible outbreak in *your own* herd? You need have no fear of hog cholera wiping out *your* pork profits if you will feed a little *Merry War POWDERED Lye* twice *each day* with the regular rations. *It costs only 5c per month per hog,* and thousands of farmers can tell you it *prevents* hog cholera. This awful disease may be raging in a neighborhood, but hogs that are on a *Merry War POWDERED Lye* diet, are conditioned against it, as surely as a vaccinated person is protected against smallpox. Besides it destroys hog worms, keeps the digestion in such perfect condition that every pound of feed is changed into firm flesh thus preventing feed waste and greatly increasing pork profits.

The use of *Merry War POWDERED Lye* as a hog remedy, conditioner and fattener is *not* an experiment. It is a *specially prepared, powdered* lye that has been *tried* and *proven safe* and *effective* for those purposes. Full directions on every can. Don't experiment with an untried, old fashioned, ordinary lye. Get *Merry War POWDERED Lye*—the *time-tried* remedy that *actual experience* has *proved* to be the safest, surest preventive of hog cholera the world has ever known.

These Hogs Could Not Take Cholera

"We have had hog cholera all through our district. Those who have been using *Merry War POWDERED Lye* have missed it. One man in particular, who buys it by the case, has cholera all around him, but so far his hogs have escaped." C. M. COOPER, Proprietor of "The Right Place" Dawson, Neb.

Make a test for yourself. Merry War POWDERED Lye comes in 10c cans (**120 feeds per can**). *It is convenient to buy in case lots—4 dozen cans for $4.80 at Grocers', Druggists' or Feed Dealers' Everywhere. There are no substitutes. WE WILL SUPPLY YOU DIRECT, $4.80 FOR 4 DOZ. CANS, IF YOUR DEALERS WON'T SUPPLY YOU. Write for our valuable booklet "How To Get The Biggest Profits From Hog Raising." Sent FREE for the asking.*

Dept. 22 St. Louis, Mo.

Which Kind Do You Want?

HYSOPE—GRAND CHAMPION PERCHERON MARE. In a class of twenty-six splendid aged mares at the Chicago International Live Stock Exposition of 1912, HYSOPE received the blue ribbon, and in competition with all other female first-prize winners she won the grand championship. The picture shows what a magnificent, clean-limbed draft mare she is. HYSOPE was imported and shown by Trumans' Pioneer Stud Farm, Bushnell, Ill., and since sold to Mr. Thomas G. Plant, of New York City.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

POULTRY YARD NOTES.

Early Chicks Are Necessary For Winter Eggs—How to Keep a Clean Flock.

Prepare for early chickens this year, if eggs during winter are to be looked for. The March and April broods are the broods that prove most profitable. because the birds in such broods get most of their growth during the summer months, when foraging is possible. The chicks that are born later in the season mature very slowly, as the cold weather of fall overtakes them and the supply of green feed is lessened.

Many a farmer would raise more early chicks than he does if he could get his hens to sit at the right time. The solution of this problem is to combine the services of the hens that will sit with the incubator, which is never out of mood for sitting.

One of the great expenses of the poultry yard is feeding chickens that are slow in maturing. The writer has one of the best of the modern breeds, but finds that many of the birds are late in maturing, so much so that they are not well feathered out by the first of December. Some of these have to be kept in the basement of the residence, while the others consume an immense amount of feed and make little growth. This experience leads to the observation that chicks born after May are not profitable except in southern and warmer latitudes, where the growing season is much longer and the supply of green stuff is practically obtainable the year around.

Keeping diseases out of the flock is an easy matter, if birds perfectly free from diseases and free from mites and lice are used for breeding. If a poultry raiser has mites in his poultry house, or has lice on his hens, let him not expect to be free from disease. He will find it most profitable to dispose of all his old stock and begin over again on a clean basis, unless conditions are such that he can thoroughly clean out every mite and every louse. But when lice and mites are present, it is practically impossible to kill them all. At least the writer has never been able to do so. The only means he has found effective has been to discontinue the keeping of fowls for a year or more in the infected house and yards. A man need not stop raising fowls during this time, but he must select a new location and begin with birds known to be clean.

Disease germs in some way get from one poultry establishment to another, if the fowls are permitted to run over the same ground. Last year a man with a good-sized flock had in his flock a disease representing roup. He moved out of the neighborhood, and months after the same disease broke out in the flock of a man who lived in the adjoining house, though the fowls of the latter had been kept penned up most of the time. However, now and then a fowl got out and ran over the ground that had been occupied by the first-mentioned flock. This illustrates the fact that a disease in one flock is a menace to near-by flocks, even when the latter are penned up.

Health of the fowls is one of the very important assets of the poultry yard, if large profits are to be looked for.

EGG-LAYING CONTEST.

The Second Missouri National Event Now in Progress.

Our readers have been pretty well posted in regard to the First Egg-laying Contest at Mountain Grove, Mo., and will be glad to learn that Mr. T. E. Quisenberry, the Director, is now fully occupied with another.

The second contest began November 15th, and in the fifteen days the six hundred hens from many states, Canada and England, and one hundred hens in addition used in a feeding experiment, lay 739 eggs. It appears that this time there are ten hens to the pen. The birds are much younger this year, and quite a number of immature pullets did not lay an egg in the first fifteen days. A pen of Illinois Wyandottes lay 60 eggs in fifteen days, and the next highest was 41 eggs for an English pen of S. C. White Leghorns.

In the next few months the contest will be more interesting, and we hope to keep our readers posted from month to month.

POULTRY NEWS.

A pair of Indian Runner ducks from New York state lay 674 eggs in one year, and another pen laid 638. This at the Missouri National Egg-laying Contest of last year.

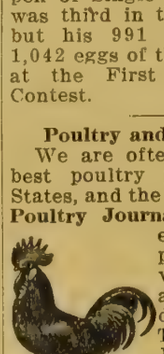
At the first Missouri Egg-laying Contest, five hens lay 137 eggs in the month of April. They were Barred Plymouth Rocks from Nebraska.

The White Plymouth Rock pen that contained Lady Show You with the 281-egg record, was thirteenth in the pen record, with a total of 813 eggs. The average of the other four hens in the pen was 133 eggs.

No one will say much to Walter Hogan, of Petaluma, Calif., concerning light-weight Leghorn eggs. His pen of Single-comb White Leghorns was third in the egg-laying contest, but his 991 eggs outweighed the 1,042 eggs of the winning pen. This at the First Missouri Egg-laying Contest.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that should be accepted at once. Address, **HALE PUBLIHING CO., 3550 Vista Ave., St. Louis, Mo.**



There are 202,336 farms in Illinois that sell more or less dairy products.

Uncle Sam Knows How to Raise Chickens

and he tells you all his secrets in **UNCLE SAM'S POULTRY BOOK** the world's only complete official guide to poultry culture. Written by government experts and sold for only 20 cents, worth $10.00, and by our plan you can have 50c. back. Send today two dimes or 10 2-cent stamps.

Uncle Sam says use an incubator and the **Sure Hatch** is built just as he says. **Guaranteed for 5 years.** Freight paid and 60 days free trial. Get Free Catalog.

Successful In Any Climate—

The X-Ray Incubator

Shipped *direct* to you from factory. No agents. No dealers. Guaranteed to please you. Freight prepaid *anywhere!* Only incubator made on right principle. Lamp is placed *underneath*—square in the center—and not on the side. Thus the X-Ray has perfect distribution of heat all throughout egg-chamber. There's no cold side. Big lamp holds four to eight quarts of oil—fill it once for a hatch.

X-RAY INCUBATOR

—has patented automatic trip. That cuts flame down at *burner* when egg-chamber gets too hot. So there's no waste, no excess heat. Thus only one gallon of oil is needed. These time and labor-saving features are wonderful! Think of operating a guaranteed incubator that

Uses Only One Gallon Oil to a Hatch—Lamp Only Has to be filled once!

And there are many other patented features. Top has two double glass panels—Thermometer in sight always. Eggs are never removed from X-Ray. To ventilate or turn eggs simply raise lid. Write today for Free Book No 96 on X-Ray Incubators and Brooders. X-Ray Brooder guaranteed to raise *every* chick worth raising.

We pay freight.

X-Ray Incubator Co. Wayne, Nebr.

THE X-RAY

Big Money this Year in Poultry and Eggs

1913 promises to break all records in poultry and egg profits. Prices are high now—and will stay high. Cost of production is low. Farmers, their wives and daughters, will make a big share of this 1913 poultry money. But the way to do it is to be rightly equipped—with the right knowledge—with the right tools!

"Profitable Poultry and Egg Production" is the title of our big, FREE 1913 Year Book that gives the latest facts, the most successful methods, the most reliable advice on poultry raising. It is worth many dollars to any one who raises chickens.

Cyphers INCUBATORS and BROODERS

are selected by farmers, who insist upon a high standard of quality in every tool used on their farm! *Absolutely reliable.* They mean high percentage hatches and chicks that live—no heat or moisture troubles. Substantial, fireproof, dependable. Write today for the 244-page Book, and for full information about Cyphers Company "Free Bulletin and Personal Letter Service," which makes our customers still more successful.

CORN GROWERS AND STOCKMEN.

Annual Round-up at the Illinois State College of Agriculture of the Corn Growers and Stockmen.

Commencing Monday, January 13, at 8:00 a. m., and terminating Friday, January 24, the Illinois State Agricultural College will entertain the Corn Growers' and Stockmen's Convention with lectures and practical demonstration work, including farm mechanics.

The mechanical instruction includes tractor demonstration and inspection of farm machinery, lecture on soldering, rope work, farm tractor again, farm concrete construction, demonstration of forge work, ignition for gas engines, how to make concrete fence posts, farm shop and power plant, haying and harvest machinery, silo construction, benefits and details of land drainage, heating and water supply system, brazing, and care and operation of farm machinery. There are two demonstrations daily, fitting in the farm mechanics with other exercises.

In the list of morning lectures we find "The Use of Commercial Fertilizers" by Prof. C. G. Hopkins; "Soy Beans as a Profitable Farm Crop" by Prof. Leonard Hegnauer; "Some Things Farmers Should Know About Meats" by Prof. L. D. Hall; "Cattle Feeding, Producing International Winners in Car-loads," by Mr. E. P. Hall, Mechanicsburg, Ill.; "Problems and Work That Should be Done by County Agricultural Advisers" by Mr. W. G. Eckhardt, DeKalb county; "The Silo as a Factor in the Production of Live Stock" by Prof. W. F. Handochin; "Illinois Roads" by A. N. Johnson, State Highway Commissioner; "Illinois Alfalfa Growers' Association" by Hon. A. P. Grout, of Winchester; "Co-operative or Community Work For the Control of Insect Pests" by Dr. S. A. Forbes.

The afternoon sessions include "Plant Wounds and Their Healing" by Dr. C. F. Hottes; "The Value of Insect-eating Birds to the People" by Geo. O. Shields; "Present Condition at the College and Station" by Prof. E. Davenport; "European Farm Conditions, Illustrated," by Mr. C. C. Pervier; "Road Improvement" by Homer J. Trice; "Fence Construction, Illustrated," by J. W. Meaker, Jr., of the American Steel and Wire Company; "The Dawn of Plenty, Illustrated," by a representative of the International Harvester Company; "The New Thing in Education" by Supt. O. J. Kern; "Domestic Science" by Miss Mary Snow, of Chicago.

There will be lectures on feeding and management of cattle, horses, sheep, swine, dairy work, study of soils, poultry farming, etc. It looks like two-weeks' good, active instruction for those who go to Urbana, Ill., January 13 to 24.

Asset or Liability.

The grain crop is a liability—the cattle crop an asset. This is the way Ed. H. Webster, Dean Kansas Agricultural College, compares the grain and stock raising.

This may seem a little severe, but an analysis of the two will bear out the statement. Grain farming reduces the fertility. Stock raising increases the humus in the soil. Grain raising decreases it. Grain farming spoils the mechanical condition of the soil—stock raising improves it. Grain raising fosters weeds, plant diseases and insects—and stock raising decreases them. Grain raising results in decreasing yields. Stock raising increases them. Stock raising develops thrift—pay as you go. Grain raising develops the credit system. Grain raising brings the mortgage. Stock raising pays it off. The labor for grain raising is expensive—that for stock raising is cheaper in that it is engaged by the year. Grain raising is dependent on the season—often resulting in failure. Stock raising is quite independent of the season. Taking care of stock is a splendid training for children. People with the instinct for stock raising are and have been the dominant people in the world. Grain raising is a soil robber; hence it is only possible on a new soil, and then only for a short time.

The aim of every farmer should be to gradually work into some kind of stock raising. The ideal is to mix grain raising and stock raising. In this way as much grain can be grown on the farm as though it were all given to grain, as the yield will be larger, due to increased fertility, less number of weeds, less plant disease, better mechanical condition of the soil, etc.

The only permanent agriculture is that which is based on stock raising, and permanent agriculture means profitable agriculture.—W.C.Palmer, of North Dakota Agricultural College.

Hair From Angora Goats.

The total mohair production in the United States during the census year 1909 was 1,682,912 pounds.

Each a Lucky Car

By R. E. Olds, Designer

In every make an occasional car proves almost trouble-proof. No breakdowns, no repairs.

The man who gets it tells his friends he got a lucky car.

But every buyer of Reo the Fifth gets a lucky car. This is how I insure it.

How I Do It

A lucky car means simply a car built with proper care and caution. I have spent 26 years in learning all that is necessary.

I have all of my steel made to formula. Then every lot is analyzed twice to prove its accord with the formula.

Then the finished parts are tested. In every part I require over-capacity, not less than 50 per cent.

The gears are tested in a crushing machine, to prove that each tooth will stand 75,000 pounds.

Springs are tested in another machine for 100,000 vibrations

Added Cost

I use big tires—34x4—to save you tire expense and trouble. This year, by adding 30 per cent to my tire cost, I have added 65 per cent to the average tire mileage.

I use in this car 190 drop forgings, to avoid all hidden flaws. Steel castings would cost half as much.

I use 15 roller bearings—11 of them Timken, 4 Hyatt High Duty. The usual ball bearings cost one-fifth as much, but ball bearings often break.

I use a $75 magneto to save ignition troubles.

I doubly heat my carburetor—with hot air and hot water—to deal with low-grade gasoline.

I use a centrifugal pump, instead of a syphon, to insure positive circulation.

I use 14-inch brake drums for safety. Also seven-leaf springs, two inches wide.

1,000 Tests

The various parts of this car, during the making, get a thousand tests and inspections.

Each engine, for instance, is tested 48 hours—20 hours on blocks, 28 hours in the chassis.

Fitted parts are ground over and over, until we get utter exactness.

Each body is finished with 17 coats. It is deeply upholstered with genuine leather, filled with the best curled hair.

The electric dash lights are set flush with the dashboard. Thus the car's appearance shows the care we use.

Center Control

No other car has such easy control as you find in this Reo the Fifth.

All the gear shifting is done by moving a handle only three inches in each of four directions.

Both brakes are operated by foot pedals. So the car has no levers, either side or center, to clog the way in front.

You get in this car the wanted left side drive. The driver sits close to the cars he passes. Yet you shift the gears with your right hand, just as with the old right hand drive.

Costs Me $200 Per Car

Reo the Fifth, without these precautions, could be easily built for $200 less. For the first few months you might not know the difference. But in years to come this skimping might cost you several times $200.

I know this well, for I have built cars for 26 years — over 60,000 of them. I know the cause of troubles.

I save this $200 per car by building only one model, by building all my own parts, by wonderful factory efficiency. And I put that saving into these extremes, to save you after-cost.

If you think that it pays to have a car like this, ask us to send you the details.

Our thousand dealers now are showing the 1913 model of Reo the Fifth. Write for our catalog and we will tell you where to see the car.

Address,

J.G.TRUMAN, Manager, Bushnell, Ill.

I. C. AND CHESTER WHITE BOARS AND GILTS. No kin. Bred Sows, young herds, a specialty; prolific, large kind; all ages. Pedigrees furnished. Prices reasonable.

FRED RUEBUSCH, Sciota, Illinois.

SALE OF HOLSTEIN CATTLE.
Cows, Heifers and Young Bulls.

I will sell the following high-grade Holsteins. They have plenty of quality and breeding and are in good condition:

50 Yearling Heifers and 50 1½-year-old Heifers—just being bred to a son of a 24-pound dam.

100 2 to 2½-year-old Heifers and 100 2½ to 3-year-old Heifers—bred to a high-class registered Bull; to freshen from December 1, 1912, to March 1, 1913.

250 Matured Cows, very heavy producers, springing up ready to freshen soon; most of them in calf from registered Bulls.

A number of high-colored, registered Bulls, ranging in age from six months up, out of heavy producing dams, and selected especially to head choice herds. Can fill any order, from one animal up. Have a small surplus of excellent registered Cows and Heifers I will dispose of. Write me regarding your wants.

JAMES DORSEY, Dept. F & S G, Gilberts, Kane County, Illinois.

BUY GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.

WILLARD MILLER, R.F.D. 2, Anita, Iowa.

JACKS AND SADDLERS.

KENTUCKY MAMMOTH JACKS from one to six years old. Saddle Stallions, Mares, Colts and Fillies of the very best breeding. Hampshire Swine and Big Black Pigs. Write your wants or visit the Cook Farms.

J. F. COOK, Lexington, Ky.

PURE-BRED REGISTERED ANGORA GOATS,

Bred from the choicest strains of imported Angora Goats. Sweepstakes and First-prize Winners at the American Royal Show. Satisfaction guaranteed.

R. C. JOHNSTON, Lawrence, Kansas.

JACKS and PERCHERONS. We have forty-five of the biggest-bone and best Mammoth Jacks in Kentucky. Registered Percheron Stallions from $250 to $750. Percheron Mares, Saddlers, Hampshire and Tamworth Hogs. Write for circular and visit the Cloverdale Farm.

H. T. BROWN & CO., Lexington, Ky.

TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed; early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at the State Fairs of the year 1912, including a bunch of championships. Imported stock owned by me were winners at Royal Show, London, England, 1907. Mature Sows will fatten from 600 to over 700 pounds; Boars 1,000 to 1,200 pounds. **CHAS. FORD, Mortonsville, Woodford County, Kentucky.**

REGISTERED LARGE YORKSHIRES
THE BREAKFAST BACON HOG.

That's the meaning of those long, deep, sides—choicest, sweet, tender, fresh pork.

HEALTHY, EARLIEST TO MATURE, PROLIFIC.

Splendid hustlers; relishes all kinds of feed, pasturage and cured forage.

THEY CROSS OUT GREAT ON LARD TYPE.

Write for descriptive booklet.

T. C. KIMBER, Box 1212, St. Louis Mo.

HOGS! HOGS! For Sale: REGISTERED Poland-Chinas and big English Berkshires. Champion Boars of Mo. State Fair, 1912, for sale at right price. S. C. Brown Leghorns that lay and weigh.

See or write **S. Y. BURKS, Bolivar, Mo.**

POLAND-CHINAS OF BEST STRAINS.

For size and quality unsurpassed. Spring Gilts and Summer Boars and Gilts, $16 to $18; Fall Pigs, $12 to $13. Choice Sows bred to Longfellow's Special, 64,200, the best Big Type Boar I ever saw; very long, deep, wide body; big bone and extra short, wide head. I must sell some of my Sows, not having room. Hogs are priced to sell at once. Many satisfied customers in thirty-seven states. Catalogue free.

A. F. SIEFKER, R.F.D. No. 1, Defiance, Mo.

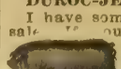
MISSOURI HERD OF TAMWORTH SWINE.

The hog that crosses best with the chunky breeds; the hog resistant to diseases; the hog of large litters; the hog that turns grass into pork. Write for prices.

W. J. WHITE, R. F. D. 2, Butler, Mo.

DUROC-JERSEY SWINE FOR SALE.

I have some extra good Duroc-Jerseys for sale. If you want something as good as will be found in any of the best herds, I have it of either sex, from pigs to yearlings. Write me what you wish to purchase. All inquiries promptly answered.



J. E. WELLER, Faucet, Mo.

CHAMPION SEED CORN PREMIUMS.

Offered to Our Readers Who Send Us a Special Subscription—Yellow Dent Corn Pure Bred Since 1847.

Johnson County White Corn That Won Many Grand Championships.

The subject of seed corn is of the utmost importance, especially at this time. Pretty good seed corn is easy to get, but superior seed corn is scarce. Even the best seed corn growers have good and bad seasons,

AN IMPROVED EAR OF CORN.

and there is great variation, one year with another, in vitality and quality of their seeds.

Only one thing can be guaranteed, and that is, pure-bred seeds, like pure-bred animals, produce true to type, and sometimes there is worked out an almost imperceptible improvement. The road to improvement is rough and rocky, and upon it there are many obstacles; but ultimate success is possible, and only possible by using seeds of the right breeding and quality. The backward road is easy to travel by using seeds of no breeding and only containing the qualities that even negligence cannot destroy. Promiscuous seeding of unknown corn results in smaller crops of low-grade corn. Nature may save the crop by an excellent season, but the general result is bad.

As a step towards general improvement, every corn grower should have one or more experimental plots each year, using small quantities of different seeds. The National Farmer and Stock Grower has furnished opportunities for farmers to obtain such seeds for the past five years.

We are now distributing small quantities of seed corn distinctly different and grown by two great corn improvers—one, D. L. Pascal of Iowa, who has grown Reid's Yellow Dent Corn that he obtained pure from the originator. Mr. Pascal has won many prizes. The other eminent breeder is the famous L. B. Clore, of Indiana, growing Johnson County White Corn. His World's Fair and National Corn Show championships are many, and no corn improver on the face of the earth is his equal.

We have bought seed corn from Mr. Pascal and we have bought seed corn from Mr. Clore. and it will be delivered us in January. We will send it out in twenty-ounce packages as subscription premiums. We charge the regular price for the paper, 50 cents, and 10 cents postage on the corn. We make no charge for the corn. The quantity is amply sufficient for experimental purposes.

Our Subscription Proposition.

The postage on twenty ounces of seed is 10 cents; therefore we make this proposition: Anyone who will send us the amount of sixty (60) cents we will send The National Farmer and Stock Grower for one year, and we will send as a premium a package containing twenty ounces of Yellow Dent Seed Corn grown by Mr. Pascal; or, if preferred, we will send twenty ounces of Johnson County White Corn grown by Mr. Clore. Take your pick of which corn you desire, and if you wish both kinds, send one dollar ($1.00) and be credited with two-years' subscription and two twenty-ounce packages of seed corn. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

OF VALUE TO HORSEMEN.

As the winter season is on it is necessary to combat the ravages of distemper among colts, mares and stallions. Frazier's Distemper Cure is advertised in this paper. Horsemen have been using this remedy for twenty-five years. Send for Frazier's New Horse Book, containing a vast amount of valuable information. It is sent free. The $1.00 bottles of Frazier's Distemper Cure contain three times the quantity of the 50-cent size. Address, Binkley Medical Co., Dept. H, Nappanee, Ind.

MILITARY HORSES.

Thoroughbred, Morgan, Trotters and Saddlers—Horses Purchased to Sire Cavalry Horses.

Under the provisions of the current appropriation act for the Department of Agriculture, authorizing the inauguration of experiments in the breeding of horses for military purposes and providing $50,000 for that purpose, the Secretary of Agriculture, with the concurrence of the Secretary of War, has appointed the following gentlemen as advisory agents in the selection of stallions and to assist in the operation of the government's plan: Mr. Henry Fairfax, of Virginia, for thoroughbreds; Mr. C. L. Bailey of Kentucky, for American saddle horses; Mr. Walter Palmer, of Illinois, for standard-breds; Mr. Maxwell Evarts, of Vermont, for Morgans.

Each gentleman acts with the officers of the government in the selection of stallions of the breed he represents. The Secretary of War has designated Lieut. Col. D. S. Stanley, of the Quartermaster's Corps, to represent the Army, and the Secretary of Agriculture has designated Mr. George M. Rommel, Chief of the Animal Husbandry Division of the Bureau of Animal Industry, to represent the Department of Agriculture.

Thirteen stallions have been purchased to date, as follows:

Thoroughbreds—Gold Heels by The Bard; dam, Heel and Toe; Charcot by Common; dam, Spanish Match.

Saddle horses.—Young Bill by Golden King; dam by Bourbon Chief; Fair Acre King by Bourbon King; dam, Aletha Chief; Richmond Choice by Rex Peavine; dam by King Richard.

Standard-breds.—MacNunne by MacDougall; dam, The Nunne; Sigler by Red Medium; dam, Maud Sigler; BeGue by Wiggins; dam, Lady Crescent; Twilight M., by Delmont, Jr.; dam, May Fry; Lord Rion by Arion; dam, Madge Fullerton.

Morgans.—Daniel Webster Lambert by Joe Allen; Madison Lambert by Lambert B.; Prince M., by Ethan Allen, 3d; dam, Topsy M.

All of these horses are well bred and registered, and some are well-known individuals. Gold Heels, for example, had a conspicuous career on the turf; Common, the sire of Charcot, was by Isonomy, winner of the Derby and other important stakes in England. All the saddle horses thus far purchased have had winning records at the Kentucky Fairs. Of the standard-breds, MacNunne is notable in that he, like Carmon, at the Colorado stud of the Department of Agriculture, is a grandson of Robert McGregor. Sigler was first in two-year-old class for standard-bred trotters at the National Horse Show of 1911; and Lord Rion's sire, Arion, sold for $125,000. The Morgans thus far purchased are excellent representatives of the breed and should prove useful as sires of cavalry horses of good size and conformation. The sire of Prince M., Ethan Allen, 3d, has left a remarkable impress on the character of the Morgans of the east side of Vermont.

The Department of Agriculture expects to make other purchases during the winter.

Best Load on the Market.

On the last day of December, 1912, Cherry & Son, of Macoupin county, Ill., marketed twenty-four head of 1,294-pound beef steers at $8.75 per 100 pounds. It was the best load of cattle on the market that day. Other sales included forty head, 1,203 pounds, at $8.50 per 100 pounds; forty head, 1,356 pounds, at $8.25 per 100 pounds.

Colorado Lambs at St. Louis.

H. E. Spencer, of San Luis Valley, Colorado, marketed 204 head of 80-pound lambs at St. Louis that sold at $8.90 per 100 pounds. It was on the last day of 1912 and the price the highest of the season. H. J. Gilbraith, another well-known sheepman of the San Luis Valley, Colorado, marketed 247 lambs that averaged 72 pounds and brought $8.80 per 100 pounds.

A $10,000.00 Horse.

Trumans' Pioneer Stud Farm, of Bushnell, Ill., writing under date of December 24th, said: "We have sold our International (Olympia) champion Percheron stallion Intitule to Samuel Insull, Esq., President of the Commonwealth Edison Company, to place at the head of his stud of Percherons at Hawthorne Farm, Libertyville, Ill. Intitule was placed second in the aged class at the last International and was considered by good judges one of the grandest specimens of the breed ever imported to this country. The price paid for this horse was $10,000. We also sold our grand champion Percheron mare at the International to Thomas O. Plant, Esq., of New York."

THE HERCULES TRIPLE-POWER STUMP PULLER AT WORK.—The scene is on the farm of Mr. Tony Sump, near Winkler, Kansas, who writes to the editor of The National Farmer and Stock Grower as follows: "About a year ago I purchased a Triple-power Stump Puller from the Hercules Company, of Centerville, Iowa. I have given it a test of the severest kind—pulled white elm stumps, green, eighteen inches in diameter and four to five feet deep in ground to first root. (These trees were in an old creek bed.) This, I must say, as for strength and power, it is impossible to express in words." The advt. of the Hercules Stump Puller is on page 14.

Read These Letters

I have been in the hog business for 30 years and have tried every known remedy for hogs, but have never found anything equal to your Sal-Vet. It certainly does the work and is easy to feed. I feed it to little pigs, boars, pregnant sows and find it O. K. I will never be without Sal-Vet.

C. F. MARSHALL & SON,
Per G. F. M. Monroe, Ia.

"I had a lot of sick hogs and I lost five of them. I began feeding them Sal-Vet, my losses stopped and the hogs soon got into a fine, healthy condition.

V. P. UNDERWOOD,
R. D. No. 1, Roachdale, Ind.

While I cannot say positively Sal-Vet kept my hogs from having Cholera, I had no such sickness while my neighbors almost without exception lost hogs from Cholera. I certainly have great faith in Sal-Vet and it is all and more than you claim for it.

J. C. CONOVER,
Chrisman, Ill.

I used your Sal-Vet regularly while feeding a bunch of fattening hogs and can say it is just the article. It made my hogs double their weight in 50 days. It is a great conditioner and worm destroyer.—E. E. SHULL, LaCygne.

I'll Stop Your Worm Losses I'll Prove It Before You Pay

Don't let worms breed **contagious diseases** among your hogs this year. Don't let them kill off the young pigs and rob you of your season's profits. You can **prevent it** if you will just take "a stitch in time." **Now** is the time when worms begin to get in their **deadly** work. **Now** they are breeding, multiplying by the millions in the stomach and intestines, and if you don't get the best of them, they will surely get the best of you. Let me show you how. I'll get rid of stomach and free intestinal worms in your hogs, sheep, horses and cattle and prove it to your satisfaction (not mine) before you pay me a cent. I'll do it with

Beware of Imitations — **SAL-VET** — **Look at the Name Carefully**

The Great Worm Destroyer and Conditioner

I've done it for thousands and in addition they write me they never had stock thrive better, look better and bring them such profitable returns. Here is my offer to you.

Send No Money—Just the Coupon

Simply fill in the coupon, tell me how many head of hogs, sheep, horses and cattle you have. I will then ship you enough Sal-Vet to last them 60 days. You pay the small freight charge when it arrives—put it where all your stock can get free access to it—**and they will doctor themselves.** They eat it as they do salt—just as they need it, and at the end of the 60 days if you don't feel **satisfied,** write me and I'll cancel the charge. I take your word as final—I let you act as judge of its merit—I put everything up to you. How can you risk loss—how can you let your stock drag along when they should be thriving, growing into profit when such a fair, open offer like this is put at your disposal? You have all to gain—nothing to risk. Fill out and mail the coupon **now.** Don't put it off—lest you forget. Read the letters above.

Get Your Canadian Home From the Canadian Pacific

THE richest virgin soil is waiting for you in **Manitoba, Saskatchewan** and **Alberta.** Go where you can prosper, earn a farm home in a few years—farmers have paid for their farms with one crop. First prize of $1000.00 for best wheat in the world was awarded by American judges at the New York Land Show to a western Canadian farmer. Anyone can own land in Western Canada.

Land From $10 to $30 An Acre Ten Years in Which to Pay

The Canadian Pacific Railway offers you the finest irrigated lands for intensive farming, and non-irrigated lands with ample rainfall for mixed and grain farming near established towns along its lines. Land adapted to grain growing, to poultry raising, dairying, mixed farming, and cattle, hog, sheep and horse raising. Select your own land. Decide what kind of farming you want to follow, and let the Canadian Pacific Railway put you on the road to fortune.

To workers of farms in the United States having sufficient agricultural experience and equipment, the Canadian Pacific will loan money for a period of ten years at 6% for the purposes of erecting buildings and completing the improvements on their newly purchased Western Canadian farms.

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps with full information **free.** Write today.

A QUESTION OF FOODS.

Remarks on Rations and Climates—Also on Winter and Summer Feeding.

We have been taught that the average composition of animal and human bodies run about five parts of carbohydrate material to one of protein, and that a feed should be balanced in about that proportion. Now comes an English chemist and says that he has been making some experiments and that the proportion of carbohydrates is too low and the proportion of protein too high. He says we should feed about nine parts of carbohydrates to one of protein. At least he says this will apply to human nutrition.

This is important, if true, as the old saying goes. If it is true, it explains why the Chinaman can keep strong on a diet of rice, which has in it a very large proportion of carbohydrate material. It also would make corn a better feeding ration than we have figured on its being. If this latter estimate is near the truth, it will be a great thing for the farmers living east of the Rocky Mountains, for it will make it easier for them to compound rations, since they have a surplus of carbohydrate materials and a deficiency of protein materials.

But the most important bearing will be on the meat foods of human beings. We have leaned strongly towards the lean meats, lean bacon, lean ham, lean mutton, lean beef, if not too lean, when it is tough. It will mean an appreciation of more fat in meats of all kinds. All these fats are made from the carbon of the air; they do not draw anything from the fertility of the soil. Hence the production of fat meat costs less in soil fertility than the production of an equal weight of lean meat.

If we can get along with less protein in our food, we can live more cheaply, for the starchy matter and fatty matter cost less to produce than the proteins, which form the basis for all the lean of meat and the albumen of eggs.

However, the question may not be considered settled. Digestion experiments have to be made with all kinds of animals and in all kinds of temperatures. This makes a great variety of results possible. The person living in a cold climate needs more fat in food than the person living in a warm climate, and the same would be true of animals. Thus, the Esquimo is a fat eater, for he lives where ice fields and snow form most of his landscape and seascape the year around. In his case, the proportion of carbohydrate material to protein should certainly be as high as ten to one. But in the tropics, where the sun supplies more heat than is necessary, man does not need a food with large fuel content, and it should be true that not more than five parts of carbohydrates to one of protein are needed. The carbohydrates are burned up to give force, while the proteins are utilized in the making of muscles, sinews, skin, and the like.

The tendency towards a wider ration is greatly in favor of the feeding of more silage. The one objection to silage has been the fact that it has in it a very large proportion of the carbohydrate material to the protein present. At least in cold weather this is not as objectionable as it might seem, for the animals are using up a very great quantity of heat-making food.

There ought really to be a wider ration fed in the winter than in the summer, because of the demands on the food for heat production. This applies to both men and animals. We have not generally taken much account of it in the making of our balanced rations; but it is certain that a wider ration is profitable in the winter than in the summer.

"He That Ruleth Himself."

Rufus Bailey, an overgrown lad of sixteen, was the despair of his little, rather weak mother and also of his big, burly father, as well as the trial of every teacher who taught the County Line School. Regularly each term he was suspended from the school and re-enrolled at the intercession of his mother, who, with tears, declared she tried to make Rufus a good boy. And the burly father did the best he knew, too, and was continually threatening the boy with punishment if he misbehaved. The punishment was frequently administered.

When Miss Carmen came to teach the County Line School the President of the Board of Directors took it upon himself to "post" her regarding every child in the school. She held up her hand to silence him. "Don't tell me a thing. I do not care to be prejudiced." Thus it came that she knew not that Rufus' deportment mark had several times been zero, and that it had never been above fifty.

The first day she was at the school she wrote upon the square of blackboard behind her desk the words: "He that ruleth himself is greater than he that taketh a city." She drew a small scroll beneath the words and in the scroll she wrote the name of every pupil in the room. She read aloud the accounts of the taking of several cities. The big boys, especially, drank in every word and thrilled with a vague hope that perhaps some day they might be the actors in some such scenes. Then Miss Carmen said: "It is a great thing to win such victories. 'But he that ruleth himself is greater than he that taketh a city.' When I find that a boy or girl does not know how to rule himself or herself, I will erase his or her name from this roll of honor. The name will be put back on again only after the pupil has proved that he can rule himself."

Rufus was puzzled. His mother had begged him to be good and weakly scolded him when he was bad ever since he could remember. His father had strongly scolded him and many times whipped him. Teachers had striven to compel obedience by force. But no one had ever told him it was his business to rule himself, and that by so doing he could achieve greatness. It was a wholly new phase of the matter. Hitherto he had openly defied his teachers and thought himself a great fellow for so doing. Now he began dimly to see that in making necessary all of those previous punishments he had shown himself a weakling incapable of ruling himself. Half a dozen times that day Rufus forced wandering thoughts back to the lessons. Twice his hand was extended to give a black-and-blue pinch to the arm of the boy in front of him, but the hand was withdrawn and the arm went unpinched. He started to shuffle across the room—one of his old tricks of annoying the teacher—then drew himself up and crossed the room swiftly and quietly. When evening came his name was still on the roll of honor, and he let out a yell of victory and suppressed energy as he tore down the path toward home. He felt many times a conqueror. Ruling himself! Gee, why hadn't somebody thought of it before!

When, at the end of the first month, Rufus presented a report card, showing his deportment to be one hundred, his mother cried for joy, but his father said: "So you've got an easy mark for a teacher, have you. I didn't think she'd be any good. Doesn't know a bad boy from a good one."

The two following report cards showed the same record for deportment. Then Mr. Bailey seized his cap and started for the school, muttering darkly: "I'll break in on their bedlam and give her a surprise. Then I'll ask how she dares to give the lie like that and mark all those cantankerous youngsters one hundred in deportment!"

But the school room seemed to Mr. Bailey a strangely unfamiliar place. For one thing, he did not have to dodge spitballs and another when he wished to speak to the teacher; he did not have to get close to her and shout in her ear.

"How do you make them mind and make them study so hard!" he demanded when he had a chance to speak to Miss Carmen.

"Why, I don't make them," replied Miss Carmen. "They make themselves mind and they make themselves work. See, here is our motto: 'He that ruleth himself is greater than he that taketh a city.' The boys are striving for that greatness, and they won't allow themselves to be beaten at their game of ruling themselves."

"Well, well, you sure are a bright one!" said Mr. Bailey, admiringly. "Here ma and myself have been working our hardest, using a stick to help along, trying to rule Rufus, but we never once thought of making him take a hand in it himself."—Janet Thomas Van Osdel.

Banish Those Ugly Pimples

Skin Cleared in a Short Time by Stuart's Calcium Wafers, the Greatest Blood Purifier Known.

Pimples, blotches, skin eruptions of all kinds, are simply the impurities in the blood coming to the surface. All the external treatment in the world won't do a particle of good

Clean Your Back and Face of Pimples.

unless you purify the blood. And there's nothing so humiliating as a face that's all "broken out" and spotted.

Stuart's Calcium Wafers will clear the most obstinate complexion, because they go right into the blood and remove the cause of the trouble. The blood is cleansed of all impurities and foreign substances and these are quickly eliminated from the system. You'll notice a wonderful change in a few days—you will hardly know yourself in a week.

And Stuart's Calcium Wafers are absolutely harmless to any one. Their ingredients are just what a physician prescribes in most cases of skin eruptions and poor blood. These wafers are put up in a concentrated form, which makes them act quickly and thoroughly.

Begin taking Stuart's Calcium Wafers today and then look at yourself in the mirror in a few days and find all those awful pimples, blackheads, acne, boils, liver spots, rash, eczema and that muddy complexion rapidly disappearing and your face cleared like the petal of a flower.

You can obtain Stuart's Calcium Wafers at any drug store at 50 cents and there is now no reason why anyone should be disfigured by pimples or any other skin eruption.

Mome-made Dressmaking Form.

A woman who does her own sewing can do more satisfactory work if she has a form counterparting her own measurements on which to fit garments. The cost of the bought forms is an item, but one can be made at home at almost no expense. Take a plain waist which fits perfectly. Cut oval pieces of material to fit in the neck, the ends of the sleeves and the bottom of the waist. Sew the pieces on the neck and the ends of the sleeves. Then fill the form with sawdust or bran, cramming the filling well into the sleeves and all of the curves. When filled, sew on the bottom piece of goods. Mount this form on a table, stand or broomstick—anything that will bring it to the exact height of the figure it duplicates. Thus skirts can be hung upon it as well as waists fitted.—Janet Thomas Van Osdel.

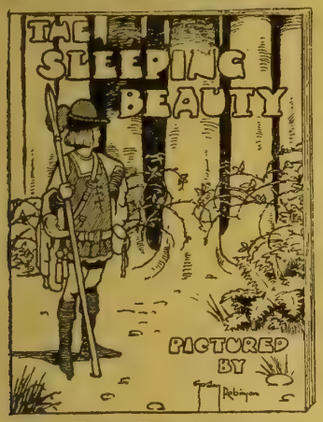
Don't forget the National Corn Show.

TOY BOOK PREMIUMS.

Pleasure and Instruction For Children, Especially During the Holiday Season.

We are always on the lookout for something that will please the children and at the same time be of an educational advantage to them. Our beautiful toy books, the first we have ever used as a subscription premium, are delighting the hearts of the little ones, and we are greatly pleased to consider these books as one of our very best premiums. We are issuing these toy books as supplementary premiums to The National Farmer and Stock Grower. These toy books are substantial, beautifully colored, illuminated. The illustrations are wonderfully beautiful. They are astonishing in the delightful coloring. There are four sets. They are as follows:

Animal Series.
No. 101—Three Bears.
No. 102—Three Kittens.
No. 103—Ten Little Pigs.
No. 104—Noah's Aark.



Fairy Tale Series.

In offering these delightful toy books we make two propositions:

1. Send us twenty-five (25) cents for six-months' subscription to The National Farmer and Stock Grower and you can select one set of four (4) toy books.

2. We publish the Universal Magazine. It is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. Send us twenty-five (25) cents and we will send you the Universal Magazine for one year and you can select a set of four (4) toy books as a premium.

Order toy books by numbers. Select either four you desire. Address your orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Variety From One Recipe.

Some years ago we knew a friend who always prided herself on having three kinds of cake for company; and this is how she did it: A small light cake and a dark one of equal size were made at the time. When ready to bake, part of one was put in one end of a long pan and the same amount of the other at the opposite end. The dough that was left in each dish was put in the middle of the pan, a spoonful at a time, the light and dark parts being artistically arranged. And thus she had white cake, spice or chocolote cake and marble cake with a very little extra work.

A single recipe may be varied only a little and still give the variety wished by the family without the deviations which mean new recipes to confuse and test the skill. One tried-and-true way may always be depended upon, and this without the necessity of hunting up the cook book or of burdening the mind with a load of rules. One woman finds her favorite recipe for molasses ginger cake capable of several variations. It originally reads: Porto Rico molasses, two cups; good half cup shortening. Melt, turn in molasses, then add two teaspoonfuls dry soda, and when it foams stir in a cup of water, a teaspoonful of ginger, one of salt, and three and one-half cups of flour. Bake slowly.

If a ginger cake is not wanted, she follows the same recipe, but substitutes cinnamon or other spices for the ginger. Again, a small piece of chocolate is melted and added to the dough, and if company is expected a dark cake, relished by all, results with the aid of a little frosting. If the molasses is very dark, half sugar may be used. Your own favorite recipe will doubtless admit of as many changes, though the above is a cheap cake, especially when eggs are scarce. The idea of departing from iron-clad rules may prove helpful to secure variety and at the same time solve the problem when one regular ingredient is lacking.—Bessie L. Putnam.

Taffy Apples.

These are toothsome goodies of which few country children know, but they are easily prepared. Select sound, ripe apples and rub them clean. Cut pine sticks eight or ten inches long, sharpen to a point on one end and insert one in each apple. For the syrup, boil two cupfuls of granulated sugar and one-fourth cup of water until it hairs. To tell when it hairs, let some of the boiling sugar drop from a fork and when a strand of it, instead of dropping into the pan, runs off into a fluffy hair, it is time to remove the syrup. Let it cool for two minutes, then twirl the apples around and around in it until they are well coated. Set them upon waxed paper or a buttered platter in a cool place until the taffy hardens. —Janet Thomas Van Osdel.

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

START YOUR LIBRARY.

The First Book to Buy is the Most Valuable Book Placed on the Market in Twenty Years.

Every man and boy should own a library. It is easy to obtain a nice lot of books. A splendid book to begin with is "The American Government," by Frederick J. Haskin, which is a valuable book for any American between the age of nine and ninety years.

No other book explains so clearly what our government consists of. The articles upon the Presidency, the Senate, the House of Representatives are alone sufficient to place the book on the top shelf of the home libraries and in the 386 pages there are thirty distinct articles, each one of them complete with information concerning a government department.

The "American Government" clears the mind of many doubts and answers many questions. A Congressman serving his first term needs such a book before he goes to Washington, and Mr. Haskin has produced a book of which 175,000 copies were sold the first year.

We will recommend other books, but "The American Government" is a first-class book for No. 1 in a farm library. We have adopted "The American Government," handsome cloth-bound edition, as a subscription premium in connection with The National Farmer and Stock Grower. Anyone who will send One Dollar for two-years subscription to The National Farmer and Stock Grower can select a copy of "The American Government" as a subscription premium, and we will send it postpaid, safe delivery and satisfaction guaranteed. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Rent Money Buys Farms Southwest

This year has been one of the best and most productive the Southwest has ever enjoyed. On land as good as you are now farming enormous crops of all kinds have been raised. The land is so cheap that you can buy a farm for your rent money—thousands of acres of highly productive land at $15, $20 and $25 an acre. This land is tributary to

Rock Island Lines

In Kansas, Missouri, Oklahoma, Texas, the Panhandle Country, Louisiana, Arkansas and New Mexico opportunities for successful farming at low cost are numerous.

An exhaustive study has been made by Prof. H. M. Cottrell, Agricultural Commissioner of Rock Island Lines, of the various sections as to climate, soil, rainfall, what crops bring best returns, etc. This literature is of inestimable value and should be in your hands for study at the earliest moment. A postal card brings it.

8 Hardy Rose Plants Free.

The **Universal Magazine** is a splendid monthly publication; nice, bright, cheerful, illustrated; 32 pages, three columns to page. Devoted to stories, the homestead, good literature, poetry, patterns, embroidery, etc. We have a very liberal offer to make in connection with a subscription to the **Universal Magazine.** Anyone who will send us fifty cents to pay for two-years' subscription to the **Universal Magazine** can select as a Free Premium **Eight Hardy, Ever-blooming Roses,** one-year plants. They are splendid varieties, as follows: **Etoile de France, Yellow Kaiserin, Helen Gould, Clothilde Soupert, President Taft, White Killarney, Marigold** and **Ever-blooming Rambler.** No such collection was ever offered before as a subscription premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Of What Use is Chemistry?

This question has been asked with a bit of contempt, especially as applied to the farm boy and girl. Yet every year is proving more and more that it is of practical value on the farm. Every new fact about soils and soil feeding is of practical adaptation of the principles of chemistry. Every feeding ration based upon the laws of food values is another application. Nor do the boys alone need the study. The increased cost of living has made the food problem one of the utmost importance; and not only what we eat that is of food value, but what we eat that is a positive nutriment must be considered.

And here chemistry steps in, proving the adulterants and injurious preservatives to be in our midst where we least think it. We are shown through the buildings of one of the biggest food-manufacturing concerns, and are more than pleased with the sanitary arrangements throughout, and yet we find later that there are preservatives employed in this very factory that are entirely against the law. Surely we should be glad that our home-grown products are in the majority, so far as our own table is concerned.

Some of the tests for the common adulterants require little skill, while others can only be detected by a complicated process. Yet the results are so useful that the value of chemistry is assured. Anyone can apply the test for oleomargarine or rejuvenated butter by melting the suspected material in a porcelain dish and stirring with a piece of wood. Pure butter boils quietly with much foam, while the spurious products sputter with no foam. For alum in baking powder, put water on logwood chips and bring to a boil, then throw the water away, and renew three times, saving the fourth solution. Fill a small bottle or test tube half full of water and add a teaspoonful of baking powder. Shake until it ceases to foam, then add a little hydrochloric acid. Now add four or five drops of the logwood and see whether the result will be yellow or of a bluish red color, the latter indicating the presence of alum. And thus we may find that the cheap baking powder is in the end an injurious one.

Coffee is one of the staple articles which have of late soared in price, and yet which we cannot ourselves grow. There are so many different kinds on the market that it is well worth the while to compare them as to strength and flavor. Some may cost a few cents more a pound and yet require a less amount per cup, while you get the extra flavor of the pure grain thrown in. Pure coffee usually inclines to float on the surface when cold water is poured over it, while the most common adulterant, chicory, sinks. Pour some of it on a piece of white paper and examine with a small microscope. The surface of pure coffee grains is dull; that of chickory dark and gummy; and broken beans and peas have a polished finish. This, you may say, is not chemistry; but there are other tests which decidedly are, though almost as simple. A common one is a solution of salt, to which the coffee grains are added. If they float, and the color is pale yellow, the coffee is pure. Adulterants usually impart a dark yellow or brown color. Now, some prefer to roast wheat or brown bran and mix with the coffee. This is all very well if it suits your taste, being a saving of money and equally a more wholesome drink. But why pay the grocer more for this amalgamation when you can do it yourself cheaper?

There are many other little kinks which the subtle art reveals. The next generation will consider it as important to know about chemistry as you consider it to know about arithmetic. They will be handicapped in an unequal competition without a general understanding of the underlying principles of the study. It permeates all life, but most surely that of the farm.—Bessie L. Putnam.

World's Greatest Horse Tamer Tells His Secrets in New Book.

Owners of horses will find disclosed secrets of rare value in training horses and breaking colts if they send for a copy of the advanced edition of Prof. Jesse Beery's 1913 prospectus, now off the press. Prof. Beery is recognized by professional trainers as the world's greatest master of horses. His new book is free to those who write for it while the edition lasts.

Prof. Beery, known the world over as the King of Tamers and Trainers, has had a marvelous career. When a boy, his love of horses and amazing insight into their natures led him to the stables. His astonishing control over unruly horses attracted attention, and vicious horse were brought from long distances to be subdued and trained by the "boy wonder." His fame spread and the demand for his services came from widely-scattered communities.

The methods which made Prof. Beery successful in taking vicious, unmanageable and dangerous horses and turning them over in a few days gentle and broken of bad habits have now been written by this master of horses in simple, clear form. Any man can understand them and apply them in breaking and training his own horses or those of others.

Thousands of men who have lost money, time and property through not being able to manage animals which develop bad habits have adopted the Beery system, and with its methods have in a few days accomplished what was before impossible to them. Horses with bad habits can be bought at low cost, and after training by this method are sold at high prices. Hundreds make a business of breaking and training horses by the Beery system. Owners usually pay from $15 to $25 to have their horses tamed, trained, cured of bad habits, or to have their colts broken. A good trainer can always keep his stable full.

If you want to get into a big money-making business, or if you you have a balky, tricky, vicious, dangerous horse that you want to quickly cure of its faults, write for the Beery prospectus on horse training and colt breaking. It will give you valuable knowledge about horses. It may save you a lot of money. It may lead you into a big, profitable business. Write for your copy to-day, before the advance edition is exhausted. Prof. Jesse Beery, Dept. 67, Pleasant Hill, Ohio. See page 9.

DOLLY DIMPLE DRESSING DOLLS.

A Subscription Premium With the Universal Magazine, Published at St. Louis, Mo.

The Dolly Dimple Dressing Dolls are furnished in a cardboard box, and each box contains a cut-out doll with easel back, four dresses and four hats. The dolls are nine inches high. The names of the dolls are "Affectionate Alice," "Baby Betty," "Chubby Caroline" and "Dainty Dorothy." Nothing more satisfactory has ever been offered as a subscription premium with a publication. We have adopted the Dolly Dimple Dressing Dolls as a subscription premium. The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication for the money.

In offering such a premium we are actuated by a desire to place in rural homes these delightful Dolls, which gratify the children, besides having a good influence upon them.

Anyone who will send us 25 cents to pay for one-year's subscription to the UNIVERSAL MAGAZINE can select the Dolly Dimple Series of Dressing Dolls as a subscription premium, and we will send the box postage prepaid, safe delivery guaranteed.

If you don't care to obtain the set of Dolly Dimple Dressing Dolls by subscribing for the UNIVERSAL MAGAZINE, you can obtain a set by sending in 25 cents for six-months' subscription to THE NATIONAL FARMER AND STOCK GROWER, which will serve the purpose equally as well. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Horse and Mule Receipts.

The St.Louis National Stock Yards received 163,500 horses and mules in the year 1912; Chicago, 93,000; Kansas City, 73,000; Omaha, 33,000; St. Joseph, 38,500; and Indianapolis, 18,000. The largest receipts at St. Louis in one year were 181,341 head, in 1904; largest month's receipts, 30,322 head, in January, 1911, largest week's receipts, 7,970, in February, 1911; and largest day's receipts, 4,257, on January 30, 1911.

During the last week in December, D. Cresswell, of Prairie Point, Miss., marketed a load of steers at St.Louis, 920 pounds average, that sold at $6.25 per 100 pounds.

A splendid line of farm land advertising will be found on pages 6, 8, 14 and 23. Buy land before prices advance and make money by doing so.

The Army and Navy Needle Book.

A TEN-CENT PROPOSITION WORTH TEN TIMES AS MUCH. The Army and Navy Needle Book contains five packages of Peerless Steel Needles, warranted; sizes, 3 to 9, 5 to 10, 6 to 7. There is no needle in the market better. There is also an assortment of fifteen other cloth-stuck needles, such as darners, mending needles, stitching needles, crewel needles, glove needles, straw-working needles, worsted needles, etc. The book as a whole cannot be beat. We have adopted the Army and Navy Needle Book as a subscription premium with the **Universal Magazine,** our own publication. It is a thirty-two-page, three-column illustrated monthly magazine. It contains interesting reading, stories, poetry, history, and useful information, fashions, patterns, etc. It is a magazine that recommends itself. Send us 10 cents in silver and we will send you the **Universal Magazine** on a trial subscription for three months, and we will send you one Army and Navy Needle Book. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo. TO CLUB RAISERS:**—Anyone who will get up a club of four subscriptions to the **Universal Magazine** in accordance with this advertisement will be credited with an extra three-months' subscription to the **Universal Magazine** and an extra package of needles will be sent for getting up the club. Don't wait. Remember, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

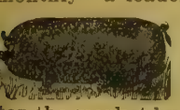
BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed because either paper is worth considerably more than the full price. The papers are as follows:

The National Farmer and Stock Grower—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.



The American Swineherd—issued monthly—a leader in its class. The hog paper. the pig paper, the brood sow paper, and strictly first-class in teaching how to top the market by producing top hogs.

The Shepherds' Journal is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

The Reliable Poultry Journal—the best and most elegant poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. **The Reliable Poultry Journal** is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read **The Reliable Poultry Journal.**

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — For One Dollar ($1.00) enclosed herewith please send us the Big Four Subscription Combination one year, consisting of **The National Farmer and Stock Grower, The American Swineherd, The Shepherds' Journal** and **The Reliable Poultry Journal.**

Profitable Dairying is a handy book advertised on page 4..

Uncle Edward's First Ride on an Elevated Train.

When first the elevated electric road was built in Chicago every little boy longed to ride in one of the new trains, running so smoothly above the streets of the city. Any boy having a five-cent fare could ride to the down-town district of the city, and if he did not get off the train he could go around the loop and home again all on the one fare.

Uncle Edward was then a little boy, and he was quite as anxious to take the ride as were any of the other boys. His mother promised that some day when she went to the down-town stores she would take him with her, but there was a wee baby, and always so much work to be done that she seldom went away from home. So the day of keeping that promise looked far away to Edward.

Spare nickels are scarce in Boydom, and it was some time before any of Edward's chums tried the new road. Then one day two of the most daring of the boys climbed the iron supports that run up the side of the station and so got onto the platform without passing the agent at the gate. When they came back they talked of nothing but that ride, and, of course, it grew more wonderful with each telling.

Edward liked to listen to them, but his legs were rather short and he was not a very good climber. Besides, "sneaking" a ride wasn't exactly to his fancy. He wanted to go to the agent, pay his fare and be rung through the turnstile. But a five-cent piece seemed to be a long time coming his way. He made most of his money selling rags, all of which were turned over to him.

Then there came a glorious surprise! In the back entry, where his mother always put the rags for him, he discovered a big roll of carpet! With a great deal of tugging and pulling and resting in between, he managed to roll it out to the alley and then sat down beside it to watch for a rag collector.

To the first one that came he called: "Want to buy this carpet?" He was a very little boy or perhaps he would have understood that the sudden brightening of the peddler's eyes meant that the man saw a bargain in the carpet. But he only watched eagerly as the man weighed the carpet strip by strip and then grunted out: "Eighty-eight pounds." And Edward promptly told the peddler that he wanted forty-four cents, which was paid without grumbling, to Edward's surprise, for he usually had to argue for his one-half cent a pound.

You can imagine what a fortune that seemed to Edward, who for days had been longing for only five cents. He could have eight rides and four cents left, or he could—then he began to think of some of the other boys who were hoping for a ride. There was lame little Stanley, who never had a penny to spend, because his family wore their rags on their backs; and there was big Joe, who had to watch his little sister while his mother went out washing. Joe would not have been above scaling the elevated supports, but it was quite impossible with a little, two-year-old sister in his arms. The little sister wouldn't cost anything, and Joe could carry her up the stairs.

There were some joyful boys in that neighborhood when Edward told big Joe and lame Stanley about the treat in store for them, and even Baby Rose, big Joe's little sister, gave a crow of delight. Edward felt like a gentleman when he walked up to the little window and said: "I'll pay for three." Behind came big Joe, carrying Baby Rose, and next was little lame Stanley, his crutches clicking joyfully upon the floor. It was a glorious ride and greatly sweetened by the two packages of cracker-jack which Edward bought.

Several weeks after that, when the forty-four cents had all been spent, and Edward was looking about for another chance to earn money, he heard his mother say: "I could hardly believe that Abe did it, but he was the only one working about the place that day and he did look confused when I spoke to him about it."

Abe was the old colored man who cleaned out the furnace and did odd jobs about the place. Edward always had fun with him, so he looked up with interest and asked: "What did Abe do, mamma?"

His mother hesitated a moment before she replied: "I am afraid that he took my carpet that I left out in the entry for him to clean. It was the back parlor carpet. When he went to clean it, he told me it was gone. His son drove up to the back gate that morning to speak with him and I'm afraid that the temptation proved too much."

"Why, mamma, Abe wouldn't steal!" cried Edward. "I took that carpet and sold it for forty-fo r cents to the peddler, but I thought you put it out there for old rags for me."

"Oh, Edward!" groaned his mother. "And that carpet was worth fifteen dollars to me!"

Edward was very sorry, of course, but what could he do about it? His mother saw how badly her boy felt, and so she sent him to tell old Abe his story and bring the old man back to work.—Janet Thomas Van Osdel.

St. Louis Apple Market.

On December 31st, on the St.Louis market, apples in round lots were quoted as follows: Ben Davis at $2.00 to $2.25; choice to fancy Willowtwig at $2.75 to $3.25; Winesap at $2.75 to $4.00; Geniting at $2.75 to $3.00; fancy Grimes' Golden at $3.00 to $3.50; Jonathan at $2.50 to $4.00; Huntsman's Favorite at $2.75 to $3.25; No. 2 and inferior fruit of all kinds at $1.50 to $1.75; New York Greenings at $2.25 to $3.00, delivered; Baldwins at $1.75 to $1.90 for No. 2 to $2.35 to $2.40 for fancy, delivered; Kings at $2.75 to $3.00, delivered; fancy Virginia Yorks at $3.25, delivered; bulk Baldwins dull and lower—car selling at $1.60 to $1.75 per barrel measure, delivered. Sales: Load Eastern mixed varieties at $2.26, delivered; load Baldwins at $2.35, delivered; twenty-three barrels Greenings at $3.00 per barrel, delivered.

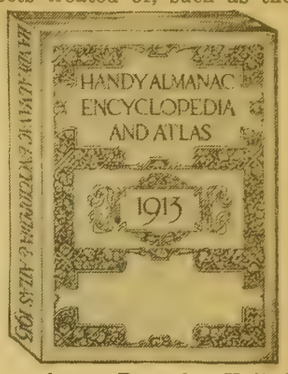
Population has increased 18 per cent. in the last ten years and cattle decreased 2 per cent.

THE HANDY ALMANAC, ENCYCLOPEDIA AND BUSINESS ATLAS FOR THE YEAR 1913.

A Book of Knowledge For Home or Office—Book Mailed Promptly on Receipt of Order.

For the purpose of furnishing the subscribers of THE NATIONAL FARMER AND STOCK GROWER a splendid book of up-to-date information we have published the HANDY ALMANAC AND ENCYCLOPEDIA, a book of 216 pages, 6x9 inches, including a carefully-prepared index and a number of maps printed in colors.

To give an idea of some of the good things it contains we mention the subjects treated of, such as the Postal Banks—the Parcels Post Mail — new Pension Law — new Eight-hour Law — Highest Structures in World — Olympic Records — World's Crops—Aeroplane Records—United States Flag Regulations—Arbitration Treaties—Explanation of Initiative, Referendum and Recall—the Panama Canal—the Panama Exposition—Astronomical Calculations and Eclipses For 1913—How to Foretell the Weather—Average Weather in Various States—Domesic and Foreign Postage—Weights and Measures—Interest Laws—Statute of Limitations—Tariff Law—Sherman Anti-trust Law—Length of Railways and Telegraph Lines—Length of Ocean Cables—World's Longest Bridges—Highest Mountains—Goverments of the World—Sporting World's Records—Important Dates in American History—Rules For Spelling and Punctuation — Household Hints — Cooking Time Table—First Aid to the Injured—Etc.



There is very much more in the book than we have stated, and in addition thereto there is the vote at the Presidential election.

THE NATIONAL FARMER AND STOCK GROWER, issued monthly at St. Louis, Mo., is a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general grain-growing farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains good poultry facts and market information. There are thirty-two pages, four columns to the page.

A Subscription Proposition.

Anyone who pays fifty (50) cents for one-year's subscription to THE NATIONAL FARMER AND STOCK GROWER can select the HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS as a free premium. We will send the book postage paid, safe delivery guaranteed. Money refunded if not satisfied.

SUBSCRIPTION BLANK.

The above patterns will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents for each.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Very Nicely Broken.

Patient (who has met with an accident)—"Is it a bad fracture, doctor?"

Doctor (a surgical enthusiast)—"Bad? Why, it's beautiful, sir; beautiful! The bone is broken in no fewer than thirteen places."—Republic.

No Man in the House.

"John, John!" cried Mrs. Dubbleigh, shaking her husband by the shoulder. "Wake up—there is a man in the house!"

"Nonsense, Susan!" retorted Dubbleigh, shivering with apprehension and hiding his head under the pillow. "Nothing of the sort—"

"Humph!" said Mrs. Dubbleigh. guess you are right. I was referring to you!"—Harper's Weekly.

Returning the Goods.

Madge—"What, you've made up with Jack? Why, I thought you demanded that everything you'd given each other must be returned."

Ethel—"Well, so I did; but he insisted that we begin with the kisses, and then, of course, the jig was up."—Boston Transcript.

Judge of an Omelet.

Two men were hotly discussing the merits of a book. Finally one of them, himself an author, said to the other:

"No, John; you can't appreciate it. You never wrote a book yourself."

"No," retorted John, "and I never laid an egg; but I'm a better judge of an omelet than any hen in the state."—Publisher and Retailer.

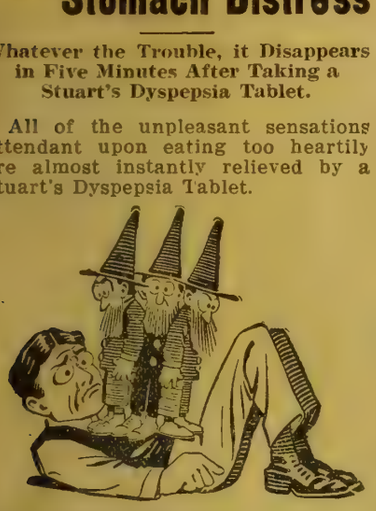
Quickly Dispels Stomach Distress

Whatever the Trouble, it Disappears in Five Minutes After Taking a Stuart's Dyspepsia Tablet.

All of the unpleasant sensations attendant upon eating too heartily are almost instantly relieved by a Stuart's Dyspepsia Tablet.



Heaviness of the Stomach from Undigested Food Quickly Relieved by a Stuart's Dyspepsia Tablet.

When you take food into a stomach that is tired and over-taxed, the gastric juices do not form fast enough to digest it properly. So the food becomes sour and at once begins to throw off gases. Your stomach becomes inflated just as surely as if you attached a toy balloon to a gas jet. Then the gases and foul odors issue forth and pollute your breath. Your tongue quickly becomes coated and you can taste the foulness that is within you.

Now all this condition is changed almost instantly by a Stuart's Dyspepsia Tablet. This little digester gets busy at once—supplies all the digestive elements that were lacking—digests the food in a jiffy and sweetens and refreshes the mucous lining of the stomach and bowels and restores peace and content.

One grain of a single ingredient in Stuart's Dyspepsia Tablets will digest 3,000 grains of food. This saves your stomach and gives it the rest it needs. All muscles require occasional rest if they are ever over-taxed. The stomach is no exception to this rule.

Try a box of Stuart's Dyspepsia Tablets and you will wonder how you ever got along without them. They are sold at 50 cents by all druggists everywhere.

Care of Men's Clothing.

It is a good plan to keep a good cleaning fluid on hand and remove all spots as soon as they appear, and an excellent cleaning fluid is made by shaving two ounces of Castile soap in two quarts of soft water and boiling until thoroughly dissolved. Strain, and when cool add one ounce of sulphuric ether and two ounces of wood alcohol and keep in a closely-corked bottle and shake it well before using.

For removing spots from men's clothing, a small roll of rather heavy, dark cloth tied or sewed together as tightly as possible will be found a great convenience. Dip one end in the cleaning fluid, brush the spots gently with it and rub dry with the other end. This is much better for cleaning than a brush, cloth or sponge.

The best and easiest way to clean the dirty overalls and shirts that are worn by the men on the farm is to soak them in a little lye water, then wash through the last suds. Pull the garments up over the washboard and scrub with a stiff brush with a handle, but rub soap over the most soiled spots first.

When a garment seems clean after the scrubbing, lift it out of the suds without wringing into the rinse water, then into clean water, and do not put the overalls through the wringer, but hang from the line by the hems, inside seams together, as the water will stretch them smooth, so there will be no need of ironing, and when they are cleaned in this way the fabric is saved as well as time and strength.

An old vest can be made to last a long time to work in when the back is worn out by making a new back from the bottom of an old, every-day shirt, leaving it double, and if a vest is too small it can be made large enough by putting a V-shaped piece in the back. Cut the back in the center from the bottom to the collar and set the piece in with the wide part at the bottom of the vest.

When pants and vests have become much soiled it is easier to wash them in hot suds than to try to remove the spots from the fabric.

Sometimes a suit becomes rusty or faded and the cloth is still quite good, and in such cases they are well worth recoloring. One economical woman renewed a rusty black suit by removing all linings and buttons, then the garments were washed clean and recolored a jet black with Diamond dye for wool, and after pressing the cloth carefully, new linings, buttons and braid were used for the new suit, and they looked as nice as new garments. This same woman colored the best parts of an old tan cloth overcoat a rich dark red with the dye for wool and made them into a stylish jacket for her young daughter.

In pressing garments, the cloth should never be pressed so hard as to make it shiny or show marks of the iron, and a seam should never be pressed dry on the outside edges, as they will show through on the right side of the garment, and it takes time and care to press a garment as it should be pressed.—A. M. H.

Among the Culls.

It is easy enough to dispose of the standard cuts of pork, but there are some pieces not so choice which some may discard, while others have each a way of their own for working them up. The head is one of these, head cheese being in the estimation of many as not worth the bother, while others regard it as one of the choicest offerings of the porker. Still others add the liver and find in this an agreeable variety.

The liver cooked alone is a dish not to be despised. The old German way is to slice across the grain, pour boiling water over it and then fry. Some prefer to soak it an hour in cold water; in either case, the rank flavor being largely removed. Those who like fried onions will relish it treated to the boiling water and then placed in hot fat. Over the liver place a layer of sliced onions. Fry all to a rich brown.

The legs are another part which is hard to dispose of, few caring for the meat alone when cooked. Some pickle them, though we prefer to cook them until the flesh cleaves easily from the bones. When cold, chop into mince meat. The hearts may be cooked at the same time and used in the same way. When ready for use, add twice the amount of chopped apples, with boiled cider, sugar, raisins and spices, suet or butter, and you have a mince meat which you know has meat in it—an ingredient notably absent from most of the prepared "mince meats" now on the market.

And Gas Stoves Too

The "scraps" left after rendering the lard are good mixed with the chicken feed once or twice a week, and if salted a little and kept in a cool place they will remain in good condition for some time. And any other parts which cannot be utilized as food will do the fowls as much good as the refuse purchased from the butcher. It may be partly a matter of individual taste, but almost every one can find some use for almost every portion—the question up to you is to decide for yourself on the way you best like the culls.—Bessie L. Putnam.

Top Prices For Durum Wheat.

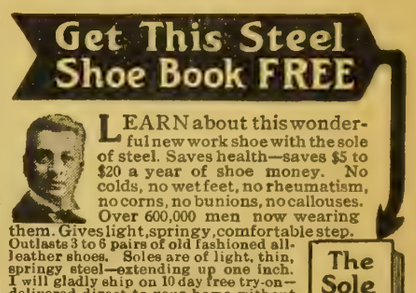
In a conversation had with Secretary Wilson, of the Department of Agriculture, several days ago, he called attention to the fact that the market prices for Durum wheat grown in this country are higher than ever before.

It will be remembered that Durum or Macaroni wheat was introduced to this country by the Secretary of Agriculture in 1898. It came from the dry regions of Southeastern Russia and was introduced as a crop probably adapted to successful cultivation on the semi-arid plains of the West. From the point of view of the dry-land farmer, the crop proved all that was claimed for it by the Federal Department.

The total acreage in this country has advanced rapidly until two or three million acres are grown annually. Exact figures on production are difficult to give because complete statistics on this crop separate from the other classes of wheat have been taken but once, namely in 1899. The states of North Dakota, South Dakota and Minnesota are the leading producers, while Nebraska, Kansas, Colorado, Wyoming and Montana plant smaller areas.

When this wheat first began to appear on the market, a considerable prejudice against it developed on the part of the milling trade, and the price paid for it was as much as 15 cents a bushel lower than for other wheat of a similar quality. This difference in price has been gradually decreasing until for the last three or four weeks; highest cash prices paid daily for Durum wheat on the Duluth and Minneapolis markets have been equal to or as much as five-eighths to seven-eighths cents in advance of those paid for No. 1 Northern, which is the standard and usually the highest-priced wheat on these markets.

The present comparatively high prices of the Durum flour in the making of bread, either alone or in combination with common wheat flour, together with the inability of the Mediterranean markets to obtain Durum wheats from Russia and the Balkan States at present, are responsible for the record prices.



Get This Steel Shoe Book FREE
LEARN about this wonderful new work shoe with the sole of steel. Saves health—saves $5 to $20 a year of shoe money. No colds, no wet feet, no rheumatism, no corns, no bunions, no callouses. The Book of Champions.

"Philip H. Hale, editor of The National Farmer and Stock Grower, in St. Louis, has just published a picture book of 'Live Stock Champions,' which is full of interest to horsemen. It contains 720 indexed portraits of noted animals, among which are scores of thoroughbreds, trotters, Hackneys and draught horses. Schreiber's photographs of Rysdick's Hambletonian, Ethan Allen, George Wilkes and other old-time trotters make the book of lasting value to votaries of harness racing."—New York Herald. See page 7.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use oil. He calls it powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 66 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

The Home Dressmaker.

Many housewives are compelled to do their own dressmaking through lack of means to hire. Some of these regard it as a hardship—not so often because of the extra work required as because they do not know how to do it properly; and after they have ripped out and re-sewed or fitted over over until thoroughly tired of the whole thing, it lacks the "style" desired, and is permanently stamped for what it is—amateurish.

Some of us are inclined to look back longingly at the times of grandmother, whose sampler was the A B C of the necessary sewing; who had her daily stint and worked on every kind of task until the stitch and all the necessary kinks were mastered. But then sewing was a far less complicated process, and the making of a dress could be done at home in a creditable manner.

We know one young girl who has been put through the old-fashioned way until she has mastered the details of hand sewing from the over-and-over to the dainty hemstitch on mi-lady's handkerchief. And now, with natural ability along this line, and good taste, she has gone on until she is an expert in plain sewing and has made some dresses of which the owners are jusly proud. Though never apprenticed to the trade, faithfulness to the little details has brought to her success. She has much yet to learn; part of what she has gained has come in a laborious way, through hard plodding. But she looks back with pleasure to the stints of childhood, the nucleus around which all of her progress has centered.

In the maze of short-cuts to training of the head as well as of the hand—some of them too short to be of any real worth—it is a pleasure to find in Madam Carens' "Dressmaking in Ten Weeks" the practical nature promised in the title. Here again we find thoroughness as the underlying principle, the entire mastery of one lesson before another is attempted. The warning, that some work should be done every day if the best results are expected—a modern application of grandmother's "stint." The general directions teem with common sense, things which every one should know without being told, yet which most of us have never thought of or applied in sewing. For instance, the position, as important to the sewing woman as to the aspirant to penmanship. Then how many who are vexed with the thread knotting know that it makes a difference whether you thread the needle with the end broken from the spool or the reverse?

Hand sewing, since the advent of the machine, is more or less neglected, and, though we may think we know enough about it, the average person will be surprised to learn tha there are three ways of basting, eac especially adapted to a certain use and we really do not know how t baste and do it right! Then ther are the various other stitches, som adapted to one purpose, some t another, and while we may hav mastered them in detail, there ar still applications of their use of th utmost value.

Some of the countless "kinks" of the professional are simple enough when we know how, but without understanding them a multitude of trouble and a final botch are the result. No wonder why our seams will pucker when by the simple trimming of the selvedge all this trouble is eliminated. We are appalled at the complications of changing a pattern to fit the individual, yet the directions given in these pages reveal the system which overcomes our peculiar needs. Proper pressing is just as essential as the making, and there are rules for this of great value. Even the direction of cutting the lining makes or mars a good fit. The wonders of this little book must be tested to be appreciated, and we realize from it more and more the complications which beset the one going haphazard—the simplicity of methodical study.—Bessie L.Putnam.

A POPULAR PREMIUM.

The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication.

Concord Junction, Mass.

For Home and Health.

The housekeeper can do very much ng the line of preventing disease ner family by looking after certain itary precautions; but too often it found that little heed is paid to n the most simple means of pre- tion against disease, and the nily suffers from this neglect. ch illness and malaria have been ced to drain pipes that are not efully looked after, as they have ome clogged with poisonous ter, and when anything is wrong h the pipes the whole family is in ger, for half the disease con- cted in winter, the time when ple are more or less closely sed, may be traced to bad pipes drainage.

A plumber says that sink stoppage usually caused by grease and metimes by coffee grounds, and if se things are kept out of the sink the pipes scalded daily with an water and plenty of common shing soda, you run very little k of stoppage. Have a funnel to in the bath tub and basins, that soda may not touch any of the al save that in the pipes.

Every housekeeper should look l to all corners of the pantry, ars and outbuildings, that all aying vegetables or fruits may be ared away, and she should allow scent of decay from whatever se.

Housekeepers are learning rapidly t food is more important than gs, and to value the physician re for hygienic advice than his dical services.

Never leave canned goods in the after it has been opened. Their tents should be placed in an then dish immediately. Many ple have been poisoned from eat- goods that have stood in open s. Tea that stands a long time eping, or tea that boils, develops nic acid, and is consequently a verful astringent and very un- blesome.

There is nothing more useful in home than a bottle of borax solu- n, and this is prepared by dissolv- a heaping tablespoonful of vdered borax in a quart of hot ter, and this should be kept on the shstand always ready for use. If ittle of this solution is snuffed up nostrils and used as a gargle ry morning, it will go a long way vard preventing sore throat and d in the head, and its persistent as a gargle will strengthen the mbranes and overcome any tend- y to tonsilitis or laryngitis. Also the bath a like agency is valuable insure thorough cleanliness and keep the skin free from odors and ptions, and a little of the borax ution added to the water not only tens the water but it tends to an the skin thoroughly, and the ax is especially good to use if re are any skin eruptions, and to prevent sore and chapped skin.—M. A. T.

Broom Corn at Wholesale.

Poor to fair grade undesirable, being plentiful, dull, low-priced and weak, while real good corn is scarce, in demand and firm. Prices at from $40 for common up to $90 per ton for choice—mainly at $70 to $75 per ton in car lots, on track—damaged less.

A TEN-CENT PROPOSITION.

In the Interest of a Publication That is Rapidly Coming to the Front.

To Club Raisers:—Anyone who will get up a club of four subscriptions in accordance with this advertisement and send us one dollar and twenty cents to pay for same will be credited with an extra year's subscription to the Universal Magazine and we will send one extra Universal Embroidery Set for getting up the club.

Times Have Changed.

"I did not have a very nice time when I first went to Annabel's,' little Madge announced on her return home. "Annabel was cross as could be; she wouldn't let me play with her doll or touch one of her playthings."

"Well," replied her mother, "when I was of your age, had I gone to see a little friend and she wouldn't let me touch her playthings I should have gone straight home."

"But times have changed since you were a little girl, mother," Madge replied after due reflection. "I slapped her face and stayed."

Wholesale Dried Fruit.

Offerings, December 31st, at St. Louis, were scarce. Quotations were as follows: Apples, evaporated rings—Inferior at 4c.; fair to prime at 4¼ to 4½c.; fancy more; chops, cores and peelings at ½ to ¾c. for sun-dried to 1c. for bleached evaporated; sun-dried, dark and poor, at 3¼ to 3½c.; large bright quarters at 4¼c.; peaches, sun-dried halves, at 8c.

At the St. Louis market, late in December, canning cows were selling at $3.50 to $3.60 per 100 pounds. In the good old times, twenty years ago, many cows just as good sold at $1.50 to $1.75 per 100 pounds.

Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

THE DARK HORSE.

Origin of One of the Most Familiar Terms Used in Politics.

The political term "dark horse" is thought to have had its origin in the following circumstances:

In the last century there lived in Tennessee a "character" named Flynn, an elderly person who dealt in horses. Flynn generally contrived to own a speedy nag or two for racing purposes if he could arrange for "a good thing" during his peregrinations throughout the state.

The best of Flynn's flyers was a coal-black stallion named Dusky Pete, almost a thoroughbred and able to go in the best of company.

One day Flynn visited a town where a race meeting was in progress. He entered Pete. The people, knowing nothing of the horse's antecedents, and not being overimpressed by his appearance, backed the local favorite heavily against the stranger.

Just as the horses were being saddled for the race a certain Judge McMinamee, who was the "oracle" of that part of the state, arrived on the course and was made one of the race judges.

As he took his place on the stand he was told of the folly of the owner of the strange entry. Running his eye over the track the Judge instantly recognized Pete. "Gentlemen," said McMinamee, "there's a dark horse in this race, as you'll soon find out."

He was right. Peter, "the dark horse," lay back until the three-quarter pole was reached, when he went to the front with a rush and won the race. — American Horse Breeder.

MISSOURI FARMERS' ANNUAL REUNION.

A Great Get-together Time For Farmers of the State.

Four days of solid pleasure and profit, four days of personal contact with the most wide-awake farmers of Missouri—this is Farmers' Week in the abstract. The time is January 13th to 17th; the place is the College of Agriculture, Columbia, Mo. During this time the College of Agriculture is turned over bodily to the farmers of the state. The entire equipment of the college, every building, every class room and laboratory, as well as the entire time of the whole teaching staff, are all given over to the purpose of enabling the visiting farmers to make every moment of their time pleasant and profitable.

The day's programme, from 8:30 a. m. to 3:00 p. m., is under the direction of the College of Agriculture. This is the Farmers' Short Course. The hours from 3 to 5:30 p. m. are set aside for the annual meetings of the various live stock and general agricultural associations of this state. The evening programmes are given under the auspices of the State Board of Agriculture. The first meeting of the week will be held Monday evening, January 13th.

At 8:30 o'clock, Tuesday morning, five different departments of the College of Agriculture will start work in five different lecture rooms at the same time. In general, each department will offer two periods of lecture and discussion and two practical demonstrations during the day. This is the plan for every day of the Farmers' Short Course, so that visiting farmers at any hour of the day have a choice of five different lines of agriculture, representing animal husbandry, dairy husbandry, farm crops, soils and mechanics, farm management and horticulture. In connection with the live stock work the Veterinary Department will offer special exercises on diseases of farm animals. The Department of Agricultural Chemistry will discuss commercial fertilizers and how to buy them. This is a new feature of the course which is offered this year for the first time. Other new features are the exercises on farm buildings and machinery and a series of lectures and discussions on automobiles and automobile construction.

Free admission everywhere. No admission fees are charged to the Short Course or for the evening programme. Everything free. The eighth annual banquet—coming, as it does, the last thing on the programme of Farmers' Week—the annual farmers' banquet makes a decidedly appropriate close for the week, Friday evening, January 17th.

Human and Mechanical Energy.

The Department of Agriculture has determined by tests with a newly-perfected instrument called the "Respiration Calorimeter," that the human body is capable of 20 units of work to 100 units of feed as against the best steam engine that being fed with 100 units of energy is only capable of 14 per cent. in units of work.

Whether or not physical energy must be expended for mental work as well as for muscular work is a question of interest. Judged by the results of a long series of experiments with the "Respiration Calorimeter," severe mental work does not make demands for physical energy, at least in amounts that were measurable even with so accurate an instrument.

The discovery that the "Respiration Calorimeter" is equally as valuable for studying ripening-fruit processes and other problems of vegetable life and for the study of man's food and the way to use it, has opened a new line of work. With the apparatus which has been built for this purpose and the larger "Respiration Calorimeter" for experiments with man, the Department is in a position to continue its investigations of technical and practical problems and to accumulate very useful and valuable information. The first stages in a valuable kind of work has long been passed, the apparatus and methods have been perfected and facts of great value have been secured. New fields of usefulness are being entered upon and the outlook for rapid accumulation of additional data of great importance to all who are interested in the profitable and proper use of agricultural products is assured.

The Farmer's Reply.

In the summer of 1911, B. A. Worthington, President of the Chicago and Alton Railroad, took his family to a farm house in Indiana, where quiet and rest seemed to be secured. Close by, however, was a pig sty, the presence of which was indicated under certain wind conditions. Mr. Worthington planned to go there again in 1912, but wrote the farmer that the piggery would have to be attended to before he engaged accommodations.

The farmer's reply was brief:

"Can accommodate you all right. There have been no hogs on the place since you left."—Pittsburg Post.

Live stock raising is the most profitable branch of agriculture.

Don't Wear a Truss!

Brooks' New Scientific Appliance--Adjustable to Any Size Person--Easy, Comfortable, Affording Instant Relief--Made for Men, Women and Children.

SENT ON TRIAL.

No risk in ordering--Money will be refunded if not satisfied.

After thirty years' experience in curing rupture, I have invented an Appliance which will absolutely hold the rupture and never slip, yet is light, cool and comfortable. It conforms to every movement of the body without chafing or hurting, and costs less than many common trusses. There are no springs or hard, lumpy pads, and yet it holds the rupture safely and firmly without pain or inconvenience. I make it to your measure, and send it to you on a **strict guarantee of satisfaction or money refunded**, and I have put my price so low that anybody, rich or poor, can buy it.

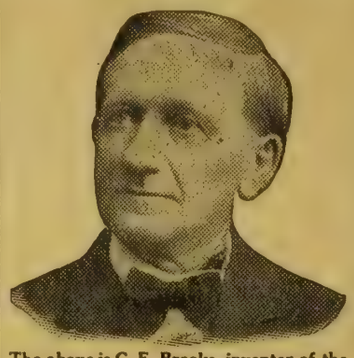
DOUBLE RUPTURE CURED.

Lecompton, Kans.,
R. F. D. No. 2, Feb. 7, 1911.

Mr. Brooks.

Dear Sir:—I drop you these few lines to say I am well pleased with your Appliance, as it has effected a permanent cure in my case. I have been ruptured eighteen years. Am now forty-two and wore a great many trusses before I got your Appliance. The ruptures disappeared after wearing the Appliance a few months. Mr. Brooks, I will do all in my power to recommend your Appliance, not only for your benefit, but to help others who suffer from rupture.

Your True Friend,
W. F. BUCHHEIM.



The above is C. E. Brooks, inventor of the Appliance, who cured himself and who has been curing others for over 30 years. If ruptured, write him today.

"COMPLETELY CURED."

Hebron, Douglas Co., Mo.,
June 12, 1911.

C. E. Brooks.

Dear Sir:—Some time ago I purchased an Appliance from you and am now pleased to inform you I am not wearing it nor will I ever need it again, for to my great surprise, it has completely cured me. I hardly hoped to be cured at all, but the cure was effected in about seven months. Many thanks for the kind way in which you have treated me.

Yours gratefully,
S. B. LITTELL.

I have received thousands of letters like these from grateful patients the world over. This appliance gives **instant relief**, and effects permanent cures when everything else has failed. Remember, I use no salves, no harness, no lies. Fill out the attached coupon and mail today, and I will send you free my illustrated Book on Rupture and its Cure, showing my Appliance, and giving you the names of many people who have tried it and are now permanently and soundly cured. Remember, I send my appliance **on trial** to prove what I say is true. You are to be the judge. Send free coupon **now**.

SELECTED POETRY.

HISTORY OF A JOKE.

A toiling, sweating journalist,
A humble man, and broke,
Once clawed his hair and chewed his fist
Until he wrote a joke.

The joke a vaudeville actor saw
And stole it right away,
And thus two hundred plunks could draw
Each joyous Saturday.

A lecturer of wide renown
Next filched the morsel bright,
And, telling it as all his own,
Got sixty bucks a night.

One man who heard him tell it had
Few shekels in his jeans,
And sold it to (the clever lad)
Three comic magazines.

A noted after-dinner wit
Next swiped and let it fly,
And then, with him as author, it
Got in "Who's Who—and Why."

And, since a hundred papers quote
What there their clippers scan,
It traveled as an anecdote
About a noted man.

So, though the joke won pelf and fame,
And had results immense,
Poor old Anon, who wrote the same,
Got only fifty cents.

And so this fact began to dawn
On him and make him pout:
Full many a goodly joke is "on"
The man who ground it out.
—Kansas City Star.

REPORTING THE AFTER-DINNER SPEECH.

They called on him to give a speech,
The chairman praised his eloquence,
And told the heights that he could reach,
Referred to his pre-eminence.
Worked in a story, old and trite,
(Toastmasters always have to do it),
Got off: "We have with us to-night,"
Then called his name and said: "Go to it."
And this, as well as I recall,
Is how he thrilled us, one and all:

"Er-hem—kind friends. I didn't know
That you were going to call on me;
I haven't much to say, and so
I won't say much. I do not see
Ahem—er, hem, I do not see
Why I was called on, anyway;
I don't know why they called on me,
I really haven't much to say.

"I always like to be with you,
I hope I make my meaning clear,
I'm very proud and happy, too,
I'm very glad that I am here.
I hope to meet with you again,
I'm very glad, let me repeat,
To be with all you splendid men,
I hope again with you to meet.

"I haven't much to say to you,
Except that I am very glad
That I am here. I thank you, too,
For such a splendid time I've had.
I'm very glad that I am here,
I hope to come again some day;
That I am here I'm glad—I fear
That this is all I've got to say."
—Detroit Free Press.

BEGONE, DULL CARE!

Begone, dull care!
I prithee, begone from me;
Begone, dull care!
Thou and I can never agree.
Long while thou hast been tarrying here,
And fain thou wouldst me kill;
But i' faith, dull care,
Thou never shalt have thy will.

Too much care
Will make a young man gray;
Too much care
Will turn an old man to clay.
My wife shall dance, and I will sing,
So merrily pass the day;
For I hold it is the wisest thing
To drive dull care away.

Hence, dull care,
I'll none of thy company;
Hence, dull care,
Thou art no pair for me.
We'll hunt the wild boar through the wold,
So merrily pass the day;
And then at night, o'er a cheerful bowl,
We'll drive dull care away.
—Author Unknown.

IF BOASTING DELIVERED THE GOODS.

The world would be crowded with horses,
The hills would be thronged with great men
And many about us we'd hail as
The masters of brush and of pen;
Full many a path would be broken
Where now are the thickest of woods;
Oh, the world wouldn't hunger for service
If boasting delivered the goods.

There'd be not a wrong to be righted,
And few would be known as unjust,
And no one would go down in failure,
And never a wheel go to rust.
The widows would cease their sad wailing
And smile 'neath their shawls and their hoods;
There'd be little left for our striving,
If boasting delivered the goods.

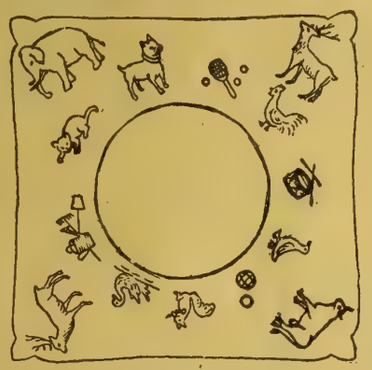
But with all of the boasting and bragging,
And all of the promises fair,
The widows and orphans are wailing,
And no one has banished despair;
And with all the conceit of the spouters,
Real service the world sadly needs;
Humble men who will bend to their toiling
And help it along with their deeds.
—Detroit Free Press.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number.

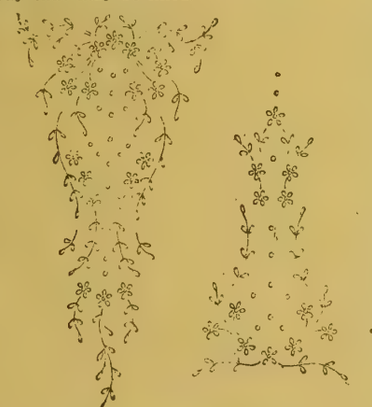
Edging For Baby's Towel.

No. 704.—Design for embroidering an infant's towel, fifteen inches wide. The entire design for one end is given, scallops for two ends. The design can be used for eyelets or for solid embroidery.



Animals and Toys.

No. 705.—Design for outlining animals and toys. The designs are given separately and can be arranged as illustrated or in the way that may be liked.



Embroidered Panels.

No. 707.—These embroidered panels are very handsome and will give good satisfaction.

Pretty Pillow Case.

No. 702.—Design for an embroidered pillow case. One complete transfer is given, with scallops for two yards.

One-piece Handkerchief Case.

No. 706.—Design for an embroidered handkerchief case. The case is made from one piece of material folded on indicated lines.

Envelope Glove Case.

No. 703.—Design for an embroidered glove case in envelope style. The case is sixteen inches long by seven inches deep. The dots may be used for punched work or French knots.

Each embroidery pattern is 10 cents, and is well worth the money.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

National Good Roads.

That the movement for federal participation in highway construction is not confined to motorists, but is also being agitated by the farmers, is one of the most hopeful indications of its ultimate success.

On this point the recent convention of the National Grange, Patrons of Husbandry, took a decidedly favorable stand. Hon. Oliver Wilson, Master of the National Grange, in his annual address stated:

"The public highway is a matter of general concern. The old idea that the country road should be constructed and maintained by the farmer has disappeared. It is now recognized that good roads are of as much importance to the consumer as to the producer, as anything that lessens the cost of transportation is a benefit to the consumer.

"The Grange stands for and advocates federal aid for road improvement. There can be no good reason given why the government should not appropriate money for the maintaining and the improving of the public highway, the same as for our public water works. Seventy-five per cent. of the product of this country must pass over the public highway before it can be transported over our railway or water systems. While the government has spent millions of dollars for highway improvement in our foreign possessions, it has never appropriated one dollar to be used on the highway in continental United States.

"The Grange membership is unanimously in favor of Congress making suitable appropriations for highway construction and maintenance. This appropriation should be expended by a National Highway Commission or Board, working in conjunction with similar commissions from the states.

"The Legislative Committee of the National Grange should be instructed to use all the influence of the Grange upon Congress for a passage of a bill appropriating a sufficient sum under proper regulations for the improvement of our public highways."

C. O. Raine, of Canton, Mo., Chairman of the Grange National Committee on Good Roads, offered a report, which was adopted, endorsing the plan for a system of national roads, and the Legislative Committee of the Grange also included federal aid for road improvement among its recommendations.

Florida is the leading state of the Union in the production of phosphate rock, according to the United States Geological Survey. In 1911 the phosphate product was valued at $9,473,638, compared with $7,647,774 in 1910.

A GARDEN OF ROSES.

Fine, Sturdy Plants—The Most Delightful Premium Offered by Any Farm Paper.

THE NATIONAL FARMER AND STOCK GROWER has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription. They are one-year plants and will give good satisfaction. We guarantee the plants to reach you in good growing condition, and with each package we send complete directions for planting, care and culture. The time to send the order is now—before you forget it—and you will receive the plants at the best time for planting in your section.

The collection, briefly stated, is: ETOILE DE FRANCE, the acme of perfection of hardy red roses; PRESIDENT TAFT, an ever-blooming pink rose of superior merit; YELLOW KAISERIN, rich canary yellow, that will thrive under most unfavorable conditions; WHITE KILLARNEY, the wonderful new "Irish Beauty," of surpassing elegance; HELEN GOULD, vigorous growing velvety red; MARIGOLD, a most valuable variety for outdoor planting, producing deep, full, saffron-yellow flowers; CLOTHILDE SOUPERT, the premium bedding rose with white, pink-tinted flowers, which always appear charmingly fresh and sweet; EVER-BLOOMING CRIMSON RAMBLER is the eighth of the collection, making a total of the grandest family of rose plants ever grown.

Our Grand Special Offer.

Send us a money order for fifty cents. ONLY fifty (50) cents. We will credit you with ten-months' subscription to THE NATIONAL FARMER AND STOCK GROWER, and at the proper time we will also send you the full set of EIGHT ONE-YEAR ROSE PLANTS as described. The roses are sent out directly it is safe to dig them in the spring. Send in your order at once with fifty (50) cents and it will receive prompt attention.

Here is a Subscription Blank.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:—Gentlemen: Herewith please find fifty (50) cents. Please send me THE NATIONAL FARMER AND STOCK GROWER for ten months and the full set of EIGHT HARDY, EVER-BLOOMING ROSES, one-year plants, when it is safe to dig and mail them in the spring.

Mr. Stock Raiser—READ THIS BIG OFFER

$10,000,000 WORTH

of hogs, horses, cattle and sheep died last year from *worms*, careless feeding, bad blood, intestinal troubles and run down condition

Just Listen to Me One Moment

Right in *your own county* thousands of dollars were spent in veterinary bills. Tons upon tons of feed were wasted through malnutrition. Read the death statistics from your own State Agricultural Dept.

I Will Prove to YOU What I Proved to this Man

and the proof won't cost you a cent. Read what Dr. Pruitt says:

E. B. MARSHALL, Pres., Vance, Alabama.
WILBUR STOCK FOOD CO., Milwaukee, Wis.

Dear Sir:—I have been using your stock remedies for three years and I want to say that they are far superior to anything of the kind I have ever used. I have not had a sick horse, cow, hog or anything else in the line of domestic animals since I began to use them.

Yours very truly, E. A. PRUITT, M. D.
Surgeon for Big Sandy Iron & Steel Co.

Wilbur's Worm-Kill

(The Great Stock Conditioner and Worm Destroyer)

There is no secret about this wonderful remedy. Is composed of tumeric, elecampane, African ginger, gentian, soda, blood root, anise seed, golden seal, quasia, wheat middlings, elm bark and powdered charcoal. Ask any veterinarian or M. D., if there is a better worm killer, fattener, conditioner, blood cleanser or feed saver on the market.

Here is My Free Offer to You

I want to send you enough WORM-KILL for 60 days feeding at my risk. You don't send me one cent—simply feed Worm-Kill according to directions and judge the results for yourself. See what it does for your horses—watch your milk pails fill up—watch your little pigs grow big and your big pigs fat—your lambs or sheep will be worm-free and have no scours.

12k

Positively No Strings to this Offer

You simply fill out and mail me the coupon—I ship you 60 days feeding of WORM-KILL at my own risk. You don't pay me one cent unless you are satisfied after 60 days trial.

HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

THE NATIONAL FARMER AND STOCK GROWER has again decided to send out a collection of eight choice, hardy, ever-blooming Rose Plants to our patrons who will send in a special subscription. They are one-year plants, and will give good satisfaction. We guarantee them to reach you in good condition, and with directions for planting, care and culture. We have a new collection this year, far surpassing any previous set we have ever before sent out. The collection consists of:

1. THE OLIVIA—A most gorgeous, distinct rose of deep, brilliant rosy red, and one which excites the admiration of everyone beholding it.

2. THE SUNBURST—An intense exquisitely beautiful rose of orange-copper and golden yellow.

3. THE BRIDE—The most satisfactory white rose of dainty, chaste, beautiful flowers and healthy growth.

4. MY MARYLAND — A pink beauty, rapidly developing a sturdy, shapely plant and large flowers.

5. SOUV. DE PRESIDENT CARNOT — A wonderfully handsome rosy-blush color creation.

6. THE METEOR—For intense, rich, velvety, crimson color no other rose compares. The flowers are large and double.

7. THE BLUMENSCHMIDT — A pure citron-yellow; a first-prize winner at every show.

8. DOROTHY PERKINS — A shell-pink, hardy climber and one that should be extensively planted.

OUR SPECIAL OFFER.

Send us fifty (50) cents, by money order preferred. We will send you THE NATIONAL FARMER AND STOCK GROWER for ten months. We will send you direct by mail, postpaid, the full set of EIGHT HARDY, EVER-BLOOMING ROSES. The subscription begins at once. The roses are sent out directly it is safe to dig them in the spring. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

(Note.—See page 31 of this paper and send in the subscription coupon.)

and Stock GROWER

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912—True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

This is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors: the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, mother of champions or winner in the prize ring.

The Book of Live Stock Champions is receiving the highest praise from the live stock breeders' associations and from officials of the Department of Agriculture. It is being adopted as a text book at high schools and colleges. Active, up-to-date stockmen having an interest in their business and a desire to do their share towards live stock improvement are subscribing for the Book of Live Stock Champions themselves and recommending others to do so.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special inducements to paid-in-advance subscribers, to old friends and patrons. We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. This is an extraordinary offer.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Book of Live Stock Champions, cloth-bound edition of 1912.

GETTING ABOUT.

A Short Practical Talk Upon the Subject of Transportation Facilities and Road Making.

The greatest mechanical problem of the age, as touching agriculture, is the problem of transportation. If one will stop to consider it, he will see that this is the factor that enters most into the welfare of the world, when we consider that welfare only in the light of material things.

The great problems of agriculture to-day concern not so much the production of things as the selling of them at a fair price. Much of the land in this country is still low-priced, because the facilities for disposing of produce are poor and there is no encouragement for the producing of things in those localities.

It is not only necessary that there be railroads, but that there be an available railway service. Many a farmer lives in sight of a railroad, but it does him no good, for the trains do not stop to take on his produce, and when he drives several miles to the station he finds no service adapted to his needs. Meantime there are other vast regions where the railroad lines are many scores of miles apart, and freight service is slow and uncertain. More than one farmer has shipped perishable produce which has been sidetracked and left to spoil.

But country life is not only hemmed in by the difficulty of getting produce to market but by the inability to get about, on the part of the people themselves. This inability constitutes the greatest obstacle to happy country life. In the city one can get anywhere by means of the electric cars, steam railroads, 'bus lines and asphaltum pavements. But in the country all of these facilities are wanting, in most localities.

It is a hard problem to solve, but must be worked out in every way possible. Road improvement seems to be the most feasible way of attacking the problem, with the electric road second.

It is safe to say that the way out will not be found by every locality working alone, for we have several hundred years of that kind of effort. With each country district going its own pace, most of the work done on the roads is unscientifically done, and, what is worse, most of the planning and direction of the work is without knowledge or the help of scientific investigation. Larger political units than townships must be interested in the work, especially where the townships are sparsely populated.

It is the worst piece of road that determines the size of loads drawn over the whole road. A while ago the writer was passing on a bicycle over a country road. There was one piece of many rods in length where dirt and gravel had been hauled onto the road and dumped without being rolled. The theory of the road supervisors evidently was that traffic would do the work. The writer had to walk, for he could not ride over this piece of road. Now, that piece of road reduced the size of all the loads drawn over it. It was an absurdity, and yet the same method is practiced in many places. The writer has noted such cases in three states, Illinois, Missouri and Indiana.

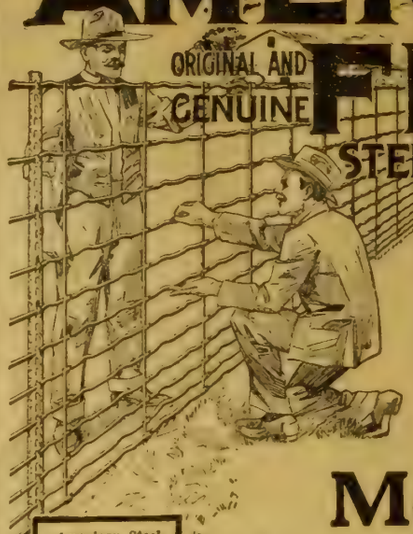
Getting about has a cash value to the farmers as well as a social value. The antiquated ways of repairing roads should be no longer tolerated by our rural communities.

Nearly all the corn meal exported goes out from the ports of New York and Philadelphia.

AMERICAN FENCE

ORIGINAL AND GENUINE

STEEL POSTS AND GATES



Over half the farmers of America are recommending American Fence. Let the judgment of this majority be your guide.

American Steel Fence Post Cheaper than Wood and More Durable. Get Catalog.

More For Your Money

AMERICAN FENCE has always been the economical fence. Now it's a better investment than ever. The same superior steel (open hearth or Bessemer), the same big, stiff wires—but the galvanizing is even better than ever, being heavier, more permanent, giving added insurance against rust. Investigate American Fence. Note the prices and you'll do some fencing this year.

Dealers In Every Place

where farm supplies are sold. Shipped to them in carload lots, thus saving freight charges and enabling dealers to sell at lowest prices, giving buyer the benefit.

Two Great Books Free

"Making The Farm Pay"—a simple and short treatise on farming, covering the things every farmer and his boy should know—**sent free on request.**

"The Making of Steel"—a complete account, simply and clearly presented, with many illustrations. This subject never before presented in so concise a manner. Every farmer and his boy should read this. **Sent free on request.**

THE HEALTH OF ANIMALS

Depends Upon Their Food and Drink and Condiments, the Same as With Human Beings.

Animals will not thrive on moldy foods, neither will they thrive on tasteless foods, no matter how much hunger may force them to eat it. The cry of disease is often rampant when there is no disease; the cry of epidemic is spread broadcast when there is no epidemic, and the cry of "cholera" is aloud through the land, when there is no real cholera, but where there is ample need of conditioners and tonics.

If we follow all the teachings of the veterinary school we must continually be inoculating animals for one thing or another. Undoubtedly we are approaching the time when for every farm there must be a doctor and a teacher and a government inspector, whereas what we need most in the case of live stock is industry and common sense; industry to carry out the plans that common sense dictates.

This has a bearing upon the health of animals. The animal is different from man, but in some respects has the same requirements. Man will not eat tasteless, unattractive foods; with his oatmeal he needs cream, sometimes sugar and sometimes salt; with his bread he needs butter, and with his meats he requires pepper and salt and sauces; with his oysters he must have catsup. He needs a conditioner, and is miserable without it.

And now let's go out to the stables and feed pens and see if there is any condiment to feed with the corn, or the oats, or the hay. Are the offgrade feeds tasty and appetizing when fed to the dairy cow, the work horse, the hog and the sheep? Do they need a little sugar with their oatmeal or catsup with their hay? Yes, they do. They need pure water and pure foods, and correctives and tonics and medicants. Judgment must be exercised in using these things, but the way to keep a healthy barn yard is very much the same as to keep a healthy household. The wormy boy will not thrive much better than the wormy hog, and it often happens that the hog is treated for cholera when he needs but a medicine to expel the worms, and simple conditioners to restore the appetite. This article has special reference to live stock tonics and conditioners, feeds and medicants advertised in this paper, which are put out on such liberal conditions that no man can lose by purchasing them. The only way that money can be made on such goods by the proprietor is in the after orders that come regularly from satisfied customers, and which are the result of continual use of them. They save many a doctor's bill and cost but very little compared with the benefits derived. We do not by any means advocate promiscuous feeding of these foods and tonics, but the use of them according to directions as medicines are that are obtained through a doctor's prescription.

IMPROVE THE PASTURE.

Give It a Fair Start and all the Plant Food Necessary—It May Then Become the Most Profitable Land on the Farm.

Unlike European farmers, American farmers pay little attention to their pastures. This custom must change in time, for, rightly handled, the pasture may be made one of the most profitable parts of the farm. Its neglect has been the cause of its frequent unprofitableness in our method of farming.

Purchased feed is coming to be too expensive an article for the ordinary farmer to indulge in it largely. Henceforth, the farmer that has much stock will find it necessary to develop his three main supplies of feed, namely, his pasture, his silo and his clover field or alfalfa field.

Formerly, no manure was applied on the permanent pasture except such as fell on it during the time the stock were on it. As that is in dry weather, the manure that falls on it in the summer time is partly dissipated into the air. The manure that does good on the pasture is that applied in the fall or winter, which is washed into the soil by the rains of winter or spring and by the melting snows. It will pay also to apply potash and other commercial fertilizers, especially to the thin parts.

An attempt should be made to put back on the pasture as much fertilizer as is taken off every year, just as is now being advocated for the rest of the farm. This is a thing that has been quite generally lost sight of, and the pastures have been pastured to death, almost, in many localities.

It is full time to begin a new regime with the pasture and place it on the same basis as the rest of the farm, knowing that every blade of grass produced is harvested without cost to the owner, the animals themselves dong the work of ingathering. It is probable that every pound of fertilizer judiciously applied to the pasture will yield as much profit as when applied to any other part of the farm.

Be generous with the pasture this spring, when the grass is just starting and the ground is still soft with the spring rain. It is better to feed a little longer and permit it to get a good start and at the same time protect it from the tramping feet that will pack the upper soil so compactly that air cannot get through.

At some of our Experiment Stations splendid results have been obtained in bringing up the permanent pasture with the idea of making it model of productiveness and of profit. These pastures at the Experiment Stations have been not only fertilized regularly and in a scientific manner, but some of them have been extensively drained by tiling. They have been relieved of their bushes, which were taking plant food from a part of the soil and shading some more of the soil, thus preventing the sunshine from doing its work in the development of the growing grass.

Disking the surface of the ground and applying manure or commercial fertilizers has proved of great benefit to some spots in these pastures, while in others the early mowing of the tall weeds has made it possible for the sod to thicken and give a supply of nutritious grass where noxious plants grew before. Be generous to the pasture and it will astonish you with liberal returns.

The Shade Tree.

The city man who is so fortunate as to own a genuine forest tree is justly proud of it. He knows its value from the aesthetic point of view, and this is usually many times greater than could be measured by the lumberman's foot rule. He knows how much of beauty and of pleasure are added to his home through its shade, and he also has a realization of the fact that should he ever want to dispose of his property, that tree will increase its value materially.

Yet where the shade trees are most easily available, around the farm home, they are too often neglected. There is in every community some quick-growing tree which should in a few years at most become a source of pride and comfort to its owner. It may be in your own woodland you have such material. If not, the nurseryman will furnish it and will advise as to the best for your special locality and needs. While it takes years to grow a large tree, those of useful size come into existence much quicker than one would think.

The chief thing is to treat them well. Dig large holes, and do not hesitate to give them good soil A specialist who was superintending the transplanting of native trees was noticed tying a string around a certain root of each as it was uplifted. Inquiry proved that this was simply to mark the east side of the tree, as it had originally grown, and this precaution was taken that the tree might be replanted in the same position as regards the cardinal points, thus insuring to it a similar distribution of the sun's rays. This was a little thing to do, but it illustrates the point that we can in numerous ways break the shock of any abrupt change and still not inconvenience ourselves. If you have not already plenty of shade for the hammock and then some, plan to make amends for the deficiency this spring. The fruit tree may have objectionable features on the front lawn; but the clean forest tree, which is a place for rest, a home for the birds, will become each year more of a source of pleasure.—Bessie L. Putnam.

"NATIONAL" STYLE BOOK SENT FREE

The "Beautiful Money-Saving Style Book"

Free—the most beautiful style book ever issued—the "NATIONAL" Style Book. One copy is yours free. You need only mail the coupon, that's all.

This Money-Saving Style Book is just filled with illustrations and descriptions of newest styles and bargains such as these:

COMMERCIAL FERTILIZERS.

A Few Remarks Concerning Them by the Editor.

Anyone who wishes to get into trouble quickly with a fair chance of never getting out of trouble again should begin to tell all he knows about fertilizer.

We were thirty years an editor before we fell into the trap, and, being in it, never expect to get out again. We were also an editor of a farm paper eight years before the United States Department of Agriculture issued a farmers' bulletin, and from that statement it would appear that the editor ought to know enough to keep out of trouble.

We well remember the first time we had a talk on the subject of fertilizer. It was in the year 1869, and at the boarding house where we stopped we made the acquaintance of a French market gardener, who claimed to be looking for a piece of land for the purpose of starting a market garden, and the funny part of it was, that he desired to obtain the land in New York City. There was plenty of land out towards Harlem that he could get, but he was determined to get in closer. He only wanted an acre, and he was not studying soils so much as he was studying location. He said that he would guarantee to raise and sell twelve hundred dollars' worth of vegetables on one acre of ground without assistance if he could pick the location.

He explained that he needed horse manure for warmth, and he could get it in the city better than in the country, and that in order to insure abundant crops, and, as he said, "keep them coming all the time," he required other fertilizing material that he could buy. He said that where he was raised they did not consider what the soil contained; they did not trust it to produce the crops they must raise, but they built up the soil with fertilizer until they knew it contained all the elements that were necessary for the growth of abundant crops of superior quality.

Since then we have read about the application of fertilizers to different crops, and we have found it to be, on the one hand, a very difficult subject, and on the other a very simple matter. The difficulty grows out of the fact that there are more opinions on the subject of fertilizer than there were languages at the Tower of Babel. Take the leading soil experts, as shown by the positions they hold, and you would expect them to agree like two doctors who have been in consultation over one patient. But these doctors of soils disagree upon almost any proposition they can put up for argument. They are working conscientiously, but they cannot agree even upon the fundamental question. If all the advice they have been able to agree upon was tabulated by a committee of language experts it could not be brought to a clear statement that any farmer could understand, unless it be that high-grade fertilizers, which are the highest in cost per ton, are the cheapest in the end, upon which they appear to agree.

It has been left for the man who sells the fertilizer to educate the people by putting up different formulas for different crops, and his basis is to fertilize with the constituents that the crop takes from the soil. In other words, you have to put into the ground in fertilizer the same proportion of nitrogen, phosphoric acid and potash that you take out. You put in little but you expect to take out much more than that soil naturally contains, and by growing plants that take nitrogen from the air, and by the use of barn-yard manure, you reduce the purchase of commercial fertilizer to the actual necessities of the situation.

The simple side of the subject, however, is, that farmers can experiment for themselves in good-sized tracts far better than it can be done on the small experimental blocks set out at Agricultural Colleges. The usual farm practice is to fertilize one strip and not to fertilize another strip, and so get at the different results without disturbing the general farm operations. Buy moderately of commercial fertilizer and study the subject from the practical standpoint of your own operations. That is all one can do when soil doctors disagree.

Low Prices For Vegetables.

On February 1st, at St. Louis, in car lots at wholesale, Rural potatoes were selling at 46 to 50 cents a bushel; onions, fancy sacked and Red Globe, at 25 to 35 cents; sacked white at 50 to 57 cents; Danish and Wisconsin Holland seed cabbage at $6.00 to $8.00 per ton; on orders, 60 cents per 100 pounds in sacks; red cabbage at $8.00 to $10 per ton.

WHEN WRITING TO ADVERTISERS, PLEASE MENTION THIS PAPER.

P&O

LIGHT DRAFT PLOWS

THE draft of a plow depends nearly altogether upon the construction of the bottom, the shape of the share, the curve of the mold, and the position of the side plate. These necessary details must be worked out on a scientific basis, the secrets of which can only be discovered by actual experiments in the field. As the soil differs, so also must the shape of the plow. The greater the variety of soils the greater the number of plows necessary to meet the conditions.

P&O Gang Plow.

P&O Light Draft Plows have been on the market since 1842, and all the experimental work in designing plow bottoms was accomplished years and years ago. Today there is a P. & O. plow for every kind of soil, for every condition of these soils, in all standard sizes—walking, riding and engine gang, with every kind of attachment.

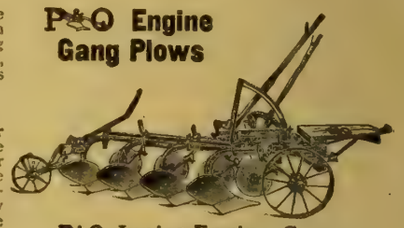
P&O Light Draft Plows are standard and supreme—made so by the use of the highest priced material, and our advanced methods of manufacture.

WE make no tools in which we take a greater pride than in the P. & O. Engine Gang Plows, made in several styles, both Mold and Disc, and in sizes from four to twelve furrows.

The P&O Mogul

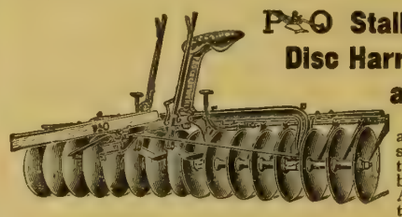
Is made with an individual lever for controlling each bottom. The levers all point to the center of the platform. This and five other patented features are exclusive, and cannot be found on any other make. The Mogul is made from five to twelve bottoms.

P&O Engine Gang Plows



P&O Junior Engine Gang.

The P. & O. Junior Engine Gang Plow is made for three furrows with a fourth bottom as an attachment. All bottoms are controlled with one lever. One man can operate both engine and plow. The P. & O. Disc Engine Gang is made with four or six discs, and with a platform for the operator.



P&O Stalk Cutters, Cultivators Disc Harrows, Corn Planters and Potato Diggers

We make a complete line of tillage implements, suitable for all soils and conditions. Remember that P. & O. Implements have been used by three generations of American farmers, and that everything we make is

Backed by an Unqualified Guarantee.

ASK YOUR LOCAL DEALER for P&O Implements and then insist on getting them. When you are ready to invest in farm implements, buy the best—the P&O line. We will gladly send P&O catalogs and other literature to any address. Write us your wants.

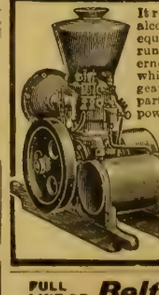
20 Reasons Why You Should Investigate the SANDOW Kerosene Stationary ENGINE



It runs on kerosene (coal oil), gasoline, alcohol or distillate without change of equipment—starts without cranking—runs in either direction—throttle governed—hopper cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—only three moving parts—portable—light weight—great power—starts easily at 40 degrees below zero—complete, ready to run—children operate them—5-year iron-clad guarantee—15-day money-back trial. Sizes 2 to 20 H. P. Send a postal today for free catalog, which shows how Sandow will be useful to you. Our special advertising proposition saves you one-half cost of first engine sold in your county. (167)

THE OATS MARKET SITUATION.

A Short Reference to Past, Present and Future Prices on the End-of-the-Month Basis.

We have every reason to congratulate ourselves that oats prices have gone no lower. A year ago (January 31, 1912) oats were selling on the St. Louis market at 52½ cents per bushel, and this year the cash quotation of No. 2 oats on January 31st was 34 cents. Not much to be thankful for, one may say, but we continue to congratulate ourselves that it is no worse.

Six months ago, on August 31st, cash oats were sold at St. Louis at 31 to 32 cents a bushel, and the outlook was dark and gloomy. The largest crop of oats ever grown was just ready to be dumped on the community, and the weight of it was depressing the market. All our readers know how we stood at that time. We said that farmers could raise the price of oats by holding them and letting the actual buyers get out and hustle for oats.

Not over one-third of the crop is sold to be consumed in cities, and the balance is consumed in small towns and on farms and ranches, and it ought to be understood that prices must be higher if such crops are to be repeated. Thirty-five cents a bushel for oats, with freight and expenses from the farm to the market, will only leave 30 cents a bushel, which is less than a cent a pound for threshed oats grading as No. 2.

So long as large crops must be sold at less than cost of production farmers are always considering whether or not they will continue to produce grain crops, with the inclination on the Not; and it is especially aggravating, while the farmer is not getting enough, the consumer who buys from the retailer is paying too much.

You cannot rush into the market and upset all methods of business and rip and tear things that have grown up in a hundred years, but it is absolutely certain that the farmers' products are mismanaged in sale for the reason that they are practically unconstrollable until they reach the centers of traffic, and then most of those products have already passed from the hands of the farmer. The principal difficulty is, that the average farmer does not produce and market a finished product and a shipping unit. The finished product in grain is a car-load of No. 2 wheat, oats, corn or barley, as the case may be. The shipping unit is a car-load. A car-load is usually a thousand bushels of corn or wheat and 1,500 bushels of oats, but now, on account of shortage of cars, cars are often loaded with 1,100 to 1,500 bushels of corn, 1,600 to 2,000 bushels of oats and 1,000 to 1,200 bushels of wheat.

So many farmers cannot themselves produce or prepare a shipping unit, and that puts them in the hands of the local dealer, who gets money from the commission man and who buys the small lots at a discount and shapes them into grades that the market recognizes and forwards the grain in shipping units that the market will accept. Buyers do not care for anything irregular, and they do not buy parts of car-loads and mixed grades, so long as ninety per cent. of the offerings are put up properly. We wish that it was different, for the reason that it is these made-up car-loads in the hands of speculators anl not the consignments of farmers that form the bulk of the receipts at the grain markets.

Cash Grain at St. Louis.

The following were Merchants' Exchange quotations for cash grain at St. Louis, January 31st, 1913:

Wheat.—No. 2 red wheat, $1.08 to $1.12½; No. 3 red, $1.04 to $1.07; No. 4 red, 85c. to $1.04; No. 2 hard, 90 to 92c.; No. 3 hard, 89 to 93c.

Corn.—No. 2 corn, 49 to 49½c.; No. 3 corn, 48¼c.; No. 4 corn, 48c.; No. 2 yellow, 50½c.; No. 3 yellow, 48½ to 49½c.; No. 4 yellow, 48½c.; No. 2 white, 50¾ to 52c.; No. 2 white, 49½ to 50½c.; No. 4 white, 48½c.

Oats.—No. 2 oats, 34c.; No. 3 oats, 33c.; No. 4 oats, 32½c.; No. 2 white, 35 to 36c.; standard, 34¾ to 35c.; No. 3 white, 34c.; No. 4 white, 33 to 33½c.; No. 2 rye, 63½c.

Power FREE!

I'll Give You the Use of a Genuine Galloway Gasoline Engine on Your Own Farm for Three Months ABSOLUTELY FREE! Read My Great Offer NOW!

1¾ H. P. to 15 H. P. $29.75 Up

Listen! Read this carefully! There isn't one farmer in the country—no, not a single one—who can afford to miss this offer. I positively know this to be the most liberal engine offer that has ever been made. I'll let you take a genuine Galloway Engine—let you pick any size or style you want from 1¾ H. P. to 15 H. P.—let you take it right to your own farm for 30, 60 or 90 days' trial **absolutely free.** Yes, I mean it, **absolutely free;** you don't take a **cent's** worth of risk. Don't take anybody's word about a gasoline engine—find out the truth for yourself. Get my engine and put it right to work. Use it just as though it were your own. Test it any way you want to. **Make it prove its SUPERIORITY to engines costing two or three times as much!** Take your time. I won't hurry you—don't you let anybody else hurry you. If you aren't ready at the end of a month, tell me and I'll let you keep it two or three months longer—all free. **Then you'll know!** Then you'll either tell me, "Galloway, I know I can't beat your engine at any price"—or you'll send it right back to me and I'll pay the freight both ways, so that **you won't be a cent out of pocket!**

The Only Way Is the Galloway ***Selling Direct from Factory to Farm***

I'm going to turn the engine world upside down with this offer. It's a wonderful offer— the most liberal engine offer anybody ever thought of. But that's the way I do business. I won't take a man's money until he is thoroughly, absolutely and permanently satisfied. That's why 125,000 farmers say: "The **only** way is the **Galloway.**"

Here Is the Strongest Proof of All

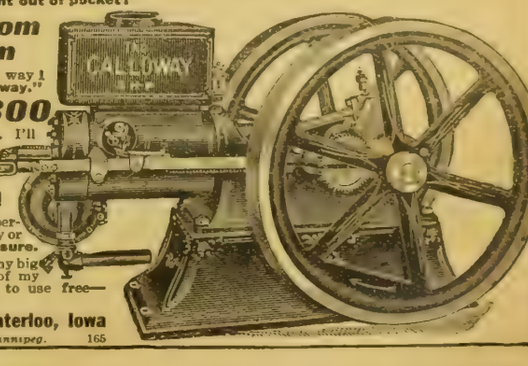
E. L. Davis, South Gibson, Pa. I wish to say that the 5 H. P. gasoline engine I bought of you has given perfect satisfaction. I have used it on a three-horse threshing cleaner this fall, and have recommended your make of engine to everyone, both in price and quality. Two parties, especially, who own an _____ engine, admitted to me that my Galloway Engine was much simpler than theirs and run just as nice. I will do what I can for your business in my neighborhood.

Joe A. Oliver, Seneca, Neb. Received your 5 H. P. engine about six months ago and it has never given me a minute's trouble since. Had an _____ and a _____ but the Galloway has them all skinned a city block. Have been working two days on another make to get it to run, but it isn't built to run.

Em Probst, Kennedale, Texas. I received the engine all O. K. and it is the simplest and smoothest running engine I ever saw. I have been running engines over 25 years and I would not give the 5 H. P. Galloway for any one I ever saw. Everyone that sees my engine says its a dandy. I am running a ten-cow dairy and I run a cream separator, and churn and pump, sausage mill and grist mill and am to get me a wood saw and an emery wheel and grindstone attached to engine. Anyone can run it. I can start it and go about my work, and I want to say it has the best governor that I ever saw.

Then I'll Save You from $50 to $300

If you do keep the Galloway, you won't have to pay for anything but **pure engine** value. I'll sell it to you **at actual cost to make** with just one small factory profit added. I'll save you all the middleman's profits—**put $50 to $300 in your pocket right at the start.**



Special! Get My Great 1913 Proposition

It's the biggest, finest thing I ever did. I can't explain it here—I'll have to write you a personal letter. But here's the gist of it. I'll show you how to get a Galloway engine partly or entirely **without a cent of cost to you,** no canvassing or soliciting either. **Get this offer sure.**

Big Engine Book FREE A postal or letter brings you a copy of my big 1913 Engine Book and full explanation of my Special 1913 Proposition absolutely free. Get this catalog—pick out the engine you want to use free—that's all. Now don't wait. Let me hear from you RIGHT AWAY.

THE EXPERIENCE OF OTHERS

Basis of All Education—The Accumulated Evidence Obtained From the Works of Thousands of People.

All scientific education is based mostly on the experience of others. The great advantage the educated man has over the uneducated is, that he is trained to take the experience of others to heart and profit by it. The uneducated man will tell you that he does not need to learn from others, for he has his own experience for his guide. That kind of a guide has ditched many a man.

All the courses of instruction in our universities are based on the experience of thousands of persons. In our Agricultural Colleges the instructors systematically arrange the experience of thousands of men in many regions of the earth to point the lessons they give. The young man that completes an Agricultural College course has availed himself of the experience of others and has acquired the habit of taking advantage of those experiences.

The lack of this power is always a great obstacle in the way of agricultural success. It is the main factor in keeping some of the foreign agricultural countries in a state of great poverty. We read of some countries where the same primeval methods are being used in farming that were used thousands of years ago. The ground is scratched with a crooked stick drawn by a cow; the hoeing of crops is with a heavy iron implement that requires a great waste of strength to use it; the grain is harvested by means of a sickle, and the reaped grain is carried by armfuls. There the rewards of agriculture are few and the peasant ekes out a scanty living.

Yet in those lands our missionaries and others have tried to get the natives to adopt the ways of the more advanced nations and profit by the experiences of others. But the ruts are too deep as yet.

It is not an easy thing to get people to look away from themselves and change their habits because of the experiences of others. The law of inertia holds good in human minds as well as elsewhere. That is the law that a body not moving tends to remain motionless, and that a mody moving in any direction tends to continue to move in that direction.

Our Experiment Stations and our Agricultural Colleges are doing a great work in inducing people to overcome this mental inertia, or rather in changing its operation. Where it has been preventing action it is being so changed as to induce motion.

Many a farmer is spending all of his time in work, never looking inside of an agricultural book or giving much heed to an agricultural newspaper, who would make much more money by working less and giving some time to finding out what the experiences of others have been.

The agricultural paper is the first great means of bringing the experiences of others to the farmer, for it has the whole world of agriculture to draw from. Moreover, its editors know the needs of the farmers in the regions in which it has the bulk of its circulation. Thus, a first-class agricultural paper well studied will prove a gold mine to the intelligent agriculturist who has developed enough to be able to look away from himself and profit by the work and thought of others.

OUR INDUSTRIAL POLICY.

We Are in Favor of All Foreign Farm Productions Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

THE NATIONAL FARMER AND STOCK GROWER is in favor of the United Staes Custom House collecting a reasonable range of duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government.

By the tariff policy that we advocate fully one-half the money required for the support of the national government should be collected at the custom houses, besides furnishing the farmer and manfacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm produce free of duty because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed on our own people.

Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time foreign goods are placed on the free list there is the same result. With moderate import duties received by the United States on various products as now collected the total that is covered into the United States treasury is over three hundreds of millions of dollars a year, and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty results in higher prices to the American consumer and higher taxation also upon our own products to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and be the greatest sufferers.

"Baby beef" is bringing Ozark farmers $50 per head profit in one year

IF there is one thing that emphasizes the special advantages in the Ozarks for stock raising, it is the unusual success and big profits which farmers there are making with baby beef. Good stock, after one year's feed, is bringing them $50 per head profit!

Here is the plan that the Ozark farmer is following to get such profits. He buys up good grade calves at $15 to $20 a head (providing he dosn't raise them himself). Then, instead of letting them "mosey along" until the second year with just enough rations to keep them in good trim, he starts feeding them for quick flesh gains *right away*. The calves are put on flesh-producing field grasses until after corn is harvested; then the shocks, with a little extra now and then, keep them going until January. That leaves only three months of winter feeding (for pasture is green again by April 1st).

By that time the beef will weigh around a thousand to twelve hundred pounds easily, and will top the market at $8 a thousand or more. The feeding, on account of the short winter and other advantages in the Ozarks, doesn't cost more than $25 per head, all told—that's a clean profit of around $50 from every baby beef.

It's a mighty profitable business, and Ozark farmers are not slow to take it up.

Baby beef is just *one* way of making money in the Ozarks. It is *just one* example going to show why all kinds of stock raising is so profitable in the Ozarks. Hogs, for example, bring Ozark farmers around 5 cents a pound profit, because they cost so little to produce per pound—only 2½ cents, or less. Sheep make $12 per ewe easily, and Ozark dairymen are getting $8 to $10 per cow per month, regularly.

The reasons for these profits are easy to understand. The Ozarks have very mild, short winters—good pasture from April 1st to January 1st—only three months of winter feeding. Right there is a mighty big cut in costs.

The soils of the Ozarks will grow practically every variety of grass, and forage crops—alfalfa, peanuts, cowpeas, corn—all the quick-fattening products.

The Ozarks have an unlimited supply of pure water, splendid drainage and a healthful climate that keeps stock sickness down to the minimum.

The Ozarks are *right at the doors* of St. Louis, Kansas City and Memphis—big markets offering the very highest quotations for all kinds of stock and farm products.

But all these advantages mean more when it is realized that good land can be bought now in the Ozarks at $12 to $15 per acre. It's a proposition that deserves any man's serious thought and investigation right *now!*

A free book for you!

It's not the kind you can pick up anywhere. Double sized pages, 75 actual photo pictures of farms—some in full color. Written by a man who knows farming. Takes up the Ozark sections, county by county, and describes the farming conditions there. Also tells actual experiences of Ozark farmers. I haven't many copies of this book on hand; please drop me a postal to-day for your free copy.

FRISCO LINES

A. HILTON, General Passenger Agent, 1512 Frisco Building, St. Louis, Mo.

The Crocodile Wrench.

We have only recently used the Crocodile Wrench as advertised on page 15 as a subscription premium. Although it is heavy, weighing twelve ounces, we send it as merchandise by parcels post, and it is a welcome wrench on every farm.

THE CORN CROP.

Disposition and Use Made of It—A Compilation by the United States Department of Agriculture.

One of the most valuable contributions to the statistics of agricultural products was issued in the Crop Reporter for January, 1913. It shows the disposition of the corn crop, as near as can be ascertained, as follows:

"The corn crop is by far the most valuable single crop grown in the United States. It is distinctly an American crop, about 75 per cent. of the 'world' yearly production of approximately three and a half billion bushels being grown in the United States. What becomes of this vast quantity of corn is frequently asked. Answers to inquiries sent to crop correspondents of the Bureau of Statistics of the United States Department of Agriculture permit some interesting deductions to be made upon this subject.

The average annual production of corn in the United States in the last few years (not including the bumper crop of 1912) was about 2,700,000,000 bushels. Of this it is estimated that about 26 per cent., or 702,000,000 bushels, were marketed, 8 per cent. (216,000,000 bushels) remaining in the nearby towns, 11 per cent. (297,000,000 bushels) going to distant towns or for export, and 7 per cent. (189,000,000 bushels) going to distant farms.

The disposition of the 513,000,000 bushels estimated as used in 'towns' (as distinguished from 'farm' consumption) was approximately as follows:

Used in flour and grist mills, 245,000,000 bushels, or 9.1 per cent. of the total crop; used for making glucose and starch, 40,000,000 bushels, 1.5 per cent. of total crop; used to manufacture distilled liquors, 21,000,000 bushels, 0.8 per cent. of total crop; used in the manufacture of malt liquors, 14,000,000 bushels, which is 0.5 per cent. of the crop; used for feed in towns, 120,000,000 bushels, or 4.4 per cent. of the total crop; exported, 45,000,000 bushels, or 1.7 per cent. of the crop; and 28,000,000 bushels, amounting to 1 per cent. of the crop, unaccounted for.

Of the quantity exported, less than 2,000,000 bushels were in the form of meal.

Of the 245,000,000 bushels used in flour and grist mills, a portion returns to the farm for consumption. This quantity may be estimated at about 125,000,000 bushels. If we include this quantity, 125,000,000 bushels, with the farm consumption, the total farm consumption would be about 2,312,000,000 bushels, or 85.6 per cent. of the total crop.

Of the total 'farm' consumption, it is estimated that horses and mules consumed 31.5 per cent.; swine, 31.3 per cent.; cattle, other than milch cows, 11.0 per cent.; milch cows, 10 per cent.; poultry, 4.2 per cent.; human beings, 4 per cent.; sheep, 2.6 per cent.; seed, 1 per cent.; balance (for other or doubtful purposes) 4.4 per cent. Applying these percentages to the 2,312,000,000 bushels, the estimated total farm consumption of recent years gives the following totals and percentages of the entire crop:

It is shown as near as possible that there were fed to horses and mules 728,000,000 bushels, or 27 per cent. of the crop; the estimate of corn devoted to swine feeding is 724,000,000 bushels, or 26.8 per cent. of the crop. The amount fed to cattle (not including dairy cows) is 250,000,000 bushels, of 9.4 per cent. of the crop; the amount fed to dairy cows is 231,000,000 bushels, or 8.6 per cent. of the crop; poultry is credited with 97,000,000 bushels, or 3.6 per cent. of the crop; and human beings (consumers who are complaining of the high cost of living) use about 92,000,000 bushels, or 3.4 per cent. of the crop; sheep feeding consumes 60,000,000 bushels, or 2.2 per cent. of the crop. Then there are 23,000,000 bushels of corn used for seed, which is 0.8 per cent. of the crop. Then there are other uses estimated at 103,000,000 bushels, or 3.8 per cent. of the crop. Of course, all these figures are estimates, but there have never before been placed such satisfactory figures before the people. The proportion of the crop utilized for different purposes varies from year to year, according to the size of the crop. For instance, when the crop is large a relatively larger proportion in consumed by meat-producing animals, the proportion used by swine increasing more than that used by horses because the number of horses is more uniform from year to year than the number of swine. The estimated production in 1912 is large, 3,124,000,000 bushels—424,000,000 bushels more than the 2,700,000,000 to which the percentages above are applied. Hence, of this year's crop a larger percentage than given above will probably be consumed by meat-producing animals."

The Source of Sorghum Cane Seed.

Out of a total of 833,707 bushels of sorghum cane seed raised in the United States during the year 1909, Kansas produced 656,522 bushels; Nebraska, 83,134 bushels; Texas, 38,683 bushels; and Oklahoma, 30,435 bushels.

NUT-GROWING INDUSTRY.

The Nut Grower, published at Waycross, Ga., says: "The edible portion of nuts, with very few exceptions, is highly-concentrated food, consisting chiefly of much fat and little water. In general, nuts are also rich in protein, the peanut containing 29.8 per cent. of this nutriment, while the butternut, beechnut, almond and Brazil nut also rank high. The nut richest in fat is the pecan, which contains 70.7 per cent., with the Brazil nut a close second, with 65 per cent."

North Carolina is the great peanut state, having produced 5,980,919 bushels in the census year 1909, against 4,284,340 bushels in Virginia the same year. These two states produced more than half the present peanut crop of the United States, the total of the whole country being 19,415,816 bushels.

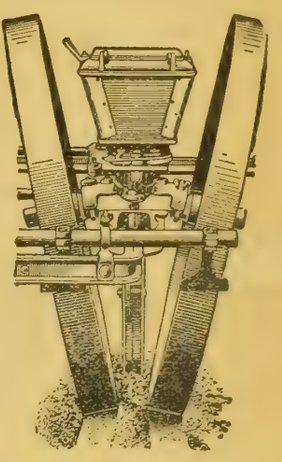
Ladies' World and Grapevines.

We are again offering a very valuable subscription combination in the matter of one-year's subscription to the Ladies' World; one-year's subscription to The National Farmer and Stock Grower; and eight selected two-year grapevines, which are grown at the best grape nursery in New York state, all for one dollar ($1.00.) There are magazines published at $1.50 a year that are not equal to the Ladies' World, and the grapevines will be satisfactory to all who get them. Such a combination ought to bring us ten thousand subscriptions in the month of February. See page 5.

In the year 1912 this country exported 30,113,868 bushels of oats, and that amount was far in excess of the exports of the two previous years.

Abyssinia uses American crackers.

Good Seed Isn't All—



Good seed and good soil is only the *starting point* in raising a big corn crop. You can no more afford to plant with an old worn out corn planter or a complicated new one full of fads and fandangles than you can to plant *poor seed.*

You can't afford to waste your time and labor or *risk your entire crop* with a planter that covers unevenly, misses hills or does not check accurately.

Uneven depth of planting means a bigger loss than many realize. It's *especially bad* in cold, backward seasons; often amounts to several times the cost of a planter in a single year. Avoid a planter that covers part of the corn so deep that no matter how good the seed or how rich the soil *many of the hills never come up*—or leaves other hills uncovered so that the sun and wind *destroy or stunt their growth.*

Hayes Four-Wheels regulate depth of planting to the fraction of an inch—this planter plants every kernel *exactly the same depth.* Here's why: Runners set back between the wheels, within 10 inches of the covering point. In going over ridges, dead furrows or uneven ground the shoe *rises and falls* with the wheels. **Hayes** planted corn all comes up at the same time, (proof of even depth of planting) and *allows earlier cultivation.*

Four-Wheels—Bigger Yields

Hayes Four-Wheels guarantee *surer germination and quicker growth.* Wheels pack the dirt from the sides to hold moisture and leave a ridge on top so that the corn sprouts quickly and comes up several days sooner. The ridge gives greater surface for sun's heat and prevents washouts in hilly fields. This method *assists the budding sprout.* protects its vitality and makes stronger and healthier stalks.

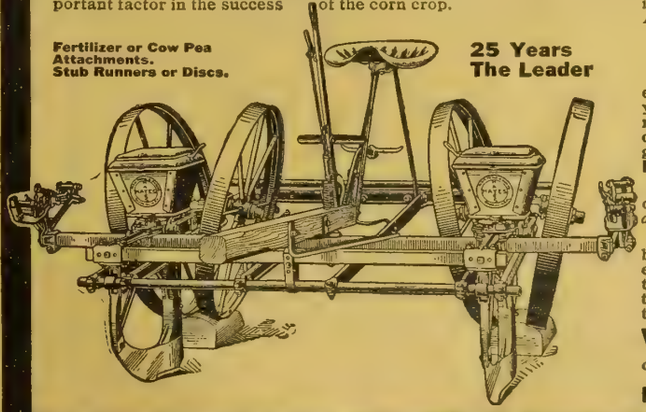
Hayes Four-Wheels *cover where all ordinary open wheels fail.* They open at the top and clean themselves. Guaranteed not to clog or carry the corn over even in wet and sticky soil. Insures a stand even in low wet spots of field and *allows earlier planting.*

Checks With Absolute Accuracy

No matter how fast you drive the **Hayes** *always plants in perfect check.* Cross rows are straighter than the way you drive. Easiest handled planter. Also shortest coupled, making it the *lightest draft* and turns in *shortest space.* For these reasons you can plant from *three to five more acres a day* with the **Hayes** and get your corn in *earlier*—an important factor in the success of the corn crop.

Fertilizer or Cow Pea Attachments. Stub Runners or Discs.

25 Years The Leader



Never Misses A Hill

The **Hayes** Drop *never fails.* It is the simplest, most durable and most efficient ever made. Fewer parts, less breakage and delays. Has no clutch to miss and give trouble. *Never cracks or grinds the seed.* Will drop accurately any size or shape kernel. *No bare spots* in **Hayes** planted fields. Increased yields soon pay for it. Corn growers are never disappointed with the **Hayes** *NEVER-FAIL DROP.*

160,000 Users Know

Thousands in use for years with practically *no repair expense,* and every one giving *time-saving, money-making* service. If the planter you used last year missed the hills, planted at an uneven depth, did not drop accurately, cut or cracked the kernels, scattered the seed, checked unevenly, clogged or was a constant source of trouble by getting out of fix, you can *save its cost* many times over by buying a **Hayes** Four-Wheel.

Think these things over and start investigating *NOW.* Learn the overwhelming advantages in **Hayes** Four-Wheel construction. *Ask any* **Hayes** *user.*

Learn the experiences of farmers who *have* increased their yields by big margins with the use of the **Hayes**—who *have* finished planting earlier—who *have* begun cultivation earlier. Every **Hayes** user will tell you the work is easier—faster—better; the results more satisfactory—more profitable. So much depends on the work of the planter that a farmer cannot afford to get anything less than the *best service.*

WRITE! This planter is *guaranteed.* It *must* be all we claim and all you expect. Send for Free Book "Ø" of Valuable Planting Facts. Write today, then you won't forget.

HAYES PUMP & PLANTER CO., GALVA, ILLINOIS

Hayes Four Wheel Corn Planter

THE PERFECT POTATO.

Also a Large Crop—Grown With and by the Stockbridge Potato Manure, a Commercial Fertilizer.

The Stockbridge Fertilizer For Potatoes is composed of 4 per cent. ammonia, 6 per cent. soluble and available phosphoric acid and 10 per cent. potash. This fertilizer is constructed upon the potato, its analysis, habits and conditions of growth. It is customary to apply half to three-quarters of a ton per acre.

In the New England States the Bowker Fertilizer Company offers prizes to potato growers who apply Stockbridge Fertilizer, and this is done to increase the yield of table-size potatoes.

The "perfect potato," according to potato authorities, is a medium-sized (eight-ounce), oval, shallow-eyed tuber, well ripened and grown rather deep in the ground with commercial fertilizer.

Seven prizes, amounting in all to $500, were offered for the largest yields of the best quality table-size potatoes, grown exclusively on the Stockbridge Potato Manure, using not less than 1,000 pounds per acre.

We have not the space to go into all the particulars, but the result was eighteen crops over 300 bushels to the acre, eleven crops over 400 bushels per acre, and three of them over 500 bushels per acre. The average crop of potatoes in New England is 148 bushels per acre; the average of the United States is 94 bushels, and the average of the contest was 334.76 bushels per acre.

The Record-quality Crop.

The first prize of $200 was awarded to No. 26, who is Mr. L. A. Littlefield, of Lincoln, Penobscot county, Maine, for a yield of 545.4 bushels from one measured acre; variety, Green Mountain. Of this yield, 77 per cent. was of table size, which included all potatoes of four to twelve ounces; 17 per cent. were small potatoes, or under four ounces; and 6 per cent. were very large potatoes, or over twelve ounces. The crop scored perfect as to mealiness and color when cooked and in flavor. It also scored 46 points out of a possible 50 in appearance, which included shape, type, skin and flesh. The test for starch showed 16.37 per cent., being 4.37 per cent. in excess of the minimum standard of 12 per cent. The total score was 714 points, the highest in the contest.

Mr. Littlefield's acre was planted on sandy loam soil, which yielded about one ton of hay in 1911. The rows were 32 inches apart and seeded with medium-sized Green Mountains cut one to four eyes to each piece, planted 10 inches apart in the rows by machine and covered 4 inches deep. In ten days the piece was cultivated, then brushed and "buried;" ten days later it was cultivated and hoed again, this being repeated in another ten days. All the work was done by machinery. The acre was sprayed with Pyrox. Twenty-five hundred pounds of Stockbridge Potato Manure was applied, divided into three applications. No other fertilizer or dressing of any kind was used. The entire crop weighed 32,729 pounds, which is equal to 545.4 bushels per acre.

Mr. Littlefield is a young man, about thirty years of age, who makes a specialty of potato growing. His total production that year in addition to the prize acre was 1,095 barrels. He also owns a small herd of fine Jersey cows. He raises some corn and other mixed crops. His farm contains about 150 acres. His ambition is to raise good crops and to produce good cream and butter as well as prize potatoes.

The second prize of $100 was awarded to No. 53, who is Mr. Geo. E. Burditt, of Rochester, Vermont. His acre was planted on soil which he describes as "stony loam," and which produced in 1911, with a light dressing of manure and 300 pounds of fertilizer, a fair crop of ensilage corn. In 1912 it was planted with potatoes in rows 32 inches apart and seeded with Pride of Vermont, cut two to four eyes, dropped 18 inches apart in the rows, covered three to four inches deep with a horse hoe. The piece was cultivated three times with a weeder, with a five-tooth cultivator and hilled up with a horse hoe. He applied 1,100 pounds of Stockbridge, half in the drill and half broadcast. It was sprayed with Pyrox. The yield was 527.2 bushels, of which 73 per cent. was table size, 12 per cent. under four ounces, and 15 per cent. above 12 ounces. In cooking qualities they scored 49 points and in appearance 42 points out of a possible 50. The starch content was 16.65 per cent., very nearly corresponding to Mr. Littlefield's crop. Total score, 696 points.

Mr. Burditt is a young man, about twenty-one years old, who resides with his father. He took the Short Course in agriculture at the Vermont University and evidently has made good use of the advanced methods taught there.

The remaining five prizes were awarded as follows: Third prize, $75, to Gerald Thompson, East Holden, Maine, 511.2 bushels, 658 points: fourth prize, $50, to B. L. Aborn, Brooks, Maine, 465.6 bushels, 640 points; fifth prize, $35, to J. M. Pease & Son, Hope, Maine, 400.6 bushels, 635 points; sixth prize, $25, to E. D. Page, Bangor, Maine, 423.7 bushels, 621 points; seventh prize, $15, to F. E. Chandler, Dover, Maine, 453.1 bushels, 612 points.

738 Bushels Per Acre.

The largest authenticated record crop in New England is a yield of 738 bushels, which was grown on the Stockbridge Potato Manure in Aroostook county by Mr. Coy in 1880. This crop took the grand prize of $1,100 in gold offered jointly by the American Agriculturist and the Bowker Company. This prize was offered for the largest yield without regard to quality. The variety grown was the "Dakota Red," a coarse variety, grown mainly for stock food.

As stated in our January edition, we received by parcels post one of the potatoes grown by Mr. Littlefield that in appearance, baking and tasting qualities was entitled to be called the "Perfect Potato." The account of this contest, a full report, showing yield of every contestant, is published for the benefit of inquiring potato growers. The Stockbridge Fertilizers, manufactured by the Bowker Fertilizer Company, are sold by the Empire Carbon Works, 421 Locust street, St. Louis, Mo., and all applications for free copies of the Perfect Potato Contest Report will be attended to by that company.

Draft Horse and Hackney Catalogue.

A new catalogue by Trumans' Pioneer Stud Farm, Bushnell, Ill., is worth sending for. It contains the history, breeding and illustrations of Shire, Percheron, Suffolk, Belgian, Hackney stallions and mares that are for sale, including the get of some of the stallions they have imported, exhibited and sold. Anyone contemplating the purchase of pure-bred horses of the breeds mentioned should send for this catalogue. It is full of famous animals and their offspring.

Top-priced Native Steers.

During the last week in January, F. E. Heiman, a well-known feeder of Chariton county, Missouri, furnished the top of the steer market with a load of 1,433-pound bullocks that sold at $8.30 per 100 pounds, the highest price obtained on the market for this grade of cattle. The consignment included sixteen head, which came directly from Mr. Heiman's feed lots, where he has had them on a ration of mixed cottonseed meal and cracked corn for the past four months.

In the state of New Jersey, about 85 per cent. of the milk produced is sold as such. Very little is sold as cream or butter-fat. New York City is the principal market.

GOING TO BUILD?

These 2 Great Books Will Reduce Your Building Expense

A magnificent, big 176-page Catalog of Millwork and Building material containing pictures of 8,000 money-saving bargains. A handsome Plan Book of Modern Homes—showing 50 splendid views and floor plans of houses and barns priced from $360 to $6000. Don't pay dealers' prices—deal direct with us, get our wholesale prices and save money.

HOT BED SASH Complete Glazed with Five Rows of 6-in. glass. Made of Redwood with Fir upright and cross bars. *Guaranteed* $1.89

EVERYTHING IN LUMBER, FLOORING, ROOFING, DOORS, WINDOWS, MOULDINGS, PORCHWORK, BUILDING PAPER, HOME and FARM FURNITURE, HARDWARE, TINWORK AND PAINTS at Wholesale Prices. Don't build, repair or remodel without these valuable books. We guarantee quality, safe delivery, satisfaction or money back. Write us today. Ask for Catalog 122. Also book of house plans No. 132, if wanted. Both are free.

GET A BETTER PLACE

Learn Horse-Training —Make Big Money!

$1,200 to $3,000 a Year—at Home or Traveling

Prof. Jesse Beery

Send Coupon for "Horse-Trainers' Book" FREE

Prof. Jesse Beery, known from one end of the country to the other as the World's Master Horseman, having retired from the arena with an independent fortune, is giving the world the priceless secrets of his marvelous success. A copy of his wonderful "HORSE-TRAINERS' PROSPECTUS" will be mailed, free of charge, to all who are ambitious to master this highly profitable and intensely interesting profession.

Vast Audiences Thrilled by Beery Exhibitions

The thrilling exhibitions given by this King of Horse-Tamers and Horse-Trainers have never been equalled. His mastery of fierce, man-killing stallions, without whip, curb bit or other cruel devices, has astounded the world. The most unruly horses—kickers, tricksters, balkers—subdued while multitudes watched, wondered and applauded. Medals, trophies and honors of all kinds, showered upon Prof. Beery by admiring thousands, bear eloquent testimony to his matchless skill.

Learn Beery System by Mail, at Home

The Beery Correspondence System of Horsemanship is the only instruction of the kind in the world. The lessons are simple, practical and complete. Learn in spare time, right at home, to take the most vicious horse and subdue him in a few minutes. Prof. Beery can teach you how to break any horse of bad habits—teach a horse to drive without reins. How to tell the disposition of any horse on sight—judging a horse right the first time! How to cure shying, kicking, biting, balking, fear-of-automobiles-and-trains and all other bad traits forever.

Break a Colt in 8 Hours!

The lessons in Colt-Breaking alone are worth the price of the entire course. You can train a colt, in 8 hours, to be absolutely trustworthy. There is big money in breaking colts and curing horses of bad habits.

Graduates Making Big Money

For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional Horse-Trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy *a home and an automobile* solely through earnings from training horses as taught by your excellent methods."

A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

Coupon Brings Prof. Beery's Great "Horse-Trainers' Prospectus" FREE

If you want to get into a big money-making profession—if you own unruly horses with bad habits—if you enjoy travel—if you are a natural-born trader and can buy cast-off horses cheap to sell at big profit when trained, send now, today, for this grand Free Horse-Trainers' Prospectus. Tell me all about your horse. (41)

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly by
THE HALE PUBLISHING CO.

Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.
Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.
E. T. R. Murfey, 1123 Masonic Temple, Chicago, Ill., Western Representative.
Frank C. Avery, P. O. Box 284, Coronado, Calif., Pacific Coast Representative.

Entered at Postoffice at St. Louis, Mo., as second-class mail matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar. Canada and foreign subscriptions 75 cents a year.

Our Seed Corn Premiums.

On page 20 our readers will find mention of our seed corn premiums. We do this work to encourage experimental farming and to encourage farmers in sending subscriptions to this paper. On forty thousand farms in the United States there are corn-growing plots that have had considerable influence in the enlargement of the corn crop of the United States, and the seed was sent out by The National Farmer and Stock Grower.

We Must Work Together.

All those farmers who believe in "Our Industrial Policy" as published on page 6 should do their part towards it by recommending the paper to others who believe the same. Every time we publish that article we lose some subscribers who do not believe in the protection of American interests. Where we lose one we ought to get two in return. Very few farm papers have any industrial policy to speak of, but The National Farmer and Stock Grower has a policy and does not hesitate to place it before our legislators for their information.

The Reliable Poultry Journal.

The poultry journals are all excellent, but the best of them all is the Reliable Poultry Journal, published at 50 cents a year. Another publication almost as good has advanced the price to $1.00 a year, but we stand by the Reliable and club it with our own paper. See page 28. The club offered is like buying gold dollars at 10 cents each.

Empire Fertilizers.

Every farmer should know something about fertilizers. It is the easiest experimental work in the world—one field fertilized, another one not; both the same soil, the same seed bed, the same time of planting, the same cultivation, the same season, the same method in harvesting. Compare one with another. Write to the Empire Carbon Works, 421 Locust street, St. Louis, Mo., for a book on fertilizers, with formulas for all crops. Use some of these fertilizers and get your experience, so that you may know if it is profitable, and to what extent it is profitable, to use commercial fertilizers. Write for the book anyway. It costs nothing, and it will teach you something.

ST. LOUIS MARKET FOR HAY.

An Average of the Different Kinds That Supply the Market.

In conversation with one of the most capable and experienced hay salesmen, he said that in a general way about 25 per cent. of the hay received on the St. Louis market was straight timothy; that timothy and clover-mixed constituted about 35 per cent.; straight clover constituted about 12 per cent.; alfalfa had increased to about 16 per cent.; and clover hay was about 12 per cent., which makes up the total. He also said that St. Louis was a pretty active, competitive market for hay, and that any shipper who can get his hay to St. Louis at a freight charge of $5.00 per ton or less should consider himself in his own interest a shipper to St. Louis.

On the last day of January the following sales were made on the market of St. Louis, which includes both sides of the river:

St. Louis Side: One car clover-mixed at $14; one car choice light do. at $15. Timothy—One car and part car No. 3 at $10.50; one car and part car do. at $11.50; one car No. 2 at $12; one car and half car do. at $13; three cars do. at $13.50; one car and part car good No. 2 at $14; two cars No. 1 at $16.50. Prairie—One car No. 2 at $10; one car do. at $10.50; part car do. at $11; three cars No. 1 at $12; one car do. at $12.50; two cars do. at $12; $13; one car good do. at $13.50. Clover—One car No. 3 at $11. Alfalfa—One car No. 3 at $11; one car No. 2 at $12; one car do. at $13; one car good No. 2 at $14. On the East Side: Timothy—Four cars No. 2 at $13, two delivered to St. Louis. Clover—One car No. 3 at $11. Alfalfa—One car No. 2 at $13.50; three cars high No. 1 at $16.50, delivered to St. Louis.

CORN SHOW AWARDS.

The Best Single Ear of Corn, the Ten-ear Awards and the Best Peck of Oats.

The principal awards at the National Corn Show, now being held at Columbia, South Carolina, were announced on January 30th.

The grand championshpip award for the best single ear of corn exhibited, being the Kellogg Trophy, was awarded to Joseph Helms, of Richmond, Wayne county, Indiana.

The championship for mixed corn was awarded to C. A. Brown, of Franklin, Johnson county, Indiana; the championship for white corn was awarded to J. T. Henderson & Sons, of Shelbyville, Shelby county, Kentucky; the championship for yellow corn was awarded to Charles Short, of Greensburg, Decatur county, Indiana. The Indiana Trophy for the best tenears of corn, any yvariety, best ten ears of corn, any variety, awarded to Charles Short, of Greensburg, Ind.

The Colorado Trophy for the best peck of oats exhibited was awarded to J. C. Hill & Sons, of Lloydminster, Saskatchewan, Canada.

Hon. Geo. J. Kindel, of Colorado, member of the Sixty-third Congress, has discovered a number of inequalities in the parcels post law. He has proposed a simple, fair and square basis to remedy discriminations, which has received many endorsements, including the Colorado State Grange.

GOOD BOOKS AND PAPERS.

AUTOMOBILE BOOKS.—The two most interesting and instructive automobile books ever published are offered free if you write to Department 89, the Willys-Overland Company, and ask for them. The automobile has come to stay, and all people should understand them. The first book gives the points to consider in buying a car, and the second how to operate a car. We advise our readers to read the advertisement on page 7 and then write for the books to Department 89, the Willys-Overland Company, Toledo, Ohio.

CUCUMBERS AND POTASH.—This is a pamphlet showing that a farmer who is farming for profit and not for his health derived considerable profit by a small investment in potash for the purpose of fertilizing cucumbers. He paid out $2.70 and gets back $156.25. His non-fertilized plot yielded 369.5 bushels to the acre; his plot furnished nitrogen and phosphoric acid yielded 498.5 bushels per acre, and his crop was 748.5 bushels when treated with complete fertilizer, including 10 per cent. potash. The pamphlet can be obtained of the German Kali Works, 448 Monadnock Block, Chicago, Ill., by simply writing for it.

HOME MIXED FERTILIZERS.—A book that will be sent free on request. It is by Dr. Wm. S. Myers, 17 Madison ave., New York City, N. Y., and gives proportion of fertilizers to be used for different crops. Dr. Myers is specially interested in nitrate of potash and is very careful to do justice to other fertilizing materials. The book is very satisfactory to those who are earnestly desirous of increasing crop production.

CLASSIFIED ADVERTISEMENTS.

500 MEN 20 TO 40 YEARS OLD wanted at once in every state for Electric Railway Motormen and Conductors; $60 to $100 a month; no experience necessary; fine opportunity; no strike. Write immediately for application blank. Address, **MANAGER, W-275 Dwight Bldg., Kansas City, Mo.**

WANTED.—Good people to subscribe for THE NATIONAL FARMER AND STOCK GROWER and obtain eight hardy rose plants without a cent of cost other than 50 cents for a year's subscription to the paper. Read the advertisement on the front page, and sign the coupon on page 22.

AGENTS! Wake up! Get busy! Send $10. Get new 36-lb. Feather Bed with 6-lb. Pair Pillows **Free!** Start right in making money, big money. Everybody buys. All women enthusiastic. Say best bed and pillows ever offered. New feathers. Best ticking. **Freight prepaid on all. Satisfaction guaranteed.** Live agents making big profits with easy work. Reference: Commercial National Bank. **Write to-day. TURNER & CORNWELL, Dept. 73, Charlotte, N. C.**

AGENTS—$173 IN TWO WEEKS, MADE by Mr. Williams, Illinois, selling the Automatic Jack. Combination 12 tools in one. Used by auto owners, teamsters, liveries, factories, mills, miners, farmers, etc. Easy sales, big profit. Exclusive county rights if you write QUICK. Automatic Jack Company, Box O, Bloomfield, Indiana.

FREE!—Boys, a dandy Hunting Rifle free. 22 Cal. Hamilton Safety, and many other prizes for a few hours of easy work, selling only 30 Pkgs. of our new household Bluine, at 10 cts. a Pkg. **BURLINGTON SPECIALTY CO., Washington St., Burlington, Iowa.**

FARM AND RANCH LANDS.

ALABAMA.—2,240 acres fertile farm land. Thirty-three tenant houses. 900 acres fenced. Fine land for alfalfa, corn, cotton or cane. One-fourth mile from station. Buy from owner and save commissions. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—A great agricultural state not half appreciated, but a splendid, mild-climate country that is affording fertile farms at low prices. Arkansas has 214,648 farms in all, averaging 81 acres, averaging $2,116 in value and three-fourths free and clear of debt. Increase in value in ten years, 53 per cent. Write for Free Book about Arkansas to **A. Hilton,** G. P. A., 1512 Frisco Building, St. Louis, Mo.

ARKANSAS.—Land is low in value but continually advancing. The Cotton Belt Route is one of the great railroad systems leading to the Southwest from St. Louis and the lands traversed capable of the greatest degree of development. Read about Cotton Belt Excursions on page 14 and write to **E. W. LaBeaume,** G. P. A., 1466 Pierce Building, St. Louis, Mo., for Free Book on Arkansas and Texas.

ARKANSAS FARM.—160 acres, near town; all level; 100 acres in cultivation; two good houses, barns, wells, orchards, etc. Price, $12.50 acre. Terms. Other bargains. **L. E. Moore,** Searcy, Ark.

ARKANSAS.—405 acres of land, nine miles from Warren, Bradley county; 100 acres in cultivation, balance in pine, oak, gum and hickory, estimated at $500.00. Good four-room house; wire and rail fence. Part of land has good growth of switch cane; ideal stock proposition; unlimited range. Price for sixty days, $12.50 per acre, cash. **A. L. Greene Company,** Warren, Ark.

CALIFORNIA.—THE FAMOUS SANTA CLARA VALLEY. "WE SELL IT." Write for list of places and literature. **E. D. Crawford & Co.,** 415 Bankers' Investment Building, San Francisco, Calif. Branches: San Jose and Gilroy.

POLOMAS VALLEY, ARIZONA, FARM LANDS sold on easy payments. Perfect titles guaranteed. Abundance of water year round. Canals all in. Land level; easily irrigated; all cleared and ready for plowing. Soil rich, dark, sandy loam, 25 to 30 feet deep, free from alkali, and adapted to alfalfa, small grain, oranges, lemons, olives, dates; also wheat, barley, oats and live stock. Climate ideal. Pure well water. Land all fenced in 80 and 160-acre tracts. Write for maps, lists, prices, terms and full information. Sent free. Address the owner, **POLOMAS LAND CO., 1535 E Street, San Diego, Calif.**

MICHIGAN.—WE SELL OCEANA FARMS—Greatest Fruit county. Also Potato, Corn, Alfalfa, Stock. List free. **Hanson & Son,** Hart, Mich.

MISSISSIPPI.—CATTLE PEOPLE, LOOK! Eight thousand acres of pasture; seventeen miles south of Vicksburg, Miss.; fenced and counter-fenced. Cane in the hills for the winter. Level, open fields in grass for the summer; overflow lands for the fall. NO WINTER FEEDING REQUIRED. Rental price, 40 cents per acre per annum. Allen Station, Y. & M. V., is on the place. Address, **C B. Allen,** Nanachehaw P. O. Warren county, Mississippi.

MISSISSIPPI.—Well improved farm, situated in Yazoo county, Mississippi; eight miles from good town on main line of I. C. R. R.; 1,290 acres; equipped with four miles of woven wire fence; about two miles of barbed wire fence. All in cultivation except about 200 acres, which is in wood and pastures. Seven tenant houses in first-class condition; one seven-room residence; good orchard, wells, barns, cribs, etc. One good gasoline grist mill goes with it. Soil is black and deep. Japan clover grown naturally on the place, making it one of the best and cheapest stock farms in this county. 175 bales long-staple cotton, besides an abundance of corn, hay, etc., grown on this place yearly. Land is mostly level; no hills; only part of it is gently rolling. No overflows Two creeks furnish plenty water for stock. Owner has other interests and desires to sell. Price only $17.00 per acre. For further information call on or write **R. C. Jarnagin,** Goodman, Miss.

MISSOURI.—For Sale: Farms of 40 to 600 acres at reasonable prices and terms. Choice locations on main line Frisco Railway. List mailed free on application. **John Ross,** Bourbon, Mo.

MISSOURI LANDS IN THE OZARKS.—Corn and cows are a winning combination. Farmers in older states who wish to obtain new locations for one-third of actual value should write for Free Book of the Ozarks. Address, **A. Hilton,** G. P. A., 1512 Frisco Building, St. Louis, Mo. See page 6.

MISSOURI.—For Sale: Fine cattle ranch, 447 acres; 250 of river-bottom land in cultivation. Located on the Frisco Railroad at Wesco, 110 miles from St. Louis. Up-to-date eight-room frame house. Concrete walks. Large barn; all necessary outbuildings and two small orchards. Dept 200 yards from the house. Price, $15,000.00. **A. J. Schwieder,** Steelville, Mo.

TEXAS.—Farms in Texas on the Cotton Belt Route can be had cheap. Most of the fruit and vegetable farms sending early shipments to St. Louis are from the sections traversed by this road. Write for Free Book on Texas Excursion Rates to **E. W. LaBeaume,** G. P. A., 1466 Pierce Building, St. Louis Mo.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property **FREE. American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago.**

Purchase a Southern Farm

Prices range from $10 an acre up. Nature favors you with big crops, ample rain, mild winters, enjoyable summers. Social, religious, and school privileges the best. Beef, pork, poultry, sheep, and dairying pay handsomely. Large profits in alfalfa, truck, corn, cotton, nuts and apples. Great **industrial openings** in all parts of the South. "Southern Field," state booklets and all facts free

SOUTHERN RAILWAY — Mobile & Ohio, Ga. So. & Fla. R.

ALBERTA

The Price of Beef is High and so is the Price of Cattle.

For years the Province of **ALBERTA,** (Western Canada), was the Big Ranching Country. Many of these ranches today are Immense grain fields and the cattle have given place to be cultivation of wheat, oats, barley and flax, the change has made many thousands of Americans, settled on these plains, wealthy, but has increased the price of live stock.

There is splendid opportunity now to get a

FREE HOMESTEAD OF 160 ACRES

(and another as a pre-emption) in the newer districts and produce either cattle or grain. The crops are always good, the climate is excellent, schools and churches are convenient and markets splendid in Manitoba, Saskatchewan or Alberta.

Land Value More Than Doubled

WHEN Mr. Honeycutt of Lee County, Illinois, bought a run down 400-acre farm about three years ago, some of his neighbors thought he had made a bad bargain.

After three years' soil treatment by scientific methods, he raised more than eighty bushels of corn to the acre on land that produced less than thirty bushels the first year he farmed it.

At forty cents a bushel, that figures about $42.00 an acre, not less than $14.00 of which is clear profit, representing 7 per cent on a valuation of $200 an acre. Mr. Honeycutt paid less than half that price for his land, which is not by any means the best in the state. In all probability it is not as good as the land you are farming. His success is due entirely to his up-to-date, common-sense methods of stock feeding and soil fertilizing. You can do as well or better than he has done, when you begin to supply your soil with the kind and quantity of fertilizer it needs, and spread manure evenly with an

I H C Manure Spreader

I H C Manure Spreaders are made in various styles and sizes to meet any and all conditions. There are low machines and high; steel frames, and wood; wide, medium and narrow machines, all of guaranteed capacity; return and endless aprons; in short, a spreader built to meet your conditions and made to spread manure, straw, lime, or ashes as required.

I H C Spreaders will spread manure evenly on the level, going up hill, or down. The wheel rims are wide and are equipped with Z-shaped lugs, which provide ample tractive power without jarring the machines excessively. The apron moves on large rollers. The beater drive is positive, but the chain wears only one side. The I H C dealer will show you the most effective machine for your work. Ask to see an I H C manure spreader. You can get catalogues from him, or, if you prefer, write

IMPROVED DAIRY BREED.

Its Mission and Purpose—A Milk or Butter Test of a Cow Equal to the Track Record of a Horse.

In one of his recent bulletins Mr. Malcolm H. Gardner, Superintendent of the Advanced Registry of Holstein Cattle, says:

"The mission of an improved dairy breed is to increase the productive capacity of the dairy herds of the country. This may be accomplished directly by using pure-bred cows in whole or in part for milk production, and indirectly by grading up the common herds to greater production by the use of pure-bred bulls. To conserve purity of blood, pedigree registers are used for the improved breeds, no animal being eligible to registration whose sire and dam are not recorded. Advanced Registry rests wholly upon merit; the animal must prove itself worthy before it can be accepted. All advanced-registry animals were first entered in the pedigree register to guarantee purity of blood, and then advanced to a higher register upon proving that they were worthy of such advancement. Cows are admitted to advanced registration on their own performance; bulls, on the performance of their daughters. The test record to the cow is what the track record is to the horse; provided the test record is well authenticated. A test record may be worth much or nothing; all depends upon the confidence of the public in its authentication."

Potash Pays the Farmer.

On page 14 will be found an example of fertilizers containing enough potash and another example of fertilizers not containing enough potash. Many low-grade fertilizers are stuffed with phosphoric acid, because it is cheap, and the other elements, nitrogen and potash, are short. Read the advertisement of the German Kali Works on page 14.

Good For Milk or Beef.

A writer in the National Stockman and Farmer, referring to Holstein milk that does not come up to the commercial butter-fat standards, said that cows that gave milk that by the Babcock test does not come up to 3.3 per cent. fat, if fed properly, not for milk, but for beef, will soon put on beef fat, and sell well, especially under present conditions. The culling-out process is not so expensive as it looks, and many a thousand unprofitable animals as dairy cows are good sellers as beef cows.

Holstein-Friesian Records.

During the period from December 24th, 1912, to January 3d, 1913, records for 200 cows were received and have been accepted for entry in the Holstein-Friesian Advanced Register, twenty-four of which were begun not less than eight months after the freshening of the cows making them, and sixty-five of which were semi-official yearly or lactation records.

This herd of 111 animals, of which nearly one-half were heifers with first or second calves, produced in seven consecutive days 46,251.1 pounds of milk, containing 1,578.947 pounds of butter-fat, thus showing an average of 3.41 per cent. fat. The average production for each animal was 416.7 pounds of milk, containing 14.225 pounds of butter-fat, equivalent to 59.53 pounds or 28.35 quarts of milk per day, and 16.59 pounds of commercial butter per week. These averages are computed from tests as carefully and accurately made as it is possible to make them, and some wonder why breeders of pure-bred cattle go to the trouble and expense that is necessary in the making of records. Breeders make the records to show that their cows have the goods, and that they are able to furnish reliable stock for improvement.

Alfalfa in Milk Production.

"An Illinois Experiment Station test showed that with an acre yield of four tons of alfalfa hay and 1½ tons of timothy, the timothy worth $10 per ton, an acre of alfalfa was worth $68.44 more than an acre of timothy in milk production, under the conditions of the experiment, and with milk at $1.30 per 100 pounds. The New Jersey Station concludes that in feeding value three pounds of alfalfa are equivalent to one of cotton-seed meal. Where alfalfa was tested against wheat bran and dried brewers' grain, the saving in cost of milk was 12.7 cents per 100 and 2.3 cents per pound of butter. The milk value of an acre of alfalfa was $74."
—Holstein-Friesian Register.

DAIRY AND CREAMERY NOTES.

During the year 1912 Canada exported 165,000,000 pounds of cheese. Most of it went to England. In the year the Canadian exports of cheese reached the high mark of 234,000,000 pounds. In 1912 the average price for cheese obtained by the Canadian farmers was 13 cents a pound.

The closer the restrictions are imposed in the sale of dairy products the easier it is for the big fish to eat up the little fish. And that many measures ostensibly advocated as health laws are really agitated in the interest of monopoly.

From Brockville, Ontario, Canada, it was reported in January that Thos. C. Singleton, aged 72, in his day one of the most extensive cheese manufacturers in Leeds county, died there recently. He controlled a large combination of cheese factories throughout Leeds and adjoining counties, and he controlled them before consolidations became fashionable in the United States.

From Madison, Wis., it was reported that the first parcel mailed at the local postoffice by parcels post was an eight-pound cheese sent by T. E. Evans to Texico, New Mexico.

Twelve creameries in Bradford and Wyoming counties, Pennsylvania, have gone under one management by purchase. This is only one of a hundred items of that kind.

LOUDEN'S LABOR SAVING LITTER CARRIER
Tickles the Boy because it makes a man of him—enables him to do a man's work with ease.
You clean your barn with half the effort in half the time. The
LOUDEN CARRIER
makes this heavy job fun for the boy. Curves and switches take the carrier to any part of the barn. The cost is small. It's a money making investment in any size stable. Send for Catalogs. Ask your dealer about the LOUDEN CARRIER.
BARN PLANS FREE
If you expect to rebuild or remodel a barn our Architectural Department will work your ideas into a real plan without cost or obligation to you. Tell us the number and kind of stock you wish to stable and give other information. We may be able to save you a good many dollars.
We manufacture every equipment for Dairy, Horse and Hog barns, and hay unloading tools.

DE LAVAL
CREAM
SEPARATORS

Don't Delay Buying One a Single Day Longer

If you are selling cream or making butter and have no separator or are using an inferior machine, you are wasting cream every day you delay the purchase of a De Laval Separator.

There can only be two real reasons why you should put off buying a De Laval; either you do not really appreciate how great your loss in dollars and cents actually is or else you do not believe that the De Laval Cream Separator will make the saving claimed for it.

In either case there is one conclusive answer: "Let the De Laval agent in your locality set up a machine for you on your place and see for yourself what the De Laval will do."

You have nothing to risk and a million other cow owners who have made this test have found they had much to gain.

Don't wait till Spring. Even if you have only two or three cows in milk you can buy a De Laval now and save half its cost by Spring. If you can't conveniently pay cash you can buy a De Laval machine on such liberal terms that it will actually pay for itself.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

Dairy Bull Associations.

"One of the hindering factors working against improvement of the dairy stock in communities where there are few if any pure-bred herds is the inability of the dairyman to get good sires.

This inability may be through lack of information, lack of money, or too few cows to warrant the individual purchasing a good bull.

In such communities an organization might be effected that would to a large measure solve the problem.

Bull associations are well known in Europe, but the American dairy farmer knows but little about them. The European plan, changed to meet conditions in this country, has been advocated. The Federal Dairy Division has assisted in forming a few associations of this kind. The territory covered by such an association is divided into four breeding blocks of not more than sixty cows each. The association purchases a bull for each block. At the end of two years the bulls are exchanged, No. 4 going to No. 1, No. 1 to No. 2, No. 2 to No. 3, and No. 3 to No. 4. By this method of transfer a farmer may have the use of four bulls in eight years at a cost of but a part of the purchase price of one bull.

The plan also makes it possible to secure a better class of bulls than any one farmer would be likely to buy.

There is another advantage in that a whole community will be breeding along the same line. This will enable the community to establish a reputation in a very few years for high-class stock of the breed purchased by the association. Such a reputation brings buyers for this kind of stock and results in an average higher selling price for the surplus."

Thus far the article is taken from Hoard's Dairyman of January 24th, and it is good reading. Farmers located within milk-shipping distance of big cities will have no difficulty in agreeing upon forming Holstein Bull Associations, Milk Durham Associations, or some other breed that has obtained a good start; on the other hand, at distances too far out for milk shipping, farmers can form Jersey Bull Associations or adopt the Guernsey Bull Association, or such other as may have a good start in the neighborhood. The shortest cut to economical dairy production is by the improvement of the dairy herds by using pure-bred bulls.

How to Speak to a Cow.

One of the most successful of the early Wisconsin dairymen had for his motto: "Speak to a cow as you would to a lady;" and when he was asked if he removed his hat when entering the stable door in the morning he replied that he certainly would do so if he thought he could get more milk thereby. What owner, especially in testing, has not noticed that some one of his milkers was able to get more milk from the cows than were the other milkers? It is the personal equation, the regard the cow has for her attendant, that gives hand milking an advantage over the machine; and the more nearly the cow has adopted her milker in the place of her calf, the greater will be his success as a milker. There is usually a vast difference in results between the milker who gets a cow into position by pushing the leg of the stool into her flank and then kicks her on the shin to make her step back, and the one who gains the same end with patience and gentleness. Who can blame the cow for wanting to kick the first man?—Malcolm H. Gardner.

Three Men on Silage.

The thousands of farmers who are feeding corn silage this year for the first time will find much help for their problem in a circular on silage feeding just issued by the Iowa Agricultural Experiment Station at Ames, Iowa. It was written by three men who are thoroughly informed on the management of live stock—Prof. W. H. Pew, head of the Department of Animal Industry of the Iowa State College; John M. Evvard, Animal Husbandry Experimentalist, who has had large experience in feeding; and Prof. H. H. Kildee, Dairy Husbandman. It is called Circular No. 6 and deals with silage as a ration for all kinds of live stock. If interested, write for it to the Director Agricultural Experiment Station, Ames, Iowa.

A Modern Dairy Farm.

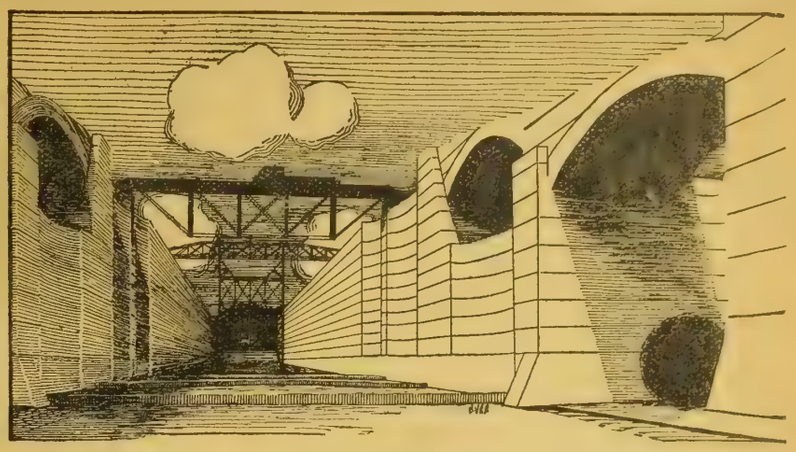
During the week ending January 25th, Dr. Alfred Knight, Dairy Commissioner of British Columbia, and Dr. W. P. Cutler, Missouri Dairy Commissioner, and Dr. Sheldon, of the State University, inspected Col. William F. Phelps' dairy farm near Carthage, Mo. Dr. Knight says Phelps has the most modern dairy farm in the West, if not in America. Every scientific appliance is used, including milking machines, so that the milk does not come in contact with the air until poured in the glass on the table. He has seventy Jerseys and a fine silo.

World's Record Ayrshire.

Jean Armour, a typical Ayrshire cow, weighing 1,100 pounds, has recently gone through a year's test. Her production was 20,174 pounds of milk, which is for the breed a world's record. She gave 774.73 pounds fat, equal to 904 pounds butter, with an average of 3.84 per cent. fat. She is owned by Mrs. F. D. Erhardt, of West Berlin, Vt.

Exports of Butter and Cheese.

During the year 1912 butter to the amount of 4,605,234 pounds was exported from this country; in 1911 the quantity was 6,040,965 pounds; and in 1910 the butter exported was 2,760,974 pounds. Of cheese, the exports were 2,726,065 pounds in 1912, 11,745,880 pounds in 1911, and 2,418,859 pounds in 1910. Our exports are very small, compared with the total butter production of cheese and butter.



Panama Canal

Your attention

is respectfully directed to the fact, that the five million barrels of Atlas Portland Cement, already supplied by this Company for the construction of the Panama Canal, have been accepted without the rejection of a single barrel.

The United States Government has ordered this Company to supply, in addition, all the cement necessary to complete the work in the entire Canal Zone.

MANAGING ORCHARDS.

Relation of Proper Pruning to Thorough Spraying.

The necessity for thoroughness in spraying is recognized by every one who has had any experience in fighting our worst insect pests. Writers on spraying have urged that thoroughness is one of the most important factors entering into the spraying operations. While such urging is entirely justifiable, I sometimes feel that too little has been said about preparation for thoroughness. This is certainly true in the case of many of our orchards where, if more time was spent in heavy and intelligent pruning, and less in spraying, the result would be much more effective work than is sometimes done. Orchards have been observed time and again which had not seen a pruning saw for years, where the growth of the branches was such as to exclude the sun almost entirely from the center of the tree; where the fruit was small and poorly colored; where codling-moth found conditions entirely favorable for its survival, and yet when the owner was asked why his fruit was wormy he would reply that the arsenate of lead that he sprayed with was not good. Such orchards defy proper spraying, or at least require so much spray to do the work well that the average orchardist would rather grub up the trees than spend the necessary money to spray them. While the statement may be slightly overdrawn, it is not far from the truth, as any investigator who has studied spraying problems will have to admit.

The horticulturist urges regular and systematic pruning of the orchard just as emphatically as the entomologist urges thorough spraying. Heavy pruning of old trees does not usually become necessary when each season after planting moderate, careful pruning is done. It does become necessary in extreme cases where earlier pruning has been neglected, and the time has come when a serious pest infects the orchard, else the spraying in all probability will be insufficient to control this pest.

Many striking examples of this relation between pruning and spraying were observed in orchards where the leaf-roller has been doing so much damage of late years. Where trees have been allowed to grow to an abnormal height and the upper branches have not been reached with the spray, they have lost a much higher percentage of their foliage from the attack of the larvae than branches lower down, where spraying could be more easily done. The same condition has very often been observed where codling-moth was the pest sprayed for instead of leaf-roller. It must hold true when spraying for any pest, whether it feeds on the bark, fruit or foliage, if it is at all prevalent.

There are orchards in Colorado and other states that offer a resistance to thorough spraying so great that our high-pressure power sprayers are insufficient to overcome it altogether. Before spraying should be attempted in such cases, the trees should be cut back to a reasonable height and all the interfering and surplus braches should be taken out, thus making the tree low enough so that the topmost branches may be easily sprayed, and the head open enough so that each branch may get its share of the liquid.

Trees that would properly require from twenty to thirty-five gallons of spray for the most thorough work could probably be well sprayed with ten gallons when pruned as they should be.

The control of a well-established insect pest is often no easy matter, notwithstanding the fact that we may have access to the improved modern power spraying machines; the insecticide used may be perfectly reliable in controlling the pests we spray for, and yet we may fail because of having to do our spraying under unfavorable conditions. In the orchard nothing can be more unfavorable than tall, bushy, neglected trees.—George P. Weldon, Colorado Experiment Station, Fort Collins, Colo.

Keep the Grain Out of Your Straw Pile

All threshing machines are not alike. There is one different from all others. It has a different way of taking the grain out of the straw. **It beats it out** just as you would do by hand with a pitchfork. All other machines depend upon its dropping out.

This one different machine is the Red River Special and you should insist upon having it do your threshing. It will save all your grain and waste none of your time.

It saves the Farmer's Thresh Bill.

It has the Big Cylinder, the "Man Behind the Gun," the patented Grate and Check Plate, the greatest separating devices ever built.

The Big Cylinder drives the intermingled straw, chaff and grain against the separating grate, **beating** the grain through where the check plate catches it and delivers it to the grain pan and mill.

Ninety-five per cent of the grain is taken out right there.

The straw goes over upon the shakers which hold it and **beat** it until all the grain is **beaten out.**

In all other kinds the straw is hurried out of the machine and the grain is expected to drop out.

It doesn't. Thousands of green straw stacks every year loudly say it doesn't.

The Red River Special saves all this. Insist upon its doing your work this year. **It will save your thresh bill.** Write for proof.

To Whom It May Concern:

I, J. Knudson, farmer, of McHenry County, North Dakota, do depose and say that during the summer of 1908 I bought of Nichols & Shepard Company a threshing outfit, consisting of one 20-horse power, double cylinder traction engine and one 32x62 Red River Special Separator with wind stacker, self-feeder and weigher attached.

That on or about August 23, 1908, I started this outfit near a stack of old straw that had been threshed in 1907 by a ——— separator, and to stretch the belts on the new machine I caused a small load of old straw from the stack in question to be run through the new machine and was surprised to get over sixteen bushels of oats from this load of straw.

I afterward threshed out the balance of this stack and got 347 bushels of grain.

(Signed) JAMES KNUDSON.

Subscribed and sworn to before me, a Notary Public, in and for McHenry County, North Dakota, this 6th day of Feb., 1909.

[Seal] J. EDGAR WAGAR, Notary Public.

My commission expires March 27, 1914.

Mississippi Cattle at St. Louis.

The cattle from Mississippi bring better net results at St. Louis than at any other market, especially so when they are sold by a first-class commission firm. Messrs. Milton, Marshall Live Stock Commission Company sell a good number of Southern cattle at the National Stock Yards, Ill., including many mixed loads, including cows, bulls, oxen, stags, etc. Late in January they sold for J. W. Wright, Montgomery county, Mississippi, 1,500-pound steers at $6.00 per 100 pounds; 850-pound cows at $4.90; a lot of yearlings, 223 pounds, at $5.75; 800-pound cows at $4.75. They sold for Hood & Orr, of Morgan county, Alabama, 505-pound bulls at $4.75; 550-pound cows at $4.15; 285-pound yearlings at $4.70; and 150-pound calves at $6.50. For J. W. Gresham, Prentiss county, Mississippi, 193-pound calves at $5.75; 715-pound bulls at $4.50; 544-pound canners at $4.10. For R. W. Holland, Morgan county, Alabama, 826-pound cows at $5.40; 610-pound bulls at $4.35; 1,066-pound oxen at $5.25; 932-pound oxen at $4.50. For Ki Harrington, Holmes county, Mississippi, 506-pound heifers at $4.65; 388-pound heifers at $4.00; and 565-pound bulls at $4.65—all sales being at the price quoted per 100 pounds.

In this connection, taking the last week of January, 1913, Mississippi steers, 609 pounds average, sold up to $6.40; a load from Louisiana, averaging 1,026 pounds, sold at $6.90; another lot 796 pounds at $6.10; and a straight load of 613-pound Louisiana steers at $6.15 per 100 pounds. We close this article with Milton-Marshall & Company's quotations for Southern States butcher cattle:

"Cows are in good demand, especially the good grades, and are selling from $5.25 to $5.50. Canners are still finding a ready outlet at strong prices. Bulk selling from $4.15 to $4.25, with common kinds around $4.10. Cutters from $4.40 to $4.65. Best heavy calves from $5.50 to $6.50, with the light from $5.75 to $6.75, a few selected selling as high as 7 cents. Yearlings mostly from $4.50 to $5.00 per 100 pounds."

NATIONAL CORN SHOW NOTES.

The National Corn Show opened at Columbia, South Carolina, on January 27, and remains open until February 8, 1913. It was estimated as being equal in exhibits and the fullness of variety to displays at twenty State Fairs.

At the National Corn Show, the United States Department of Agriculture exhibited moving pictures, showing the life history of the cattle tick, also a demonstration entitled "From the Cow to Consumer," and other views of considerable interest.

The famous champion corn grower, Mr. L. B. Clore, of Indiana, stated at the National Corn Show that crop improvement by seed selection had added an average of seven bushels of corn to the acre in the past ten years.

Some few grains of original Indian corn, supposed to be 1,000 years old, were exhibited at the National Corn Show. The corn was found some years ago in the tomb of a mound-builder near Fort Ancient, Ohio.

For the present the office of Mr. R. W. Brown, Secretary of the American Galloway Breeders' Association, is at Carrollton, Mo. This is not a removal of the headquarters, but a temporary arrangement, because Mr. Brown is obliged to be at Carrollton, and the association has agreed to the temporary removal of the Secretary's office to that town.

There's a Certain-teed Roofing for every building on your farm—large or small

There is a simple method of applying *Certain-teed* Ready-to-lay Roofing on all kinds of buildings—farm houses, barns, garages, poultry houses, silos.

It comes in rolls, also red, green and slate gray shingles.

Certain-teed

(Quality *Cert*-ified—Durability Guaran-*teed*)

Roofing in Rolls and Shingles

Cold weather cracks tile, rains wash and rot shingles, wash gravel off, and the sun melts tar. *Certain-teed* Roofing contains no tar or paper, it will not crack, warp or blow off, it is weather-proof and we guarantee it to wear fifteen years—*costs less* and is *easy to lay.*

Look for the *Certain-teed* label of quality—your dealer can save you money.

Valuable Book Free You will find many valuable suggestions in our new book, **"Modern Building Ideas and Plans."** It tells you what to do and what not to do—it suggests economies and conveniences that will save you money.

A book of this kind would ordinarily sell for $1, but as it shows the use of our *Certain-teed* Roofing on all kinds of model homes and farm buildings, we offer it to you at 25 cents. We prefer to have you go to your lumber, hardware or building material dealer, who will gladly get you a copy FREE. If you write us, enclose 25 cents to cover cost, postage and mailing.

Wyoming's Highest Mountain.

Wyoming has a mountain nearly 14,000 feet in height. It is called Gannett Peak and is located in Fremont county, in the western part of the state. Its height above sea level, according to the United States Geological Survey, is 13,785 feet. The lowest point in the state is on Belle Fourche river, 3,100 feet above sea level. Wyoming, which has an average elevation estimated at 6,700 feet, is the second highest state in the Union, being exceeded only by Colorado.

Get It From the Factory Direct

KITSELMAN FENCE

We were the first to sell wire fence direct to the Farmer.

We make you the same price we would make the Dealer or Jobber. THAT IS WHY WE CAN SAVE YOU MONEY. Look over these prices on just a few of our many styles.

14 cents a rod for 26 inch Hog Fence.
23¼ cents a rod for 49 inch Farm Fence.
25½ cents a rod for 60 inch Poultry Fence.
$1.55 for 80-rod spool Ideal galv. Barbed Wire.

Kitselman Fence wears best and lasts longest. Read the following letter, one of hundreds recently received.

"Nearly 20 years ago I built corals for wild Texas cattle with Kitselman Fence. These pens are still good although the fence is on its third set of posts."
W. C. POWELL, Baird, Texas.

We make over 100 different styles of Fencing. Won't you write for our Free Catalogue today?

Land cost him $600 $6000 profit now!

Mr. Hall, a former Michigan man, bought 100 acres of land in East Texas, at $10 per acre, a few years ago; planted 60 acres to peach trees; made a good living from melons and berries until trees came to bear—and *now* he is getting $6000 *net* from his sixty-acre orchard alone.

[Monkress Farm Jacksonville, Texas.]

You can not only buy lands at far less than yours would sell for; but you can raise more crops with the same effort and at less expense; because of the rich fertility of these lands and the milder climate, which cuts winter expenses *'way down*, along the

Cotton Belt Route in Arkansas and Texas

A. Frank Federer says, who came here from Rhineland, Wis.: "I can raise here on $15 land as much as I could in Wisconsin on $200 land." S. N. Jackson of Piggott, Ark., declared that "This is better fruit country than in Tennessee; our orchard crops bring more money here, and there is a better market for what we raise." Jackson only paid $700 for his place. These lands won't stay cheap. They have already doubled in value since 1905; but even this year you can buy at $12 to $25 per acre, as good land there as you are farming now. And you'd have *every* advantage of schools, churches, close neighbors, good local markets, phones, rural free delivery, etc. This proposition deserves serious thought.

On the 1st and 3rd Tuesdays of each month there are low round trip excursions to Arkansas and Texas via Cotton Belt Route, allowing 25 days' time and free stopovers. Go on the *next* one.

He tells you, in plain words, all about them. 100 pages and farm pictures. Send a postal today for your *free* copies.

E. W. LaBEAUME,
General Passenger Agent
1466 Pierce Bldg., St. Louis

COTTON BELT ROUTE

Value of Fertilizer.

In Parker county, Texas, the Agricultural Agent is Mr. J. J. Caldwell, who makes the following report upon the five-acre demonstration tract which G. G. Cannon had in cultivation on his farm, seven miles northwest from Weatherford. On two and one-half acres of cotton cultivated under scientific methods and with the use of 200 pounds of available acid phosphate per acre the yield per acre was 2,480 pounds of seed cotton. The phosphate cost 90 cents per 100 pounds, or $1.80 an acre as used. On Mr. Cannon's adjoining land of the same quality, worked along the old method, the yield was 800 pounds per acre. On two and one-half acres of corn cultivated under scientific methods and with the use of 200 pounds of phosphate per acre, the yield was forty-five bushels by weight per acre, as against twenty-five bushels per acre on adjoining land of the same quality worked after the old method. Mr. Cannon's eleven-year-old son cultivated one acre in cotton, following Mr. Caldwell's directions, and fertilizing as his father had, and from the one acre picked 2,818 pounds of seed cotton. He did all the work himself except the heavy breaking. Mr. Caldwell says Mr. Cannon is a convert to the scientific method of farming.

FORMALIN TREATMENT

For Smut in Wheat, Oats, Barley and Potato Scab.

Many good agricultural bulletins are issued by the New Mexico College of Agriculture, and one of the recent issues is on the formalin treatment for smut.

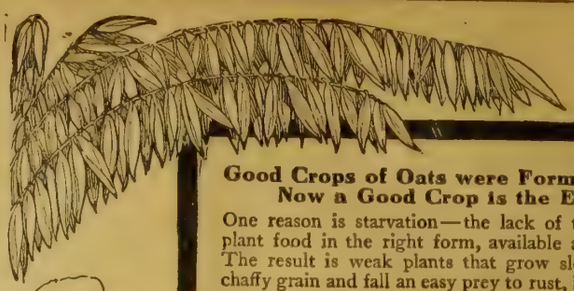
The formalin treatment of seed to prevent smut is simple, cheap and effective. It is also safe, there being but little danger of doing injury to the vitality of the seed. It will prevent (1) stinking smut or closed smut of wheat; (2) loose smut of oats; (3) covered smut of oats; and (4) covered smut of barley. (Potato scab is also treated successfully with formalin). The formalin treatment is not entirely effective in controlling loose smut of wheat or loose smut of barley. It does, however, help considerably with these two loose smuts. The loose smuts are more successfully combated with the hot-water treatment, but its use is not so easy and there is more danger of doing injury to the seed. No effective treatment for corn smut is known. Loose smut of wheat and barley can be distinguished from the closed by the fact that, to see the black spores of the closed smut, the kernel or mass between the glumes must be crushed. The black spores of the loose smut are visible on the surface.

Treatment.—Mix one pint of formalin with fifty gallons of water. The seed may be dipped into this solution in a basket or sack, or the solution may be sprinkled upon the seed. The essential point is, that all of the kernels are thoroughly wet. Fifty gallons of the solution should treat about fifty bushels of seed. The treated seed should be dried soon after the treatment.

Farmers should treat their seed wheat and seed oats and seed barley every year. The cost of treating sufficient seed is small and the loss due to smutted grain is large. Those smuts which are not controlled by this treatment are of comparatively little importance.

Profit in Nineteen Fall Pigs.

An Ohio farmer who has had the experience which teaches him that there is money to be made with fall litters, gives results with two Duroc-Jersey sows and their fall litters. These sows farrowed August 30th and September 1st, thirteen and eleven pigs, and raised nineteen in all. The feed they consumed, counting from the time the sows were bred until the offspring were sold, May 19th, 1911, was as follows: Pasture, $5.90; tankage, $12.25; ground wheat, $9.50; skim milk, $2.00; linseed meal, $2.00; soy beans, $2.00; 193 bushels of corn, $86.85. Total cost, $120.50. When these nineteen pigs were sold they averaged 196 pounds and weighed in all 3,725 pounds. He received $6.00 per 100 pounds, net, on the farm, or $223.50, making $105 profit on the nineteen pigs, or, to put it the other way, he cashed the corn consumed at 98 cents a bushel by sending it to market on foot.



Good Crops of Oats were Formerly the Rule; Now a Good Crop is the Exception.

One reason is starvation—the lack of the right kinds of plant food in the right form, available at the right time. The result is weak plants that grow slowly, yield light, chaffy grain and fall an easy prey to rust, blight and insects.

POTASH

has been shown to greatly decrease the liability of the small grains to attacks of rust, as well as lodging because of weak straw. Be sure that your oats fertilizer contains 6 to 8 per cent. Potash. Ask your dealer to carry such brands, or Potash Salts, to enable you to bring the brands up to this standard.

If he will not, we will sell you Potash in any amount from a 200-pound bag up. Write for prices and for free book on fertilizer formulas and how to adjust them.

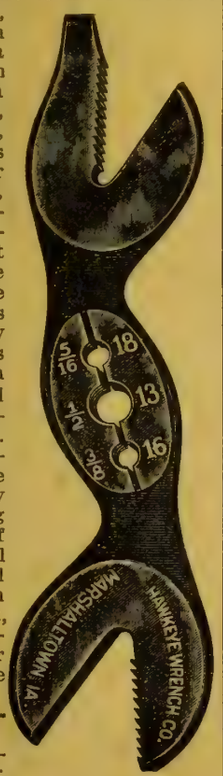
NECESSARY ON A FARM.

The Crocodile Wrench—Actually Six Handy Farm Tools in One.

Yes, an absolute necessity. The Crocodile Wrench means business. Every farm ought to have an extra wrench or two, especially when the wrench is a Crocodile Wrench premium, which is a pipe wrench, a nut wrench, has three dies for cleaning or cutting threads, and a screw-driver. The picture is small, but the Crocodile Wrench is twice as long, and it is full size for any purpose. It is drop-forged from the best tool steel, scientifically tempered. Requires no adjustment. Simple and always ready for use. Nothing to get out of order. Dies will fit threads on all standard farm machinery. Light, strong and durable. No farmer can afford to be without it.



Special Inducements.

Our Subscription Proposition: Send us One Dollar and we will send you THE NATIONAL FARMER AND STOCK GROWER for two years, and we will send you, postage paid, safe delivery guaranteed, ONE CROCODILE WRENCH. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Farm Level Necessary.

A farm level is just as useful and as necessary as a two-foot rule. Every farmer does not have to be a surveyor or an engineer to conduct a farm, but he should know enough to establish his grades and levels in laying out his fields for cultivation, in terracing to prevent the land washing,, in ditching and draining, etc. The best farm level on the market is made by the Bostrom-Brady Mfg. Co., Atlanta, Ga. It is sold through hardware dealers, but the way to get acquainted with the uses and purposes of a farm level is to answer the advertisement on page 6.

THE COUNTRY SCHOOL OUTFIT.

Points in Favor of the One-story School House—Land For the Play Ground—The Time to Buy is Now.

In our cities the building of school houses has become a matter of greater importance than formerly, and the most modern edifices meant for school work are very different from those erected a few generations ago. The same improvements should be found in our country schools.

Where country school houses are to have more than one room, the building should in no instance be given two stories. The day of two-story school houses is passing, except in cities where land is too expensive to give the school houses the land they should have.

In quite a number of places now school houses are being spread over a large area, but are made but one story high. It is found that this method does not cost much more than the old method of construction. Even where there are as many as eight rooms in a school house, the one-story edifice is preferred. It means more light for the children and the elimination of danger from fire, for it is not possible for children in a one-story school house to lose their lives in case of fire.

Another improvement in school house building is the making of the roof flat and furnished with sky-lights, so that much of the light comes from the top. Then, on certain days it is found advisable to draw down the shades at the side windows and receive all the light from the top. This gives a more perfect distribution of light and is a help to the eyes of the children. In some of the suburbs of Chicago, even where land is expensive, the new school houses are being constructed on this plan, and the Boards in those places say they will never again construct school houses more than one story in height.

In the country the price of land is so low that there is no reason why school houses should not be spread out rather than built up. Climbing stairs is not a desirable kind of exercise for children, especially those that have weak hearts. Since a spread-out school house costs no more than the other kind, why not build that kind? The old argument used to be that it was the roof that cost, and therefore one roof should be made to cover as many stories as possible. But the flat roofs are not so expensive as the slanting roofs, and this does away with the old argument.

The play ground is now assuming great importance in the modern city school equipments. In the country it is not perhaps possible to have supervised play, but the ground can be provided for the children. Especially should there be provided a good, big base ball field in connection with every country school. Five acres of land should be added to every school ground where there are a goodly number of pupils. There can be no better investment in connection with any school.

The cost of the additional land would not generally exceed $1,000, even in localities where land is high-priced. There are many other localities where the cost would not be more than half that sum. Bonds can be voted for the purchase, paying four per cent. interest and payable in light installments spread over a term of years. Land should be purchased now, for it will never be cheaper.

What other things should be added to the outfit will depend on the size of the school and the importance it has in the eyes of the people. In some localities domestic science and manual training equipments in country schools are becoming common.

The European wheat crop of 1912 was in bulk larger than in 1911, due entirely to 218,000,000 bushels increase in the Russian harvest. A total of 727,010,852 bushels in 1912, against 509,491,420 bushels in 1911.

The Chance to Save the Dollar

It is right here. Your seed is right, your cultivation is right, and the weather is right for a bumper crop; but if the manure or fertilizer is not right you stand to lose the bumper crop even if you do succeed in making a small one. When you want a big crop, (and most farmers do) it is up to you to feed for it, because your soil does not contain enough **available** plant food. That is where

EMPIRE FERTILIZERS

do their work. They supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather and the plant food supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

Agents wanted where we have none. Address early for prices and terms,

GRAND CHEMICAL CO.,
Dept. C., 1426 South Grand Ave., St. Louis, Mo.

Gone to South Africa.

Bauhard Bros., of Nashville, Tenn., sold fifteen jacks and six jennets to Gunn & Sinclair, Free Orange State, South Africa. This shipment left Nashville by express and will leave New York on the City of Edinburgh for South Africa. They were a nice lot of jacks, and among them was a jack called Tennessee Perfection that won several ribbons in the jack shows, and one of the best to be found anywhere.—Farmers' Home Journal.

Annual Jack and Jennet Sale.

Our readers are advised that on Tuesday, March 4th, 1913, L. M. Monsees & Sons will hold their thirty-fifth auction sale of jacks and jennets. This is always an event of great interest, because the Monsees stock is widely known for superiority and uniformity in breeding, quality and appearance and all that goes toward perfection in jacks and jennets. The record of the herd goes back to the year 1870, and at one auction sale in 1910 the year's output, at bidders' own prices, amounted to over sixty-seven thousand dollars. The number offered this year, sixty-five head, is large enough to be interesting. Catalogues are ready and will be sent to those who write. See advertisement and address L. M. Monsees & Sons, Smithton, Mo., and mention The National Farmer and Stock Grower when you write.

Government Horse Breeding.

In his annual report the Secretary of Agriculture gives an account of government horse breeding as follows:

"The horse-breeding investigations in Colorado, Vermont and Iowa have continued with good progress. In the Colorado experiments in breeding carriage horses there were in the stud at the close of the fiscal year seventy-seven animals, including twenty-two stallions and fifty-five mares Of fourteen foals dropped during the year eleven are alive and thrifty. The average excellence of the foals is above that of previous years.

At the government Morgan horse farm at Middlebury, Vt., there were at the close of the fiscal year sixty-nine animals, consisting of nineteen stallions, forty-four mares and six geldings (work horses). One stallion, one mare and two fillies of approved type and breeding were purchased in Kansas and added to the stud during the year. One of the stallions is still leased to the Massachusetts Agricultural College for breeding purposes. During the breeding season of 1912 an opportunity was given to farmers in Vermont to breed to stallions at the Morgan horse farm under the provisions of the plan for army-horse breeding.

The culling of inferior animals is continued each year by a Board of Survey, so as to retain in the Colorado and Vermont studs only such individuals as conform to the desired types.

In the co-operative work of breeding gray draft horses at the Iowa Experiment Station there are three stallions and nine mares. Four foals were produced during the year.

A good start has been made with the plan of breeding horses suitable for army use, as outlined in last year's report. Two stallions were stationed in Virginia for breeding with approved mares, and during the year thirty-eight mares were bred and eleven foals produced. It is too early to report upon the foals, but it is evident that farmers owning mares of satisfactory type are willing to have them bred to the government stallions on the terms proposed by the government. With the provision made by Congress this work will be extended during the coming year, and it is hoped that within a few years a considerable number of suitable horses will be available for the army."

First-class Commission House.

The best-organized live stock market is St. Louis, and one of the best firms doing business in that market is the Milton, Marshall Live Stock Commission Company. Shippers who consign stock to this firm to be sold can be assured of obtaining the best results possible. Mr. A. J. Milton, President of the company, is an expert cattle salesman, and, assisted by his brother, L. H. Milton, make splendid sales. J. S. Jackson and J. S. Mulberry, selling hogs, are equally expert in their department; and Thos. Freels, Sheep Salesman, is noted for skill, ability and good judgment. It is a finely-equipped firm, doing business efficiently in the interest of their customers. All who will apply to Mr. R. E. Marshall, Secretary, P. O. Box 94, National Stock Yards, Ill., stating what they have to ship, will receive special information concerning the market prospect, coming directly from the salesmen.

HORSE AND MULE NOTES.

During the year 1912 the Kansas City horse and mule market received 73,445 head, against 84,861 head received at the same market in the year 1911. As far back as the year 1900, Kansas City received 103,308 horses and mules in one year.

It was in the year 1907 that Kansas City received the largest number of cattle, 2,384,294 head. Last year 1,943,390 cattle were received at that market.

It has recently been discovered that the mule is a blight on horse breeding, because the mare does not produce a breeding generation. It is a pretty good blight when a weanling mule colt will sell for more money than the government used to pay for a first-class, five-year-old cavalry horse, and for more than the mare will bring in market to-day.

On the New York market, big draft geldings weighing 2,000 pounds are not plentiful, but matched teams of that character are often bought and sold. When the New York brewers, coal dealers and contractors are in need of horses they buy wheelers that come close to the limit of weight in horseflesh.

During the first week in January, Holland, Nugent & Maxwell Bros. sold twelve hundred mules at the St. Louis National Stock Yards. It was a good week for them in mules, but not unusual, as they sell many thousands during the year.

The Great Hog States.

During the census year 1909 the state of Missouri marketed 4,425,425 hogs and slaughtered 949,318 on the farms, accounting thus for a total of 5,374,742 head as the year's product. The state of Iowa shipped to market 5,524,519 hogs and slaughtered at home 507,167 head, together making a total of 6,031,686 head. The state of Illinois marketed 3,745,309 hogs and slaughtered 762,545 at home, making the Illinois total 4,507,854 head.

These three states combined raised, slaughtered and sold a total of 15,914,283 hogs in one year.

The next three states in hog raising bring up their combined total to 9,988,420 head—Indiana with 3,677,128; Kansas with 3,235,490; and Ohio with 3,085,702.

These six states raise one-half of the marketable hogs in the United States, the total for the country being 52,878,675 head of hogs marketed and slaughtered.

Pointer to Horse Shippers.

Holland, Nugent & Maxwell Bros., holding horse auctions at the National Stock Yards Monday and Tuesday of each week, are doing a large and satisfactory business, and they can sell more horses, especially chunks weighing 1,200 to 1,350 pounds, and farm mares and drafters. Any shipper who can put up a carload of horses and who will specify what class of horses he can buy and ship, can get the benefit of the best market in the world by opening communication with Mr. T. H. Holland, National Stock Yards, Ill. The St. Louis market can easily sell a quarter of a million horses and mules in a year.

HORSE AND MULE SALESMEN.

Holland, Nugent & Maxwell Brothers.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

Horse Auctions Every Monday and Tuesday.

SAVE-THE-HORSE
(Trade Mark Registered.)

EVERYONE ASKS HIM, "HOW DID YOU DO IT?"

WILBUR HOLMES of Somers, Conn., Aug. 5, 1912, writes: The very day I ordered Save-the-Horse our horse got so bad we telephoned for a doctor. He ordered poultices on several days. It finally broke and ran, and the foot looked to be coming off; we were frightened. Did not know what to do about using Save-the-Horse. The crack kept growing wider and we expected to lose him. Finally I said we might as well try it; we had spent the money and had the medicine; it can't surely make him worse. We began with Save-the-Horse and SURE AS THE WORLD the crack began to close and finally healed and he now steps SQUARE on that foot. Every one says, "How did you do it?" and "What did you use?" People are surprised. I have been sick or you would have heard from me before, we are so pleased. It surely did save my horse.

Save-The-Horse has stood alone and unique among veterinary remedies for over seventeen years.

Every bottle of Save-the-Horse is sold with an iron-clad contract that has $60,000 paid-up capital back of it, guaranteeing to permanently cure or refund the money; no matter whether it is Bone or Bog Spavin, Tendon disease or Puffs—nor how aged, serious or complicated the lameness or blemish may be. But write, describing your case, and we will send our—BOOK—sample contract, letters from Breeders and business men the world over, on every kind of case, and advice—all free (to horse owners and managers).

Write! AND STOP THE LOSS.

TROY CHEMICAL CO. 62 Commerce Ave., Binghamton, N. Y.

Druggists everywhere sell Save-the-Horse WITH CONTRACT or sent by us Express Prepaid.

Bog Spavin

Cure the lameness and remove the bunch without scarring the horse—have the part looking just as it did before the blemish came.

Fleming's Spavin Cure (Liquid)

is a special remedy for soft and semi-solid blemishes—Bog Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It is neither a liniment nor a simple blister, but a remedy unlike any other. Doesn't imitate and can't be imitated. Easy to use, only a little required, and **your money back if it ever fails.**

Fleming's Vest-Pocket Veterinary Adviser

describes and illustrates all kinds of blemishes and tells you how to treat them. Covers over 200 veterinary subjects. 192 pages. 69 illustrations. Write for a free copy.

FLEMING BROS., Chemists,
218 Union Stock Yards, Chicago, Ill.

Milton, Marshall
LIVE STOCK
Commission Company

Shipments of Cattle, Hogs and Sheep solicited for sale upon the St. Louis Live Stock Market.

The St. Louis Market is the most active and competitive of all markets. Many shippers selling elsewhere will obtain better returns at St. Louis.

We are thoroughly equipped to obtain the very best results in the interests of our customers, and in all market matters we will be found to be leading the procession.

For market information, special letters on Native and Southern Cattle, Stock Cattle and Feeders, Hog Prospects, Stock Sheep, Fat Sheep and Lambs, write to

Guaranteed Rupture Holder On 60 Days Trial

Won't Cost You A Cent If The Two Months Test Doesn't Prove All Our Claims

You can make a thorough 60 day test of this guaranteed rupture holder without having to risk a single cent. We'll make one especially for your case and let you see for yourself how it takes all the misery out of being ruptured.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial — the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times —including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why druggists should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—CluthCo., 125 E. 23rd St., New York City

Please mention Nat. Farmer and Stock Grower.

SOLD AND SLAUGHTERED.

Enumeration of Domestic Animals Slaughtered at Home and of the Total Shipped to Market.

One of the statistical tables compiled by the Bureau of the Census and applying to the census year 1909 is something not easily obtained, even by a census enumeration, and is certainly not available any other year, because it requires a very close count to obtain the figures.

This reference is to the official statement showing the number of domestic meat animals shipped to market and the number slaughtered at home.

It appears that during this census year 20,572,997 head of grown cattle were marketed and only 1,408,640 were slaughtered at home; the entire cattle crop being 21,981,637 head, averaging in value $31.36 per head, and a grand total of $689,375,710 for all the cattle disposed of that year.

In the matter of calves, the home slaughter is very much greater in proportion to the number shipped to market. The total number of calves marketed was 6,742,748, and the number slaughtered at home was 1,131,600, the grand total being 7,874,348 head, averaging in value $7.59 per head, and a grand total money value of $7,446,998 for the calf crop.

In the matter of swine the figures are surprising. The number sold in market reached the amazing total of 37,500,158; the number slaughtered at home was 15,378,517; the grand total hog crop of one year was 52,878,675 head, an average value of $13.08 and a grand money total of $691,611,885.

The number of sheep shipped to market during this census year was 18,991,456 head; the number slaughtered at home, 529,526, a grand total of 19,520,982, valued at $4.34 per head, a total of $84,774,271.

The number of goats shipped to market was 407,563, and 118,989 were slaughtered at home, making a total of 526,552; valuation, $2.24 per head; a total of $1,181,312 for goats.

Anyone who will follow these figures will be satisfied that the amount per head received by the farmer for cattle, calves, hogs, sheep or goats does not by any means furnish any reason for the "high cost of living."

STOCK YARD NOTES.

At the St. Louis National Stock Yards the Milton-Marshall Live Stock Commission Company sold for L. M. Stingley, of Pelahatchee, Miss., a load of 298-pound hogs at $7.10 per 100 pounds. These hogs were of fair quality and sold high, considering that the top of 10,000 native, corn-fed hogs on the same day sold at $7.70.

The wool clip is lighter in Australia and the number of sheep and lambs twenty-five millions less than usual in consequence of a severe drouth last winter. Australia, however, is accustomed to drouth, and if it were not for troubles of that kind, sheep would increase very much faster and overstock the country.

Last year 2,523,331 hogs were received at Kansas City, against 3,167,816 received during the year 1911. The largest receipts of hogs at Kansas City were 3,716,404, in the year 1901.

The first year that Kansas City received over a million hogs was in the year 1897, when the total was 1,134,236 head. In the year 1912 the receipts were 2,133,976 head, and the largest yearly receipts of sheep at that market amounted to 2,175,493 head, in the year 1911.

Where Hogs Are Slaughtered.

Missouri slaughters more hogs on the farm than any other state, the total for a year being 949,318 in one year. Other states slaughtering over a half million hogs on farms are Texas, 885,260; Georgia, 860,409; North Carolina, 783,247; Ohio, 768,195; Illinois, 742,123; Kentucky, 733,642; Pennsylvania, 675,939; Indiana, 646,581; Arkansas, 616,350; Alabama, 581,615; Iowa, 507,167; and Virginia, 537,797.

It's HOG WORMS—Not Cholera That Kills The Most Hogs

E. Myers, President, E. Myers Lye Company

Real hog cholera—the disease that is caused by a certain germ—is by no means as common as many farmers and hog raisers seem to think. In fact, it is rather rare. Yet every year an epidemic breaks out and sweeps the country like wildfire, killing thousands of hogs and causing millions of dollars loss. An enormous part of this disease is caused by **worms.** The symptoms are similar to those of cholera—the hog snoops around, his flanks "flop," hair sticks up, tail hangs down, he coughs, eats little, gets thin. You think he has cholera, but he hasn't. **Rid him of the stomach and intestinal worms that are sapping his vitality and strength and he'll get well. You can quickly rid all your hogs of worms by mixing with their feed twice every day according to directions on every can a little**

Merry War Powdered Lye

Hog raisers declare it is a **dependable destroyer** of hog worms. It makes hogs strong, healthy, fat and sleek, tones up the digestion so that all feed is changed into firm flesh and juicy fat. MERRY WAR POWDERED LYE is likewise the **safest preventive of real hog cholera and the best hog conditioner** the world has ever known. Keep your hogs on a MERRY WAR POWDERED LYE feeding from weaning until marketing time—they'll never know a day's sickness and will weigh heavy. Feed **twice every day** according to directions printed on every label.

About Vaccination I've no doubt that vaccination, as a preventive of cholera, has done some good. But it is an expensive and difficult treatment. It guards only against the specific cholera germ. It does **not** destroy hog worms, make sick hogs well, or thin hogs fat. So why use a treatment which is more or less of an experiment, when you can so easily get MERRY WAR POWDERED LYE, which **actual experience** in thousands of cases has **proved** to be a **dependable, safe preventive of cholera, destroyer of worms** and a **wonderful hog fattener?**

Beats Everything As A Worm Destroyer **A. U. PATE, Blue Jacket, Okla.** "I have been feeding Merry War Powdered Lye to my hogs for worms. It beats everything I ever saw."

10c A Can At All Dealers

MERRY WAR POWDERED LYE is for sale at most grocers, druggists and feed dealers everywhere, 10c per can (**120 feeds**). It is convenient to buy in case lots—4 dozen cans $4.80. **Costs only 5c per hog, per month, to feed regularly**—by far the best and much the cheapest hog insurance you can buy. If your dealers can't supply you, write us, stating their names. We will see that you are supplied, and also send you, **free,** a valuable booklet "How To Get The Biggest Profits From Hog Raising." **Order direct from us in case lots (4 dozen cans $4.80) if your dealers won't supply you.**

There Are No Substitutes

Don't experiment with ordinary, old-fashioned lye. **It might prove dangerous.** MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed to hogs. Full directions on each can.

Which Kind Do You Want?

E. Myers Lye Co., Dept. 22 St. Louis, Mo.

DR. LEGEAR'S STOCK POWDERS

Healthy, Vigorous Stock Is The Only Kind That Makes Money For You

A horse, whether for work or to drive, can't give you first-class service unless he feels right. Your steers and cows can't create beef or milk to advantage if they are feeling "under the weather". Sheep and hogs won't yield wool and pork profitably unless they are healthy and vigorous. Put your horses, cattle, sheep and hogs into fine condition, and then keep them in that fine condition by feeding the famous Dr. LeGear's Stock Powders. A tip-top Tonic—an unrivalled Milk Producer. Gives horses strength and endurance, sleek coats and good spirits. A money maker for every man who owns stock.

Large 25c, 50c and $1.00 size boxes; also 25-pound pails at $2.50, and 100-pound pails at $9.00.

Write for free copy of Dr. LeGear's Stock Book. It contains 112 pages of information about stock and poultry. Invaluable to all owners of stock.

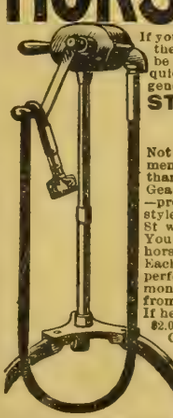
HORSES FEEL YOUNGER AND WORK BETTER WHEN CLIPPED



If your horses are clipped before the spring work begins they will get all the nourishment from their feed—be healthier and look better. They will dry off quickly, be more easily cleaned and feel better generally—that means work better. Use a

STEWART'S BALL BEARING ENCLOSED GEAR CLIPPING MACHINE

Not an expense—but a highly profitable investment. It turns easily, does more and closer work than any other machine—can't get out of order. Gears all file hard and cut from solid steel bar—protected and run in oil. Includes 6 feet new style easy running flexible shaft and celebrated Stewart's Single-Tension Clipping Head. You can make money clipping your neighbors' horses while yours will do better work. Each machine guaranteed. If it doesn't give perfect satisfaction, return it and get your money back. Complete from your dealer at ..... $7.50 If he can't supply you send $2.00 and we will ship one C. O. D. for balance.

CHICAGO FLEXIBLE SHAFT CO., 182 Ontario St., Chicago, Ill.

WOOL

Stewart No. 9 Ball Bearing Shearing Machine

Is a real profit device. Gives 15c to 40c more from each sheep. You know the size of your flock, so figure your profit and you'll find the machine will more than pay for itself the **first** season. Any boy can run it all day without tiring. All joints ball bearing with ball bearing shearing head. The equipment includes four sets of knives fully guaranteed. Price.... $11.50 If your dealer hasn't it send $2.00 and pay balance C. O. D.

Expert instruction on Sheep Shearing FREE

My X-RAY Saves You From 75¢ To $1.25 Every Hatch

GREATEST hatcher ever invented! Shipped *direct* to you from factory. No agents—no dealers. *Guaranteed* to please. Orders filled *same* day received. No delays.

I place my lamp underneath, square in the center, and not on the side. Thus I get an absolutely even temperature throughout the egg-chamber all the time—and there is no cold side. I use a big oil tank on my X-Ray—holding 4 to 8 quarts of oil—fill this up just once and you don't have to touch it again until after the hatch. One gallon of oil is all that is needed for a hatch—just one gallon! Why! Because every bit of heat in my

X-RAY Incubator

"Built Different From all Other Machines"

is used to best advantage, because my automatic trip cuts down flame at the burner when egg-chamber gets too hot. Others burn high all the time and let excess heat escape. My machine controls it!—saving both oil and money. You never have to touch the regulator of my X-Ray—it's automatic; it's the most perfect heat regulating device ever invented. My heater being so centrally located (underneath) conveys equally a direct heat from the lamp into every part of the egg-chamber. Door of my X-Ray is on top—where there are two double-glass panels through which you can see the thermometer any time—without raising lid and chilling eggs.

Uses Only One Gallon Oil to Hatch Requires Only One Filling of Lamp

To use my X-Ray means less egg-handling, less oil, less heat generated, absolutely no waste, no filling of lamp during hatch, no fumes, no danger of "cooking" eggs—but an even heat always over the WHOLE egg-chamber. My X-Ray weighs ¼ to ½ less than the old-style machines of same egg-capacity. I, personally, guarantee it to please you—to give you the biggest and best hatches you ever had. Anyone can be successful with my X-Ray—it is so simple. It is neatest, cleanest, most beautiful incubator made.

Write today for Free Book No. 96 on X-Ray Incubators and Brooders. Get my Factory-to-you price. I pay the freight and make good every claim.

J. H. Kate, President, X-Ray Incubator Company, Wayne, Nebr.

TEN-YEARS' WORK

In Egg-laying Competitions at the Hawkesbury Agricultural College, New South Wales, Australia.

It was the Daily Telegraph, a newspaper publication, that organized the egg-laying competitions of Australia, and the contests were conducted at the Hawkesbury Agricultural College at Richmond. The competitions were intended to be and have been a source of education and inspiration to poultry keepers.

In ten years the average number of eggs laid per hen were 130, 163, 152, 166, 171, 173, 180, 181, 168, 184, with a ten-year average of 166.8. The profit per hen ranged from $1.92 to $2.96.

In tests where the laying continued the second year the pen laying 184 the first year lay 124 the second; another year the figures were 179 to 127; another 190 to 140; another 194 to 134; another and last, 184 the first year and 140 the second.

The first-year average of pens that were tested two years was 185 eggs per hen for the first year and 133 for the second year.

Some of the hens were tested three years. Fifty-four White Leghorns averaged 209 the first year, 148 the second and 134 the third. Six Black Orpingtons averaged 189 the first year, 156 the second, and 100 the third.

The average of the winning pen for ten years was 224 eggs per hen, per pen of six layers. The lowest average was 106 eggs per hen.

There were also three years of duck competitions. First contest average eggs per duck, 156.5; second contest, 170.5; third contest, 173.

The first ducks that were tested two years lay an average of 185.3 the first year and 175.6 the second. The second lot of ducks that were tested two years lay an average of 185 the first year and 136 the second.

It is stated upon the best authority that the influence of these contests has caused an increase in the laying average on the farms in Australia. Our information is from Farmers' Bulletin No. 57, issued August, 1912, and is by D. S. Thompson, the poultry expert in charge of the contests.

Weights of Market Poultry.

Quotations on the New York market for dressed poultry are instructive, for in many instances weights are given in addition to prices. The following were middle of January quotations from the New York Produce Review:

Chickens — Broilers — Twelve to box, milk-fed, 24 pounds to dozen, and under, 26c.; 26 to 30 pounds to dozen, 24c.; corn-fed, 24 pounds to dozen, and under, 21 to 22c.; 26 to 30 pounds to dozen, 18 to 20c.

Chickens—Fryers—Twelve to box, milk-fed, 31 to 36 pounds to dozen, 19c.; 37 to 45 pounds to dozen, 19c.; corn-fed, 31 to 36 pounds to dozen, 16½ to 17c.; 27 to 45 pounds to dozen, 16c.

Chickens — Roasters — Twelve to box, milk-fed, 48 pounds and over to dozen, 20c.; corn-fed, 48 pounds and over to dozen, 18 to 18½c.

Chickens, barrels, Philadelphia and other nearby squab broilers, per pair, 80 to 90c.; do. fancy broilers, per pound, 27 to 28c.; roasting, 23c.; average, 18 to 20c.; Pennsylvania broilers, per pound, 24 to 25c.; roasting, 18 to 20c.; average, 15 to 16c.; Western dry-picked, milk-fed, 4 pounds and over each, 20c.; mixed weights, 18c.; corn-fed broilers, 18 to 19c.; corn-fed, roasting, 4 pounds and over, average each, 17½c.; mixed sizes, 16½c.; Ohio and Michigan, scalded, selected large, 17½c.; mixed weights, 16c.; other Western scalded selected, large, 17c.; mixed weights, 15½c.; Kentucky and Southern dry-picked, 15c.; Western and Southern poor, 12 to 13c.; chickens, large, coarse and staggy, 14 to 16c.

Capons—Philadelphia, 8 pounds and over, 26 to 27c.; 6 to 7 pounds, 23 to 24c.; small and slips, 20 to 21c.; Ohio, selected large, 23c.; 6 to 7 pounds, 21 to 22c.; small and slips, 18 to 20c.; other Western, selected, large, 22c.; small and slips, 18 to 19c.

Fowls, dry-picked—Western, boxes, 60 pounds and over to dozen, 17c.; 42 to 55 pounds to dozen, 16c.; do. 36 to 42 pounds to dozen, 15 to 15½c.; under 36 pounds to dozen, 14 to 14½c.; Western dry-picked, average best, 4 pounds and over each, 16c.; 3½ pounds and under, 15c.; Southwestern, 15½c.; Ohio and Michigan, scalded, 16c.; do. other Western scalded, 15½c.; Western Southern dry-picked and scalded, small and poor, 13 to 13½c.

Other poultry—Old cocks, per pound, 12½c.; spring ducks, Western, large and plump, 19c.; do. average, 16 to 17c.; inferior, 10 to 12c.; spring geese, Maryland, choice, 16 to 17c.; Western, fancy, 15 to 16c.; fair to good, 12 to 14c.; inferior, 8 to 10c.; squabs, prime white, 10 pounds to dozen, $5.50; do., 9 pounds to dozen, per dozen, $5.00 to $5.25; do., 8 pounds to dozen, $4.50 to $4.75; do., 7 pounds to dozen, $3.50 to $3.75; 6 to 6½ pounds to dozen, $2.25 to $2.50; do., dark, per dozen, $1.75; culls, per dozen, 50 to 60c.; spring guineas, per pair, $1.10; old, 60 to 75c.

The Connecticut Contest.

At the egg-laying contest that was conducted at Storrs, Conn., F. G. Yost, of Pennsylvania, owned the winning pen of five White Leghorns that averaged 214.2 each. The second prize went to a Canadian pen of White Wyandottes with 213.8. A S. C. Rhode Island Red pullet belonging to Mrs. Harris Lehman, of Kentucky, lay 254 eggs, the largest record of a single bird.

Ireland is the greatest poultry-growing country in the world. It is far ahead of France, though we have always considered the latter as the leading country in this industry. Ireland, with a population of not quite 5,000,000, has 14,000,000 fowls, while France, with a population of seven times greater, has only 40,000,000.

Read about our industrial policy on page 6. It is good reading.

Uncle Sam's Poultry Book

The world's only complete official guide to poultry raising. Written by government experts—every page means money in your pocket. Price 20 cents, worth $10.00 to you, and by our plan you can have 50 cents back. Send us 10 2-cent stamps, or 2 dimes. Edition limited: send quick. Uncle Sam says you should use an incubator and tells how a good one is built. There's no other machine made coming up to the standard but

The Sure Hatch Incubator

which is built Uncle Sam's way. Heavy, strong, best materials, many modern features not found in others. Complete control of heat and **hatches chicks that live. Guaranteed five years. Big book free.** Send for it. Get to work at once and put your chicks on the early high-priced market. Poultry and eggs will be higher the coming season than you ever knew them to be.

SHOEMAKER'S BOOK on POULTRY

and Almanac for 1913 has 224 pages with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies. All about incubators, their prices and their operation. All about poultry houses and how to build them. It's an encyclopedia of chickendom. You need it. **Only 15c.** **C. C. SHOEMAKER, Box 945 Freeport, Ill.**

THE MISSOURI NATIONAL.

The Egg-laying Contest That is Nearest Home.

The Second National Egg-laying Contest at Mountain Grove, Mo., is proving to be more satisfactory than the first in every particular. The contest began in the middle of November and will close November 15th, 1913.

There are seventy pens in the contest with ten hens to the pen.

The total for the first six weeks is 5,954 eggs.

An English pen of Single Comb White Leghorns is leading the procession with 263 eggs.

A pen of Silver Wyandottes is second with 217 eggs.

The third pen so far consists of White Wyandottes, with 185 eggs.

Many birds in the contest are not mature, yet every pen had laid some eggs before the end of the first month.

The birds this year are practically all pullets and are expected to make grand records when they get fairly started.

In the month of December, White Leghorns led with a pen laying 222 eggs, followed by S. C. Reds with 162 eggs to their credit, and the birds of the third pen were Silver Wyandottes, with 157 eggs.

In addition to the egg-laying contest by breeds, ten pens are used to demonstrate different methods of feeding, and so far the demonstration indicates that liberality in feeding is necessary during the winter. The Maine method of feeding is leading.

The prime necessity in getting a good start in a contest is getting early chicks. Most of the hatching ought to be done by April 15th.

The pen that has 160 eggs to its credit in six months has a big start over the pen of immature pullets of the same breed that had only seven eggs laid by that time.

The leading ten pens lay from 129 to 222 eggs in December, with an average of 1,119 eggs for the ten of them.

The leading breeds from the commencement are White Leghorns, White Wyandottes and Silver Wyandottes, but it is too soon to count eggs that are not yet hatched.

Mr. T. E. Quisenberry is Director of the State Poultry Experiment Station at Mountain Grove, Mo., having the contest in charge. He has three pens, and no more, of each breed contesting.

Authentic Egg Laying.

Lady Cornell, a Single Combed White Leghorn hen owned by the Cornell (New York) Agricultural College, has a two-year egg record that probably has not been excelled by any other hen. Lady Cornell weighs but 3.2 pounds, but, notwithstanding this, she laid 257 eggs during one year, and the following year laid 200 eggs, making a total of 457 eggs for the two years, which weighed 57.19 pounds. Lady Cornell consumed about eighty-eight pounds of grain and mash to produce the above large egg output.

The New York Produce Review says: "Juiciness in broilers is due to pure food and rapid maturity. As a broiler cannot be secured on free range, and as it can attain the required weight in a given time only by a systematic feeding of pure foods, it carries with it a repuation and demand on account of its juiciness, tenderness and purity."

Cut Down Upkeep

By R. E. Olds, Designer

I have built cars for 26 years—60,000 of them.

But of all I have learned, nothing else compares with these ways for cutting upkeep—shown in Reo the Fifth.

The Final Cost

The buyer sees just the car's first price. But the vital thing is the after cost.

That may be little or it may be much. It depends on the builder largely. And the difference to you, in the course of five years, may be $1,000.

How I Reduce It

One big item is tires.

In Reo the Fifth I cut this cost by using tires 34x4. They cost $60 per set more than tires often used on a car of this weight. But they save many times that in tire bills.

I use in this car 15 roller bearings —11 Timken, 4 Hyatt. They cost five times as much as common ball bearings. But they do not break.

I use 190 drop forgings, at twice the cost of steel castings. But drop forgings don't have flaws.

Margin of Safety

Axles and driving parts should show very large over-capacity. I build them all to stand the tests for a 45 h. p. car. That leaves enormous margin.

I have all steel made to formula. Then I analyze each lot twice.

For testing my gears I use a crushing machine of 50 tons' capacity.

I use 7-leaf springs, two inches wide. And I test them for 100,000 vibrations.

Each engine is tested for 48 hours —20 hours on blocks, 28 hours in the chassis. I employ unusual tests.

Each car in the making gets over 1,000 separate tests and inspections.

Costly Items

I use a $75 magneto to save ignition troubles. I doubly heat my carburetor, for low-grade gasoline. I use a centrifugal pump, not a syphon. That adds about $10.

I use 14-inch brake drums.

I give each body 17 coats, so the finish will endure. I use the best genuine leather in upholstering. Also the best curled hair.

I am using flush electric dash lights in place of the old-style lamps.

All these things are costly. Yet I supply them, through factory economy, in a wonderfully low-priced car.

A car without them is likely to cost five times as much for upkeep. There may be costly repairs, and frequent.

I never would buy a lesser car. Therefore, I never shall build one.

Our $100 Control

Here is one feature worth $100 which costs not an extra penny.

It's the Reo center control. All the gear shifting is done by moving one little handle only three inches in each of four directions. It is as simple as moving the spark lever.

The driver sits on the left hand side, as in the latest high-priced cars. And this control lever is at his right hand.

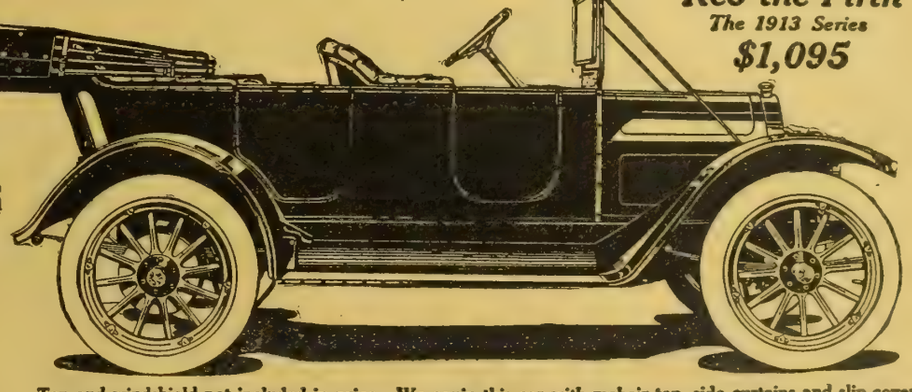
Both brakes are operated by foot pedals. There are no brake levers, so both front doors are clear.

A car in these days should have these modern features.

Sold by 1,000 dealers. Write for our 1913 catalog and we'll tell you the nearest show-room.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.
Canadian Factory, St. Catharines, Ont.

Reo the Fifth
The 1913 Series
$1,095



30-35 Horsepower
Wheel Base—112 Inches
Tires—34 x 4 Inches
Center Control

Made with 5 and 2 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170).

English Ducklings Bred Early.

Tegetmeir, the famous English authority, says in England ducklings are bred for the London markets as early in the year as possible. At Christmas time, in the neighborhood of Aylesbury, as much as $2.88 per dozen will occasionally be given for eggs of good Aylesbury ducks, in order that the ducklings may be reared and fattened early, for in the spring months from $2.88 to $3.60 a couple is no uncommon price for good Aylesbury ducklings. Formerly the struggle was to get the ducklings ready for the peas; now the position of things is reversed, and the difficulty is to produce the peas to accompany the early ducklings. The birds, owing to the prices named, are reared and fattened in many cases in the laborers' cottages, are never allowed to go into the water, are forced upon mixed vegetable and animal food, and are killed at from eight to ten weeks old, before they have molted a single nestling feather. The meat is tender, the flavor delicate, not at all assimilating to that of the wild duck.

In Germany, in the year 1912, 3,928,395 acres of barley planted produced 40 bushels per acre (figuring 48 pounds per bushel), a yield only surpassed in 1909. The quality in general was so poor that it will be impossible to use much of the barley for brewing.

Long Distance Phone, Main 1326.

LOANING MONEY TO FARMERS.

How It is Done by the Land Bank of the Union of South Africa.

In a recent issue of the South African Journal we find an interesting article as follows:

"Another landmark in the agricultural progress of South Africa is the establishment of the Land Bank. This bank has been provided for the purpose of aiding deserving agriculturists in the development of their farms. With the advent of Union the Provincial Agricultural Banks were amalgamated into one Union Bank with headquarters in Pretoria. As this combined bank has been modeled on the lines of the Transvaal Land Bank, it may be of interest to recall the nature and scope of the operations of the latter. The Transvaal Land Bank was started in 1907, and carried on business for four and a half years. During this period, moneys were advanced to the amount of £2,105,000 ($10,525,000), the security being farm property worth nearly £7,000,000 ($35,000,000). The average loan was £357 ($1,785), a figure which clearly shows that the directors kept in view the main object for which the bank was established, namely, to help the small farmer. No loan exceeded £2,500 ($12,500). The total number of loans issued was 5,661, which is approximately one-quarter of the rural population of the Transvaal, and indicates how widely the bank was appreciated. The Transvaal Land Bank not only enabled farmers to pay off mortgages by advancing money at reasonable rates, but it also brought down the general rate of interest on farm property. The bank proved that, in the past, many agriculturists had been paying too much for advances. The bank relieved them, and, at the same time, set free a large sum for beneficial development of the land instead of permitting it to swell the profits of Shylockian money lenders.

The capital of the new Union Bank is fixed at £6,000,000 ($30,000,000), and consists of the capital of the old Provincial Banks, together with such further moneys as Parliament may authorize. Its operations are controlled by a Central Board in Pretoria, assisted by four local Advisory Boards in other parts of the Union. Under the Union Land Bank the loans will vary from £50 ($250) to £2,000 ($10,000). The method of procedure is as follows: Any farmer who desires a loan goes to the nearest magistrate and fills in a form of application. He pays two fees, one on the amount of the loan, varying from £1 ($5.00) to £1 10s. ($7.50), and the other a valuator's fee of £1 ($5.00). The valuator then submits this valuation to the magistrate, who forwards the application with his recommendation to the Local Bank, who, in turn, forward it to the Central Board. The Local Board is purely advisory. The Central Board finally determines whether the application shall be approved. The interest for the first five years is at 5 per cent.; thereafter, capital and interest for twenty-five years at 7 per cent. These loans are for a period of thirty years. There is another form of loan called the cash credit loan, limited to £1,000 ($5,000) at 6 per cent. This loan is granted on a reasonable security, and is intended specially to encourage the purchase of live stock and any necessaries connected with farming operations."

Farm Canning Factories.

Farmer, you are the man of all men naturally fitted to can your own crops, and do so at home, using all of the family large enough to work to help you grow and can same. This gives you a home market for your crops and profitable employment for all of your family. Read this:

"Mr. Thos. M. Brown, Springfield, Mo.:

Dear Sir:—I have my canning business for 1912 rounded up. Packed 4,400 cases, or 105,600 No. 3 cans, tomatoes this year. Sold them for 95 cents per dozen, f. o. b. factory. I grew four acres myself and bought the rest from my neighbors at $8.00 per ton.

I made this year, after paying all expenses for canning and paying for the tomatoes I bought, over $1,800, and feel pretty good over results for a small farmer with small investment in your $330 canning outfit.

I have in the last five years got rid of a big mortgage on my farm; paid a lot of outside debts; improved my farm well, and stocked it up in good shape, and have money in the bank. Made it all on your factory.

When I bought it I was a poor man, badly in debt, with a family of a wife and several small children to care for. J. H. SPEARS."

If you want to start in the best business in your reach, write THOS. M. BROWN, of SPRINGFIELD, MISSOURI, for free booklet. It will give you over 100 testimonials with the addresses of the canners writing same, so you can investigate for yourself.

He sells his factories on time or 10 per cent. or 15 per cent. of the pack as payments until paid for. No chance to lose a dollar. He makes sixteen sizes for the farm or large community; prices, $85 to $850. You can own a home or pay the debt on the one you have if you will try. —(Advt.)

The silo is certainly in fashion, for here comes the sheep raiser demanding ensilage for his sheep. Ensilage was supposed to be the exclusive ration for the dairy cow, but now the cattle feeder and the sheep feeder are claiming it.

PUBLIC SALE

(4th ANNUAL SALE)
—of—

20 Head of High-Class REGISTERED BLACK JACKS and JENNETS

—and—

15 Head of Registered Poland-China Hogs,

consisting of Bred Sows, Gilts and young Boars, at

W. F. SCHADE,
Cape Girardeau County. JACKSON, MO.

FARM HOG DRESSING.

Timely Article by an Expert Stockman, Who is a College Professor.

It is an easy matter to dress hogs neatly provided the temperature of the water is just right. The water for scalding should be heated to a temperature of 210-212 degrees Fahrenheit. On the farm, where it must be heated in the house, usually it should be boiling when removed from the stove. If turned into a cold barrel it will then be about the right temperature, 185-195 degrees, when the hog is ready to be scalded. Water at 165-175 degrees will scald a hog, but more time will be required and the results are not so satisfactory. It is not expected that a thermometer will always be used, but boiling water carried from the stove to a cold barrel out of doors will usually be at about the right temperature for scalding, when the hog is put in the barrel, unless there is unnecessary delay.

A small shovelful of hard-wood ashes added to the water aids materially in removing the scurf from the body, although it has a bad effect in loosening the hair. A lump of lime or a handful of soft soap will have the same effect.

While being scalded the hog should be kept moving constantly to avoid cooking the skin. As soon as the hair and scurf slip easily from the surface, scalding is complete. If it is suspected that water is too hot, scald the hind end of the hog first; if too cold, the front end, in order to always get a good scald on the head, which is difficult to clean.

The scraping should begin just as soon as the hog is removed from the water, and the more rapidly it is done the easier it will be. The head and feet should be cleaned first, as they cool quickly. A small hand "candlestick" scraper is a very convenient tool for the purpose. It may be purchased at almost any hardware store for from 25 to 35 cents.

After removing the hair from the body, the hog should be hung up and rinsed with hot water and then with cold, scraping down with a sharp knife to remove all hair and scurf from the body.—Andrew Boss, Agriculturist, University Farm, St. Paul.

CORN MARKET SITUATION.

Prices Advanced in January All Along the Line and Spread It Over the Present and Future.

Anyone who is interested in the disposition of the corn crop ought to read the article which appears in this publication on page 7. It shows what little business in actual fact the different centralized markets are doing in corn in proportion to the total crop. It proves the old saying, that the price of the surplus is the basic price of the whole crop. It is very valuable information, and we are glad to acknowledge our indebtedness to the United States Department of Agriculture for it. It shows very clearly that in this case, as in many others, the tail is wagging the dog.

The corn market gave a good account of itself in the month of January and closed higher than at the close of the previous month by several cents a bushel. On December 31st, cash corn at St. Louis was selling at 45 cents a bushel, and on January 31st the price had advanced to 49 and 49½ cents a bushel. That is not bad, considering the immensity of the crop, and we are only three months past crop maturity, when usually there is plenty of corn for sale.

Noticing the speculative market, as we must do to get a line on the future, we find that the May option advanced from 48⅜ cents, quoted on December 31st, to 52½ cents by January 31st, showing a snug advance of 4⅛ cents in the thirty days, notwithstanding an open winter and not much corn being fed. The July corn option, which closed at 49¼ cents on December 31st, advanced to 53⅜ cents a bushel by January 31st, a nice gain of 4⅛ cents in thirty days. There is very little more to be said about corn, except that a September quotation of 54⅛ cents appeared on the market, giving the comfortable assurance that somebody has an opinion that corn will not decline right up to the time when the coming crop of early and Southern corn is maturing. Cash corn at 49 to 49½ cents a bushel; the May option closing at 52½ cents, July at 53⅜ cents, and September at 54⅛ cents a bushel on January 31st, and it indicates strong values, considering the crop of 1913 is a record breaker.

Slaughter of Sheep in a Year.

In New York and New Mexico they slaughter a few sheep on the farms and ranches. New York slaughtered 51,217 and New Mexico 58,839. The slaughter of sheep in these states is far beyond sheep slaughter in other states. The total of all sheep slaughtered on farms in a year was only 529,526, against 18,991,456 sheep reaching market to be purchased by butchers and packers.

Average Butter Test.

The average butter-fat content of the milk produced by different breeds was ascertained by experimenters at the New York College of Agriculture several years ago. The Holstein, the largest producer of milk, was placed at 3.46; the Ayrshire at 3.57; the Devon at 3.70; the Guernsey at 5.12; and the Jersey at 5.61 per cent.

Eggs Selling Low.

Cold-storage eggs are being sold for less than original cost. On January 31st, at St. Louis, the best eggs were selling at 21 cents a dozen, and cold-storage eggs dull and nominal at 15 to 18 cents a dozen.

L. M. Monsees & Sons' 35th Auction Sale

—AT—

LIMESTONE VALLEY FARM,

Tuesday, March 4, 1913.

65 Head of High-Class Registered Jacks and Jennets.

TERMS CASH.

WRITE FOR CATALOGUE AND COME TO THIS GREAT SALE. RESPECTFULLY,

L. M. MONSEES & SONS, SMITHTON, MO.

Pigs Without Worms

I'll Stop Your Losses from Worms—I'll Prove It 60 Days Before You Pay

Little pigs only a few weeks old are often found loaded with worms. Hogs of all ages suffer from these deadly parasites. Then cholera, swine plague and other contagious diseases get in their destructive work. Stock troubled with worms don't thrive; they cough, have fever, act dull, and don't gain a pound. Your feed is wasted; your profits are stolen. Your animals frequently die, causing total loss of many dollars. I'll stop all this **quick** with Sal-Vet, the great worm destroyer and conditioner. I have done it for thousands of others. I'll do it for you, before you pay me a penny, if you will just send me the coupon.

Prices 40 lbs. $2.25, 100 lbs. $5.00, 200 lbs. $9.00, 300 lbs. $13.00, 500 lbs. $21.12. No order filled less than 40 lbs.

Read This Letter: "Have fed Sal-Vet to my hogs and lost none. Neighbors both sides of me, east and west, have had cholera bad. One west of me, on adjoining farm, lost about forty hogs and pigs with cholera; the one east, on adjoining farm, lost all he he had, excepting four."
A. J. HOFFMAN, Leipsic, Ohio.

SAL-VET

Send No Money—Just the Coupon

If you will fill out the coupon—tell me how many head of stock you have—mail it to me, I'll ship enough Sal-Vet to last them 60 days. You simply pay the small freight charge when it arrives, and when the 60 days are up report results. If it does not rid all your stock of the deadly stomach and free intestinal worms, I'll cancel the charge—you won't owe me a cent. [72]

S. R. Feil, Pres. THE S. R. FEIL CO., Dept NF&SG Cleveland, Ohio

60-day trial shipments are based on 1 lb. of "Sal-Vet" for each hog or sheep, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular packages.

SIDNEY R. FEIL, Pres. THE S. R. FEIL CO., Cleveland, Ohio
Ship me enough SAL-VET to last my stock 60 days. I will pay the freight and roll ort results in 60 days and will then pay for it if does what you claim. It it does not you are to cancel the charge

LIVE STOCK FARMING.

Changed Conditions in Live Stock Raising—Expenses Added That Increase the Cost of Production, But the Best All the Same.

Live stock farming requires more brain power than some other kinds of farming. This was not always the case, for there was a time when a man simply let his live stock take care of itself and grow into a multitude. That was when range cost nothing and expenses were few. Now pasturage costs a good deal of money, and all other feed is high in price. The cost of producing farm animals and what can be obtained for them are quite close together. So close is the relative positions of cost and value that there is always the danger of the cost exceeding the value of a farm animal. It therefore behooves the stock raiser to be eternally vigilant.

The man that is producing live stock has a market on his own farm for some of the crops he raises, for the successful live stock grower must raise a large part of his feed. To be able to feed out on his own farm the crops he raises makes the farmer independent of market conditions as to hay, grain, roots, and such things as can be used for feed. He also is saved the trouble of hauling these things to market in all kinds of weather. In the marketing of his live stock he is not forced to market in a hurry, for the greatest preservative in the world is life, which is in his animals.

The rightly-managed live stock farm does not deteriorate in ability to produce crops. Its fertility is generally on the increase. This is a factor that has not been made enough of when we have figured the returns from our live stock, for fertile land has been such a common thing in this country that we have not fully valued it. It is safe to say that if live stock raising had been carried on extensively in New England and the Middle States those states would not now be reporting so many thousands of worn-out farms.

The productiveness of the farm of the future more than in the past will depend on the amount of manure put on it annually. It is hard to see how the farm that is not fairly well supplied with live stock will be able to make this annual application of fertilizer in the face of rising prices for fertilizers and deteriorating land. The manure from the stock is a good thing to apply with the fertilizers of a commercial nature.

The by-products that can be used by the live stock is an item of great importance. These by-products vary with different localites, but changing them into money through the medium of the live stock is frequently a matter of a difference very noticeable in the bank account. One of these by-products is the second crop that may be grown on a piece of land for the purpose of producing feed after another earlier crop has been removed, while the time would be too short to mature anything marketable.

Not to drift with the tide is a good way to make money out of live stock. When a whole community seems to be giving up the raising of any particular kind of stock is a good time to determine to hold on, for the time will come again when a particular kind of stock will bring good prices and the supply be inadequate. That means profit to the breeder in position to supply the kind of stock then in demand.

LAND VALUES DOUBLED

By the Use of an Up-to-Date Machine—The I. H. C. Mogul Tractor.

This article is inspired by the fact that the tractor engine is now and has been advancing the value of land. It is not ordinary plowing that is being done by such machines as the I. H. C. Mogul Tractor. Some cheap lands in Iowa have been doubled in value by being brought into use—lands that had no value so long as the horse was the motive power.

In the year 1911 A. L. and Bruce Rogers bought a 320-acre farm near Dennison, Iowa, for $52.50 an acre, and it was one of the lowest-priced pieces of land in the country, because of the heavy growth of underbrush and scrub oak, making it appear impossible to ever farm much of it without great expense for clearing it. The same farm is now one of the best in Iowa and would command $100 per acre if the owners would part with it.

Up-to-date machinery can work wonders, and this farm was rapidly turned from waste brush land into level plowed fields. The machinery used is a forty-five-horse-power I.H.C. Mogul Tractor, burning cheap kerosene oil, and a huge plow cutting a twenty-four-inch furrow twelve inches deep. The cost of operating the outfit is so small compared with the value of the work being done as hardly to be worth figuring. The engine consumes approximately twenty gallons of kerosene a day, costing seven cents a gallon, and required two men for the operation, one on the engine and one on the plow. This outfit is so powerful that it plunges along through stiff brush and saplings at the rate of two to two and a half miles an hour. Trees and roots three inches thick are cut off like paper, and the whole mass turned under a foot of sod, to disintegrate and become fertilizer for further crops. The engine walks right over the small saplings, crushing them down for the plow to turn under, and the outfit leaves a plowed furrow twenty-four inches wide and nearly twelve inches deep in its path, the earth and brush being literally turned upside down.

The owners figure that after the plow has cut through this land and the top brush burned, the land should reasonably be worth from $100 to $150 an acre, as the soil is very rich and full of vigor, and the owners are confident that the crops raised on it will more than justify these figures.

Many people from the nearby country are out every day watching this giant plowing outfit do its work, and a number of farmers who have scrub oak and brush land in the vicinity are making arrangements with the owner of the outfit to convert their land into tillable soil. In this way a good many acres of good, rich soil will be added to Iowa's wealth-producing land and another advance in the science of increasing land values is to be credited to the International Harvester Company of America.

The large plow being used to turn under hazel brush and shrubbery is known as the grub-breaker; size, twenty-four inches; three-ply steel beam, using a standing coulter. The plow is mounted on a two-wheel truck and regulated by levers. The weight of the plow is about 1,300 pounds. Mr. Rogers, the owner of the plow, advises us that from the results of this plowing he has fifty acres of corn which equals any of the corn in the vicinity of Dennison. He says, furthermore, that by the use of this engine plow he has converted the land which he purchased in 1911 for $52.50 per acre into a farm that he has already refused $125 an acre for. By reference to the illustration you will see that the land is very rough and uneven. Some of the pockets in the ravines they were plowing had a grade of 50 per cent., with 33⅓ per cent. on the side slope.

ELKHART INDIANA

CHAMPION SEED CORN PREMIUMS.

Offered to Our Readers Who Send Us a Special Subscription—Yellow Dent Corn Pure Bred Since 1847.

Johnson County White Corn That Won Many Grand Championships.

The subject of seed corn is of the utmost importance, especially at this time. Pretty good seed corn is easy to get, but superior seed corn is scarce. Even the best seed corn growers have good and bad seasons, and there is great variation, one year with another, in vitality and quality of their seeds.

AN IMPROVED EAR OF CORN.

Only one thing can be guaranteed, and that is, pure-bred seeds, like pure-bred animals, produce true to type, and sometimes there is worked out an almost imperceptible improvement. The road to improvement is rough and rocky, and upon it there are many obstacles; but ultimate success is possible, and only possible by using seeds of the right breeding and quality. The backward road is easy to travel by using seeds of no breeding and only containing the qualities that even negligence cannot destroy. Promiscuous seeding of unknown corn results in smaller crops of low-grade corn. Nature may save the crop by an excellent season, but the general result is bad.

As a step towards general improvement, every corn grower should have one or more experimental plots each year, using small quantities of different seeds. The National Farmer and Stock Grower has furnished opportunities for farmers to obtain such seeds for the past five years.

We are now distributing small quanties of seed corn distinctly different and grown by two great corn improvers—one, D. L. Pascal, of Iowa, who has grown Reid's Yellow Dent Corn that he obtained pure from the originator. Mr. Pascal has won many prizes. The other eminent breeder is the famous L. B. Clore, of Indiana, growing Johnson County White Corn. His World's Fair and National Corn Show championships are many, and no corn improver on the face of the earth is his equal.

We have bought seed corn from Mr. Pascal and we have bought seed corn from Mr. Clore, and it will be delivered us in February. We will send it out in twenty-ounce packages as subscription premiums.

Our Subscription Proposition.

Anyone who will send us the amount of sixty (60) cents we will send The National Farmer and Stock Grower for one year, and we will send as a premium a package containing twenty ounces of Yellow Dent Seed Corn grown by Mr. Pascal, or, if preferred, we will send twenty ounces of Johnson County White Corn grown by Mr. Clore. Take your pick of which corn you desire, and if you wish both kinds, send one dollar ($1.00) and be credited with two-years' subscription and two twenty-ounce packages of seed corn. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Big Day For the Editor.

The editor of a Kansas paper says that he picked up a Winchester rifle recently and started up the street to deliver the weapon to its owner. The delinquent subscribers got it into their heads that he was on the war path, and everyone he met insisted on paying all they owed. One man wiped out a debt of ten-years' standing. On returning to the office he found a load of hay, fifteen bushels of corn, ten bushels of potatoes, a load of wood and a barrel of turnips.—La Belle Star.

A Valuable Book For Cow Owners.

The De Laval Dairy Hand Book, now ready for distribution, is one of the most valuable small books for the dairyman we have ever seen. It is filled with good, practical matter from cover to cover, and its subject matter was prepared by men of the highest authority.

It contains a number of condensed discussions on subjects of every-day value to dairy farmers, including "Dairying For Profit" by Prof. John Michels; "Maintaining Soil Fertility on the Dairy Farm" by Prof. Elmer O. Fippin, of Cornell University; "Proper Dairy Feeding and Balanced Rations" by Prof. Hugh Van Pelt, of Iowa; "Alfalfa, the Wonderful" by Hon. F. D. Coburn, of Kansas; "Legumes For the Dairy" by Prof. C. W. Burkett; "The Silo and Silage" by Prof. C. S. Plumb, of the Ohio University; "Diseases of the Dairy Cow and Their Proper Treatments" by Dr. A. S. Alexander, of Wisconsin.

Other articles cover dairy cow judging, farm butter making, history of the dairy breeds, stable ventilation and other matter. The whole booklet is a valuable collection of facts and figures which every dairyman ought to know. The De-Laval Dairy Hand Book will be sent free to our readers who write the De Laval Company for it. Address, The De Laval Separator Co., New York City, N. Y., and please mention The National Farmer and Stock Grower.

Beef Product Exports.

We are not exporting cattle on foot to any great extent. In the year 1912 the total was 32,626; in 1911 the total was 148,611; and in the year 1910 the total was 94,355; but in 1910 we exported 8,177,961 pounds of canned beef, 8,821,812 pounds of fresh beef, 26,849,686 pounds of pickled beef, 3,283,744 pounds of oleo oil, and 27,416,451 pounds of tallow.

Book of Champions on page 2.

Give Hogs SalTone and Watch 'em Grow

There's money in raising sound, healthy, wormless hogs. But much of the expensive feed given to wormy animals is a dead loss. Because the worms eat at the first table, and the animals get nothing but the leavings. All animals like Sal Tone. They will take it without urging. But worms and parasites simply can't stand it. It drives them out "tops and all." One man wrote us recently—"Sal Tone drove the worms out by the gallon.

The Stock Tonic SAL TONE TRADE MARK **The Great Wormicide**

Sal Tone is a medicated salt tonic wormicide and conditioner. It is ready prepared. It requires no skill to use it. Simple directions accompany each package.

It contains the vegetable remedies the animal's instinct would lead it to look for if allowed free range.

Sal Tone is prepared under the personal direction of Mr. John E. Robbins, who is now and has been for thirty years, a successful stock raiser and breeder on a large scale. It is the result of *practical experience*, the only experience that amounts to anything in handling animals. There is no *theory* about it. It has been used by him for years.

Sal Tone, the tested-and-proved remedy, is just as easy to get as the poorly compounded kinds.

We Will Send You a Supply On 90 Days' Approval

We will ship Sal Tone to you on our big guarantee that it costs you nothing if it fails to do all we claim—to remove stomach and intestinal worms. You merely pay the small freight charge and use according to directions for 90 days. At the end of that time, after you have had a chance to fatten and market your stock, report results. If Sal Tone does not do all we claim, say so and it costs you nothing. We leave it to you. You are the judge and the jury. Your verdict is final with us. There will be no appeal. This offer means money in your pocket. Don't hesitate. Mail the coupon NOW.

THE JOHN E. ROBBINS COMPANY
Greensburg, Indiana

Prices: 40 lbs., $2.25; 100 lbs., $5; 200 lbs., $9; 300 lbs., $13. No mail orders filled for less than 40 lbs. Sal Tone is always sold in "trade marked" packages—never in bulk.

Ask Your Dealer for Sal Tone. If He Can Not Supply You, We Will Ship Direct.

The John E. Robbins Company, Greensburg, Indiana
Ship me your SPECIAL 100 LB. 90-DAY TRIAL ORDER OF SAL TONE. I will tell you in 90 days whether it does as you say, and if it does, will pay for it. If it does not I owe you nothing. N. F. 1112.

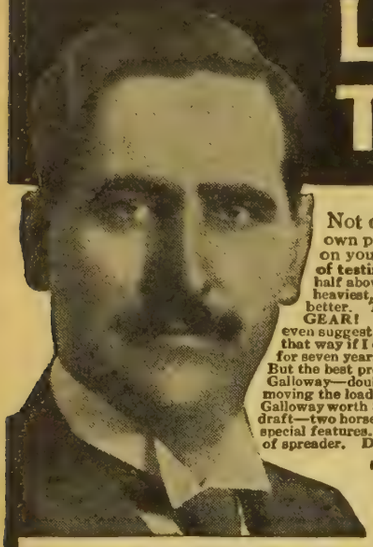
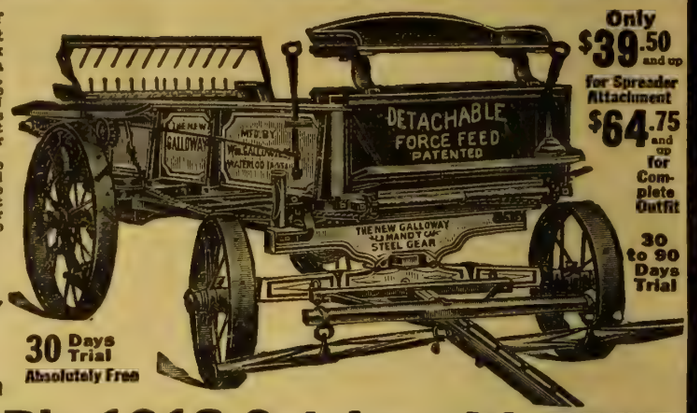
Let Me Ship YOU This 1913 Spreader FREE



Not one cent down. No bank deposit. Keep your money in your own pocket. I just want you to **try** my new Spreader, **that's all.** Try it right on your own farm for a whole month **free. Test it out as you wouldn't think of testing any other spreader in the world.** Pile on the manure a foot and a half above the box. Put on all she'll hold. Take the fine, powdered stuff or the toughest, heaviest, tramped-down, slough-hay kind from the calf yard. If it's frozen, so much the better. **Take it into your field, whip your team to a gallop and SLAM IT IN GEAR!** Say, I know that's an awful test. So do you! A test no other manufacturer dares even suggest to you. But do you think for a minute I'd ship you a spreader and let you abuse it that way if I didn't know it would make good? I know what I'm doing. I've made the same offer for seven years, and the Galloway today is better than ever. 40,000 farmers have proved it. But the best proof of all is the machine itself—eleven patented features—all exclusive with the Galloway—double drive chains furnishing power from both wheels alike direct to the beater and moving the load. The only endless apron force feed, roller bearing feed spreader built. Makes the Galloway worth $25.00 more than any other spreader sold today. Low down—easy to load—light draft—two horses will handle it easily. Pull between wheels entirely on the reach—and many other special features. I can't tell them all—just get my catalog before you buy any other make or style of spreader. **Do it today.**



Only $39.50 and up for Spreader Attachment

30 Days Trial Absolutely Free

THE ONLY WAY IS THE GALLOWAY

Selling Direct from Factory to Farm

You know Galloway. You know his fair, square, straight-from-the-shoulder way of doing business direct with the farmer from his factories **and saving you the 30% to 50% middleman's profit.** No man in the country ever gave the farmers as square a deal as Bill Galloway.

Now, I'm out to break my own records.

I know I've done it, but I'm going to leave it to you. If you can figure out a **fairer** proposition than I'm making for 1913, I wish you'd write and tell me—I can't.

Write Me—Get My Special 1913 Proposition

Here comes the **best news of all.** I am going to help you get your spreader partly or even entirely free. No canvassing—no soliciting. When **I say free, I mean FREE.** I've been four years working out this plan, and say, **it's the biggest, fairest and most liberal co-operative offer ever made.** Now, I want you to get my offer **right away.** I don't want you to wait a minute. **I have a special reason for wanting you to hurry** and I'll tell you when you write me.

Here's the Proof:

Gentlemen: My Galloway Spreader was ordered about the first of February, 1909, and is a 50-bu. machine. I have run over a thousand loads of manure through it. Perfectly satisfied.—W. G. SUTFIN, Dundee, Ill.

Sir: My Galloway Spreader works as fine as silk, and I have the $30 left that it would have cost me if I had bought a trust spreader.—St E. TRENKS, Geddes, S. D.

Dear Sir: The spreader I bought of you is a dandy. I have hauled 150 loads with it without the least trouble and with two small horses not weighing over 1,100 pounds each. I use the 60-bu. size and I would advise anyone in need of a spreader to try the Galloway and see for themselves. It is the lightest running and the strongest in the market today. It is O. K.—GER. McCARTHY, Monona, Iowa.

Now Get My Big 1913 Catalog—It's FREE

Don't let this paper get out of your hands until you have sent for Galloway's wonderful big illustrated free spreader catalog. Find out how you can get a Galloway Spreader shipped right to your farm for 30 days' free test. And above all, get posted on my SPECIAL LIMITED OFFER. **I want you to get that offer sure.** Not another like it. Send me the coupon or letter or postal **today.**

"A Streak of Gold"

The only book of its kind in the world. It tells you just the practical facts every man ought to know about fertilizing. Tells how to handle manure, how to treat it, keep it and use it to the best possible advantage. Worth a hundred dollars to any business farmer. Regular price one dollar. Free to you when you write me.

WHEAT MARKET SITUATION.

Small But Satisfactory Differences in Wheat Prices, One Month With Another.

St. Louis is the market in which the bulk of the soft red wheat is sold, and the cash market has a way of acting very independent of outside conditions. In the wheat trade all people buying and selling hard wheat listen to the voice of Chicago, but when it comes to No. 2 red the voice that is listened to is the voice of St. Louis.

On December 31st the cash quotation at St. Louis was $1.06 to $1.10 per bushel, and thirty-one days later at St. Louis the selling price of No. 2 red was $1.08 to $1.12½, showing a 2 to 2½-cent gain for the month. Hard wheat on the cash market at St. Louis sold at 88 to 92½ cents on December 31st and advanced during the month of January until on the last day of the month hard wheat was selling on the cash market from 90 to 94 cents a bushel, a gain of 4 to 4½ cents a bushel.

As usual, we look towards Chicago for the market that gives actual contract transactions. We find then that the May quotation had advanced from 91½ cents a bushel on December 31st to 93⅞ cents a bushel on January 31st, and as the May quotation in wheat is the most important of the year, even so small an advance is a decided step in the right direction. The July quotation also advanced in the same time from 88¾ cents to 91½ cents, and a lone September quotation was recorded at 90 cents.

Wheat is selling too low to please the farmers who raise the crops, and unless wheat does sell better than 90 cents to a dollar a bushel there is but very little inducement to grow wheat, no matter how much clatter is going on about it.

Poland-China Swine Breeders.

The Annual Meeting of the National Poland-China Record Company was held in the Phillips Hotel, Dayton, Ohio, on Wednesday, January 22, 1913, when the new Board of Directors was elected as follows: E. E. Coler, Dayton, O.; W. W. Johnson, Danville, Ky.; M. C. Brown, Martinsville, O.; I. B. Morgan, Flora, Ind.; J. M. Klever, Bloomingburg, O.; Lloyd Mugg, Kokomo, Ind.; and J. S. Harmison, Woodstock, O.

The Board of Directors organized by electing E. E. Coler, President; Lloyd Mugg, Vice-President; J. M. Klever, Treasurer; and A. M. Brown, Secretary; and the Executive Committee, I. B. Morgan, J. S. Harmison and M. C. Brown.

The Treasurer's report showed all bills paid to date, with $367.49 remaining in the bank, and that he held a loan of $2,000.

The report of the Executive Committee showed that they had carefully examined the records, vouchers and bills of the office of the Secretary and Treasurer, finding the same to be true and correct.

The Secretary's report showed that Volume 34 was closed and now in the hands of the printer; also that the company had not done quite as large a volume of business during the last twelve months as for some previous years, which he attributed largely to the heavy loss of hogs by disease during that time; also the loss of pigs during the severe cold weather which prevailed all over the hog belt throughout the winter and early spring. The report of the Secretary further showed that there is a good demand for Poland-Chinas in the South and Far West, as many new herds are being built up in these sections, many of which are on a large scale and of our most popular breeding.

Among other things debated by the Board, considerable attention was given to the advisability of changing the printed form of pedigree in the volume, whereby the brackets would be left out and the book set straight matter. After careful thought on the part of the Board it was decided to make no change; that the present form of tabulated pedigree was the best used by any Record Company of any live stock, and that while some other concerns were shortening their pedigrees, about to the extent of no pedigree, now is the time to hold fast to that which is not only good but the very best. (Official.) A.M. Brown, Secretary.

THE GRANDEST
Subscription Offer.

A Splendid Magazine One Year —The Ladies' World—National Farmer and Stock Grower One Year—Eight Standard Grapevines—All For One Dollar.

This is a startling subscription offer, especially valuable to farmers' wives and families and to anyone who owns a home. **The Ladies' World** is a monthly magazine,

forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, lovely stories, splendidly edited, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. No better, cleaner or more useful paper can possibly enter the farm home.

The National Farmer and Stock Grower is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets and instructive matter concerning general farming, stock raising, dairy, poultry keeping and all the especial features that keep a farmer posted on his own interests in dealing with the world of business.

The subscription offer includes a magnificent collection of **Eight Two-year Standard Grapevines.** These

grapevines are ready for planting. They are two - year - old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe: **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar.

We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Fuel-saving, Perfect Heating Stove.

There is no reason why a stove should be wasteful of fuel, whether the fuel be coal or corn cobs. The

Kalamazoo Oak Heater, suitable for farms and country homes is constructed so as to represent perfection in radiation with the least fuel and very little attention. It is a quick heater—an emergency stove—and one that will fill the bill under any and all circumstances. You buy direct from factory, and to be sure of getting a fine-looking stove and one that is as lasting and good as it looks, all you have to do to select the size that suits is to write to the Kalamazoo Stove Company, Kalamazoo, Mich., and ask for Free Stove Book No. 328.

The Handy Almanac, Encyclopedia and Business Atlas For the Year 1913.

For the purpose of furnishing the subscribers of THE NATIONAL FARMER AND STOCK GROWER a splendid book of up-to-date information we have published the HANDY ALMANAC AND ENCYCLOPEDIA, a book of 216 pages, 6x9 inches, including a carefully-prepared index and a number of maps printed in colors.

To give an idea of some of the good things it contains we mention the subjects treated of, such as the Postal Banks—the Parcels Post Mail—new Pension Law—new Eight-hour Law — Highest Structures in the World — Olympic Records—World's Crops — Aeroplane Records— United States Flag Regulations—Arbitration Treaties—Explanation of Initiative, Referendum and Recall—the Panama Canal—the Panama Exposition—Astronomical Calculations and Eclipses For 1913—How to Foretell the Weather—Average Weather in Various States—Domestic and Foreign Postage—Weights and Measures—Interest Laws—Statute of Limitations—Tariff Law—Sherman Anti-trust Law—Length of Railways and Telegraph Lines—Length of Ocean Cables—World's Longest Bridges—Highest Mountains—Governments of the World—Sporting World's Records—Important Dates in American History—Rules For Spelling and Punctuation — Household Hints — Cooking Time Table—First Aid to the Injured—Etc.

There is very much more in the book than we have stated, and in addition thereto there is the vote at the Presidential election.

A Subscription Proposition.

Anyone who pays fifty (50) cents for one-year's subscription to THE NATIONAL FARMER AND STOCK GROWER can select the HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS as a free premium. We will send the book postage paid, safe delivery guaranteed. Money refunded if not satisfied.

SUBSCRIPTION BLANK.

Don't Fret About Pimples.

No More Humiliation; the Wonderful Stuart's Calcium Wafers "Get Right After" those Pimples, Boils and Skin Eruptions.

No need for anyone to go about any longer with a face covered with pimples, blotches, eruptions, blackheads, and liver-spots. These are all due to impurities in the blood. Cleanse the blood thoroughly and the blemishes will disappear.

"A Short Time Ago My Face was Full of Pimples. Now They're All Gone! I Used Stuart's Calcium Wafers."

That's what Stuart's Calcium Wafers are intended to accomplish and do accomplish. Their principal ingredient is Calcium Sulphide, the quickest and most thorough blood cleanser known.

These wonderful little wafers get right into the blood, and destroy eruptive substances present in it. In some cases a few days is sufficient to make a marked improvement. And when the blood is pure the whole system is a hundred per cent. better.

Go to any drug store and get a 50 cent box of Stuart's Calcium Wafers. Get them today.

Don't fret any longer about those blackheads, pimples, boils, tetter, eczema, spots or skin eruptions; they all go and "go quick" if you use Stuart's Calcium Wafers.

TOY BOOK PREMIUMS.

Pleasure and Instruction For Children, Especially During the Holiday Season.

We are always on the lookout for something that will please the children and at the same time be of an educational advantage to them. Our beautiful toy books, the first we have ever used as a subscription premium, are delighting the hearts of the little ones, and we are greatly pleased to

consider these books as one of our very best premiums. We are issuing these toy books as supplementary premiums to The National Farmer and Stock Grower. These toy books are substantial, beautifully colored, illuminated. The illustrations are wonderfully beautiful. They are astonishing in the delightful coloring. There are four sets. They are as follows:

Animal Series.

No. 101—Three Bears.
No. 102—Three Kittens.
No. 103—Ten Little Pigs.
No. 104—Noah's Ark.

Fairy Tale Series.

No. 107—Sleeping Beauty.
No. 108—Little Tom Thumb.
No. 109—Puss in Boots.
No. 110—Little Snowdrop.

Mother Goose Series.

No. 113—Mother Goose.
No. 114—Cinderella.
No. 115—Jack and the Beanstalk.
No. 116—Little Red Riding Hood.

Little Darling Series.

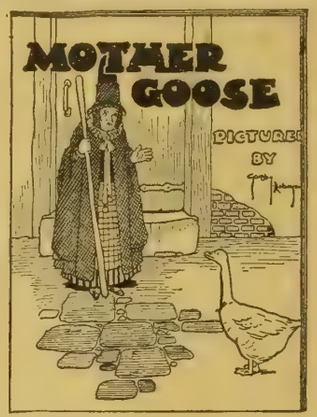
No. 119—A B C at the Zoo.
No. 120—Railway A B C.
No. 121—Dainty Darlings A B C.

In offering these delightful toy books we make several propositions:

1. Send us twenty-five (25) cents for six-months' subscription to The National Farmer and Stock Grower and you can select one set of four (4) toy books.

2. Send us fifty (50) cents for one-year's subscription to The National Farmer and Stock Grower and select two sets of four (4) toy books as a premium.

3. We publish the Universal Magazine. It is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry —a splendid publication. Send us twenty-five (25) cents and we will send you the Universal Magazine for



one year and you can select a set of four (4) toy books as a premium.

Order toy books by numbers. Select either four you desire. Address your orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Mother Who Took Time.

In the early part of the eighteen hundreds there was in Paris a small milliner shop owned and conducted by a Madame Corot. She loved beautiful colors and had the knack of turning a bow or twisting a hat to give it just the Frenchy effect that women love. This natural gift led her to open the milliner shop, but, being poor, she worked alone save for the assistance of her small son, who, out of school hours, helped his mother by sorting ribbons and matching colors.

As Madame Corot made hats she studied her boy, for after all, was not he her chief mission in life? She saw that little Jean had an unusual eye and brain for colors and she found many of his suggestions helpful. She well knew that his susceptibility in the matter of coloring was far greater than is found in the average child and she desired with her whole heart to give him a better training. Perhaps that paint brush with which he loved to daub might mean something some day if he had a chance.

The milliner shop was a crowded street, so Jean saw little of coloring except in the artificial. His mother wished to introduce him to Nature's art school, where he might learn to study real coloring. At last she decided to do a thing that she knew might cost her several customers and some money, which was badly enough needed. Still, what was money as compared with this which she would do for her boy? So on that afternoon of the week when half the woman world seeks a new bonnet—that is on Saturday afternoon—Madame Corot decreed a holiday. Closing up the shutters of her shop at noonday she took her hand of Jean and away the pair went far out from Paris to the woods, the real woods, with all of its wealth unspoiled by the hand of man. Not one Saturday, but every Saturday, did Madame Corot and her son Jean fare forth on their trips to the forest. A week's time wrought wonderful changes in coloring quickly noted by the delicate eye of the child. The twain studied the sky with its clouds and its sunsets, the shadows on the pools, the greens of the spring time, the flowers of the summer, the browns and golds of the autumn. Ever something new, ever something more wonderful appeared.

Then came a period later in life when Jean was apprenticed by his father to a draper. He hated the work but stayed with the draper until he was twenty-six years old. How could he stay longer with all that wonderful gallery of Saturday afternoon pictures crowding upon his brain and demanding expression? He wished to make others see the things he saw.

So he became the pupil of Michallon and Bertin. Then he went to Italy and studied alone for several years. He became exclusively a landscape painter, not a painter of elevations and depressions of earth, which somewhat remind one of a topographical map. Jean Corot was no prose painter; he painted the poetry of the landscape as he had read it from early childhood. With his brush he has attained the most delicate effects of light and shading, and he is called one of the most original painters. Anyone who gazes long at a Corot landscape cannot fail to capitulate to the charm of it.

Possibly Jean Baptiste Camille Corot might have become Corot even though his mother had not turned his eyes in the right direction; but suppose she had failed in her mother task and the boy had not found out his genius? What wealth might have been withheld from the world!

And the other little lads now peopling the earth and helping mothers about homely tasks, who are perhaps not incipient Corots or Mozarts or Lincolns—yet have they not some special gift which only a mother's discerning eye may detect and only the mother guidance find some means for its training?—Janet Thomas Van Osdel.

Governor Sulzer in the Street Called Straight.

Governor Sulzer, of New York, like the author of "The Street Called Straight," seems to have felt the apt significance of that particular Biblical passage, since he made use of it in his inaugural address: "In the future, as in the past," he said, "I will walk the street called straight." Though Biblical titles have sometimes proved a drag to books, this would not seem to be the case in the novel "The Street Called Straight." According to the figures of the January Bookman, it reached the high-water mark of the year in fiction, reaching 372 points.

The Medicinal Stride.

"I remember you cured me of the same trouble a dozen years ago. Why don't you use the same treatment now?"

"A dozen years ago?" echoed the doctor. "My dear sir, the medical profession has made wonderful strides since then, and I couldn't think of such a thing."—Puck.

What'll Stop Sour Stomach?

They Act Quick and Relief Is Almost Immediate.

There are some things so exactly right that to mention them brings calm and repose. And to use Stuart's Dyspepsia Tablets gives the stomach just that kind of lift that makes you check up one hundred per cent. to the good. Particularly is this true with those who suffer with sour stomach. You feel so mean that you actually hate yourself. And yet in a few minutes these tablets sweeten the stomach, arrest unnatural fermentation, start a powerful digestive action and prevent the formation of gas.

They are composed of only such digestants as are approved by the very best of physicians.

Real, live, progressive people want to be around where the activities of life embrace whatever circumstances dictate. If a house party serves a Welsh rarebit, go to it. It isn't the easiest thing in the world to digest, 'tis true, but what of it? Stuart's Dyspepsia Tablets will take care of you, keep your stomach in control and your dreams won't see an army of hobgoblins playing hobs with your nerves. Many physicians regularly prescribe Stuart's Dyspepsia Tablets for the stomach disorders of patients who are ill with some constitutional malady. They do so for the reason that these tablets are not a patent medicine and their composition is known and recognized as the most approved and most powerful of all digestants.

Stuart's Dyspepsia Tablets are sold and recommended by all druggists at 50c. a box.

MAY MANTON PATTERNS.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Loves Life As It Is.

Theodore Dreiser, author of "The Financier," has often been accused of seeing only the dark side of life. In answer to one who asked him if he were a pessimist, he said: "That depends on what you mean by pessimism. One thing is sure: I love life just as it is. It is perfectly beautiful to me." Mr. Dreiser added that he found the spectacle of life so colossal and compact that he contented himself with seeing it and reproducing it in his books; that he could neither generalize nor philosophize about it.

Art Gum.

Something which every woman will appreciate having on hand is a piece of art gum. It is used by draughtsmen for cleaning their drawings, and it will quite as effectively clean many things about the house, such as soiled pictures, books, wall paper, slightly-soiled gloves and linen collars. It is used as a pencil eraser is used to rub out lead marks. So it is on firm surfaces that it does the best work. The gum may be purchased in the art stores or in most stationery stores. A piece which will last for a long while if used only on small articles may be purchased for ten cents.—Janet Thomas Van Osdel.

FARM-MADE meat products mean bigger profits for you and very little extra trouble. Always a salable market. No other way offers such a fine opening as for you to do your own "killing" and marketing. Every farmer who does, needs an

ENTERPRISE Meat AND Food Chopper

The one chopper that chops. Does not mangle, squeeze or crush, but has a four-bladed steel knife that cuts fast and clean. Make sure of getting it by remembering "AND"—Enterprise Meat AND Food Chopper.

Your wife will find it an everyday help in the kitchen, too, for making the many delicious dishes that farmers' wives know all about. So easy to clean, too. It repays its cost almost every week. Enterprise Meat AND Food Choppers are made in 45 sizes and styles—hand, steam and electric power.

No. 5—Family size	hand	$1.75
No. 12—Farmers' size	hand	2.25
No. 22—Farmers' size	hand	4.00

We also make cheaper food choppers, but recommend the above. Send 4c for "The Enterprising Housekeeper," a fine 200 recipe cook book. Your wife will like it.

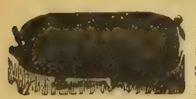
BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed because either paper is worth considerably more than the full price. The papers are as follows:

The National Farmer and Stock Grower—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.



The American Swineherd—issued monthly—a leader in its class. The hog paper. the pig paper, the brood sow paper, and strictly first-class in teaching how to top the market by producing top hogs.

The Shepherds' Journal is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

The Reliable Poultry Journal—the best and most elegant poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. **The Reliable Poultry Journal** is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read **The Reliable Poultry Journal.**

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Agriculture For Young People.

For some years there has been an endeavor to establish the teaching of agriculture as a regular part of the curriculum in district schools. In many cases it has become a part of the course of study, and most excellent would it be were the work done along the lines of the study of agriculture in the Agricultural Colleges with an Experiment Station in connection. Many of the prescribed courses are of little value to the country boy, as they consist of a set of printed questions to be asked by a teacher, usually from the city, who often knows considerably less on the subject of agriculture than do the pupils whom she in trying to instruct. And there is no Experiment Station connected with the schools in which the pupils may work.

Of practical value was this work made by S. A. Martin when teacher of agriculture in the high school of Watervliet, Mich., a couple of years ago. Through his instrumentality several men in the community contributed money to the amount of $55 for prizes to boys and girls. Twenty-five dollars was offered as a prize for the best ten ears of corn shown, and three other prizes of $15, $10 and $5 were offered. The corn was shown at an exhibit held a year ago last fall and competent judges awarded the prizes. So much interest was shown by young and old that last fall a second exhibition was held with an attendance of about six thousand people. In addition to the corn exhibits there was shown fruit and dairy produce. Three hundred dollars in prizes were awarded. No admission fee was charged, as it was in no way money-making affair.

Any community might carry out this idea to the good of all concerned. There are always a few public-spirited men who will help to establish a prize fund. It is wonderful what boys and girls can do when they are working in competition with one and another for a prize. They make it their business to find out the best way of doing things; they read and ask questions and then put into immediate use the knowledge gained. It is not the actual money that appeals as much to these young people as it is the thought that they have found the way of growing better corn or fruit or stock than their neighbor.—Janet Thomas Van Osdel.

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Can't you see that I couldn't do this if my Drafts didn't satisfy? Wouldn't you mail a coupon to know for yourself, when I, knowing, as I do, risk my dollar treatment on your verdict? Address Magic Foot Draft Co., 232 B Oliver Bldg., Jackson, Mich. Send no money—only coupon. Do it now.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that should be accepted at once. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

In Germany, in 1912, 4,275,522 acres of winter wheat returned 33 bushels per acre, figuring 60 pounds to the bushel, and the 483,077 acres of summer wheat returned 34 bushels. This crop of wheat, however, cannot be credited to raw rock phosphate, for the reason that Germany does not use it.

FREE **DON'T WEAR A TRUSS**

Rupture Cured by Stuart's Plapao-Pads means that you can throw away the painful truss altogether, as the Plapao-Pads are made to cure rupture and not simply to hold it; being self-adhesive and when adhering to the body slipping is impossible, therefore, they are also an important factor in retaining rupture that cannot be held by a truss. **No straps,** buckles or springs—cannot slip, so **cannot** chafe or press against the pubic bone. Thousands have successfully treated themselves at home—no delay from work. **Soft as velvet—easy to apply—inexpensive.** Awarded Gold Medal. Process of recovery is natural, so no further use for truss. We **prove** what we say by sending you Trial of Plapao absolutely **FREE**—you pay nothing for it, now, or ever. Write **today.**

TRIAL OF PLAPAO Address—**PLAPAO LABORATORIES,** Block 688, **ST. LOUIS, MO.**

VIOLIN FREE

This is a fine, handsome, clear toned, good sized Violin of highly polished, beautiful wood, ebony-finished pegs, finger board and tail piece, one silver string, three gut strings, long bow of white horse-hair, box of resin and FINE SELF-INSTRUCTION BOOK.

Send us your name and address for 24 packages of BLUINE to sell at 10 cents a package. When sold return our $2.40 and we will send you this beautiful Violin and outfit just exactly as represented.

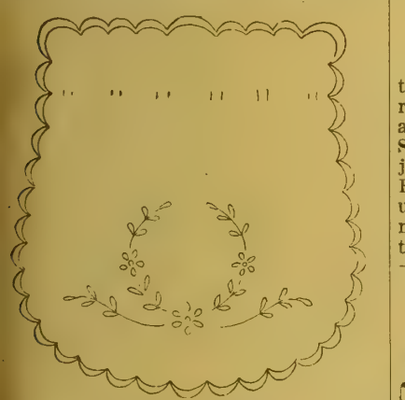
BLUINE MFG. CO.,
588 Mill Street,
Concord Junction, Mass.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number.

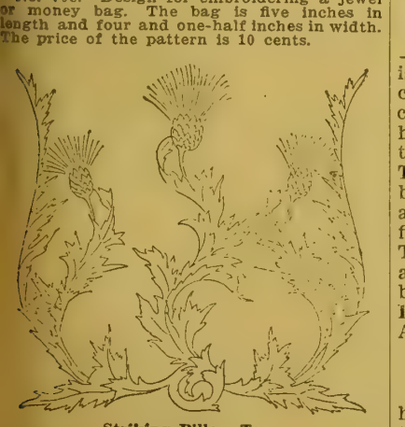
Fourteen-inch Tea Napkins.

No. 711.—Design for embroidering a luncheon or tea napkin, fourteen inches square. The price of the pattern is 10 cents.



For Jewels or Cash.

No. 708.—Design for embroidering a jewel or money bag. The bag is five inches in length and four and one-half inches in width. The price of the pattern is 10 cents.



Striking Pillow Top.

No. 713.—Design for an embroidered pillow top; very attractive when finished. The price of the pattern is 10 cents.

Laundry Bag Embroidery.

No. 712.—Design for embroidering or braiding a laundry bag; a very satisfactory pattern. The price of the pattern is 10 cents.

Each embroidery pattern is 10 cents, and is well worth the money.

Please address all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

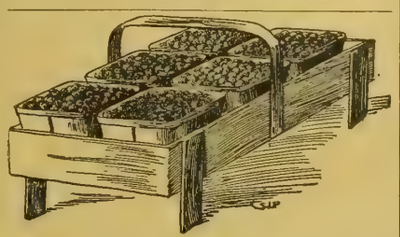
Ladies Are Invited.

On page 3 will be found an invitation that ought to be accepted quickly and with thanks. The farm idea is to get as close to the manufacturer in buying and as close to the consumer as possible in selling. In furtherance of this policy the National Cloak and Suit Company, of New York City, is placing farmers' wives and daughters upon the same plane as the buyer who can enter the store and be measured for a tailor-made suit. Thousands of dollars have been expended in preparing a style book that can be had for the asking; it is also possible by an additional request to obtain a suit booklet and samples of material. Do not fail to accept the invitation on the third page.

FRUIT-GROWING BOOK.

The Strawberry Crop Surpasses in Yield and Value All Other Small Fruits Combined.

According to the census enumeration, in nearly every state strawberries are by far the most important of all the small fruits raised. **The Strawberry Culturist** is a handy little jewel of a book. It is by Andrew S. Fuller, one of the greatest horticulturists. It contains all the information necessary to grow strawberries for the home or raise them for market. It



is fully illustrated; bound in flexible cloth; is 5x7 inches. This little book contains that which a beginner should have to start on and an expert needs to rely on. We will send a copy of **The Strawberry Culturist** post free by mail and The National Farmer and Stock Grower for one year for fifty (50) cents, payable with order. This is a splendid opportunity to get a good farm paper and a valuable book as a premium. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Constructing Farm Homes.

The matter of constructing farm homes economically and at the same time elegantly and substantially is now a simple matter, because there are factories that furnish the plans and construct all timbers and millwork, shipping them ready to be put up by ordinary carpenters. One of the best houses in this line of business is the Chicago Millwork and Supply Company, West 37th street, Chicago, Ill., who are advertising in this paper. Their special catalogue has 176 pages, describing 8,000 specialties in building material, and their House Plan Book shows plans of fifty house buildings that will range in cost when put up from $300 to $6,000. These valuable books are useful in repairing, remodeling and constructing all kinds of farm buildings. All who are interested in this subject should write to Chicago Millwork and Supply Company, 1463 West 37th street, Chicago, Ill., and ask for Catalogue 122 and House Plan Book No. 132. Mention The National Farmer and Stock Grower and the books will be sent free.

The Stitch in Time.

The old proverb is often exemplified, and a single stitch taken in time often saves hours of needless work, and there is nowhere that it is as useful as with table linen. The ever-diminishing supply of such things, which every housekeeper must contend with, can be overcome by small expense and little work.

Ravelings of new linen may be used for darning thin places, and if the work is neatly done it will show very little. Fine table linen is darned with soft, fine floss, always following the weave. Replace the warp first as an important beginning, then fill it in neatly over and under, and this is best done in an embroidery hoop.

No girl's home training is complete until she knows how to mend and darn neatly and when she once learns it will be a blessing to her all her life; and the mother who mends and sews for her daughter after she is old enough to do these things for herself, is doing her an injustice.

A glove-mender should be found on every toilet table, and if gloves are darned as soon as they begin to rip, they will repay their wearer by a long lease of service. When buying a pair of kid gloves, select a spool of cotton thread of the same shade as the gloves for mending them, and when ripped edges refuse to join, work all around the edges in buttonhole stitches, one row upon the other, until the space is entirely filled in.

Nice stockings will last twice as long if the heels and toes are strengthened by darning them for some distance on the wrong side before they are worn.

If you find that lace insertion in waists or dresses is beginning to pull or break, whip footing under it and darn the broken place, and it will never be noticed that the insertion is double. Great care must be taken with all work of this kind if it is to do credit to the wearer or be at all satisfactory.

When table linen, fine lace or nice white waists begin to wear, they should be cleaned without rubbing, and this can be done by shaving enough borax soap in warm, soft water to make a nice lather and then putting in the pieces and allowing them to soak for several hours. Clean the pieces by lifting up and down and pressing and squeezing between the hands, then shave some of the same soap in cold water, put in the pieces, place on the stove and let them boil for half an hour, then rinse through two waters. There is nothing better than this Twenty-mule Team Soap for washing all kinds of fine white goods and laces, such as lingerie waists, handkerchiefs and baby garments; and if every small hole is darned as soon as it appears in all such articles, and then they are cleaned in this way, they will come out beautifully white without any rubbing, and they will not only look well, but will last twice as long.—A. M. H.

Beautiful Apron Premium.

To introduce our splendid Universal Magazine we are offering a useful fancy apron as a premium. Hand-embroidered tea aprons are always in great demand among ladies and girls, and this is an article anyone would be proud to own. We offer this beautiful apron, stamped on fine white lawn, including piece for pocket and strings, also a year's subscription to our popular Universal Magazine, filled with choice stories, departments for all the family, thirty-two pages, etc., all for only thirty cents. Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

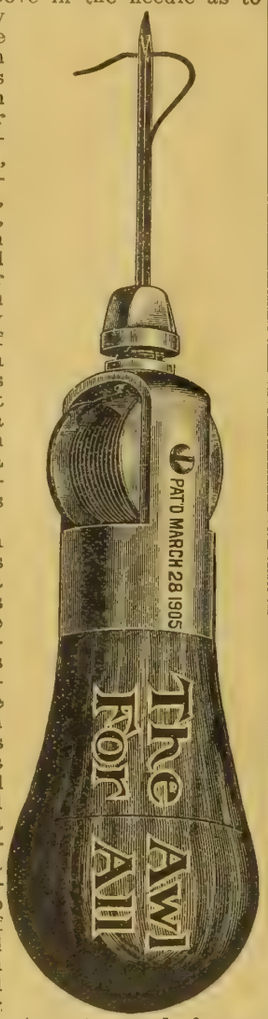
Office, 302 N. 12th St., - ST. LOUIS, MO.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we well send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Gold Fish and Their Care.

Few pets require so little care, especially in winter; they will live for some years with the few simple requirements, continually affording entertainment as well as initiating the little folks into some of the wonders of aquatic life.

The chief mistakes in treatment are overfeeding, lack of oxygen and too high a temperature in the room. An aquarium is very much preferable to a globe, for aside from its greater capacity, the shape permits a more satisfactory arrangement of plants and shells or stones. The globe, however, is a cheap substitute, which does very nicely for only a few fish.

Fish like company. Do not entertain the thought of keeping one in solitude. A seven-inch globe will serve for two fish, though one an inch greater in diameter will give more pleasing returns, the water requiring renewal less frequently. Cover the bottom with clean sand, pebbles and shells. Growing plants are an essential in preserving the purity of the water, besides adding to the pleasure of the fish and to the artistic beauty of the globe. For this purpose nothing is better than the common aquarium moss, which roots and grows freely in water if the root is held stationary in the sand by means of a small pebble. Parot's feather or the umbrella plant may be substituted if preferred; but some growing plant is an essential at all times.

Select fish of nearly equal size. The one unpardonable sin of the gold fish is its proneness to turn cannibal, or at least to chew the scales from the back of a smaller comrade. There are numerous modifications of the species, the gay colors being a direct result of the art of the Chinese breeders, who have transformed a plain brown carp native to their waters into the fantastic forms with which we are familiar. Gold, pearl, amber and silver are variations too common to need description. The "oriole" is doubtless the most striking result of the piscatorial artist's skill, showing beautiful variegations of golden red and black.

Use spring, well or river water. Cistern water is insipid and usually not cold enough to give good results. Fish are cold-blooded animals, and one secret of success in their management is in keeping them cool. For this reason direct sunshine should never shine upon the tank for any length of time.

Change the water once or twice a week in winter, daily in warm weather, being careful not to fill the dish so full that they may flop out. This change can be readily made by pouring off nearly the entire contents of the globe and replenishing with fresh water, a thorough cleansing of the globe and pebbles being necessary not more than once or twice a week.

The actions of the fish are the best key to their thrift. If they remain well under water, all is going well; but if one comes to the surface and gasps as if for air or turns on its side, the water should be at once renewed.

A sick fish usually responds to a salt bath. Put a teaspoonful of salt in a quart of water, leaving the patient in it until it comes to the surface from sheer exhaustion, which usually occurs in about two minutes. Transfer to a vessel containing a saline solution in the proportion of half a teaspoonful of salt to a gallon of water. Bathe daily in the strong salt solution until better. A folden dorsel fin, faded color, and habit of swimming near the surface, are characteristics of the ailing fish.

Overfeeding must be avoided or the pets will be short-lived. Bread and cracker crumbs are objectionable. The prepared fish food is much safer, given strictly in accordance with directions accompanying. Feed regularly once a day, and only so much as will be devoured within a very few minutes. The fish soon learn to take the food from the finger, and this small show of friendship is one of the pleasures gained in their culture. Any stray bit of food allowed to remain in the tank clouds the water and renders it unfit for the fish. It seems almost beyond belief that a bit of thin wafer a quarter of an inch square will sustain the average-sized gold fish twenty-four hours; yet any great deviation from this amount is sure to prove disastrous. They vary the monotony of this one food to a certain extent by nibbling at the water plants.

The pleasure afforded by this simple bit of nature study is astonishing. The graceful movements of the fish are a constant delight to all, and the child who has owned such a treasure has been given not simply a valuable bit of nature study, but a lesson in kindness to and love for God's humblest creatures.—Bessie L. Putnam.

A Precaution.

A woman, feeling ill and cold, stood in front of a hot stove. While there, she was seized with a paralytic stroke and fell prone upon the stove. She was fearfully burned and disfigured for life.

In another case, a young girl in the first pangs of an appendicitis attack, toppled over upon the stove and was badly burned.

When not well, chills are often felt and there is a tendency to draw near the stove. The safe plan is to seat one's self in a chair, slightly turned from the stove. This will bring the back to the heat, which is the best way of checking a chill and at the same time, should there be a fall, it would be to the floor and not upon the stove.—Janet Thomas Van Osdel.

Plant Good Seeds.

The results of Prof. Holden's campaign for better corn are so well known that it would seem of little need to emphasize the same care in seed selection for every plant grown. And yet, we are careless, especially with the smaller seeds, and too much inclined to think that any seed which will grow is all right.

Now, some seeds will grow after they are several years old, at least a goodly percentage of them will produce fair plants, though others, like onions, salsify and parsnip, are decidedly uncertain, unless strictly fresh. But do not think for a minute that the seed which has just enough vitality to grow when all attendant circumstances are favorable, will produce the vigorous plant that the seed so full of life that it can scarcely wait to be put into the soil would furnish. The vegetables may mature, but the lack of vitality in the plant which just makes an existence greatly more than compensates for the extra cost of fresh seed.

Send in your order to a reliable seedsman, even though you do not get the extra packets of Wonderful North Pole Muskmelon and other marvelous novelties advertised by the other man. Send this order early, lest delay may bring disappointment in the ability to fill the order for certain popular strains. Or, if you do depend upon the local dealer, choose the one who makes a specialty, rather than the grocer, who will more than likely pass off upon you the remains of last year's stock. His hobby is something else and seeds are only a side issue. He cannot be expected to take the interest in them that those who make them a specialty will show. Gradually broaden your vegetable collection by adding something more each year. Study well the nature of your soil and climate and choose accordingly; but insist that the seed must be good, fresh, pure and of the best strain possible to obtain.—Bessie L. Putnam.

How He Punished Them.

"What have you done toward punishing lawbreakers?"

"Well," replied the shady police officer, "I have done a geat deal toward hurting their feelings by taking their money away from them."—Washington Star.

Now Selling at FACTORY Prices

FREIGHT PREPAID

This is a special 30-day sale of 10,000 sheets of Edwards Steel Shingles. Our direct-from-factory prices are suprisingly low. And we now pay all the freight. Here is a great bargain—an opportunity to buy the most durable, fireproof roof for much LESS than the commonplace kind.

Edwards STEEL Shingles

outwear FOUR ordinary shingle roofs, are ten times easier to put on, and yet, THEY ACTUALLY COST LESS THAN WOODEN SHINGLES. They cost LESS, mind you.

Do not judge Edwards Steel Shingles by common galvanized iron roofing—the kind that rusts. We have invented a method that absolutely prevents rust from ever getting a foothold, as 100,000 delighted owners of Edwards Roofs have found out. It's the famous Edwards Tightcote Process applied to genuine Open Hearth Steel.

STEEL Shingles Easily Put On

You don't have to nail these steel shingles, like wood shingles, ONE AT A TIME. Put on as high as 100 at once, for they come in big sheets ready to nail on sheathing or old roof. Much easier than putting on wood shingles. No extra materials to buy, no painting to do, no tools to borrow. Your hired man can do the job.

No Danger of Fire

No, Sir, you don't ever hear of any building burning up if it is roofed with Edwards STEEL Shingles.

It's the man who roofs with wooden shingles or composition paper who loses by fire his house or barn.

Why risk life and valuable property when you can make your buildings practically fireproof simply by roofing with Edwards STEEL Shingles?

Every Edwards roof is guaranteed against lightning by a $10,000 bond.

WRITE! Send postal at once for our latest Roofing Book No. 257 and Special Factory Prices. Give size of roof, if you can. (94)

THE EDWARDS MANUFACTURING CO.
207-257 Lock Street, CINCINNATI, OHIO

N. M. Ruthstein "The Steel Shoe Man"

10 Days Free Try-On

Before you think of buying a pair of shoes, get my free book and learn all about this new steel soled shoe. Learn how one pair will outlast 3 to 6 pairs of best all-leather shoes—how they are being sold by millions all over the world, all because of their economy, comfort and health protection. This book shows the different styles and sizes, for men and boys—and how the shoe is made from 6 to 16 in. high, to suit all purposes of work or outdoor sport.

Saves Health—Saves $5 to $20

No colds, no wet feet, no rheumatism, no corns, no bunions, no callouses, no broken down arches. **Keep the feet powder dry, comfortable and healthy in all kinds of weather.**

Shipment by Parcels Post

Delivery now made direct to your home anywhere by Parcels post at great saving of expense. Shipment made same day order is received. Learn about this shoe with the light, springy, airy "step"—the shoe that rests your foot naturally and comfortably, always holding its shape—never a "rundown" heel, broken arch, warped sole, worn toe, twisted uppers, or holes and leaks. For this free book address your postal to

The Sole of Steel

WHO WANTS SOME FREE SILVERWARE

Lincoln, Leonard & Co., the Mammoth Home Furnishing Company of Chicago Are Giving Away a Fortune in Silverware

To celebrate their twenty-five years of selling direct from factory to user, this great concern is distributing free of cost upwards of a million dollars' worth of the celebrated Wm. Rogers silverware.

You can have spoons, knives, forks, in the new 1913 patterns, beautiful mesh bags, elaborate toilet sets or in fact, anything shown on their silverware sheet which they send to anyone who writes. This is a grand opportunity to get something for nothing, and the Lincoln-Leonard Company authorized us to tell our readers about it and permit them to share in the gifts if they want to.

This concern's business is unique in method and marvelous in its magic growth. They make all their own goods in their own factories and sell everything direct to the user, cutting out all the middlemen who are the usual factors in selling furniture.

This policy enables them to save the profits that go to the dealer, wholesaler, etc., and give it to the user instead.

As a result of this method, this concern has grown to such magnitude that they now own their own forests, railroads, sawmills, etc. They virtually control the market and secure their raw materials at as low a price as they want to pay.

The chair pictured here at $2.98 is a splendid example of how this factory to user selling idea saves you big money. Here is a chair on which the factory selling price is $2.98. The wholesaler pays $3.00 for it, the dealer or catalog house pays $3.25, and the retail price is $4.50. But bought from Lincoln-Leonard, right from their factory, the cost is only $2.98. You see all the middlemen are eliminated and so are their profits. Any one can get this chair at this price. Send for one and see for yourself.

This is only one of the items on which you can save a lot of furniture money. Their new 1913 catalog contains over 5,000 more—and every one a big bargain. If you will send your name to Lincoln, Leonard & Company, 937-37th St., Chicago, they will gladly send you this big money saving catalog, together with the circular showing pictures of the free silverware.

SELECTED POETRY.

THE WOMAN WHO WORRIED.

Let me sing you a song of a woman I knew,
Who always was fluttered and hurried;
Don't ask me her name, if it's all the same,
Just call her "the woman who worried."

There was ever the battle with rust and moth,
For moths were slyer than foxes;
And so, poor thing, she spent all the spring,
Putting things into bundles and boxes.

She worried at morn, and she worried at noon,
And worried when night descended,
For without some hurry and without some worry
The day hadn't been well ended.

And she'd carry her burden of household cares
Till sleep put an end to her labors;
And the dog ran away, and he went to stay,
And the cat went to live at a neighbor's.

And the children stayed out of doors when they could,
For mother was always hurried,
And noise and dirt were the things that hurt
The woman who worried and worried.

—Exchange.

WHEN IT'S WINTER.

You don't ketch me a-heavin' sighs when winter comes along the way;
Nor ketch me wishin' I could go back to a summer yesterday;
There's somethin' 'bout a rough an' ready winter day I can't but love!
The cold sneaks up an' tweaks your nose, the wind gives you a gentle shove—
Just like a little feller does that's full of mischief to his eyes,
That knows you love him, so he ain't afraid to give you a surprise
An' make you jump. An' when the snow comes slowly siftin' through the air,
It's like a baby all dolled up with powder on its tousled hair.

It's like a baby all rigged out, the way they do when they pretend,
An' rompin' to you bubblin' full of joy; it knows you are its friend.
An' it can treat you as it likes, can pull your nose or tweak your ears,
An' pinch your cheeks until you laugh, although your eyes are full of tears.
First thing you know you've up an' throwed the laziness of summer by,
An' there's a quickness in your step, an' there's a gladness in your eye,
An' somehow you can't help but love the whole wide world an' every place,
An' you go down the street an' grin right into everybody's face!

Well, say, I know the world well, an' I have knowed it for so long,
That watchin' winter's antics is like listenin' to a good old song,
When you know just what's comin' next, an' could take up the tune yourself;
You know that summer isn't dead—it's just been put up on the shelf.
That's why you know some mornin' you will see a crocus in the snow,
An' that'll be a sign the world is sort of stirrin' round below.
An' you will have to fix the strings for mother's mornin' glory vine,
An' git your muscle up to hang the carpets outdoors on the line.

—Chicago Daily News.

THE KING AND THE BEGGAR.

He sat upon his golden throne
In all his robes of state, alone;
And as he sat he sighed;
And though he drank from silver cup,
And at his word a host rose up,
His heart within him cried.
And though his face was bright and fair,
A specter touched his shining hair,
And at the touch he died.

And yet he was a reigning king,
With all that gold could buy;
And he was kind, and good, and young;
Oh, God, why did he die?

He sat upon the snowy ground,
And drew his ragged coat around,
To fight the bitter cold.
His feet and hands were cracked and bare;
No hat was on his grizzled hair;
That, even, had been sold.
He had no friend to press his hand;
He was a stranger in the land;
And he was wan and old

For he was just a beggar gray,
And oft his heart would sigh;
And oft his lips would murmuringly
Please God to let him die.

Oh, God, we question not Thy will;
And yet the query, never still,
Echoes from sea to sky;
And we shall always want to know
Why beggars live 'mid want and woe,
While kings grow sick and die!

—Christian Herald.

MY FRIEND.

Written by Colonel W. S. Hawkins, U.S.A., (prisoner of war at Camp Chase), a friend of a fellow-prisoner who was engaged to be married to a Southern lady. She proved faithless to him. The letter arrived soon after his death and was answered by Colonel Hawkins in the following lines:

Your letter came, but came too late,
For heaven had claimed its own;
Ah, sudden change! from prison bars,
Unto the Great White Throne.
And yet I think he would have stayed
For one more day of pain,
Could he have read these tardy words
Which you have sent in vain.

Why did you wait, fair lady,
Through so many a weary hour?
Had you other lovers with you,
In that silken, dainty bower?
Did others bow before your charms,
And twine bright garlands there?
And yet, I ween, in all the throng
His spirit had no peer.

I wish that you were by me now,
As I draw the sheet aside,
To see how pure the look he wore
A while before he died.
Yet the sorrow that you gave him
Still has left its weary trace,
And a meek and saintly sadness
Dwells upon that pallid face.

"Her love," said he, "could change for me
The winter's cold to spring;"
Ah! trust of thoughtless maiden's love,
Thou art a bitter thing!
For when these valleys, fair in May,
Once more with blossoms shall wave,
The Northern violets shall blow
Upon his humble grave.

Your dole of scanty words had been
But one more pang to bear;
Though to the last, he kissed with love
This tress of your soft hair.
I did not put it where he said,
For when the angels come,
I would not have them find the sign
Of falsehood in his tomb.

I've read your letter, and I know
The wiles that you have wrought
To win that noble breast of his.
And gain it—fearful thought!
What lavish wealth men sometimes give
For a trifle, light and small;
What manly forms are often held
In Folly's flimsy thrall.

You shall not pity him, for now
He's past your hope and fear.
Although I wish that you could stand
With me beside his bier.
Still, I forgive you! Heaven knows,
For mercy you'll have need,
Since God His awful judgment sends
On each unworthy deed.

To-night the cold wind whistles by,
As I my vigils keep
Within the prison dead house, where
Few mourners came to weep.
A rude, plank coffin holds him now,
Yet death gives always grace;
And I had rather see him thus
Than clasped in your embrace.

To-night your rooms are very gay,
With wit, and wine, and song;
And you are smiling just as if
You never did a wrong.
Your hand, so fair that none would think
It penned these words of pain;
Your skin so white—would to God your soul
Were half so free of stain!

I'd rather be this dear, dear friend,
Than you in all your glee;
For you are held in grievous bonds,
While he's forever free.
Whom serve we in this life, we serve
In that which is to come;
He chose his way; you yours; let God
Pronounce the fitting doom!

Camp Chase, December, 1861.

BIG SHOW.

Life's stage than hope is deeper
And wider than regret;
And for each generation
A newer scene is set;
And for each generation
The story thrills or palls;
But it goes on forever—
No curtain falls.

There is a wealth of tinsel
Set off by duller gold;
And in the great endeavor
Each strives his own to hold.
Forgetting cues together,
The foolish and the wise
Pass out into the shadows
With backward eyes.

Life's stage is deep as memory
And wide as new desire;
The light is strange, illusive,
Where players work for hire;
But of parts widely different
All claim one common lot;
For who has known the hero,
Or guessed the plot?

—Chicago News.

A YALLAH DOG'S ADVENTURE.

De polecat he say toh mah ole yallah dog:
"You bettah not come too clost toh dis log;
You bettah stay way from dis ole hollow tree,
Foh I ain't got nuffin dat you want to see."

Dat yallah dog bark an' he say: "Ki yi!
I'll stick toh dis hole an' you'll never git by.
I'se gwyin' toh git you outer dat hole;
It is no use toh scrammel an' it's no use toh scole."

Dat fool yallah dog he poke in his head
Whah dat pole cat wuz, an' heahs what he said:
"You smell pretty stout; you talk mighty big."
But right dah he quit, an' started toh dig.

Dat dog he lit out an' Oh! how he run;
'Twuz awful toh see what dat polecat had done.
He had scented dat dog wid a feahful perfume,
Dat lasted his hide toh de day ob his doom.

Dat yallah dog learned a lesson dat day,
An' you nevah can coax him toh go out ob his way.
He's a good 'possum dog; he'll tackle a rat,
But you'll nevah git him nigh a nuddah polecat.

—W. H. S., in Post-Dispatch.

WOMAN WINS.

I'm for patient, loving woman, whether mean or rich of gown,
She is on the road to glory—and you just can't keep her down!

There's my little wife, Roxana; she's as artless as can be;
Yet she's not so simple, mark you, but she gets the best of me!

If you try to beat a woman, when discussing something grave,
She'll come bobbing up in triumph like a cork upon the wave.

Then before you've time to meet her with a sermon on her doom,
She'll have floored you with an adjective and chased you from the room!

Though you try to stop her progress, put her momently to rout,
With her logic she'll attack you, knock you down and drag you out!

Man has sense, but woman senses of a kind to cause dismay,
And can tell a man's chief weakness when he's half a mile away.

She can scent a winter bargain with the cunning of a fox,
And beat all her male contenders to the shop by twenty blocks!

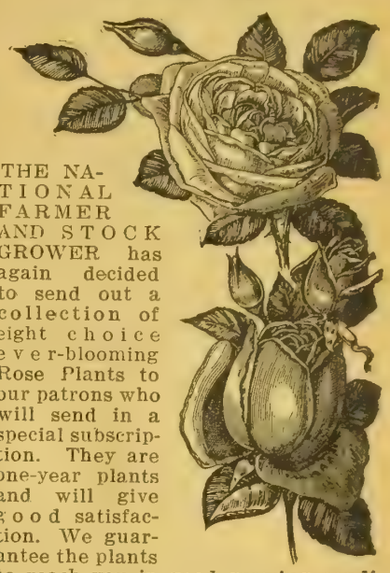
That is why I bow to woman, noble, pure and sweet witbal—
Bow before her gentle wisdom, kneel and knuckle, aye, and crawl!

—Chicago Daily News.

In the year 1912 Germany had 11,838,775 acres in oats, and the result was 47 bushels of 32 pounds to the acre.

A GARDEN OF ROSES.

Fine, Sturdy Plants—The Most Delightful Premium Offered by Any Farm Paper.



THE NATIONAL FARMER AND STOCK GROWER has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription. They are one-year plants and will give good satisfaction. We guarantee the plants to reach you in good growing condition, and with each package we send complete directions for planting, care and culture. The time to send the order is now—before you forget it—and you will receive the plants at the best time for planting in your section.

The collection consists of:

THE OLIVIA — A most gorgeous, distinct rose of deep, brilliant rosy red, and one which excites the admiration of everyone beholding it.

2. THE SUNBURST—An intense exquisitely beautiful rose of orange-copper and golden yellow.

3. THE BRIDE—The most satisfactory white rose of dainty, chaste, beautiful flowers and healthy growth.

4. MY YARYLAND — A pink beauty, rapidl developing a sturdy, shapely plant and large flowers.

5. SOUV. DE PRESIDENT CARNOT—A wonderfully handsome rosy-blush color creation.

6. THE METEOR—For intense, rich, velvety, crimson color no other rose compares. The flowers are large and double.

7. THE BLUMENSCHMIDT — A pure citron-yellow; a first-prize winner at every show.

8. DOROTHY PERKINS — A shell-pink, hardy climber and one that should be extensively planted.

Our Grand Special Offer.

Send us a money order for fifty cents. ONLY fifty (50) cents. We will credit you with ten-months' subscription to THE NATIONAL FARMER AND STOCK GROWER, and at the proper time we will also send you the full set of EIGHT ONE-YEAR ROSE PLANTS as described. The roses are sent out directly it is safe to dig them in the spring. Send in your order at once with fifty (50) cents and it will receive prompt attention.

Here is a Subscription Blank.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:—Gentlemen:—Herewith please find fifty (50) cents. Please send me THE NATIONAL FARMER AND STOCK GROWER for ten months, and the full set of EIGHT HARDY, EVER-BLOOMING ROSES, one-year plants, when it is safe to dig and mail them in the spring.

The most interesting and instructive automobile books ever published---FREE

HERE are the first *real* books ever published concerning the practical purchase and ***proper*** operation of an automobile. They were written by the best and biggest authority in the business---a man who understands and can make clear to you the very things you want to know most about. These books are so clever, clear and simple that your children can easily understand them. The publishing of these books cost us thousands of dollars. Both books are absolutely free.

HOW TO PURCHASE A CAR—Vol. I.

The first book tells you how to buy a car; how to weigh its quality; how to determine its real value; how to judge its construction.

You would not go into the grain, produce, hay, poultry, dairy or any other business without a good knowledge of that business. You would study existing prices, values and conditions. How, then, can you expect to make a practical automobile purchase without as much automobile intelligence as you can get? This book gives it all to you—FREE.

It clearly explains just which axle construction you should have in your car; it advises you on brakes; it judges a car's power; explains the modern gasoline motor; goes into spring suspension and all the other important points. In short, it simplifies; aids, bolsters and adds generally to your confidence when buying an automobile, because it thoroughly acquaints you with the subject.

HOW TO OPERATE A CAR—Vol. II.

Often a good car is put out of business simply because it was not properly operated or taken care of. Sometimes just one little false move, on the part of the driver, will put a car out of commission for life. We all live and learn.

So we got up an Overland book on the fundamentals of proper driving, operation and care. It will help every motorist in America. It tells you exactly how to run a car; when, where and how to lubricate it; how to make adjustments, etc., etc.

Here are some of the instructive chapters: "How to Start the Motor," "How to Start the Car," "The Best Way to Turn Corners," "Rules of the Road," "How to Find a Missing Cylinder," etc. Each point from starting to stopping is covered and covered thoroughly. It contains over 100 pages of clear information, all carefully illustrated with diagrams and drawings. Anywhere else this volume, with its profuse illustrations, would cost several dollars. You can have it free.

Write for these two free books to-day.

We want you to read these books for a selfish purpose. We know this valuable information, clear explanation and practical advice, in addition to helping you purchase and operate your car, will only go further in proving to you our high standard and great efficiency.

For in the Overland you get more real car for less money than from any other manufacturer in the world.

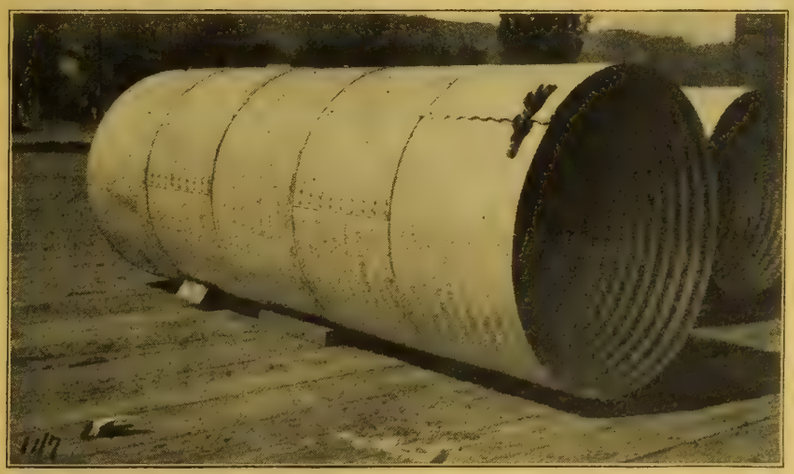
HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

For several years The National Farmer and Stock Grower has offered a set of eight hardy, ever-blooming roses as a subscription premium. They are one-year plants and we estimate that there are now living not less than two hundred thousand rose plants that were sent out by us as subscription premiums. We are sending out more this year than ever before, mainly because our old friends and patrons wish to secure the new and beautiful collection, and they also wish to renew their subscriptions to a good paper. The rose offer in full will be found on page 31 with a coupon that can be cut out and sent to this office.



INGOT IRON CULVERTS.

The picture herewith represents one of the forty-eight-inch (in diameter) iron culverts used in road construction. We have in this connection a card on page 23 relating to the Highway Magazine, in which the American Ingot Iron Culverts, 99.84 per cent. pure, are illustrated and explained. We advise our friends who are interested in the subject to send for a copy of the Highway Magazine, 532 Walnut street, Cincinnati, Ohio.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912—True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

This is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors: the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, mother of champions or winner in the prize ring.

The Book of Live Stock Champions is receiving the highest praise from the live stock breeders' associations and from officials of the Department of Agriculture. It is being adopted as a text book at high schools and colleges. Active, up-to-date stockmen having an interest in their business and a desire to do their share towards live stock improvement are subscribing for the Book of Live Stock Champions themselves and recommending others to do so.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special inducements to paid-in-advance subscribers, to old friends and patrons. We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. This is an extraordinary offer.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Book of Live Stock Champions, cloth-bound edition of 1912.

THE FARMER AS A PAINTER.

Something About Mixing Paints—When to Put on the Second Coat — Avoid Painting in Damp Weather.

The farmer is an all-around man and learns to do about everything. Every farmer boy learns to wield the paint brush, and, in time, he acquires a good deal of skill. As a usual thing, however, he learns his lessons at the expense of much labor to himself. He can profit by the experiences of others and so avoid some of the mistakes he would otherwise make.

A skilled painter tells the writer a few things about painting, which things are here set down:

There are two ways of getting paint—buying it ready-mixed or buying the white lead, oil and pigments and mixing them at home.

If the latter is undertaken, it must be remembered that enough paint must be mixed at one time to do the entire job of painting, whatever that job may be. The reason for this is that if the batch of paint at first mixed is used up and an attempt is made to mix more, it is likely to be off in color and so will not match with the first part of the job.

This may be, however, generally obviated by the man with a scientific turn of mind, who will go to the trouble of weighing the different elements he combines in the first batch of paint. Then in the second batch he can follow the same proportions. But the trouble is that almost all people are inclined to guess at the mixtures, and of course it is impossible to guess exactly the same each time.

Even in the big paint factories, where everything is done in exact proportions, the paint will sometimes vary in shades without the reason for it being fully understood. Perhaps it is clear carelessness.

Many painters prefer to buy their paints ready-mixed. This is far simpler for the amateur than trying to learn the science of mixing. But if a person expects to do much painting it may pay him to experiment with the crude materials and learn how to make any color he may want.

In the actual wielding of the paint brush the first coat must be put on thin and allowed to dry for a week or more. A good many painting jobs are hurried forward so fast that the first coat does not have time to thoroughly harden before the other is put on top of it. It then comes off quite easily under bad-weather conditions. The inexperinced painter, too, often begins to paint over the first coat as soon as it feels dry to the touch, which may be two or three-days' time. He should resist the temptation and permit it to dry for a week or ten days.

No painting should be done when the wood is damp. The pent-up moisture will cause the paint to peel off in a short time. Oil and water do not mix, and the oil can get a good grip on the pores of the wood only if the moisture is absent.

A wet day is not a good time in which to paint, even though the water does not fall directly on the part being painted.

Several coats put on and well rubbed in will last longer than a less number of thicker coats. Thick coats are to be avoided, as with thick coats it takes a long time to harden.

All farm buildings should be kept presentable with paint. It is one of the necessary factors in the keeping up of the farm, and a coat of paint is worth as much in preserving the wood as it is in the matter of keeping up appearances.

JUDGING SHOW CORN.

How Experts Determine the Best Specimens.

What Constitutes "Class"—Evenness or Consistency a Highly Important Factor in Excellence—Other Things of Worth.

(By I. O. Schaub, one of the Judges for the Fifth National Corn Exposition.)

With the coming of the National Corn Exposition to the South, renewed interest has developed in the production of corn in our section. The great corn states of the Central West began a systematic study of corn many years ago, while it is only in comparatively recent years that the Southern farmer has taken up the work in earnest. Even at this time one finds many people who take it for granted that the largest or longest ear of corn is the best ear, while the best farmers know that such ears are undesirable, especially for seed purposes.

It is one of nature's laws that "like begets like," and most of us have recognized the value of this law in the improvement of animals. If we wish to produce a good dairy cow we breed only those animals having definite milk-giving characteristics. If we wish a beef animal, we get them from parents of the beef type. The same law applies in plant life, and students of corn recognize certain characteristics that are to be desired, especially when it is for seed purposes.

For convenience in comparing samples of corn, more or less arbitrary values have been assigned to these characters, and what is known as the score card for corn judges is used in most of the states where corn is grown. Each variety has its individuality, and, as environment has a marked influence on the characteristics of the plant and ear, even the same varieties will have differences according to where it is grown. However, the fundamental principles of corn judging will apply everywhere, and it remains for the judge to recognize these principles and apply them to the samples being judged.

From the above it may be seen that the individuality of the judge plays an important part, and where several judges work together there always comes a time when some one will disagree with the others as to the best sample.

At This Exposition.

I shall now discuss in a limited way some of the points that the judges of the National Corn Exposition will take into consideration in picking the champion ten ears of corn of the world for 1912.

Uniformity.—Ears in an exhibit should be of the same length, size, shape, and in the same manner the kernels should bear the same marks of identification, color, size and shape. In other words, each kernel should be exactly like its neighbor and each ear should be exactly like all the other ears in the sample. It is safe to predict that when the champion ten ears are selected there will not be more than a half-inch difference in the length of the shortest and the longest. One ear in an exhibit that differs to any marked extent from the others mars the appearance of the sample and should be replaced by a better one if possible.

Trueness to Type.—As was stated above, each variety has characteristics peculiar to itself, and even single varieties vary in different localities. However, each sample should contain ears of only one type, for otherwise it indicates that the exhibitor has no ideal in mind and is not breeding for any type. The man who plants smooth corn and dented corn may always expect to harvest both kinds.

Market and Seed Condition.—The sample should be dry and mature, and may be judged by the hardness and solidity of the ear as well as brightness of color and the size and color of the germ. Corn that contains a large amount of water may spoil if shelled and left in bulk, while if subjected to a severe freeze the vitality and germinating qualities may be injured.

The Length and Size of Ear.—These should conform to the variety and environment; as a rule, the circumference should be about three-fourths the length.

Width Between Rows.—The rows of kernels on the ear should be straight and close together, as this insures the maximum amount of corn on the cob. We have enough gullies on our hill sides without growing them on our ears of corn.

Tips and Butts.—The grains should run in rows well over the butt, completely filling in around the shank. The shank should be of medium size, or just large enough to hold the ear on the stalk in all kinds of weather. The tip should be well filled over with regular-sized grains. Neither should the tip be too tapering. Many farmers lay too much stress on getting ears completely capped over the tip. But it is more important to have a full-sized, well-shaped ear than to have the tip of the cob completely covered.

Size and Shape of Kernels.—Kernels should be wedge-shape with parallel sides, so as to touch the full length. They should be full and plump at the top, so as to fill in all the space around the cob. The kernels should be long but not carried to such an extreme as to form shoepegs. We get the best depth of kernels on a medium-sized cob. Round, shriveled, thin and pointed kernels are objectionable.

Color of Kernels.—All the kernels should be of the same color and conform to the color of the variety. Mixed colors on the same ear indicate impurity and should be avoided when selecting seed corn.

Color of Cob.—All cobs should be of the same color. Usually white corn has white cobs and yellow and red corn have red ones, yet there are white varieties in the South with pure red cobs. The color should be definite, however, and either pure white or pure red.

The above are some of the characteristics making up a good sample of corn. One judge may assign more value to one point than another judge, yet they are all fundamental and will be considered to a greater or less extent by the judges who select the grand champion sweepstakes of the world.

THE PROFITS OF AGRICULTURE

Going to the Middleman and Not to the Producer.

From Washington, D. C., on February 9th, it was reported that a blow had been struck at the high cost of living by a division of market section of the agricultural appropriation bill providing various ways of bringing producer and consumer together and establishing a system of market reports, etc., to cure the disease. Whether the disease will be cured or not by any means that legislation can bring about will be shown in the future, but for the present the statement made by the committee is interesting reading.

The report says that during 1912 New York City people paid $28,730,000 for eggs. All the farmers got for these eggs, however, was $17,238,000.

Cabbage to the value of $1,825,000 was sold in New York, that being the figure the farmers got. But what the consumers paid for this cabbage was $9,125,000.

Milk, for which the farmers received $22,912,000, was sold in the New York market to consumers for $48,880,000.

The farmers got $2,100,000 for the onions they sent to New York, and the consumers paid $8,212,000.

Potatoes, for which the farmers received $8,437,000, brought $60,000,000 in the New York market.

"In other words," says the report, "the producer gets $6,000,000,000, while the distributor gets $7,000,000,000, clearly showing that under our present system it is more profitable to distribute than to produce."

If we had said that it is more profitable to distribute than to produce we would be charged with discouraging farmers in their efforts to produce crops; it would be said that our figures did not represent the actual facts; it would be said that the farmer received more and the city people paid less; therefore we are very glad that the Agricultural Committee of the House of Representatives is responsible for the statement in regard to farm crops, that **"it is more profitable to distribute than to produce."**

The Most Wonderful Animal.

Mrs. Gamp was up from the country to see the sights of London, and, of course, she went to the Zoo.

She was very much struck by all the wonders, and, being one of these chatty old ladies, she went up to one of the keepers and spoke to him as follows:

"Which do you think is the most wonderful animal of all, keeper?" she demanded in a shrill voice.

The keeper scratched his head and thought for a long time.

"Well, mum," he said at last, "I think the laughing hyena about takes the cake."

"Why is that?" she asked.

"Because he only has a sleep once a week, one meal once a month and a drink once a year, and what he's got to laugh about is a perfect mystery to me."—Philadelphia Inquirer.

ADMIRAL 2-MAN PRESS

THE WHEAT MARKET SITUATION.

Review of Prices at the End of the Month, Which Are Much the Same as Before.

We do not look for any excitement until the government report is issued, and even then it will take startling news to cause any great change in the market. There is no excitement in business now; there is no great activity; prosperity is an individual matter, for one man can thrive on conditions that will cause failure to another; but there are times when the majority of the people are prospering, and even failures are scarce. That is not now. Wheat is cheap, too cheap, and for that reason the state of Illinois has seeded 14 per cent. less in wheat than was grown last year. Illinois farmers are very much given to raising wheat, but they are only cashing their seed and their work when wheat sells in Chicago for less than $1.00 a bushel.

The government report is usually issued on March 8th, and indicates more clearly what the actual supplies of grain amount to than at any other time, and with the information about the condition of the winter wheat and the amount of acreage of the coming crop, it sometimes ' ause to suppose that supplies ar ' t plentiful. No well-posted grain dealers are excited about the future of wheat and it will require something of a jolt to get them started. We would like to see a couple of good years, with wheat at $1.25 to $1.35 a bushel, in order to encourage people to raise wheat. According to a late statement in regard to the tendency of crop yields per acre, there has been a small but steady gain in the average yield, and that would be encouraging if it were not that the gains in quantity have been usually offset by a reduction in the average price. The future, however, cannot reduce the consumption, because civilized nations are, as a rule, increasing in population and consuming force.

On February 28th the May wheat option sold at Chicago at 92⅞ cents, and that was a cent a bushel lower than on January 31st, when the May option closed at 93⅞ cents a bushel.

On January 31st, at Chicago, the July wheat option closed at 91½ cents a bushel, and when the market closed on February 28th the same option was quoted at 91⅜ cents a bushel, showing a very small decline.

The September wheat option closed on January 31st at 90 cents a bushel, and that was the price when the Board of Trade closed on February 28th. It surely was an inactive market.

When it comes to spot cash wheat, St. Louis stands pretty good. On February 28th St. Louis was selling No. 2 cash red (soft) wheat at $1.06 to $1.09 per bushel; Chicago was selling at $1.03 to $1.08½, and Kansas City was selling the same grade goods at $1.00 to $1.06 per bushel. A cent or two a bushel in a car-load of grain makes a handsome difference when it is going the right way.

At the close of trading on the last day of February two years ago May wheat was quoted at $1.15¾, and it was not considered high then.

Cash Grain at St. Louis.

On February 28th, at St. Louis, the cash grain sold as follows:

Wheat.—No. 2 red wheat, $1.06 to $1.09; No. 3 red, 99 cents to $1.03; No. 4 red, 90 to 98 cents; No. 2 hard, 90 to 92 cents; No. 3 hard, 89 to 89½ cents; No. 4 hard, 87 to 88 cents.

Corn.—No. 2 corn, 49½ to 50½ cents; No. 3 corn, 48½ to 49½ cents; No. 4 corn, 47½ cents; No. 2 yellow, 49¾ to 50½ cents; No. 3 yellow, 48¾ cents; No. 4 yellow, 47½ cents; No. 2 white, 52 cents; No. 3 white, 50 to 51c.; No. 4 white, 48 cents.

Oats.—No. 2 oats, 33 to 33½ cents; No. 3 oats, 32½ cents; No. 4 oats, 32 cents; No. 2 white, 35 cents; standard, 34½ cents; No. 3 white, 33½ to 34 cents; No. 4 white, 32½ to 33 cents.

Rye.—No. 2 rye, 62 cents a bushel.

A Better Shoe for Men

The "Patriot"

In the "Patriot" you get the maximum of style, comfort and service—three qualities not often combined in a shoe.

The "Patriot" is the special pride of our 23 big factories. The most skilled shoemakers among our 10,000 experts are making it.

We make over 750 styles of "Star Brand" Shoes. The leather in each hide is utilized according to grade. Only the finest cuts are used in the "Patriot". Each pair is as good as every other pair.

The style shown is one of our newest models for Spring—made of finest gun metal leather, hand welt, oak leather soles—New Rex last. Better than many other shoes costing a dollar more.

Beware of Adulterated Shoes

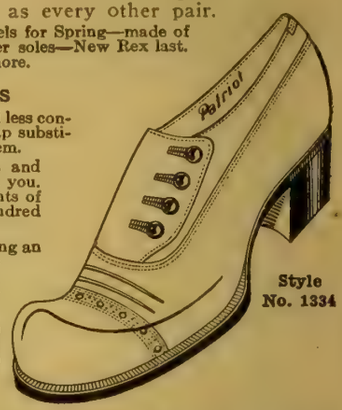
More than 90% of all shoes sold at $4.00 and less contain paperboard, leatherboard and other cheap substitutes for leather. You pay leather prices for them.

Pure Shoe bills now pending in Congress and fourteen different states are designed to protect you. We heartily endorse this legislation. The rights of 100 million consumers are greater than a few hundred manufacturers.

There is one way to be sure you are getting an honest leather shoe—simply ask for "Star Brand" shoes with our name on the sole and our Star on the heel. No substitutes for leather are ever used.

The "Patriot" and other "Star Brand" shoes are sold by nearly 20,000 good merchants. Look up the dealer in your town or write us for name of nearest dealer.

"Star Brand Shoes Are Better"



Style No. 1334

ROBERTS, JOHNSON & RAND
MANUFACTURERS Branch of International Shoe Co. ST. LOUIS

GENERAL FARM NOTES.

At Fort Worth, Texas, on February 17th, Mr. J. P. Burns, of Williamson county, marketed a load of 1,142-pound steers at $6.75 per 100 pounds. They were elegant cattle, fine-quality grade Herefords, but only in fair flesh, and were sold to Hood & Farmer, of Parker county, and by them will be fed and fattened for market. The price was the highest ever paid on the Fort Worth market for feeding steers.

Raymond Ruebush, of Sciota, McDonough county, Ill., is advertising White Orpington eggs from the leading strains of this country. These favorite fowls are considered so highly by those who raise them that they think they have the best in the land. It is a good thing for people to start the breed they believe in and stand by it under any and all circumstances.

Wisconsin alfalfa hay, grown by P. A. Paulson, of Hudson, St. Croix county, a graduate of the Short Course in Agriculture at the University of Wisconsin, won the world's championship at the recent National Corn Show held at Columbia, S. C. This victory was won in the face of severe competition from farther Western States, where alfalfa is generally supposed to grow best.

Silo Owners **REMEMBER** that proper cutting and filling are as important as the Silo itself. ***The Dick Blizzard Ensilage Cutter,*** with very large capacity, works steadily, takes whatever is fed to it without a hitch, and outlasts any machine of its kind. It is the most profitable machine to buy and is fully guaranteed.

Address..... .....

Basket Willow Cuttings.

The Department of Agriculture is getting ready to fill requests for the basket willow cuttings grown last year on its experimental farm at Arlington, Va. Distribution of these cuttings takes place in March each spring to farmers and others who wish to make trials of basket willow on lands too wet for other crops. From fifty to one hundred cuttings are given each person.

The distribution is not a mere giving-away of government material to persons who desire to get something free, because it is required that each recipient of cuttings shall make a report of the treatment given and the results obtained. Several select varieties are included in each set that is distributed, and the aim is to secure information as to the best variety for each locality, since no one kind can be relied upon to yield maximum results over a wide range of territory.

In the basket-willow investigations carried on at the Arlington Farm, Arlington, Va., and at Ames, Iowa, by the Forest Service, particular attention has been given to the development of American species for basket-making purposes. The European species now commonly used have never proved themselves entirely adapted to American conditions, and are, as a rule, less thrifty than the native species. At present there is at Arlington a willow garden containing nearly 500 lots, gathered from all parts of the country and representing practically every species and variety found in the United States and Canada.

A system of selection which has been carried on for several years is already indicating which strains show the best basket willow characteristics for American conditions.

THE OATS MARKET SITUATION.

Very Little Change, But What There is Points Upward.

Considering the size of the crop, the oats market stacks up tolerably, for which let us again express our satisfaction. Farmers can congratulate themselves that the population is increasing, and it takes food to feed them. That is the reason why oats are not selling at 30 cents a bushel, the same as on February 28th, 1911.

We have encouraged farmers to sell their oats to their own live stock rather than to sell it to be sacrificed on the Board of Trade, and we still believe that farmers can advance the market because the demands of the cities for oatmeal is very much larger than formerly, and the profits are so large that the market buyers will not stand back from a squeeze of five cents a bushel.

When we look to the Chicago trading we find that oats advanced a little in February. We left the May option on January 31st quoted at 33⅞ cents, and we find at the close, on February 28th, the market had advanced to 34⅝ cents, and this little gain is appreciated, because it might have gone the other way. We left the July option quoted at 34 cents, and we find it a month later, on February 28th, at 34½ cents. September also changed from 33⅞ cents on January 31st to 34⅝ cents on February 28th.

When we turn from the Chicago trading in futures to the actual cash transactions at St. Louis we do not find any encouragement, because there was a decline instead of an advance. We left the trading on January 31st at 34 cents a bushel, and on February 28th the quotations were reduced to 33 and 33½ cents.

"Don't The Days Seem Long Working In The Fields?"

THE FLAVOR LASTS
CHICAGO
Look for the Spear
B D'Emo, Adv., Chicago

As previously observed, the market stacks up tolerably under the circumstances, and farmers may console themselves that, bad as it is now, a couple of years ago it was decidedly worse.

Legislation of a Kind.

Congress passed a resolution to appropriate $300,000 for the purpose of proseeuting violators of the anti-trust law, but they provided the money with the understanding that farmers' organizations and labor organizations should not be disturbed with it; in other words, farmers and union laborers are at liberty to violate the law and are not liable to be punished for it. We consider this an elegant example of pusillanimous legislation, and we assume that farmers were included in the negative provision in order to make the action in regard to labor organizations more popular. A law that cannot be enforced on all classes of citizens ought to be wiped out.

Sale of Fine Horses.

Messrs. Barham, Son & Butler, Milan, Tenn., will hold their fifth auction sale of Kentucky saddle-bred horses on March 19th and 20th. This firm is well and favorably known for raising and selling high-class, sound, serviceable and stylish horses, all registered or entitled to registry. They also include in the sale offerings from other first-class breeders in their section. This time there is a car from S. E. Terry, of Cave City, Ky., and another from Arch Dickinson and others of Trenton, Tenn. Barham, Son & Butler were prize winners at the last St. Louis Horse Show and their stock belongs to the aristocracy of saddle-horse breeding. See their sale card in the breeders' columns.

During the year 1912 the United States imported 1,731 breeding cattle free of duty and 323,986 head of meat animals that paid duty at the custom house.

BOSTROM'S FARM LEVEL

has been on the market nearly **30 years** and the sales get bigger every year.

We are proud of that record, and as the

which has **Telescope** enabling you to read the Target over 400 yards away, is the most simple, accurate, durable and complete outfit ever made for

THE FARM BOY IN COLLEGE.

The Financial Question Briefly Referred to—Increase in the Number of Schools to Reduce Expenses.

A good many farm boys are going to college these days, and with the passing of the years we may expect to see the number of farm boys in all of our colleges greatly increase. They are not only appearing in large numbers in the agricultural colleges, but are becoming numerous in schools of other kinds of training.

The number of agricultural colleges and schools is enormously increasing, and bills before the different Legislatures are being pushed to create more. Every county will soon have its own agricultural school, and, in addition, many agricultural high schools are springing up.

This means that the farmers everywhere are awakening to the value of school training for agricultural work. Therefore these new schools are finding students and some to spare.

Even in the South there is an awakening that bids fair to produce an economic revolution. Take, for instance, the congressional district agricultural schools of Georgia. Last year the attendance in those schools was more than 1,300, and they have just begun their work. It took some of our State Agricultural Colleges a generation to reach an enrollment as large as that.

But those schools have begun to settle the great question of financing the students. Ordinarily the cost of a college education has weeded out many of the students who were not financially strong. In the Georgia schools they have reduced the cost of board to the students to less than $10 per month. This means about $90 for the college year.

Compare this with some of the agricultural colleges of the North, where the total expenses are over $300 per year, and where board and room cost about $25 a month.

In the Georgia schools referred to the boys have to work free for the college about twenty to thirty-six hours per month. If they put in more than that amount of time they are paid for the extra labor. This further helps out with the expenses.

The biggest thing the country boy learns in the agricultural college or the agricultural school is to co-operate with others.

As a result we may expect to see the time when exploitation of the farmers will be a thing of the past. Neither the crooked commission man nor the slick land speculator will be able to grow rich on the deceptions practiced on the farmer. The boys in the colleges are learning all the games and are at the same time learning how to checkmate them. When the time comes that the farmer gets all that is coming to him, he and his family will no longer be in the depths of poverty, as some of them now are.

The question of expense at college is a burning one, and in many of our schools is becoming a deciding one, with the increase in the cost of living. The most encouraging condition is that there is temptation among the colleges. We have known boys living in states where expenses in colleges are high going to states in which living expenses in college are low.

The increase in the number of agricultural schools will to a considerable extent reduce the cost of living, both as to board and railroad fares.

WHEN THE TREES ARE BARE.

What to Do and Why—The Caterpillars—San Jose Scale—The Scale of the Maple.

When the orchard trees are bare is a good time to hunt the eggs of the caterpillars in the localities where these insects have been numerous the past year. As a boy, the writer had this annual duty to perform. The rings of eggs are found on the small branches and constitute a necklace of closely-packed eggs, extending in a uniform band around the limb. It is but the work of a moment to take a knife and cut this band, when it can be easily stripped off and put in a box for the purpose of burning. This latter work should never be neglected, as, if these eggs are dropped in the grass or elsewhere, it means that every egg will be a caterpillar, which must later be hunted and captured or allowed to re-begin its ravages.

Often these bands of eggs can be seen from the ground; but if any of them are present, the whole orchard should be gone over. It is much easier to destroy the caterpillars at this stage than at any other time. It also saves a considerable amount of defoliation.

When the trees are bare is the time to spray for the San Jose scale with the lime-sulphur wash or such other wash as may be employed to fight this dreaded pest. The winter is the time to apply this to the trees, as, after the leaves are out, the wash is destructive to the foliage. It takes a powerful remedy to destroy the scales, and in the winter is the only time to employ it. Every man about to do this kind of spraying should write to his Experiment Station for the latest information on modes of spraying and composition of spraying material.

When the soft maples are bare is the time to look for the cottony scale of the maple. This can be detected by the little mass of cotton about the size of a navy bean. To save a maple tree may look like a big job, but it is not so great as it looks. The soft maple is the variety generally affected, and that variety grows so fast that it needs a great deal of trimming. So, many of the worst-affected branches can be trimmed off and burned. With a cloth many of the cottony lumps can be wiped off the branches and the isolated ones can be picked off. A few-hours' work will make a great impression on any tree, and with some of the trees a few hours will suffice to rid the tree entirely. This seems about the only course that will save the soft-maple trees where they are badly infested. But there will generally be found trees with only a few colonies on each tree. A few-minutes' work will free each tree of these, and if an annual inspection is made, the trees can be kept free from these pests. The females of the scales have no wings, and this makes the spread of the scale insects slow. The first ones are brought on the feet of birds, and the subsequent infestation of a tree is from one or two isolated colonies. Inspection of the trees once a year will keep down the pest entirely, with the work that should go along with it. All soft maples should be inspected every year at this time, as when the first colonies do appear they be at once eliminated.

MISSOURI and ARKANSAS
OZARKS
Free, for you!
Over 50 double pages and 75 pictures showing farm scenes—brimful of facts about the opportunities in the Ozarks; where farmers make 5c a lb. profit from pork, $50 a head from baby beef (in 1 year's feeding), $10 a month per cow, 50 bu. corn per acre on land costing $12 to $40—where there's 9 months' pasture, short, mild winters, close big markets—where profits are big because expenses are little. Written by a man who knows farming. I have only a limited number of these books; to be sure of your free copy, send for it now.

(Fill out and mail this coupon to-day.)

Great Horse Story

"Kate and Queen"

By Prof. Jesse Beery

Free

A most wonderful and unheard of book offer. It equals the famous "Black Beauty" in human interest—surpasses it in practicability. "Kate" a victim of poor handling is vividly contrasted with "Queen" who was more fortunate. You sympathize with one—rejoice with the other—even as you sigh for the slum waif and laugh with the child of fortune.

Prof. Beery has skillfully woven into this intensely interesting and true story, many valuable suggestions for handling horses—a result of a lifetime's experience.

SPECIAL FREE OFFER

Prof. Beery desires that every horse owner, trainer, breeder—everyone interested in horses—should read this great story. To make it possible, for a short time he offers every interested horseman a copy FREE. He only asks that ten cents be sent to cover postage, and the names and addresses of five other horse owners. Send U. S. Stamps or coin. If you have even a passing interest in horses—if you own, train or breed them, you will gather from this book a fund of knowledge worth many dollars to you. Send for copy.

FREE With each book we also send free a beautiful colored picture of Queen—oil painting effect—suitable for framing.

PROF. JESSE BEERY, Box 714, Pleasant Hill, O.

THE BOARD OF TRADE

Charged With Attempting to Destroy Competition and Restrain Commerce.

In a civil anti-trust suit filed at Chicago on February 11th the Chicago Board of Trade was charged by the federal government with violating the Sherman anti-trust law by arbitrarily fixing and holding during the hours the exchange is closed, the price of corn, wheat, oats and rye to be received in Chicago. In other words, the Board of Trade is charged with preventing its members from changing prices in their trading from the close of one-day's market until the opening of the next.

The petition asks the United States District Court for a temporary restraining order to stop the practice complained of to be followed, after final hearing, with a permanent injunction prohibiting the members of the Board from continuing an alleged unlawful conspiracy to destroy competition and restrain interstate commerce.

The basis of action, as stated, is, that after the close of each day's session the Board of Trade establishes a public "call" for corn, oats, wheat and rye to arrive, by which the Exchange absolutely fixes the price to be offered for such staples by its members, from all parts of the country, contracted for from the closing hour of one business day to the opening the following day. Grain bought by members of the Board prior to its shipment or while in transit to Chicago is designated, the petition points out, as grain "to arrive," and the influence of the "call" applies to this particular branch of trade.

The petition charges conspiracy, alleging that as the Board is open less than four hours, or only one-half of the ordinary business day, it is declared that these fixed prices control the bids of grain dealers for the other half of the business day.

The rule has resulted, it is charged, in a conspiracy and combination. According to the petition, the Board dominates and controls the grain market, both as to price and the amount sold and shipped in interstate commerce in a large part of Illinois and adjoining states.

The case presented will require some time for legal delays and trial. In the meantime, the publicity given the case will do no harm. It has been understood that the closing values of one day always stood good until the opening market the next day, simply because no influence could be strong enough to change it. But it appears the Chicago Board of Trade leaves nothing to chance; by its rules it insists that the 1,500 or more members of the Board be under control and prevented from engaging in any transactions outside of Board of Trade hours except at the figures which were established by the "Call Board." How much of this is a restraint of trade we will be informed later on. In the meantime, we will not anticipate the verdict.

No-Rim-Cut Tires 10% Oversize

Nearly Half the New Cars Use Goodyears

Nearly half the cars which are built this year will be equipped with Goodyear tires.

At the New York Show, nearly half the show cars had Goodyear equipment.

Think of that—almost as many Goodyears as all other tires together.

And far more cars are now running on Goodyears than on any other tire in the world.

What Led to This Condition?

It is well to ask what led to this condition.

There must lie, somewhere, some immense economy. For men in these days keep good track of tire mileage.

And the result is this:

In the past year alone, more Goodyear tires have been sold than in the previous 12 years put together.

Two Savings

Two features in No-Rim-Cut tires mean an enormous saving.

One is the device which makes rim-cutting impossible. Without that device—with the old-type tire—23% of all tires become rim-cut.

The other is the fact that these patent tires are 10% oversize.

That 10% oversize, under average conditions, adds 25% to the tire mileage.

Non-Skid Treads

Then we invented a Non-Skid tread which excels every other non-skid.

It's a double-thick tread, made of very tough rubber, filled with deep-cut blocks. It grasps the road-surface with a bull-dog grip.

This thick, tough tread is immensely enduring. And the blocks spread out so the strains are distributed just as with smooth-tread tires.

This long-lived Non-Skid became at once the favorite Winter Tire.

Any Man Can See

Any man at one glance can see these advantages.

You can see why these tires can't rim-cut. You can see the oversize. And you know without telling that these things save money.

Then this tire, remember, is the final result of 14 years spent in tire building. For 14 years the ablest of experts have here worked to solve your tire problems.

About 2,000,000 Goodyear tires have now been tested out. As a result, these tires far outsell any other tire in the world.

You who pay tire bills should find out the reason. Make a test of No-Rim-Cut tires

Write for the Goodyear Tire Book—14th-year edition. It tells all known ways to economize on tires.

WORTHLESS GOODS.

Ground Rock, Mineral Fertilizer or Stone Meal.

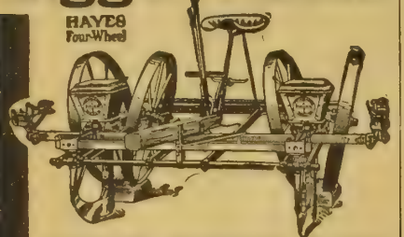
The indications are that not much of this class of materials has been sold in the Massachusetts markets. The inspectors were not able to find it in the hands of agents, and it was probably sold by the manufacturer through soliciting agents direct to the farmer.

A sample of New Mineral Fertilizer, manufactured by the New Mineral Fertilizer Company, Boston, was taken by one of our inspectors from stock carried by the manufacturer. The analysis of this showed the presence of .09 per cent. nitrogen, .38 per cent. total phosphoric acid and .10 per cent. water soluble potash. The calculated commercial value of the material was 57 cents per ton. Extravagant claims are made by the company for the fertilizing value of the silica, chlorine, sulphur, soda, lime, magnesia, iron and alumina which the material, like all rocks and soils, contains. The ordinary soil usually contains an abundance of these elements with the possible exception of lime. Assuming the ton price to be the same as last year ($17), a pound of nitrogen would have cost $5.67, a pound of insoluble phosphoric acid 60 cents and a pound of water soluble potash $1.27.

Dr. Charles D. Woods, Director of the Maine Agricultural Experiment Station, has conducted field experiments with this material. The results of the experiment were stated as follows by Director Woods:

"It will be noted that both with the corn and with the potatoes, there was a somewhat smaller yield on the plots to which New Mineral Fertilizer was applied than upon the plots which received no fertilizer. The comparative yields seem to clearly point out that there was no benefit from the use of the New Mineral Fertilizer."—From Bulletin No. 143, Massachusetts Agricultural Experiment Station, December, 1912.

Four Wheels Bigger Yields



HAYES Four-Wheels guarantee surer germination and quicker growth. Wheels pack the dirt from the sides to hold moisture and leave a loose ridge on top so that corn sprouts quickly and comes up several days sooner. The ridge gives greater surface for sun's heat and prevents washouts in hilly fields.

Hayes Four-Wheels

regulate depth of planting to the fraction of an inch—the only planter made that plants every kernel exactly the same depth. This is an important factor in the success of the corn crop. Corn all comes up at the same time, allows earlier cultivation and guards against missing hills from uneven planting.

HAYES Four-Wheels cover where all ordinary open wheels fail. They spread at the top and clean themselves. Guaranteed not to clog or carry the corn over even in wet and sticky soil. Insures a stand in low wet spots of field and allows earlier planting.

Never Misses a Hill

The HAYES Drop never fails. It is the simplest, most durable and most efficient ever made. Fewer parts than any other. Has no clutch to miss and give trouble. Never cracks or grinds the seed. Will drop accurately any size or shape kernel.

The HAYES leaves no bare spots in your fields. Increased yields soon pay for it. Farmers who have been disappointed with edge drop planters are now buying the HAYES never-fail drop.

Leads All Other Planters

Over 160,000 in use. Most perfect checking planter made. Short coupled, light draft and turns in shortest space. Twenty-five years success. Fully guaranteed.

Can be furnished with perfect working Fertilizer and Cow Pea Attachments, also Stub Runners or Discs if preferred.

Ask your neighbor and dealer about the HAYES and send postal for free booklet Z containing valuable planter facts.

HAYES PUMP & PLANTER CO., GALVA, ILL.

Hayes Four Wheel Corn Planter

THE CORN MARKET SITUATION.

A Few Remarks Regarding the End of February Conditions and Prospects.

We review the corn market at the end of each month for the purpose of affording a farmer a simple method of keeping at his hand some information that will be interesting. We think that it is well to fix a date as the time of our regular review and to make it the basis of all calculations. The closing hour on the last day of the month is the best time to consider market prices of grain, even though it is not thought of during the balance of the month.

On March 8th of each year the Department of Agriculture issues a statement showing the stocks of grain in farmers' hands, together with the visible supply of grain in the country, but at this writing, on February 28th, we can only anticipate that the report will show no scarcity of corn.

Some people may believe that the government reports are taken for gospel, but they are not. They are taken for what they are worth, and there are other interests that keep themselves posted and keyed up stronger with information than Uncle Sam, who is neither buying nor selling on the market.

We regard the government reports highly and believe they are getting better all the time, and we advise farmers to take the same view of them.

On February 28th we find the corn market no worse off than it was on January 31st. Indeed, the May option was quoted on January 31st at 52½ cents, and on February 28th the closing price for the May corn option was 53⅜ cents, which shows that there was a very moderate advance. The July option was left on January 31st at 53⅜ cents, and on the last day of February we find it at 54½ cents, showing another strengthening of the market. Then there is the September option, which is a good indicator for the future. We left it on January 31st at 54⅛ cents, and we find it a month later, on February 28th, at 55¾ cents, thus showing the slight gain was uniform on all the corn options, so far as Chicago trading is concerned.

When we turn from the speculative market at Chicago to deal with simple spot-cash transactions at St. Louis we find that cash corn is selling below the speculative market. We left the January 31st market at 49 to 49½ cents for a bushel of No. 2 corn, and on February 28th the No. 2 corn was selling from 49½ to 50½ cents a bushel. This is representative of a stronger market, and we hope the upward tendency will be continued, no matter how small and slow the movement may be.

Hay Sales at St. Louis.

Hay arriving in car lots is sold on two sides of the river, and there is considerable demand for hay of all grades and qualities. On February 28th receipts were thirty-four cars. Sales on the St. Louis side were: One car No. 2 clover-mixed (stained) at $9.00; one car Red Top mixed also at $9.00; one car No. 2 clover-mixed (headed) at $10; one car No. 1 do. at $12. Timothy—One car threshed at $7.00; one do. at $7.50; one do. at $8.00; two cars headed at $10; part car No. 3 at $10; part car No. 2 at $11; two cars No. 2 at $11.50; five cars and part car do. at $12; three cars No. 1 at $12.50; one car do. at $13; one car high No. 1 at $14. Prairie—One car No. 1 at $9.50; one do. at $10; one choice at $13. On East Side: Timothy—One car No. 2 at $10; one car No. 1 at $13.50. Any of our readers having hay to ship and wish to try the St. Louis market we will be glad to introduce them to a first-class firm.

DITTO'S Triple-Geared Ball-Bearing Double-Cut **Feed Grinder**

Is triple-geared so both grinding rings revolve in opposition to each other, giving it a Double Cut and doubling its capacity.

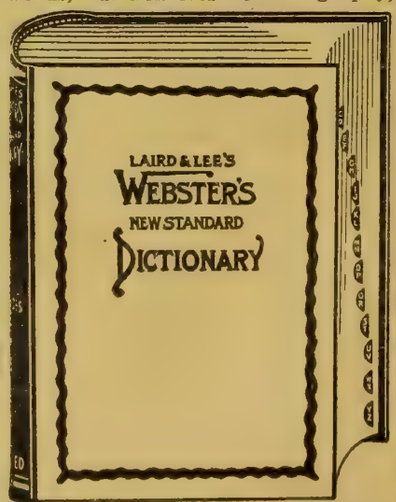
WEBSTER'S DICTIONARY.

Greatest Value as a Subscription Premium—Cost More Each Time We Buy Them and Soon Will Be Beyond Our Reach.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 750 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography,



geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces.

Our offer to you: Send us One Dollar and we will send you The National Farmer and Stock Grower for two years, and we will also send you, postpaid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Send the Coupon Below for Prof. Jesse Beery's Grand Free HORSE-TRAINER'S PROSPECTUS!

This book, by Prof. Jesse Beery, "King of Horse Trainers and Horse Tamers," tells the thrilling story of his eventful career; points the way to success as a practical Horse Trainer; explains the Beery System; gives many examples of men who are now repeating the very feats with which the great horseman won the applause of vast audiences throughout the United States.

Every owner of an unmanageable horse or colt should send for this book. Everyone who loves horses should learn the secret of subduing and controlling the wildest horses without the use of whips, cruel "curb bits" and other instruments of torture. Every man who is looking for a profession that pays

$1,200 to $3,000 a Year at Home or Traveling should learn how hundreds are making big money as professional Horse Trainers with the aid of the simple, safe, humane Beery System. Take for example the case of Emmett White, of Kalona, Iowa, who has followed the Beery System and become a professional Horse Trainer. Mr. White says: "I would not take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy **a home and an automobile** solely through earnings from training horses as taught by your excellent methods. I am proud of my profession."

Do You Own a Balky, Tricky, Scary, Vicious Horse?

If so, don't get rid of the **horse**—get rid of its **bad habits!** The minute such horses are thoroughly mastered and trained their value is **doubled or trebled.** Prof. Beery teaches you to master any horse and make him valuable, useful, **salable.**

Priceless Facts from World's Master Horseman

Having retired from the arena, Prof. Beery is devoting his life to teaching others how to duplicate his marvelous achievements.

He writes from experience, in a simple, direct style, without boasting, yet you realize that he is a veritable wizard—one who knows more about the nature of horses than any other living man.

Thousands Are Now Making Money by the "Beery System"

Today he can point you to thousands of men—yes, and a number of women!—who are making all kinds of money by training horses, breaking colts, giving exhibitions, buying up cast-off "tricksters" and "man-killers," taming and training them and **re-selling at high prices.** Prof. Beery's lessons are simple, thorough and practical.

A. L. Dickenson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several different men. I got them and gave them a few lessons and have been offered $400 for the pair. I bought them for $110."

F. N. Goux, Vernon, N. Y., writes: "I cannot speak in high enough praise of your instructions. I am at present handling a $1,000 horse. People bring me horses to train from miles around."

Roy Fordyce, 041 Adams Street, Spokane, Wash., says: "I am delighted with your teachings. Have trained a 3-year-old stallion to drive without a bridle or lines. I would recommend your system unqualifiedly to anyone."

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly by
THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.
Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.
E. T. R. Murfey, 1123 Masonic Temple, Chicago, Ill., Western Representative.
Frank C. Avery, P. O. Box 284, Coronado, Calif., Pacific Coast Representative.

Entered at Postoffice at St. Louis, Mo., as second-class mail matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar. Canada and foreign subscriptions 75 cents a year.

Each one of our readers will find it to their advantage to obtain a package of post cards before sitting down to read The National Farmer and Stock Grower for the purpose of writing on those cards to such advertisers as invite them to do so. The incubator catalogues, for instance, also the seed catalogues and the agricultural college and experimental bulletins in this paper. Agricultural implements also should be studied with the catalogues before you so as to receive the benefits of the manufacturer's claim of superiority and new points of excellence. We wish our friends and patrons to have the benefit of all that is to be obtained that will be a guide in their business of farming in all its branches, and a postal card will be found quite useful in this connection.

We Stand or Fall Together.

If we do not stand together in the protection of our own interests we cannot expect anyone to represent us. Congress intends to reduce customs duties upon most goods, and if farmers do not get busy they will admit all farm productions from foreign countries free of duty. Some of the lawmakers expect by taking the duty off wheat to be able to go round to the bakers and see the price of bread reduced. They also think by letting in meat from South America free of duty that meat will be cheaper at the butcher shop. They also believe that by making the Australian wool grower a present of the duty on wool that clothes here will be cheaper. They are mistaken, badly mistaken. They can injure and discourage American industries by reducing us to the poverty-stricken masses and wealthy classes of other countries, but they cannot cheapen bread, meat or clothing without at the same time reducing the earning power of the masses of city people, just the same as they will surely influence a decrease in farm productions. Anyone who will read "Our Industrial Policy" as published in this paper and agreeing with us should write to their Senators and members of the House of Representatives, endorsing these views. If requested to do so, we will furnish our subscribers with extra copies to send to Washington for that purpose. If we do not attend to our own business, no one will do it for us.

The Fruitman and Gardener.

On page 25 will be found an advertisement of what we call the Big Four Subscription Combination. We regard it as a splendid co-operative combination because it offers four excellent publications at half the publisher's price. Sometimes, however, a subscriber prefers to leave out one of the papers and asks for something else. We have now been able to add to the list the Fruitman and Gardener, which is published monthly at Mount Vernon, Iowa. The regular price is 50 cents a year, but we are able to include it in place of either The National Farmer and Stock Grower or the American Swineherd, or the Shepherds' Jounal, or the Reliable Poultry Journal. In other words, our readers can select any four of these papers, and we will send them for one year at **One Dollar** for the four. The Fruitman and Gardener is a very practical paper and runs very strong on strawberries, besides keeping up with all methods of fruit and vegetable culture. Be sure to send in your subscription to four out of five of the publications mentioned.

Our Secretary of Agriculture.

As we go to press, it is stated that our new Secretary of Agriculture is Dr. David F. Houston, Chancellor of the Washington University, St. Louis, Mo. Dr. Houston was born in North Carolina in 1866, and is therefore in his forty-eighth year. He was President of the Agricultural College of Texas for several years, also President of the University of Texas. We trust and believe he is fully capable of doing credit to the position of United States Secretary of Agriculture.

Cattle Exports Discontinued.

The comparative scarcity of beef cattle is shown by the general belief in the trade that it is no longer profitable to export cattle on the hoof to Great Britain. None were exported in January, 1913, and some of the men who have been in the export business have conluded to forget it. The export trade while it lasted served a purpose of taking the surplus of heavy-weight cattle and preventing them from glutting and depressing our own market. It did not stop until the population of the United States became sufficient to absorb our usual supplies. The export trade thrived on the poverty of stockmen, when we had only fifty to sixty millions of people to feed and when prices were very low. The export trade in dressed beef will take care of any surplus in production in the future.

Grand Average For Hereford Cattle.

A remarkable sale of Hereford cattle took place when on February 26th Mr. W. T. McCray, of Kentland, Ind., sold seventy-six head of Hereford cattle at $526.14 per head. The sale included a cow at $1,100, another at $1,025, two bulls at $2,500, and one at $2,150. The twenty-seven bulls averaged $735.92, and forty-nine cows averaged $405.

GOOD BOOKS AND PAPERS.

THE YOUNG FARMER—SOME THINGS HE SHOULD KNOW—By Dr. Thomas F. Hunt. Dean and Director of the University of California. Farming more and more is coming to be based on science, into which luck enters, the controlling factor. Here is a book which every man, young or old, taking up farming as a life work, will find an interesting, reliable, practical guide covering the whole subject. The author, who is one of the safest and wisest counselors in this country on agricultural matters, is himself a farmer and has had wide experience with young men and farmers, obtained through his many years' association in college work. This new book was written for the young man, although it is fully as useful to farm people of all ages and will prove extremely valuable to those who read it. The book is handsomely illustrated, 288 pages, 5x7 inches. Cloth. Net, $1.50. Orange Judd Company, 315-321 Fourth Ave., New York City, N. Y.

THE GASOLINE ENGINE ON THE FARM.—This is a splendid, comprehensive work by Xeno W. Putnam (brother to Bessie L. Putnam, well known to readers of this publication), who handles his subject in 527 pages, and every page interesting and instructive. The book is a practical treatise on the construction, repair, management and use of the farm power that has made up for the scarcity of farm labor by doing the work of several men at less than the cost price of a small boy. Mr. Putnam looks upon the gasoline engine as a necessity on every farm to do the farmer's work indoors and out of doors. He handles the subject perfectly and as simply as it can be done. It is absolutely impossible without using space we cannot spare in this edition to describe in detail even the index of this great work or the numberless uses to which the farm engine can be put. We advise our readers to send for the circulars describing this book to Norman W. Henley Publishing Company, 132 Nassau street, New York City, N. Y., and at leisure find out if the book is worth a place on a progressive farm. The price of the book is $2.50 per copy. We vote yes, the book is well worth the money.

BARN PLANS FREE.—The Louden Machine Company, address 651 West Broadway, Fairfield, Iowa, will send you a catalogue showing all kinds of dairy barn equipment and plans for a dairy barn, with special reference to their litter carriers and other sanitary labor-saving appliances. If you wish to construct a barn, they will send you a plan for your approval, and if you wish to remodel your barn they will arrange your ideas into a working plan. The first thing to do is to write to the Louden Machine Company at 651 West Broadway, Fairfield, Iowa, and ask for a copy of the booklet entitled "Dairy Barn Equipment." It will be a good introduction to the leading firm manufacturing dairy barn appliances.

FIRST PRINCIPLES OF FEEDING FARM ANIMALS.—By Prof. C. W. Burkett. This is the most comprehensive and best illustrated book on feeding the animals of the farm. As its title indicates, the book discusses the first principles of stock feeding. It is of simple construction, takes up the subject step by step, making it possible for the practical man or student to understand fully both the science and the practice of this important subject. The book is more than a statement of principles; it is an interpretation of the entire science of feeding. The stockman and farmer will find it as captivating as a novel, and the teacher in school or college the most teachable text they have in use on any subject. The book is superbly illustrated. 5x7 inches. 355 pages. Cloth. Price, net, $1.50. Orange Judd Company, 315-321 Fourth Ave., New York City, N. Y.

THE WESTERN HORSEMAN SOUVENIR EDITION is a magnificent publication, a four-column book of 150 pages, full of handsome illustrations of the leading trotting and pacing notables in harness, their owners and trainers. It contains the full list of up-to-date champion records, the new performers of 1912, and a vast collection of historical and news items to please and entertain the true horseman. The Western Horseman is published at Indianapolis, Ind., and is now issuing Volume 36. The subscription price is $2.00 per year, and the Souvenir number by itself is 25 cents.

PROFITABLE POULTRY AND EGG PRODUCTION is the title of the complete catalogue of the Cyphers Incubator Company, address Department 56, Buffalo, N. Y. It is a booklet of 250 pages, three-column size, 7½x10 inches, and is a work of art from beginning to end. The purpose of this catalogue is to show every size and make of the Cyphers Incubators and Brooders, and to insure the catalogue long life and to be kept as a valuable treasure it is loaded down with the most practical information in regard to all possible branches of the poultry industry. A free copy can be had by addressing the Cyphers Incubator Company, Dept. 56, Buffalo, N. Y.

POLOMAS VALLEY, ARIZONA, FARM LANDS sold on easy payments. Perfect titles guaranteed. Abundance of water year round. Canals all in. Land level; easily irrigated; all cleared and ready for plowing. Soil rich, dark, sandy loam, 25 to 30 feet deep, free from alkali, adapted to alfalfa, small grain, oranges, lemons, olives, dates; also wheat, barley, oats and live stock. Climate ideal. Pure well water. Land all fenced in 80 and 160-acre tracts. Write for maps, lists, prices, terms and full information. Sent free. Address the owner, **POLOMAS LAND CO., 1535 E Street, San Diego, Calif.**

ARKANSAS.—A great agricultural state not half appreciated, but a splendid, mild-climate country that is affording fertile farms at low prices. Arkansas has 214,648 farms in all, averaging 81 acres, averaging $2,116 in value and three-fourths free and clear of debt. Increase in value in ten years, 53 per cent. Write for Free Book the lands traversed capable of the greatest about Arkansas to **A. Hilton,** G. P. A., 1512 Frisco Building, St. Louis, Mo.

ARKANSAS.—Land is low in value but constantly advancing. The Cotton Belt Route is one of the great railroad systems leading to the Southwest from St. Louis and degree of development. Read about Cotton Belt Excursions on page 14 and write to **E. W. LaBeaume,** G. P. A., 1466 Pierce Building, St. Louis, Mo., for Free Book on Arkansas and Texas.

KANSAS.—Forty acres of fine land, fully water stocked in the Farmers' Ditch. Every acre can be irrigated. All in cultivation. Small house and stable. Only two miles from the Sugar Factory. Unincumbered. Price, $100 per acre. Will give easy terms, or trade for good cattle. **Niquette & Bosworth,** Garden City, Kas.

MICHIGAN.—WE SELL OCEANA FARMS—Greatest Fruit county. Also Potato, Corn, Alfalfa, Stock. List free. **Hanson & Son,** Hart, Mich.

MISSOURI. — For Sale: Well-improved farm, 212 acres, 90 acres in cultivation, 50 acres pasture, balance in good timber; almost new eight-room frame house, four barns, plenty water, fruit of all kinds; free delivery mail; telephone; six miles from Steelville; ninety-five miles from St. Louis. Price, $5,500.00. **L. J. Jonas,** Steelville, Mo.

MISSOURI LANDS IN THE OZARKS.—Corn and cows are a winning combination. Farmers in older states who wish to obtain new locations for one-third of actual value should write for Free Book of the Ozarks. Address, **A. Hilton,** G. P. A., 1512 Frisco Building, St. Louis, Mo. See page 6.

TEXAS.—Farms in Texas on the Cotton Belt Route can be had cheap. Most of the fruit and vegetable farms sending early shipments to St. Louis are from the sections traversed by this road. Write for Free Book on Texas Excursion Rates to **E. W. LaBeaume,** G. P. A., 1466 Pierce Building, St. Louis, Mo.

YOUR OPPORTUNITY
is NOW In the Province of
SASKATCHEWAN
Western Canada

Do you desire to get a **Free Homestead of 160 Acres** of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no **Free Homesteading** land left.

A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wh at, 300 acres of oats, and 50 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

Send at once for **Literature, Maps, Railway Rates, etc., to**

Canadian Government Agent,

What Three Bushels More to the Acre Means

EIGHT years ago the farmers in a central state averaged crops that ran three bushels less to the acre than they now get.

Suppose each acre of farm land in the country were so tended that it produced an increase equal to that of this state. How much more money would you have with which to buy the luxuries of life that you earn and deserve? Your share in this prosperity depends entirely upon yourself. The first step for you to take is to fertilize your land properly with manure spread by an

I H C Manure Spreader

Manure cannot be spread as it should be unless a machine is used. An I H C spreader covers the ground with an even coat, light or heavy as may be needed, and pulverized so that the plant food elements in the manure combine with the soil to the best advantage.

The spreader that does this work as it should be done must have many excellent mechanical features. The apron should move without jerking; the beater should meet the load at exactly the right point to pulverize the manure without too greatly increasing the draft of the machine; the speed changes of the apron should be positive whether the spreader is going up hill or down. All these features are provided for in the construction of I H C spreaders.

I H C spreaders are made in high and low styles, narrow and wide, with both reverse and endless aprons, for use under all conditions. There are machines with wood and with steel frames as may be demanded by local conditions.

The I H C local dealer carries in stock the machines best suited to your locality. See him for catalogues and full information, or write

International Harvester Company of America

Chicago U S A

Swift & Company Buying Creameries.

It is reported by the New York Poultry Review that Swift & Company have bought out the business of the S. P. Pond Co., of Keokuk, Ia., and the Clarinda Poultry, Butter and Egg Company's place at Clarinda, Ia. Other interests taken over by the Swifts at the same time, the purchase including, according to press reports, the following: Clarinda Poultry, Butter and Egg Company at Clarinda, Leon and Creton, Ia., and Lincoln, Neb.; Central Michigan Produce Company, Alma, Mich.; Iowa Cold Storage Company, Clinton, Ia.; and the S. P. Pond Company at Keokuk and Ottumwa, Ia., and other points. It is stated that the various centers of these companies will be used as stations for the dressing of poultry.

Holding Cream Too Long.

At the January scoring for Illinois buttermakers held in connection with the State Dairymen's Association meeting at Springfield, January 22, 1913, thirty-one entries were sent in for scoring. Of this number, eleven received scores of 90 or above; eight received scores between 88 and 90, while twelve fell below 88. The average score was 88.96.

The judges made very few cuts on workmanship, and most of the low-scoring butter seemed to be the result of holding cream too long on the farms. Several of the makers of the poorer scoring butter reported cream deliveries as infrequently as ten days apart.

Twenty-four of the thirty-one exhibitors reported the use of starters in making butter, varying in amounts from three to twenty per cent.

COW-TESTING ASSOCIATIONS.

Views of Malcolm H. Gardner, Superintendent of Advanced Registry Holstein Cattle.

Not one pure-blood bull out of ten that are born is needed for use in pure-bred herds. Sale for the other nine must be found for grading up, or they must be either vealed or raised as beef steers. Breeders of Holsteins (and all breeders of dairy cattle for that matter) are vitally interested in arousing the interest of farmer dairymen in the betterment of their herds, and there is no present better way to accomplish this than by the organization of testing associations. Under this plan an association is formed containing enough herds to give steady employment to a competent man who remains one day at each place, the cows owned by the members of the association being assessed pro rata to pay the wages of the man employed. The person so employed is usually a young man who has attended for a longer or shorter time the State Agricultural College of his own or some other state, and he is often recommended for the position by the officer in charge of tests of dairy cows.

. Such an association should not undertake to handle too many cows; nor should any association fail of organization because the number of cows is so small as to make the assessment per cow seem high. Many a farmer with twenty cows will shy at a two-dollar-per-cow assessment, saying that he can hardly come out even as it is, and that it would take all that one cow would produce to pay his forty-dollar assessment. That he can hardly come out even now is the secret of the whole matter, for there is no place on the farm for concealed losses equal to the cow stable. It is to throw light into dark places so as to hunt out the unprofitable cows that the testing association is formed; and nothing will pay like dividends on the investment. The banks pay three per cent. on deposit; savings banks, four per cent.; and investment bonds about five per cent.; but the testing association is a genuine get-rich-quick proposition that will surely pay one hundred per cent. up.

A farmer who would vigorously resent being taken for a "mark" by a smooth confidence man will day after day patiently attend upon Spot and Brindle, that with some others of the herd are continually working a confidence game on him. But how long would he allow it if he knew it? and how is he to find out except by individual testing? The cost of maintaining a testing association is as nothing when compared with the gains derived from it. It is equally beneficial in the case of a pure-bred herd, for it shows which are the most profitable animals and makes improvement possible within the herd. It will also show the breeder which of his cows he should enter in order to make the best showing in the Advanced Register semi-official long-time test. The time will come when the country district school will teach things that will be of use to the farmer, when no teacher that cannot test seeds of all kinds for germination and milk for per cent. fat will be employed. Then, with a milk-testing outfit at the school house, all the farmer will need to do is to weigh and sample the milk; and his son will take double interest in the arithmetic lesson that teaches him how to correctly determine the value of the cows in the herd.

Alfalfa in South America.

Mr. R. M. Bartelman, United States Consul at Buenos Ayres, Argentine, South America, has reported to the Bureau of Commerce that the cultivation of alfafa in the Argentine Republic is increasing yearly, favored by multiple circumstances which in a short time will give it a preponderance over all the other cultivations in the country, especially with respect to cattle breeding and the existence of improved camps. In 1872 there were 105,782 hectares (hectare equals 2.47 acres) of land under alfalfa; in 1888 this had increased to 300,000; in 1895 to 712,067; and in 1912 to 5,400,580 hectares. The value of the yield of alfalfa for the 1911-12 agricultural year amounted to $50,758,000, the production being 4,038,320 tons. The principal provinces growing alfalfa were Buenos Ayres, 1,328,000 tons; Cordoba, 880,000 tons; Santa Fe, 696,000 tons; Entre Rios, 464,000 tons; Mendoza, 132,000 tons; and the Pampas territory, 216,000 tons. The yield of alfalfa is variable according to the fertility and nature of the soil, the depth at which the first level of water is found, the frequency of rain, irrigation, and climate. It produces ten to twelve tons per year per hectare (2.47 acres) on the average.

At the time this issue of the paper went to press, butter was quoted on the St. Louis market as follows: Current make: Creamery — Extra, 35c.; firsts, 30c.; and seconds, 28c.

DE LAVAL CREAM SEPARATORS

Those who *know* buy the De Laval

Creamerymen—Because they are experts in the handling of cream and know by long experience that the De Laval skims cleanest and wears longest. That is why 98% of the World's creameries use the De Laval exclusively.

Experienced Dairymen — The De Laval is the universal favorite among big dairymen. They know that no other separator will give them such satisfactory service.

Old De Laval Users—Whenever a man who has used an old model De Laval decides to purchase a later style machine he invariably buys another De Laval.

Men Who Investigate — Because they find a large majority of De Laval machines in use; that they are used by the best informed users everywhere; that they stand up best in use, and that their users are better satisfied than users of other separators.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

THE DE LAVAL SEPARATOR CO.

165 BROADWAY, NEW YORK. 29 E. MADISON ST., CHICAGO.

Care of the Dairy Bull.

Do not give the cows all your attention. The bull at the head of the herd should have some care given to him. He is half of the herd. Be sure he is the biggest and best half, and then care for him in such a way that he will stamp his good breeding on his calves. A bull should not be stood in a stall, only watered and fed and allowed to suffer on account of filth on his flanks, lack of exercise and grooming. He is more than half the herd. He is the best part of the herd of young things he will produce for you.

He should have a roomy box stall in which he can walk about. It must be kept clean and dry and bedded deep with straw at all times. It should be a well-lighted stall, where you can watch his growth, if he is a young fellow, and where the sun and air can get to him. If a good lot cannot be given him to exercise in, he had better be left to run on a wire after being ringed through the nose. Fasten a heavy wire from one tree to another or from post to post. Have the wire at least eight feet high. A stout chain with a strong snap in the end of it should hang from the wire, not being so long that it will get under the bull's feet and permit him to get tangled up.

The bull that stamps his breed characteristics on his get is not the one on whose flanks manure is accumulated; whose hoofs are rotting in filth; who is never brushed or exercised. If you expect a bull to do his best, treat him the best. Handle him daily. Do not torment him. Ugliness is always the fault of the owner. If a bull is worried with taunts, if he is forced to fight flies during warm weather and given no chance to stretch himself, he never will amount to much as a sire. To bring his breeding quality to its highest value, give him every attention; make him comfortable; feed him well with a variety of grains and some succulent foods as well, and if you have some light chores to be done which he can handle in a treadmill for a quarter of an hour twice daily, give him the chance to do the work for you. He will be the better for it.

He is the greatest part of the herd, remember, and must be treated as such. If he becomes hidebound, his muscles will be sore and hard, and it will not help his disposition. This condition only indicates poor care, lack of exercise and a variety of feeds. Brush him daily. In summer keep him lightly blanketed and in winter provide a heavier one. Be proud of him and show him off at every opportunity. If you are not proud of him, get one that you will be proud of and care for him right. "He is the big half of the herd."—William Galloway, Waterloo, Iowa.

If the Cow Could Talk.

If the dairy cow could talk, here are some of the things she would be very apt to say:

"Do not forget that I like clover hay, and if you will give me plenty of it I will increase my flow of milk.

"Give me plenty of salt. I like it and it is good for my health, keeping my bowels in first-class condition.

"Please give me a good shelter from icy winds and storms of sleet and snow. They make me shiver and I suffer a great deal, while I consume all my food in trying to keep my body warm.

"I would be glad if I had a nice clean stall in which to sleep. I enjoy a good bed of dry straw and will keep comfortable while I manufacture milk for my owner. I will do my best to fill the pail if he houses me thus.

"Don't let my coat of hair become filthy or dirty. If I could, I would curry myself, but I have no hands with which to hold the brush and curry-comb. I feel so uncomfortable when I am unclean, and, besides, the filth drops into the bucket when my owner is milking.

"I do not like to drink ice-cold water. I do not get enough before I get so cold that I hurry back to my shelter in order to get my body warmed up again. I like water that is just drawn from a cistern or well, and I can drink all I am able to hold, which aids my digestion and helps me make lots of milk."—W. D. Neale.

Southern Prize Milk.

The Southern Field says: "In the department of milk and cream at the National Dairy Show the Kentucky College of Agriculture won second prize, a silver medal, on market cream. In this class there were eighty-two entries, and since twenty states and Canada were represented in the competition, the Southern showing is proof of the dairying possibilities of that section."

Production and Delivery.

According to an estimate by a milk distributing firm in Boston, it costs an average of 4.4 cents to sell and deliver a quart of milk to a consumer. The average price paid to the producer was 3.9 cents a quart, which would shrink in handling 0.37 cents, making the cost to the consumer 8.67 cents per quart, or 34.68 cents a gallon, and $3.46.8 for a ten-gallon can.

Dividing this forty-quart can, we find that distribution cost $1.76; shrinkage cost 14.8 cents; and the producer received $1.56, out of which he probably had to pay 26 cents for transportation to market. This statement apparently represents the cost of retail milk sold to families in half pints and pints and not the distribution in larger bulk, including restaurants and hotels, sold at a less price and costing less to deliver.

New Zealand Eggs in London.

New Zealand is sending refrigerated eggs to London, and so far such shipments have arrived in good condition.

Concrete Field Trough, Ashville, Ohio

Have you built that concrete watering trough yet?

You ought to do that this Spring sure. Maybe you're planning some other concrete work. We have some practical men here who have spent years in the study of cement. If you'd like to ask questions about concrete, *ask us*—we'll be glad to answer all we can.

Anyway, be careful what cement you use. Think of Atlas—with satisfaction if you've used it—with assurance of satisfaction if you haven't yet. The Government was careful—bought over 5,000,000 barrels of Atlas for the Panama Canal—many farmers are careful—millions of barrels of Atlas have been used on successful farms. Will you be careful?

Have you our FREE 168 page Farm Book on concrete work? Write us for it now.

If your dealer cannot supply you with Atlas, write to

THE ATLAS PORTLAND CEMENT CO., Dept 165, 30 Broad St., N.Y.
Chicago – Philadelphia

Largest productive capacity of any cement company in the world. Over 50,000 barrels per day

ATLAS PORTLAND CEMENT

Let Me Ship You This 1913 Spreader FREE

No Money Down—No Bank Deposit—Absolutely FREE for Thirty-Day Test on Your Own Farm

That's my 1913 offer to you. Can you beat it? Never. Doesn't it prove to you that the Galloway must be all and more than I claim for it, or I could never make such an unheard-of-offer? Of course it does, and I mean just that. Send for one today, give it a trial on your own farm, any way you please, and I know you will say "Galloway makes the best spreader on earth". 40,000 farmers have proved it.

Write Me for My Big Catalog and New Special Proposition

I will save you $25 to $50 by cutting out middlemen's profits on a spreader that will work better and outlast any spreader built. A low-down, easy-to-load, light-draft machine covered by eleven patents protecting our big new improvements and making it the only spreader of its kind in the world. Backed by a $25,000 bond and $5,000 challenge offer no other manufacturer dares to make you. My big illustrated catalog tells all about the Galloway. Write for it today and I will send you my new startling 1913 special proposition, telling you how you can get your spreader wholly or partly free. No work or canvassing to do. And I will send you my big book

"A Streak of Gold" FREE

This book is worth many dollars to any man; regular price, $1.00. It is free for just writing me today. It tells how to care for the manure, how to spread it, how to treat your soil, and how to make the manure-pile pay for your spreader. Write me, without fail, today.

Available Farm Labor.

Undoubtedly one of the big problems before Missouri farmers these days is the problem of adequate farm labor. Help is scarce and in many places and cases unreliable. It looks as though at least a partial solution to the problem is at hand.

A recent requirement of the Missouri College of Agriculture makes it necessary for every graduate to have at least six-months' practical farm experience. This requirement will make a large number of bright, energetic, ambitious and dependable young men available to the farmers of this state. These men can begin their services June 1st and will work for three months. They will accept as salary whatever they prove to be worth; they are after the experience.

Another class of men that is available now, March 1st, is the Short-course students. Many of these young men have had practical farm experience and are qualified to take the best of positions. They will accept salaries of from $25 per month up, depending on the kind of work and kind of man.

Farmers that can use any of this labor should avail themselves of the opportunity at once by writing to the Farm Management Department, Missouri College of Agriculture, Columbia, Mo.

Empire Fertilizers.

Every farmer should know something about fertilizers. It is the easiest experimental work in the world—one field fertilized, another one not; both the same soil, the same seed bed, the same time of planting, the same cultivation, the same season, the same method in harvesting. Compare one with another. Write to the Empire Carbon Works, 421 Locust street, St. Louis, Mo., for a book on fertilizers, with formulas for all crops. Use some of these fertilizers and get your experience, so that you may know if it is profitable, and to what extent it is profitable, to use commercial fertilizers. Write for the book anyway. It costs nothing, and it will teach you something.

Farm Marketing and Credits.

The First National Conference on Marketing and Farm Credits will be held at Chicago on April 8th, 9th and 10th, 1913. The meeting will be held at the Hotel Sherman to devise remedies in the distribution and marketing of farm products. The invitation is issued by the Associated Farm Papers, Mr. Chas. W. Holman, Secretary, 1048 Steger Building, Chicago, Ill.

Decrease of Corn in Argentine.

A cablegram dated February 22d, 1913, from the International Institute of Agriculture, Rome, Italy, has been received by the United States Department of Agriculture, giving the following information:

The estimated production of corn in Argentine, this season, is 196,842,000 bushels, or 66.5 per cent. of last season's production.

Cattle Tick Eradication.

According to an order issued by the United States Department of Agriculture, the progress in cleaning up the country of the cattle tick is progressing satisfactorily, and 24,983 acres of land were released from quarantine during the year 1912.

Copies of the new regulations, which are designated as Order 194 and Amendment 7 to Order 143, may be obtained on application to the Chief of the Bureau of Animal Industry, Department of Agriculture, Washington, D. C. A map showing the quarantined territory and indicating the areas that have been released has been prepared, and copies will be furnished to interested persons on application.

Save Your Thresh Bill

IT'S UP TO YOU to say what thresher will thresh your grain this season. It's your grain. You worked hard to grow and harvest it. You pay your thresh bill. You cannot afford to hire an outfit that will waste your grain. You have worked hard for a profit and you should have it. You cannot afford to divide it with the straw pile. Your good business judgment tells you so.

Every bushel that goes into your straw pile is money right out of your pocket. You can save the amount of your thresh bill by hiring a

Red River Special

to do your threshing. It will save more grain for you. It will waste less of your time. It will do your job quicker. It will clean your grain better. It will pay you. It is the only thresher made which uses the only true and sure method of separation. It beats the grain out of the straw just like you would do with a pitchfork.

The Big Cylinder, the "Man Behind the Gun," the patented Grate and Check Plate and the Shakers which toss the straw up and *beat it* like you do with a pitchfork, save all the grain for you, whether it be wheat, oats, rye, barley, peas, rice, alfalfa, timothy, or any other grass seed.

J. J. Porter and nine other farmers of Geneseo, Kas., Wm. Bronner and four other farmers of Andover, S. Dak., A. J. Weber and twelve other farmers of Crawford, Texas, say: "The Red River Special does the best work in grain saving and we want no other."

Have your threshing done this year with a RED RIVER SPECIAL.

It will *save your thresh bill.* Write for proof.

AGAINST REMOVING DUTIES.

Official Representation by the American National Live Stock Association.

"On January 21st, 1913, our attorney, Mr. S. H. Cowan, appeared before the Ways and Means Committee at Washington, D. C., and urged the retention of the present duty on live stock and its products. Mr. Cowan's brief on behalf of this association, filed with the Ways and Means Committee, has been sent to each of our members, and it is worthy of careful reading. Advices from Washington indicate that the Ways and Means Committee will probably favorably report the same free-list bill as passed Congress at the last session. Said bill placed on the free list meats, cereals and flour, and some manufactured articles, such as agricultural implements, cotton bagging, boots and shoes, and certain kinds of leather, and some classes of lumber. Our members are urged to immediately write the Congressmen and Senators from their respective states, asking them to vigorously oppose the placing of meat and live stock on the free list."—From letter issued February 14th, 1913, by H. A. Jastro, President. The office of the Secretary of the association is 909 Seventeenth street, Denver, Colo., T. W. Tomlinson, Secretary.

An Unsurpassed Record.

Our readers are very well acquainted with "Lady Show You," the winner of the Missouri National Egg Laying Contest, and will be interested in the following letter:

Pleasant View Poultry Farm,
Millersville, Ill., Dec. 16, 1912.

W. F. Chamberlain Feed Co., 316 North Commercial street, St. Louis, Mo.:

Gentlemen:—You will probably be interested to know that my White Plymouth Rock Hen, "Lady Show You," winner of the National Egg Laying Contest at Mountain Grove, Mo., with a record of 82 eggs in 82 days and 281 eggs in the year, and recently sold for the sum of $800.00, was reared on Chamberlain's Perfect Chick Feed.

It takes great vigor to make such an egg record, and your Feed gives the Chicks the right vigor. I have used it in rearing my Pedigreed White Plymouth Rocks for many years.

You are at liberty to make any use of this letter you wish. Very truly,
J. A. BICKERDIKE.

TIMOTHY AND RED TOP.

One Watermelon Deal.

B. F. Yoakum, Chairman of the Board of the Frisco System, writing in the February number of Dry Farming and Rural Homes, throws new light on the oft-repeated cry that railroad freight rates eat up the grower's profit on farm crops. He tells of a car of watermelons which was loaded at an Oklahoma town for shipment to St. Paul. The car contained 1,050 melons, for which the grower received five cents each, after having hauled them five miles. The freight on the car to St. Paul was $75, or seven and a half cents a melon for the 600-mile haul by railroad, thus making each melon cost 12½ cents at St. Paul, or $131 for the entire car-load.

These were the sums paid to the producer and the railroad, yet the shipper who bought from the farmer sold the melons in St. Paul for $315 and the final consumer paid from 60 to 75 cents per melon, or from $600 to $750 for that same $53 car-load. Mr. Yoakum's point was that the farmers themselves should organize for co-operative marketing purposes and get a larger share of this 1,200 per cent. profit for themselves.

Roots Reach Great Depth.

Much apprehension exists regarding the depths to which roots penetrate the soil. It is a general belief that the roots of cultivated crops do not reach to a greater depth than one or two feet.

Corn roots have been found to penetrate four feet deep and to fully occupy the soil to that depth. On drier and deeper soils they went as deep as eight feet. Roots of small grains, such as wheat, oats and barley, penetrated the soil from four to eight feet and even ten feet in depth.

Perennial grasses have been found to go to a depth of four feet the first year and five and one-half feet the next year and they probably go considerably deeper during succeeding years. Other crops have gone to the following depths: Potatoes, three feet; sugar beets, four feet, alfalfa, thirty to fifty feet. The buffalo berry penetrated the soil to the depth of fifty feet in Nebraska. In California grapevines went down to twenty-two feet: figwort, more than ten feet; goose foot, eleven feet, and hops plant, eight to ten feet.

Most of the above results were obtained in humid or sub-humid regions. Soils and climate differ in such a way to favor a somewhat deeper root penetration in arid regions, hence it is natural to expect to find roots at even greater depths than the above.

The conditions which encourage deeper rooting are drainage, limited supply of moisture and a soil porous and fertile to a great depth. Deep early cultivation also forces roots to seek the lower depths. Deep-rooted plants are much more drouth resistant, due to the fact that they can draw on the lower water supply during periods of drouth. They also have a larger feeding area and the fertility of the soil is not depleted so quickly.—D. W. Frear, Colorado Agricultural College.

Mississippi Cattle at St. Louis.

On the last day of February, 1913, Milton-Marshall Live Stock Commission Company, of the National Stock Yards, reported sales of Southern cattle as follows:

"We have had a good, steady market on the Southern side. The bulk of the receipts running to steers, coming mostly from Oklahoma and Texas. Top on best Texas here this week, $7.60, on a drove averaging 1,211 pounds, with some others selling from $7.35 to $7.40.

"Mississippi contributed a straight load of steers averaging 1,159 pounds, which sold at $7.25, with a straight load of fair to good steers averaging 922 pounds, for which we secured $7.00. Common canners are not as active this week as last, and sold mostly 10 to 15 cents lower, from $4.00 to $4.20. Common, thin yearlings have been a little draggy, selling mostly at $3.25 to $3.50.

Some Mississippi cows sold this week at $5.65, averaging 882 pounds, with one straight load weighing 725 pounds at $5.50 per 100 pounds. Good cows and heifers have been in light supply and they cleared at good, strong prices.

"Arkansas' contribution this week has been been very scant with the usual assortment, which met with a good outlet at steady prices. Stocker and feeder grades a shade higher for the week."

A farmer wrote these books!

—a man who knows farming from A to Z. He traveled through thousands of square miles of the *best* sections in Arkansas and Texas, along the Cotton Belt Route; and found out where the *real* farm opportunities were—the kind that *he*, knew *you* would like to hear about.

He doesn't generalize. He comes right down to brass tacks and tells you what Farmer Tull is raising—shows you actual pictures of Farmer Tull's crops, etc.; and tells you what the same kind of land, near Tull's place, would cost you *now*. He got the personal experiences of scores of farmers in this way; and took actual photos of their places. He points out the best sections for wheat growing, for corn, fruit, truck, etc.—in plain words he sifts the whole situation down to a point where you can say to yourself: "*There* is the most likely locality for *my* line of farming—I'll go and investigate." (And with low round trip fares via Cotton Belt Route twice each month your trip will cost mighty little.) Send a postal *today* for

Your free copies

of these books—115 farm pictures and 100 pages of farm facts! I know you'll be glad to get them. Write *now*.

THE SEPTIC TANK.

Simple Statement of What It is For —How Sewage is Purified and Discharged as Clear Water.

A septic tank is a big box of any size, which, when filled with sewage, retains that sewage in a stagnant condition and permits it to decompose, the organic matter breaks up, part of it going off into the air as gas and the other part dropping to the bottom as inorganic sediment. The same result would be obtained if a barrel were used and some sewage put into it. That sewage would not remain in the state in which it was when put into the barrel, but would, to use a common term, "rot," or "putrefy."

This is due to the fact that there are in the sewage some very minute organisms of a fungus nature. These multiply in the sewage, and while in the process of multiplication they feed on the organic matter and thus destroy it. They in turn perish when there is no longer any food for them.

Most of these minute organisms live without air and so are called anaerobic (not living in the air) bacteria. They are present everywhere and are among the great purifiers of nature. They destroy not only the ordinary components of manure, but also are deadly to any disease germ found in it. This destruction of the disease germs constitutes one of the great values of the septic tank.

The principle of the septic tank is very simple. It involves the stagnation of the sewage; that is, its nonmotion. Also it must be at a temperature above freezing. However, freezing does not kill the anaerobic bacteria, only retards their action till the mass is again at a temperature higher than the freezing point.

The writer has a friend who has one of these septic tanks he made himself, and which has been operating successfully for the last ten years. He used a piano box, which he sank in the ground till the top of it was below the frost line.

He then ran a pipe under the ground from his house to this box. The pipe also was kept below the frost line from the time it left his cellar. He had a supply of running water in his house, and so he put in a regular bath room, with closet, trap and all ordinary closet arrangements.

The flow of the sewage was through the good-sized pipe he had laid in the ground and into the box. In this box some cross pieces of board were nailed, which permitted the sewage to flow under them but which would not permit it to flow directly against the outlet and block it. The sewage rises in the box and collects between the boards, which are caled "hinder-boards." They are called that because they hinder the passing of the sewage, which is necessary to keep it from blocking the outlet.

The outlet is through a good-sized pipe which runs from near the bottom of the end to the surface of the ground, which is a little lower than the top of the box. This brings the outlet high enough up to prevent the box emptying itself till it is about full of sewage. Then it empties itself automatically a little at a time. When a gallon of sewage flows in at one end a gallon of clear water flows out at the other end, for the purifying action is so great that often the outflow looks as clear as water that has not been contaminated by sewage.

The writer believes that the time will come when every farm house will be properly equipped with toilet arrangements, the outlet being into a septic tank such as has been described or into one more perfectly built of cement and steel to make it more lasting.

Wisconsin at the Corn Show.

Wisconsin grains won eight world's championships, and over three times the amount of prizes won by any other state, at the National Grain and Corn Show held at Columbia, S. C., January 27th to February 7th. Championships were won on Wisconsin pedigree Oderbrucker barley, pedigree rye, Japanese buckwheat, sheaf barley, sheaf wheat, sheaf alfalfa and clover seed. Wisconsin received second place on oats. In the Northern zone contests, Wisconsin won first on yellow dent corn, white dent corn, single ear of corn and soy beans.

POTASH

The corn crop fooled lots of farmers last year.

Many fields looked good but fell down on the yield. This was owing to a lack of available Potash, for Potash is primarily a producer of grain.

Your corn must have enough quickly available Potash to produce well-filled ears as well as stalks.

A corn fertilizer should contain at least 8% Potash—better 10%—no matter in what form the fertilizer is used. Kainit, 75 to 100 lbs. per acre, drilled in with the seed, will keep away cutworms and root lice.

If your dealer can't furnish brands rich enough in Potash and won't carry Potash Salts so you can supplement your stable manure or strengthen the brands he does carry, write to us for prices.

We will sell direct in any amount from a 200-lb. bag up. Write for free book of fertilizer formulas and directions.

Amazing Prices on STEEL Shingles

The demand for Edwards "Reo" Steel Shingles has become so big that we now sell them from factory to user for less—actually LESS—than common wood shingles. And we pay all freight! LOOK INTO THIS MONEY-SAVING PROPOSITION BEFORE ROOFING YOUR BUILDINGS. SEND POSTAL TODAY AND GET FACTORY PRICES.

No Trick to Put Them On

You don't have to nail these steel shingles, like wood shingles, ONE AT A TIME. Put on as high as 100 at once, for they come in big sheets ready to nail on sheathing or old roof. It's ten times easier than putting on wood shingles. No extra materials to buy, no painting to do, no tools to borrow. Your hired man can do the job with a hammer.

Absolutely Rustproof

Please don't judge Edwards Steel Shingles by common galvanized iron roofing—the kind that rusts. We have invented a method that absolutely prevents rust from ever getting a foothold, as 100,000 delighted owners of Edwards Roofs have found out. It's the famous Edwards Tightcote Process applied to genuine Open Hearth Steel.

Protect Your Buildings from *FIRE*

Don't take chances of fire from defective chimneys, flying sparks and lightning. Roof your buildings with these Steel Shingles and make them safe. Remember nine out of every ten fires start with the roof. We specifically guarantee every Edwards Steel Shingle Roof against lightning. This Guaranty is backed by a $10,000 Cash Bond.

Cheaper Than Prepared-Paper Roofing

Edwards Steel Shingles cost less, far LESS, than prepared-paper or composition roofing. IF YOU FIGURE THE COST PER YEAR. And that's the right way to figure

NECESSARY ON A FARM.

The Crocodile Wrench—Actually Six Handy Farm Tools in One.

Yes, an absolute necessity. The Crocodile Wrench means business. Every farm ought to have an extra wrench or two, especially when the wrench is a Crocodile Wrench premium, which is a pipe wrench, a nut wrench, has three dies for cleaning or cutting threads, and a screw-driver. The picture is small, but the Crocodile Wrench is twice as long, and it is full size for any purpose. It is drop-forged from the best tool steel, scientifically tempered. Requires no adjustment. Simple and always ready for use. Nothing to get out of order. Dies will fit threads on all standard farm machinery. Light, strong and durable. No farmer can afford to be without it.

Special Inducements.

Our Subscription Proposition: Send us One Dollar and we will send you THE NATIONAL FARMER AND STOCK GROWER for two years, and we will send you, postage paid, safe delivery guaranteed, ONE CROCODILE WRENCH. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Agriculture in the Desert.

Khartum correspondence: The biggest recent event was the Fair and Agricultural and Industrial Exhibition, opened at Omdurman on January 12, to continue one week. Previous efforts have been made, but this last, due largely to the Omdurman Merchants' Association, and of which Mr. Albert Singer has been the moving spirit, seems likely to be a real success. It was opened by Maj. Wilson, Governor of Khartum Province, and attended by Sir Reginald and Lady Wingate and most of the officers and officials of the district. What is usually a bare square of sand, with a few stray donkeys and a boy or two, was a palace of bunting and a seething mass of people. Some government departments had exhibition tents, and all the merchants, small and great, seemed to be exhibiting their wares. Anything and everything could be seen. The exhibition made a good impression, and will do even better next year, when this year's experience bears fruit. The first day concluded with real fireworks and a torchlight military tattoo in the Square at Omdurman.

Texas Agriculture Improvement.

The Texas Industrial Congress reports that the corn growing average of the state for ten years was 19 bushels per acre, whereas 4,000 competitors in the contests under supervision of the Congress was 51 bushels per acre, and the highest yield was 167½ bushels. In cotton, the contestants averaged 1.04 bales, as against the ten-year average of the state of one-third of a bale, and the leading contestant produced 2.38 bales on one acre.

The work of the Congress is purely altruistic. These contestants pay nothing for the privilege of competing for the prizes offered, and the money to carry on the work is contributed by public-spirited individuals, firms and corporations. They are endeavoring to teach the farmers of the state to conserve the soil's fertility, to increase the yield and to decrease the cost of production.

Test of Seed Corn.

Every farmer who grows corn will find reading of interest and value in Bulletin 135, "The Germination Test of Seed Corn," just issued by the Iowa Agricultural Experiment Station for free distribution. It is based on two years of careful work with the germination test, in which Prof. H. L. Hughes, the author, and his helpers made more than 45,000 ear test readings. Many hundreds of ears of corn were tested in thirteen different states for the sake of comparing their merit; these ears were then planted in the field, so that the value of testing might be determined by actual stand and yield per acre. Nowhere else has so thorough work been carried on and published. The results show conclusively the value of the germination test; they show further that the home-made testers, like the rag doll and the sawdust box, are good enough. Prof. Hughes also brings out some interesting facts about the much-discussed "weak kernel" and shows what it does when planted. This bulletin, comprising eighty pages, is the most complete published by any Experiment Station on the germination test and may be had free by writing to the Bulletin Section of the Iowa Agricultural Experiment Station, Ames, Iowa.

That Necessary Inch

Like a pole that doesn't quite reach; a rope that is a bit too short; a bar rail that continually drops out of the post the fertility in ordinary soil lacks the necessary small amount of available fertility for a bumper crop. There is enough fertility of a kind in the soil for many years; but it is unavailable. Only enough becomes available each year to produce small, unprofitable yields; and when all other conditions are right for a large yield the crop fails for lack of **available** fertility. Available fertility is the kind provided in the

EMPIRE FERTILIZERS

These fertilizers supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather and the plant food supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

Agents wanted where we have none. Address early for prices and terms,

EMPIRE CARBON WORKS
421 Locust Street, St. Louis, Mo.

A lot of twenty-five two-year-old beef steers, sold to Jersey City dealers by J. R. Huggins, of Hamblen county, Tennessee, averaged 1,142 pounds and brought $1,998, which is about seven cents a pound. The cattle were sold at Morristown, Tenn., in February.

Factory Prices for the Asking—on Genuine Witte Engines

FREE Engine Book

THE genuine Witte—conceded the best farm engine in America—now offered at actual wholesale prices. Yes, this is the engine that has lead the gasoline engine field for 25 years. Dealers have been getting the highest prices for the Witte. *Now* you can get one at actual factory price—what the dealer paid—and have the finest engine in your county.

Our Gas Well Saves You Many Dollars More

We do more than give you ordinary factory prices. We are the *only* manufacturers who have our own gas well. Power, testing, forge, foundry and heating fuels cost us nothing. *You* get the benefits. But you couldn't afford to own any other engine even if the Witte cost twice as much—because an average of 1 cent for every horse-power per hour *cuts gasoline bills in half*—pays for your engine in no time.

Every part *guaranteed* 5 years—*full rated horse power on minimum gasoline* guaranteed too. Built in all sizes from 1½ to 40 h. p., every one *tested to 10% over load.*

I cannot thank you enough for your interest and the advice you gave If I had known about it two years ago it would have saved me a lot of money. Yours respectfully. HALE MASON

Save-The-Horse has stood alone and unique among veterinary remedies for over seventeen years.

Every bottle of Save-the-Horse is sold with an iron-clad contract that has $60,000 paid-up capital back of it, guaranteeing to permanently cure or refund the money; no matter whether it is Bone or Bog Spavin, Tendon disease or Puffs—nor how aged, serious or complicated the lameness or blemish may be. But write, describing your case, and we will send our—BOOK—sample contract, letters from Breeders and business men the world over, on every kind of case, and advice—all free (to horse owners and managers). Write! AND STOP THE LOSS.

TROY CHEMICAL CO. 62 Commerce Ave., Binghamton, N. Y.

Druggists everywhere sell Save-the-Horse WITH CONTRACT or sent by us Express Prepaid.

Don't Have a Blind One

"VISIO"

An Absolute Cure for

Moon Blindness

(Opthalmia), Cataract and Conjunctivitis

Fistula and Poll Evil

Fully ten thousand horses are cured every year with

Fleming's Fistula and Poll Evil Cure

and many of them are bad old cases that skilled doctors have abandoned. Easy and simple; no experience needed; no cutting to be done; just a little attention every fifth day—and your money refunded if it ever fails. Cures most cases within thirty days, leaving the horse sound and smooth. Valuable information and full particulars given in

Fleming's Vest-Pocket Veterinary Adviser

Best veterinary book for farmers; 192 pages, 69 illustrations. Copy mailed free.

FLEMING BROS., Chemists, 218 Union Stock Yards, Chicago, Ill.

For Canvas Covers of all sizes and weights, of best quality, and at right prices, order from Weber Imp. & Auto Co., 1900 Locust st., St. Louis.

Pointer to Horse Shippers.

Holland, Nugent & Maxwell Bros., holding horse auctions at the National Stock Yards Monday and Tuesday of each week, are doing a large and satisfactory business, and they can sell more horses, especially chunks, weighing 1,200 to 1,350 pounds, and farm mares and drafters. Any shipper who can put up a carload of horses and who will specify what class of horses he can buy and ship, can get the benefit of the best market in the world by opening communication with Mr. T. H. Holland, National Stock Yards, Ill. The St. Louis market can easily sell a quarter of a million horses and mules in a year.

St. Louis Hog Market.

After the market of February 28th was over for the day, the Milton-Marshall Live Stock Commission Company, of the National Stock Yards, reported as follows: "Hog prices reacted to-day fully 15 cents per 100 pounds, top $8.65 per 100 pounds. We had 6,500 on sale, with a good demand from all sources. Butcher hogs, weighing from 160 to 200 pounds, sold from $8.55 to $8.65, with choice heavy hogs selling about in line with butchers. Mixed hogs to the packers sold from $8.45 to $8.55, with light-weight pigs, weighing from 100 to 130 pounds, from $8.25 to $8.50; pee-wee pigs from $6.75 to $7.25 per 100 pounds. Our market still leads all Western markets; top a big nickel higher than Chicago, with a ten higher bulk. Chicago top, $8.60; Kansas City top, $8.40; bulk, $8.25 to $8.35; Omaha top, $8.25; bulk, $8.15 to $8.20; St. Joe top, $8.40; bulk, $8.35 to $8.40."

Star Brand Shoes on Sale.

Very nearly all hides and skins produced by farmers by raising cattle, sheep and goats enter into the making of shoes. Shoemaking used to be an exclusive Eastern industry, and money was expended unnecessarily in freight bills going and coming. Of recent years shoemaking has become a Western industry, and shoes are made better and cheaper by the change, because the waste in transportation and in other ways has been recovered and put into the shoes. Roberts, Johnson & Rand Shoe Company, of St. Louis, have demonstrated that a great shoe business can be built up by them in the West, and on page 4 the Patriot Shoe, one of the leading brands, is advertised. This firm has cut out the wholesaler's profit as another economy, and sells direct to 20,000 retail merchants, who have proven by handling them that "Star Brand Shoes Are Better." The advertisement on page 4 is worth reading.

First-class Commission House.

The best-organized live stock market is St. Louis, and one of the best firms doing business in that market is the Milton-Marshall Live Stock Commission Company. Shippers who consign stock to this firm to be sold can be assured of obtaining the best results possible. Mr. A. J. Milton, President of the company, is an expert cattle salesman, and, assisted by his brother, L. H. Milton, make splendid sales. J. S. Jackson and J. S. Mulberry, selling hogs, are equally expert in their department, and Thos. Freels, Sheep Salesman, is noted for skill, ability and good judgment. It is a finely-equipped firm, doing business efficiently in the interest of their customers. All who will apply to Mr. R. E. Marshall, Secretary, P. O. Box 94, National Stock Yards, Ill., stating what they have to ship, will receive special information concerning the market prospect, coming directly from the salesmen.

St. Louis Horse Market.

Report of the last auction sale in February by Holland, Nugent & Maxwell Bros., National Stock Yards, Ill.: "Good run of horses; plenty of buyers: good market. Have no particular fault to find with the horses or the price they brought. Chunks are in good demand. Southern horses sold well enough; plain, common stuff sold good; in fact, the market was all right on practically all kinds, but horses are not as high as they were a year ago, and they are not going to be. We want some little riding horses 15 to 15½ that are five to seven years old and sound, on the breedy order. Now we can get from $115 to $130 for that class, which is a considerable advance on what they have been bringing." Shippers of horses to dull, dead and slow markets are invited to communicate with T. H. Holland, National Stock Yards, Ill., in order to get acquainted with the best horse market in the world.

Conditions of the Mule Trade.

On February 28th, at the St. Louis National Stock Yards, Holland, Nugent & Maxwell Bros. reported as follows: "The mule trade is in a good, healthy condition, very few coming and all selling on arrival. We don't look for any more gluts on the market this year. If you have any mules that are ready to market it will be all right to ship them. Good, big mules are selling the best: cotton mules are selling if they are fat and finished. Little three-year-olds with long hair are bad things on the market at this season of the year."

English Sale of Shire Horses.

Messrs. Trumans' Pioneer Stud Farm of Bushnell, Ill., received a cablegram from J. H. Truman, who is buying Shire horses in England, that at Lord Rothschild's sale held at Tring thirty-two Shire colts and fillies, running in ages from yearlings to three years old this spring, sold for an average of 454 guineas, the colt that was junior champion at London last year, "Champions' Goalkeeper," topping the sale at 4,100 guineas. This is the world's record sale and amounts in American money to $2,288.16 per head, including $20,664 for the stallion "Champions' Goalkeeper."

Use of Commercial Fertilizers.

According to the report of the Census Bureau, which undertakes an accounting of manufactures, it appears that the use of commercial fertilizers increased 60 per cent. in five years, and from the same report it appears that complete fertilizers increased 104 per cent. Complete fertilizers increased from 1,329,149 tons in the year 1904 to 2,717,797 tons in the year 1909. All fertilizers increased from 3,267,777 tons in the year 1904 to 5,240,164 tons in the year 1909. The estimate as to the probable output of commercial fertilizers during the year 1912 is 6,000,000 tons. This is food for reflection. The increased use of commercial fertilizer is due to the merits of the goods.

One reason why so many young men desert the farms for the cities is, that it requires a motorman and a conductor to run a street car, and there are two shifts a day. A majority of the street car men claim to be farm-raised. The auto owners are also getting a share of farm-raised boys as chauffeurs.

HORSE AND MULE SALESMEN.

Law Should Stop Sale of Leg-Strap and Spring Trusses

Wrong To Buy Anything For Rupture Without Getting 60 Days Trial

Depending on leg-strap or spring trusses like shown below—is little less than slow suicide. They are almost sure to shorten your life. It's next to impossible to make them hold without hurting. They are simply a curse to wear.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial — the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times —including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drug-stores should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—Cluthe Co., 125 E. 23d St., New York City

Shires and Percherons.

Mr. J. G. Truman, of the Pioneer Stud Farm, Bushnell, Ill., writes an the last day of February as follows:

"I am very pleased to report that our importation of Shire and Percheron horses that arrived here on February 15th are now fully recovered from their long journey, being a week overdue. They are now ready for sale. At this writing have never been shown to any prospective buyers and we shall take pleasure in showing them to any of your readers who may be interested in a strictly high-class Shire or Percheron stallion. I may say that included in this importation are two yearlings, sired by our $10,000 champion Percheron stallion 'Intitule,' now owned by Samuel Insull, Esq., of Chicago. Advices received from our Mr. J. H. Truman state that he will ship our regular March importation on the Minnewaska, sailing from London on March 6th. This shipment will be exclusively Shire and Percheron stallions. Our trade was never better and the demand still continues very strong for high-class stallions."

Chicago Live Stock Receipts.

Cattle.—The largest receipts in one year arrived in 1892, when the total was 3,671,796 head, and in the year 1912 the cattle receipts were 2,652,342, which is 919,454 head less than the largest year.

Calves.—The largest receipts were in the year 1911, when 521,512 arrived on the market, and in 1912 the arrivals of calves were 505,411 head, or only 16,101 less than the largest record.

Hogs.—The largest arrivals in one year amounted to the grand total of 8,817,114 head, in the year 1898. Last year, in 1912, the receipts were 7,180,967 hogs, showing a decrease of 1,736,147 head, compared with the largest record.

Sheep.—The receipts of sheep were 6,055,546 head, in the year 1912, which was the largest number of sheep ever received on any market.

Horses.—The horse receipts were largest in 1905, when 127,250 were received, and last year, in 1912, the arrivals of horses at Chicago were 34,273 less, the total being 92,977 head.

Notwithstanding the decrease in arrivals of cattle and hogs, compared with the largest yearly arrivals, the total sales at the Chicago market in the year 1912 brought $375,694,939, the largest amount ever realized for live stock in one market in one year.

The Melotte Cream Separator.

Attention is invited to the advertisement of the Melotte Cream Separator to be found on page 32. The merits of this cream separator are fully set forth in the advertisement, together with a list of prizes won by the machine. Every farm in the United States should own a cream separator, thereby securing all the butter-fat (the highest-priced product produced on a farm), and at the same time have on hand for sale or feeding purposes the sweet skim milk. Those who desire to investigate this subject further will find a coupon on page 32.

Deformities and Cripples Cured.

On page 31 will be found a card of the McLain Orthopedic Sanitarium, 916 Aubert avenue, St. Louis, Mo. We have been acquainted with this institution for many years and have seen the establishment grow and prosper through benefits derived by the patients. It is devoted to the treatment of crippled and paralyzed conditions. Write for illustrated free book.

E. Myers, President, E. Myers Lye Company

Don't Lose Another Hog— You Just Try Merry War Powdered Lye

If an epidemic of hog cholera should break out in **your** neighborhood, what assurance have **you** that it wouldn't attack **your** hogs? How are **you** fixed to prevent that dread disease from killing off **your** hogs like flies and wiping out **your** pork profits? Be on the safe side—don't wait—hog cholera breaks out suddenly—**ravages** and **kills** quickly! You **can prevent** it—easily and at a very small cost. Just mix with your hog feed a little MERRY WAR POWDERED LYE. (Directions on every can.) **Feed twice daily.** It's the **proven preventive.** Thousands of practical hog raisers and farmers **know** this by **actual experience.**

Read These Convincing Letters

J. E. Vawter, Beverly, Kans.—"25 hogs lost 1 mile east; 50 hogs lost 2 miles north; 20 hogs lost 2½ miles south of me, but I used Merry War Powdered Lye and escaped loss."

Mrs. Joseph Giesken, Parnell, Mo.—"After we began using Merry War Powdered Lye we never lost a hog."

Don't Experiment—Refuse Substitutes

Don't be persuaded to try an ordinary, old-fashioned lye as a possible preventive of hog cholera. At best, it would be a doubtful, perhaps a **dangerous** experiment. MERRY WAR POWDERED LYE will **not** hurt your hogs. It is the specially prepared lye that is **safe** to feed to hogs as directed on every can, and **there are no substitutes.**

MERRY WAR POWDERED LYE is not only a **safe preventive** of cholera, but it is also the best hog fattener, and all 'round conditioner the world has ever known.

Users say it positively destroys worms. It keeps the hogs on their feed, makes them fat and sleek, skins free from scurvy and keeps the digestion in such perfect condition that every pound of feed is changed into profit making flesh and fat. One week's trial will convince you.

Prove This For Yourself. MERRY WAR POWDERED LYE is for sale at most dealers, 10c per can (**120 feeds**). It is convenient to buy in case lots—4 dozen cans, $4.80. Costs only **5c per hog, per month** to feed regularly—by far the best and much the cheapest hog insurance you can buy. If your grocers, druggists or feed dealers' can't supply you, write us stating their names. We will see that you are supplied; also send you FREE a valuable booklet "How To Get the Biggest Profits From Hog Raising."

Order Direct from us in case lots—4 doz. cans, $4.80—if your dealers' won't supply you.

DR. LeGEAR'S STOCK POWDERS

Healthy, Vigorous Stock Is The Only Kind That Makes Money For You

A horse, whether for work or to drive, can't give you first-class service unless he feels right. Your steers and cows can't create beef or milk to advantage if they are feeling "under the weather." Sheep and hogs won't yield wool and pork profitably unless they are healthy and vigorous. Put your horses, cattle, sheep and hogs into fine condition, and then keep them in that fine condition by feeding the famous Dr. LeGear's Stock Powders. A tip-top Tonic—an unrivalled Milk Producer. Gives horses strength and endurance, sleek coats and good spirits. A money maker for every man who owns stock.

Large 25c, 50c and $1.00 size boxes; also 25-pound pails at $2.50, and 100-pound kegs at $9.00.

Write for free copy of Dr. LeGear's Stock Book. It contains 112 pages of information about stock and poultry. Invaluable to all owners of stock.

PRODUCING SOFT ROASTERS.

An Industry That Can Be Conducted on the Outskirts of Any Good-sized Town.

Mr. F. L. Platt, associate editor of the Reliable Poultry Journal, states that plump, carefully-dressed chickens, soft-meated and fine-flavored, are an important product of the South Shore district of Massachusetts. The town of Norwell is about the center of the district and in a radius of ten miles 75,000 to 80,000 soft roasters are grown each year.

These soft roasters are both male and female, the cockerels being caponized. They are winter-grown chickens. The hatching begins in September and continues throughout the fall, and the marketing begins in April and continues into June.

Most of the South Shore roasters go to the Boston market. The retail price paid there occasionally reaches 50 cents a pound, while 33 cents to 38 cents is not an unusual price. The best prices are paid the latter part of May and during the month of June. The market begins to "break" about the middle of July. When the prices are highest every effort is made to market as many birds as possible, and experienced growers time their production so that their stock will be prime for the market when the prices are best.

A. F. Hunter, whose former home was at Abington, Mass., has estimated that there is a profit for the poultryman of about $1.00 in each bird. He says: "Taking the average weight of the males and females as seven pounds, and the average selling price as 25 cents a pound, they would sell at $1.75 each. With a $1.00 profit the cost of production would be left at about 75 cents."

The pullets average five and one-half to six pounds and the capons weigh from eight to nine pounds. Not infrequently the capons make more than this, and occasionally run up to twelve pounds. Mr. Curtiss has paid as much as 33 cents a pound for the roasters. A twelve-pound chicken at such prices is quite a good thing for the grower. The larger the better. They pay about the same prices for the smaller sizes, however, for the pullet roasters meet the family trade and there is a good demand for such size stock.

The roaster industry on the South Shore had its beginning about twenty years ago, when J. H. Curtiss, of Assinippi, Mass., began to grow, as has been said, the "best ever poultry." Neighbors were quick to see the profits of the business, took up the work, and Mr. Curtiss bought their chickens and marketed them along with his. As more and more people became occupied in the work of production, he gave more and more of his attention and time to the buying and marketing of their product. To-day he is not engaged in growing, but is known as the "buyer on the South Shore," not only throughout the district, but on the market in Boston, where, during the roaster season, he may be seen each Friday morning at the poultry stalls in Faneuil Hall.

It appears also that there are several branches of business conducted on the South Shore. The fatteners and finishers of soft roasters cannot keep hens upon their small tracts of land in sufficient numbers to raise all the chickens they intend to fatten. Some keep no hens at all and buy eggs for hatching, while others buy immature stockers and finish them; but the main end and aim of the Norwell district is to produce an eight or nine-pound bird that will satisfy the highest market requirements.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have therefore made arrangements to furnish our subscribers with the **Reliable Poultry Journal** on the most advantageous terms, and we know that the publishers are getting out such a magnificent paper the arrangement cannot possibly last long. All who are interested in poultry raising should consult their own interest and subscribe at once. We will send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Psychology of the Chicken.

As the automobile sped toward Cape May a little group of Tuckahoe chickens regarded it from the middle of the road. The chauffeur kept straight on.

"There's no use slacking up," he said. "Jersey chickens know their business. Look at that."

The chickens, even as he spoke, fled with loud, excited squawks to the shelter of the grassy roadside.

"It's a strange but true thing," continued the chauffeur, "that the chickens of different states act differently in the presence of a motor car. New Jersey chickens always do as those Tuckahoe birds did—keeping their heads they fly to the shelter of the footpath and are safe.

"But Pennsylvania chickens in running away from a car run straight down the middle of the road. There's nothing to do but stop. Otherwise you'll kill them.

"New England chickens run round and round in circles, but in the end this circle breaks up and the birds dart left and right to shelter. Thus, if you go slow down in New England the chickens get off with their lives.

"Southern chickens—of course this applies to out-of-the-way districts—are hypnotized by an automobile. They stand straight in its path, gazing at it with their tiny, bright, clear eyes. Sometimes a loud blast of the horn brings them to themselves and they scoot. But sometimes they won't scoot till you stop dead still.

"There's work for a psychologist here—the psychological effect of the automobile on the chickens of different states. Not being a psychologist, I can't account for it myself. I am a chauffeur and deal exclusively in facts."

What do Nova Scotia chickens do under similar circumstances? Cows, dogs, geese, etc., are killed every year by motors; perhaps a spectator or the party concerned could give us a short account about their actions. --Exchange.

FEED FOR THE FOWLS.

Hot Breakfast Easily to Prepare by Using the Principle of the Fireless Cooker.

Where the writer is, a little north of the average reader of this paper, he has found the hay stove useful in the feeding of poultry in the winter. Oats and corn are brought to the boiling point on the stove and put into the hay stove at night. In the morning the grain is thoroughly cooked and is steaming hot. The poultry seem to appreciate the favor of a hot breakfast.

Previous to this season the writer has never cooked oats for poultry, and has been surprised how much water the oats will absorb during a few hours of this kind of treatment. Every individual oat is then swelled and contains the equivalent of a large amount of thoroughly-cooked oatmeal. Besides, the outer covering is softened and is more easily digested by the birds.

This kind of feed will not be a great tax on the digestive organs of the birds, which is a matter of great importance. Previously, in the years when the writer was feeding whole grain to his fowls throughout the winter, he used to lose some fowls every spring from what appeared to be cholera, but which was really indigestion. This indigestion was caused by the lack of a supply of easily-digested feed to go along with the grain.

It may be admitted that if the fowls are fed a good amount of green stuff through the winter they may get along all right. But there are numerous farms on which there is no provision made for the feeding of green stuff during the winter, and on which no attention out of the ordinary is given the fowls.

Years ago the writer used to feed a bran-and-middlings mash every morning and found it a good way to stop the loss. In fact, since the introduction of the soft-cooked food once a day there has been no loss from indigestion.

It may be remarked here that indigestion is one of the most deadly maladies prevalent among fowls. Its similarity in symptoms to cholera often deceives the poultry raiser and leads him to give medicine when a change of food is what is really necessary.

So similar are the symptoms of indigestion to the symptoms of cholera that the Bureau of Animal Industry of the United States was once deceived by it. Under the direction of the officers of that bureau, fowls sick with cholera were secured and a test begun to find out a few things about fowl cholera. The birds had been selected on their symptoms. Bacteriological examinations were made to determine the presence of the cholera germ, and it was found to be absent. It was then realized that the fowls in the experiment were all sick with mere indigestion. New fowls had to be secured. If experts are deceived in such a matter, we certainly cannot be surprised if non-scientific people often think cholera is present in their flocks, when they have with them merely the effects of bad feeding.

It is wise, therefore, to feed so carefully that the fowls will always be in health and thrifty. It should always be kept in mind that in a state of nature the food of the fowl is bulky. The feeding, therefore, of a too large ration of concentrated feed is sure to make trouble in time, though the birds may go for some months without showing the effects of the great strain on their digestive organs.

It is an easy matter to prepare over night a warm breakfast for the fowls, and it should not be neglected.

Egg-laying Contest.

The Missouri National Egg-laying Contest progresses well. There being more laying pullets this year than last, the production to date is very much larger. A Canadian Black Orpington pullet laid 31 eggs in thirty-one days in January; a pen of ten Single Comb White Leghorns, belonging to Tom Barron, of Catforth, England, leads the contest with 213 eggs in January and with 476 eggs for 2½ months. The best individual record for 2½ months is 63 eggs, laid by one of the English pullets, which is starting a 300 clip for the year.

How to Build Poultry Houses.

Among the recent publications of the Missouri Agricultural Experiment Station is a thirty-three-page bulletin on "Farm Poultry House Construction." The bulletin illustrates several different types of poultry houses with detailed drawings of each. The publication also contains a thorough description of interior arrangements for poultry houses, which insure convenience and cleanliness. The bulletin is free to all Missouri farmers who will write to the Agricultural Experiment Station, Columbia, Mo. Ask for Bulletin 107.

What an Engine Did

By R. E. Olds, Designer

My fame as a car builder, after 26 years, is based in large part on my engine.

To me it's an old, old story. Perhaps it is new to you.

A Lifetime

I was one of the world's first builders of gas engines. Long before the days of automobiles, the Olds Gas Engines were known half the world over. And they are today.

It has taken a lifetime to develop an engine like the one in Reo the Fifth. And even my rivals concede it to be one of the great engines of the world.

My catalog states all the details about it. I won't bother with them here. But the fame of this engine is based on four things:

Its unusual power—

Its enduring silence—

Its remarkable endurance—

Its ease of adjustment.

Radical Tests

We avoid trouble for you by putting each engine to five radical tests in our factory.

Each is run for 10 hours with outside power, then another 10 hours with its own power. Then we take it apart and inspect it.

Then it is made to run a blower, and tested at various speeds. Then it runs an absorption dynamometer, as a measure of its power. Then, in the finished car, we give it the hardest sort of road test.

These tests require 48 hours. But thousands of these engines, run for years and years, are still in prime condition.

We use on this engine, to save ignition troubles, a $75 magneto. And we doubly heat our carburetor, to deal with any gasoline.

So Everywhere

In every part of this car we use the same precautions.

The steel is twice analyzed.

The gears are tested to stand 75,000 pounds per tooth. The springs for 100,000 vibrations.

We use 190 drop forgings.

We use 15 roller bearings.

The tires are 34x4.

Each body gets 17 coats.

When you get a car built like Reo the Fifth there is very small cost of upkeep.

Unique Control

We use in this car the only center control which is simple and out of the way.

All the gear shifting is done by moving a small rod only three inches in each of four directions.

There are no levers, side or center, so the front is clear. Both brakes are operated by foot pedals.

And in this car you find the left side drive, as in the finest cars this year.

Write for our catalog and we'll direct you to the nearest showroom.

THE HORSE CLIPPERS.

Why Horses Should Be Clipped and Where to Get the Clippers.

Horses represent a substantial investment and deserve good care. In their natural state they were not obliged to work. Since they are required to do labor, they should be kept in the best condition for it. Few, if any, horses are at their best when the time of changing the coat comes. Unnatural conditions should be provided against by clipping. How to properly care for work horses is much better understood now than ever before, and those who have studied the horse most carefully and tried different remedies are agreed that a good clipping is very beneficial to work horses. The skin is a most important organ for the elimination of waste, and it cannot properly perform its functions if it is not kept in a healthy condition with pores open, etc.

Animals performing work with a long coat suffer an unnecessary drain on the system. The sweat of the horse is not a simple mixture of water and salts, but of water, proteid and salts, and the observed loss of flesh which follows horses being worked unclipped, as was the practice a generation ago, is thus readily explained. The chances of chill following the return to the stable of an unclipped animal with a long winter coat have not been exaggerated. That covering, which, in a state of nature, was admirable, becomes, under artificial conditions, a source of positive danger to him.

Unless the circumstances are exceptional, all horses should be clipped, and it will be found as a result that they feed, thrive and work better and are less subject to colds and coughs.

Many farmers claim, and we know they do so correctly, that it ensures a freedom from coughs and colds that they did not enjoy before its practice was commenced on their teams.

There has been much competition in the manufacture of horse clippers and sheep shearers, so that prices have come down. The Stewart Ball-bearing Clipping Machine costs but $7.50 and the Stewart No. 9 Shearing Machine costs but $11.50. Just think of it! Men are going from stable to stable clipping horses for a living and making good money clipping horses with a total investment of $7.50. All who are interested in horse-clipping or sheep-shearing machines are invited to send for catalogue to the Chicago Flexible Shaft Company, 182 Ontario street, Chicago, Illinois.

GENERAL STOCK NOTES.

According to the Cincinnati Price Current of January 29th, the total slaughtering of hogs in the West from November 1 to date was 7,423,800 head, against 9,070,000 one year ago, a decrease of 1,646,200 head for the winter packing season.

During the week ending February 22d the Milton-Marshall Live Stock Commission Company, at the St. Louis National Stock Yards, established a new top price for Mississippi steers. They sold for Hubbard & Beigheimer, of Hinds county, Mississippi, eleven head, averaging 962 pounds, at $7.10 per 100 pounds, with heifers on the same load averaging 700 pounds and sold at $6.00 per 100 pounds.

During the month of February, at the St. Louis National Stock Yards, Alabama steers, 905 pounds, sold at $6.90 per 100 pounds, and it was the highest price paid for Alabama cattle thus far this year at St. Louis.

To Get Cheap Money.

A Farmers' Credit Union was organized at Tuleta, Bee county, Texas, in February, with J. H. Stoltzfus, President; William Rommell, Vice-President; George Gingerich, Secretary; and H. C. Schrock, Treasurer. This is probably the first organization of its kind in the United States. The purpose is to obtain money for farm development at the lowest possible rate of interest.

When you drive to town, count the buildings covered with Ready Roofing

The men who purchase roofing for railroad depots, large factories and warehouses are shrewd buyers—they investigate and *know*. You, too, will make no mistake if you cover your home and farm buildings with

Certain-teed

(Quality *Cert*-ified—Durability Guaran-*teed*)

Roofing

in Rolls and Shingles

Its durability is guaranteed for 15 years—it comes in red, green and slate gray shingles as well as rolls. Look for the *Certain-teed* quality label. Costs *less*—get prices from your dealer.

Valuable Book *Free*

You will find many valuable suggestions in our new book, "**Modern Building Ideas and Plans**"—it tells you what to do—and what not to do—it suggests economies and conveniences that will save you money.

A book of this kind would ordinarily sell for $1—but as it shows the use of our *Certain-teed* Roofing on all kinds of model homes and farm buildings, we offer it to you at 25 cents. We prefer to have you go to your lumber, hardware or building material dealer, who will gladly get you a copy *free*.

If you write us, enclose 25c to cover cost, postage and mailing,

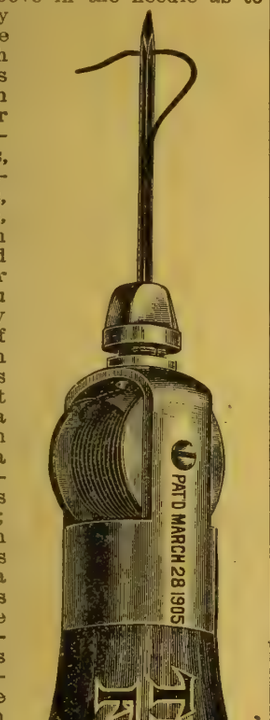
THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

OUR INDUSTRIAL POLICY.

We Are in Favor of All Foreign Farm Productions Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

THE NATIONAL FARMER AND STOCK GROWER is in favor of the United States Custom House collecting a reasonable range of duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government.

By the tariff policy that we advocate fully one-half the money required for the support of the national government should be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm produce free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed on our own people.

Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time foreign goods are placed on the free list there is the same result. With moderate import duties received by the United States on various products as now collected the total that is covered into the United States treasury is over three hundreds of millions of dollars a year, and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty results in higher prices to the American consumer and higher taxation also upon our own products to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and be the greatest sufferers.

Soil Salvation.

Land which is properly terraced, ditched, drained or irrigated brings just about whatever price the owner sets, and if he doesn't want to sell, better crops are his yearly reward. A valuable treatise on terracing, ditching, draining, irrigating, etc., called "Soil Salvation," is published by Bostrom-Brady Mfg. Co., 107 Madison Ave., Atlanta, Ga., and will be mailed by them free to any of our readers upon request who expect to do terracing, ditching, draining or irrigating this spring.

Reo the Fifth Auto.

Many of our readers are now using the Reo the Fifth Auto and know it for the magnificent car that it is. Write to R. M. Owen & Co., Lansing, Mich., and they will tell you where to look one over.

Book of Champions on page 2.

Tell Me How Many Head of Stock You Have

and I'll feed them 60 days before you pay. I'll show you how to make your farm animals grow faster—thrive better—put on more flesh on no more feed—make you more money.

I'll Rid Them of Worms or No Pay

I'll drive out the blood-sucking, life-sapping, disease-breeding parasites, which multiply in the stomach and intestines, killing off your hogs and sheep, starving your horses and cattle, and stealing your feed and profit. I'll send you enough Sal-Vet to last all your stock 60 days. Simply put it where all your farm animals can run to it freely. **They will doctor themselves.** Don't send any money—just the coupon. Fill it out and mail today.

Sidney R. Feil, Pres.

What SAL-VET is and Does

Sal-Vet is a wonder-working medicated salt which completely rids farm animals of their greatest enemies—the stomach and intestinal worms. These deadly pests are the cause of 90% of all live-stock diseases. They keep farm stock in a poor, weakened, money-losing condition—they are the first step to hog cholera, swine plague, horse plague and other contagious diseases.

How SAL-VET Prevents Diseases

Sal-Vet prevents heavy losses when disease breaks out in your neighborhood because it kills and expels these deadly, life-sapping pests and puts every animal on your farm in a healthy, vigorous, worm-free condition—enabling them to better resist these deadly plagues. It sharpens the appetite, improves digestion and makes all stock grow into profit fast because it helps them get the good of all their food. Being a salt, animals like it and run to it freely—and

They Doctor Themselves

It requires no mixing—no drenching—no dosing—no trouble at all. Leading agricultural colleges and all prominent live-stock authorities endorse it.

Let me send you a 60-day supply without a penny of pay in advance.

Send No Money—Just the Coupon

Fill out the coupon, tell me how many head of stock you have, and mail it to me today. I'll ship you enough Sal-Vet to last all your stock 60 days. You simply pay the freight charges when it arrives and at the end of 60 days report results. If Sal-Vet does not do what I claim you won't owe me a penny. Send the coupon NOW. Address

Proof That Proves from Actual Users

"Sal-Vet has been of great service to us; it has kept our hogs and pigs free from worms and, in addition, proved to be a splendid tonic.—J. B. ESPY, Agriculturist, Southern Alabama Experiment Station, Abbeville, Ala.

"For their own good, I would recommend Sal-Vet to all sheep men. It will destroy every stomach worm in the flock and keep your sheep and lambs free from them and at the same time keep the flock in the pink of condition and health."—ROBERT S. BLASTOCK, Mgr. Sheep Dept., Walnut Hall Stock Farm Donerail, Ky.

"I cannot find words to express how much I think of Sal-Vet. Hogs all around my place had cholera, but I did not lose a single one of mine, and all winter they continued to look just fine." WM. CAMPBELL, Route No. 10, Decatur, Ind.

"Before getting your Sal-Vet I had lost thirteen of my best hogs, but since feeding Sal-Vet I did not lose a single one, and every animal is in fine condition."—(*Signed*) GEO. MOREN, Route No. 1, Pittsburgh, Kansas.

"I have given Sal-Vet a thorough trial with most gratifying results. My herd of pure bred Berkshires contracted a bad cough and continually got worse, until I gave your Sal-Vet to them. After two weeks of this treatment, not a hog was coughing, and all are as sleek as moles."—E. DANA SUTCLIFF, Shirkshinny, Pa.

PRICES 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12. No orders filled for less than 40 lbs. Never sold in bulk; only in Trade-Marked Sal-Vet packages.

60-day trial shipments are based on 1 lb. of Sal-Vet for each hog or sheep and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular packages.

SIDNEY R. FEIL, Pres.
THE S. R. FEIL CO.
Dept NFSG3-13 Cleveland, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, report results in 60 days and will then pay for it if it does what you claim. If it does not you are to cancel the charge.

FATTENING WESTERN LAMBS.

Results of Several Experiments at the Indiana Agricultural College.

Agricultural experiments are conducted for the purpose of gaining information in order to improve methods in agricultural pursuits, including live stock. At the Purdue Agricultural Experiment Station they discovered by practical experience that if you buy your stockers too high and you sell your fattened sheep too low the result in feeding sheep will be a loss. Agricultural experiments are not conducted primarily to make a profit, but a profit looks nice when there is one, and when a loss is sustained it is a good thing to have an appropriation to fall back on.

This is no discredit to the Indiana Station that sustained the loss, but it shows that there are times when farm losses are not due to the mismanagement of the farmer. Indeed, no business on earth has to withstand such wide fluctuations in market values as does the farmer. The farmer knows where he has to get off, and it will not hurt the college instructor to learn the lesson also.

Bulletin No. 162, issued November, 1912, by the Agricultural Experiment Station, Lafayette, Ind., may be had by writing for it and it will do a sheep raiser much good to read it over and carry it around in his pocket for a week or so. The bulletin relates to four different experiments in lamb feeding, and, although the market was so low that the lambs were sold at a loss, the experimenters were not to blame for it, because they made a fine showing of results on the feed consumed.

The lambs were Western lambs, bought as feeders at the Chicago market. The experimenters fed the lambs in lots of twenty in open sheds, 14x16, facing south and opening into a yard 14x28 feet.

The results were as follows:

PART NO. I.

First Experiment — Timothy Hay Versus Clover Hay.

1. Timothy hay in all rations where it was fed proved a very unsatisfactory feed for fattening lambs.

2. Lambs fed shelled corn and timothy hay were very unthrifty.

3. Lambs fed shelled corn and clover hay made more rapid and more economical gains than those fed shelled corn and timothy hay.

4. A ration of shelled corn and clover hay produced better finish on lambs than a ration of shelled corn and timothy hay.

5. A ration of shelled corn, cotton-seed meal and clover hay produced faster and more economical gains on fattening lambs than a ration of shelled corn, cotton-seed meal and timothy hay.

6. Lambs fed shelled corn, cotton-seed meal and clover hay acquired a much better finish than others fed a ration of shelled corn, cotton-seed meal and timothy hay.

PART NO. II.

Corn Silage as Roughage For Fattening Lambs.

7. The addition of corn silage once daily to a ration of shelled corn and clover hay did not affect, to any appreciable extent, the rate of gain on fattening lambs.

8. The addition of corn silage once daily to a ration of shelled corn and clover hay slightly reduced the cost of gains on fattening lambs, but did not greatly affect their selling value.

9. Lambs receiving silage once daily and clover hay once daily ate approximately the same quantity of hay as of silage.

10. The grain consumption was affected very little by the addition of silage to a ration of corn and clover hay.

11. Lambs fed silage were never unhealthy and showed no unfavorable symptoms.

12. The addition of corn silage to a ration of shelled corn, cotton-seed meal and clover hay did not greatly affect the rate of gain nor the finish on the lambs, but did effect a small saving in cost of gain.

PART NO. III.

The Effect of the Amount of Silage in a Ration.

13. Lambs receiving rations of shelled corn, cotton-seed meal, clover hay and silage ate the same quantities of grain when silage was fed twice daily as when it was fed once daily.

14. Lambs receiving silage twice daily ate less hay than those receiving silage once daily.

15. Lambs fed silage twice daily made approximately the same gains as others fed silage once daily, but made cheaper gains and acquired a better finish.

16. No bad effects were produced by feeding lambs large quantities of silage.

17. The ration of shelled corn, cotton-seed meal, clover hay and corn silage proved to be the best of the seven rations fed in these trials.

PART NO. IV.

Cotton-seed Meal as a Supplement to Rations.

18. The addition of cotton-seed meal to a ration of shelled corn and timothy hay increased the appetites of the lambs for both grain and hay.

19. The addition of cotton-seed meal to a ration of shelled corn and timothy hay improved the thrift of the lambs; increased the rate of gain; decreased the cost of gain; and added greatly to the selling value of the lambs.

20. The addition of cotton-seed meal to a ration of shelled corn and clover hay did not greatly affect the appetites of the lambs for either grain or hay.

21. The addition of cotton-seed meal to a ration of shelled corn and clover hay slightly increased the rate of gain and added materially to the selling value of the lambs.

22. The addition of cotton-seed meal to a ration of shelled corn and clover hay did not on the average of three trials affect the cost of gain when corn was as low as 40 cents per bushel, but made slight decrease in cost of gain when corn was above 40 cents per bushel.

23. The addition of cotton-seed meal to a ration of shelled corn, clover hay and corn silage had no effect on the roughage consumption, but slightly increased the grain consumption in one of the three trials.

24. The addition of cotton-seed meal to a ration of shelled corn, clover hay and corn silage slightly increased the rate of gain and added to the selling value of the lambs.

25. The addition of cotton-seed meal to a ration of shelled corn, clover hay and corn silage did not affect the cost of gain when corn was valued at 50 cents per bushel, but made a slight decrease in cost of gain when corn was above 50 cents per bushel.

General Summary.

The results of these trials demonstrate conclusively that timothy hay is a very unsatisfactory roughage for fattening lambs and its use is likely to be accompanied by heavy financial loss. Clover hay is shown to be an excellent roughage for fattening lambs, but can be improved by the addition of corn silage. The best ration used in these trials was shelled corn, cotton-seed meal, clover hay and corn silage twice daily. All rations containing silage proved more economical than those not containing this roughage. The use of cotton-seed meal proved to be very beneficial when timothy hay was fed, and in most cases when clover or silage was used.

The experimenters were Prof. J. H. Skinner, Chief in Animal Husbandry, and his assistant, Prof. Franklin B. King.

Be sure to find a Dittmann Shoe Store before you buy another pair of shoes—just try on a pair

They Are Good Shoes

These are the first good words about Dittmann Shoes: they give fine wear, the best possible at the price.

They look neat because Dittmann shoes are kept *up to the minute in style*—an essential feature in *Ladies' Shoes*.

Dittmann Shoes give *comfort*, from the first minute because there is sure to be a Dittmann Shoe that just fits *your* foot.

For that reception or for church be fitted to a pair of nifty Dittmann Shoes. Be in style, enjoy comfort—wear a *Dittmann*.

Why Men Like Them

For 69 years we have been making shoes—we have made them for every shape of foot; we have perfected an immense number of typical patterns and our lines are complete. Let your Dittmann dealer show you what he can do—you will be glad of the day you put your feet into Dittmann Shoes.

THE NAME ST. LOUIS Dittmann SHOES ASSURES THE QUALITY

Nine o'Clock School Shoes

for children, remove the last trace of worry about the feet of little folks. Just prove it for yourself.

COUPONS get School Flags.

If you cannot find a Dittmann Shoe Store near you, send us the name of your regular shoe dealer and we will see that you get Dittmann Shoes. Enclose 2c and we will send you, *free*, an educational book, "Our Flag", illustrated in three colors.

It pays to trade with Dittmann dealers

FARM CREDITS IN ENGLAND.

Joint Credit of Members Obtain Advances Which as Individuals They Could Not Expect.

An article on English agriculture and banking in the London Times was as follows:

"Presiding over the annual meeting of the National Provincial Bank of England, M. O. Fitzgerald, after referring to the 'abounding prosperity' which the country had enjoyed during the past year, said he feared that agriculture had again had but a moderate measure of success. The Board of Agriculture was making an interesting experiment in which the leading banks—who had throughout been consulted—were gladly taking part. It was promoting the establishment of co-operative credit societies, who were to borrow money from the banks and to lend it to their own members. The board hoped that occupiers of small holdings might thus, through the joint credit of members, be able to obtain advances which, as individuals, they could not expect.

"Naturally the activity of trade had caused a persistent demand for credit, and rates for loans and discount had been well maintained throughout the year. Indications pointed to a very large and sustained demand for capital, and after making allowance for some hoarding on the continent owing to fear of war, there were not wanting signs that the demand was overtaking the supply. On the other hand, the supply, which was maintained to a large extent by the savings of the thrifty, was being seriously cut into by the heavy and ever-increasing taxation and the unproductive expenditure of almost all governments."

Mr. James Ried, of Randolph county, Missouri, marketed two cars of cattle of his own feeding on February 18th at the St. Louis National Stock Yards. The steers averaged 1,340 pounds and topped the market at $8.55 per 100 pounds, with 3,800 cattle on sale. The cattle were sold by the Milton, Marshall Live Stock Commission Company.

COLTS FROM WORK MARES.

Careful Management Will Overcome All Objections and Very Little Time of the Mare Need Be Lost.

No man to-day will question the desirability of raising a good colt in the next year from every good mare he possesses, but many men will let the opportunity go by for fear that the rush of their work will not permit it. It is true, some little time is lost from work when the mare is bred and a little time when she drops her foal, and besides this she cannot be crowded into work quite so heavily when she is suckling a foal as when she is not doing so. When this is said, one has included the three most serious obstacles to successfully raising colts from work mares.

The reasons given are not really so formidable as they at first seem to be when one thinks of the busy days of spring plowing and the tired, sweating horses at harvest time. Little time is really required to breed a mare, although they are aggravatingly shy, and only patient trial will determine whether a mare is a breeder at all or not. The most serious obstacle is the loss of time of the mare, for indeed it is quite commonly assumed by the experienced that a mare must not be worked months before dropping a foal, nor for a couple of months afterward.

Really, a mare need not lose two-weeks' time. She needs exercise when she is carrying a foal, but feed her according to the work done, so that she will keep in good flesh and spirits. When the foal is born and she has rested a few days, she needs exercise again. A knowledge of just what is right and safe to do with a working brood mare will prevent some little mistake, which, perhaps, may have serious consequences and will enable one to make the best possible use of her time.

While a mare may safely be worked hard and steadily from the day she is bred until the day she drops her foal, she should be kept clear of excessively hard pulls and strains, such as are apt to occur in hauling grain on the road in a hilly country, working with smooth shoes or none at all when the roads are icy and hauling feed and manure through the muddy fields and feed lots in the early spring.

Careful hauling on the road and steady work in the field putting in crops and tending them are very safe for the mare. I have used mares at spring plowing up to the day their foals were dropped and have known them to be unhitched from the cultivator to give birth to a colt in the field. Mares so used must be well fed on a ration supplying plenty of protein. It is no extravagance to cut the corn out of their ration entirely and give them oats instead. The extra expense will be well repaid by a fleshier, more vigorous mare and a stronger foal. Natural mixed clover and timothy hay are better than straight timothy, as it supplies more protein, produces less tendency to constipation and is usually quite as free of dust and mold as any hay. When her time approaches, add a little bran to the ration as a laxative and put her in a box stall at night.

When the wax protrudes at the ends of the teats, the colt may be expected inside of two days, and it is well enough to let her rest. A mare at work will have comparatively little swelling of the limbs and other parts, since the exercise and consequent unclogged system and vigorous circulation prevent it, so one must not neglect providing a box stall for her simply because she shows only moderate signs of approaching parturition.—William Hardy, R. R. No. 2, Tunnel Hill, Ill.

Soil Improvement Talks

No. 3

THE PENNSYLVANIA STATE COLLEGE OF AGRICULTURE has been experimenting for 30 years with complete fertilizers on corn, wheat, oats and hay. It has demonstrated practically that there is great profit in supplying the balance of plant food to the soil that each crop requires.

The following is an average of the results obtained with complete fertilizers on each crop during this lengthy and convincing demonstration:

Corn with Fertilizer 52.8 bus. per acre—without Fertilizer 38.8 bus. per acre. GAIN 36% PER ACRE.

Wheat with Fertilizer 23.7 bus. per acre—without Fertilizer 13.6 bus. per acre. GAIN 74% PER ACRE.

Oats with Fertilizer 41.3 bus. per acre—without Fertilizer 31.5 bus. per acre. GAIN 31% PER ACRE.

Hay with Fertilizer 4042 lbs. per acre—without Fertilizer 2608 lbs. per acre. GAIN 54% PER ACRE.

WRITE FOR SPECIAL CROP BULLETINS on corn, oats, wheat, alfalfa, potatoes and other crops; mailed free to any address upon application.

We Will Send it to You for One Year FREE!

HIGHWAY MAGAZINE is a snappy monthly devoted to the Good Roads Movement. It is practical, breezy and full of suggestions drawn from the experience of men who are up against the same problems as you are. It stands squarely for modern methods and efficiency in road building and maintenance, and for the use of

AMERICAN INGOT IRON
Guaranteed CULVERTS 99.84% Pure

The regular subscription rate for Highway Magazine is 5c a copy or 50c a year. Over fifty thousand tax payers, officials, engineers and commissioners of public works are regular readers of this magazine. We want *every* road master in the United States to read it.

Here's where *you* come in—send us the name and address of the man who has charge of the roads in *your* neighborhood and we will put *you* on our subscription list for a year. Thereafter you will receive Highway Magazine regularly every month for twelve months, FREE.

Here is your opportunity to get a splendid magazine at the cost of only one cent. Send today your name and address on a postal card so that you may receive the issue that is coming out next month. Address

Publisher THE HIGHWAY MAGAZINE, 532 Walnut St., Cincinnati, Ohio

THE GRANDEST
Subscription Offer.

A Splendid Magazine One Year —The Ladies' World—National Farmer and Stock Grower One Year—Eight Standard Grapevines—All For One Dollar.

This is a startling subscription offer, especially valuable to farmers' wives and families and to anyone who owns a home. **The Ladies' World** is a monthly magazine,

forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, lovely stories, splendidly edited, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. No better, cleaner or more useful paper can possibly enter the farm home.

The National Farmer and Stock Grower is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets and instructive matter concerning general farming, stock raising, dairy, poultry keeping and all the especial features that keep a farmer posted on his own interests in dealing with the world of business.

The subscription offer includes a magnificent collection of **Eight Two-year Standard Grapevines.** These

grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe; **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World** one year; **The National Farmer and Stock Grower one year;** and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar.

SUBSCRIPTION COUPON.

Please Cut Out and Mail to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Areas Below Sea Leved.

All the continents, with the possible exception of South America, contain areas of dry land which are below sea level.

In North America, according to the United States Geological Survey, the lowest point is in Death Valley, California, 76 feet below sea level; but this is a slight depression compared to the basin of the Dead Sea, in Palestine, Asia, where the lowest dry-land point is 1,290 feet below sea level. In Africa the lowest point is in the Desert of Sahara, about 150 feet below sea level, but the Sahara as a whole is not below sea level, although until recently the greater part of it was supposed to be. In Europe the lowest point at present known is on the shores of the Caspian Sea, 86 feet below sea level. In Australia the lowest point is at Lake Torrens, about 25 feet below sea level.

Soil Improvement Talks.

Under this heading on page 23 will be found a card of the Middie West Soil Improvement Committee of the National Fertilizer Association. The work done by this committee is for the joint benefit of the manufacturers in the way of instructing farmers in the use of commercial fertilizers. This committee has nothing to sell, and the representations made by this committee can be absolutely relied upon. They will say nothing they cannot substantiate. Their crop bulletins are written by practical and learned men, who have devoted their lives to the subjects treated of, and this committee, as will be seen by looking over the advertisement, keeps in close communication with all the agricultural college literature on the subject of plant food and is engaged in suggesting such experiments that can produce a line of information of use to any farmer in any state. We advise our friends and patrons to write to Department Q, Soil Improvement Committee, 916 Postal Telegraph Building, Chicago, Ill., and ask for free copies of their Special Crop Bulletins. All farmers who apply for them will receive a splendid assortment of literature that will assist them in their own business.

Light and Heat on Farms.

The story of the acetylene light is told on page 30. There are 201,000 of these plants lighting and furnishing heat in country homes. It is also used on railroads to light up passenger trains, the plant being carried on the train. It is a wonderful light, and remarkable how simple it is. The Union Carbide Sales Company on application will be glad to furnish full particulars. Do not hesitate because of the cost; it is a money saver and is easily installed. Address, Union Carbide Sales Company, 126 South Michigan Blvd., Chicago, Ill.

CHAMPION SEED CORN PREMIUMS.

Offered to Our Readers Who Send Us a Special Subscription—Yellow Dent Corn Pure Bred Since 1847.

Johnson County White Corn That Won Many Grand Championships.

The subject of seed corn is of the utmost importance, especially at this time. Pretty good seed corn is easy to get, but superior seed corn is scarce. Even the best seed corn growers have good and bad seasons, and there is great variation, one year with another, in vitality and quality of their seeds.

Only one thing can be guaranteed, and that is, pure-bred seeds, like pure-bred animals, produce true to type, and sometimes there is worked out an almost imperceptible improvement. The road to improvement is rough and rocky, and upon it there are many obstacles, but ultimate success is possible, and only possible by using seeds of the right breeding and quality. The backward road is easy to travel by using seeds of no breeding and only containing the qualities that even negligence cannot destroy. Promiscuous seeding of unknown corn results in smaller crops of low-grade corn. Nature may save the crop by an excellent season, but the general result is bad.

As a step towards general improvement, every corn grower should have one or more experimental plots each year, using small quantities of different seeds. The National Farmer and Stock Grower has furnished opportunities for farmers to obtain such seeds for the past five years.

We are now distributing small quantities of seed corn distinctly different and grown by two great corn improvers—one, D. L. Pascal, of Iowa, who has grown Reid's Yellow Dent Corn that he obtained pure from the originator. Mr. Pascal has won many prizes. The other eminent breeder is the famous L. B. Clore, of Indiana, growing Johnson County White Corn. His World's Fair and National Corn Show championships are many, and no corn improver on the face of the earth is his equal.

We have bought seed corn from Mr. Pascal and we have bought seed corn from Mr. Clore. We will send it out in twenty-ounce packages as subscription premiums.

Our Subscription Proposition.

Anyone who will send us the amount of sixty (60) cents we will send The National Farmer and Stock Grower for one year, and we will send as a premium a package containing twenty ounces of Yellow Dent Seed Corn grown by Mr. Pascal, or, if preferred, we will send twenty ounces of Johnson County White Corn grown by Mr. Clore. Take your pick of which corn you desire, and if you wish both kinds, send one dollar ($1.00) and be credited with two-years' subscription and two twenty-ounce packages of seed corn. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Angora and milch-goat interests are making preparations for an extensive exhibit at the San Francisco Panama-Pacific Exposition. Efforts are being made to attract a display from South Africa, and if the present inhibition against exportation from that country can be raised a big display is expected.

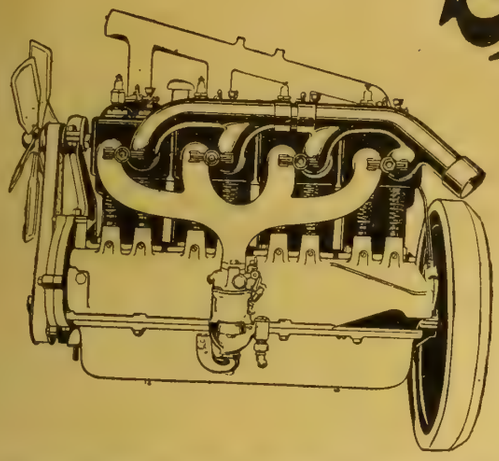
Overland



The Importance of a Powerful Motor

AS the motor is the most important part of a car, it is safe to assume that you can judge a car by the performance of its motor. Therefore, be guided and informed by the following information.

Every practical farmer knows the value of a good motor in an automobile. He knows, too, from experience, what constitutes a good motor and what is expected of it. He wants power, economy and silence.

The motor is the most expensive single unit of the Overland car. It has a 4″ bore and a 4½″ stroke. It is the most efficient 30 horsepower motor made. We say efficient, for it has, by demonstration in tens of thousands of cars, proven to be the best for your specific purposes.

It is exceptionally economical to operate—using less fuel per mile than any other motor of equal size.

It is remarkably powerful, developing forty to fifty miles an hour with ease; and over your kind of roads, without eating up an unnecessary and costly quantity of gasoline.

It is the only motor of its size made with a five bearing crankshaft which makes for real smoothness, silence and ease when in operation. This feature is only found on very high priced cars.

It is remarkably simple. It is practically frictionless. Requires no coaxing or continual adjusting. In fact, you seldom have to lift the hood. Is always obedient.

And the self-starting feature adds the final touch of perfection. Just throw a little lever and you're off. Your daughter can start, operate and drive an Overland as well and as easily as you can. It will always start in bitter cold and freezing weather as quickly as in the summer—by just switching the little lever on the dash.

So we ask you to judge the exceptional value of this car by the exceptional efficiency of its motor.

This big, powerful, comfortable touring car costs you 30 % less than any other similar car made.

We have some very interesting books we would like to send you. They are free. Write us for a set today.

How Overland motors are made

All Overland motors are designed by Overland men—made by Overland men—and made in Overland factories. We will build 40,000 motors this year. No other automobile manufacturer will build as many of this type. That is why we can build them better, and for less cost. We employ the most skilled motor builders in America.

Following are a few of the most important facts about the Overland motor.

Cylinders have large water-jackets and are cast singly, increasing cooling efficiency with the advantage of being able to replace a single cylinder at low cost should an accident occur. The crank shaft and connecting rods and all other forgings are of high carbon manganese steel.

All bearings, cylinders, pistons and rings are ground to accurate and tested smoothness, insuring long life, freedom from wear and positive compression.

All the wearing surfaces of the valves are ground to a one-thousandth part of an inch. Owing to their peculiar design and large size they enable the motor to develop at least fifteen per cent. more horsepower than any other motor of the same bore and stroke.

The cam shafts are drop-forged (in our own drop-forge plant, which is the largest in the industry) oil-treated and case-hardened. They are ground and machined automatically, insuring positive accuracy in the relative position of one cam to another.

This is the only car of its class provided with a five-bearing crank shaft. This crank shaft is drop-forged from one piece of carbon manganese steel and rotates in five bearings of unusually liberal size, insuring quietness and extreme long life.

The crank cases are cast in two sections, of the finest grade of aluminum alloy attainable—and cast in our own foundry.

No other motor in the world is given a more severe test and thorough inspection. The engine is belted up for two hours, and driven by other than its own power to limber it up so that it will start easily. Then it is put onto the block and run from 8 to 16 hours under its own power.

Say Goodbye to Pimples

Stuart's Calcium Wafers Will Drive Them Away. Creams Will Never Do It; They Can't.

No need for any one to have a complexion disfigured by pimples, blotches, liver spots or blackheads. Just clear the blood of impurities and they'll go away.

All My Friends Marvel at the Way Stuart's Calcium Wafers Drove Those Ugly Pimples Away.

Stuart's Calcium Wafers cleanse and clear the blood, driving out all poisons and impurities. And you'll never have a good complexion until the blood is clean.

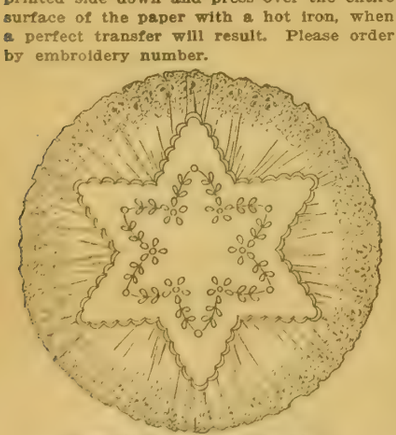
These little wafers may be used with perfect freedom. Science knows no more powerful blood cleanser. They are entirely free from harmful drugs or opiates. Your doctor prescribes these hundreds of times a year.

Stuart's Calcium Wafers go right into your blood. Their purifying, beneficial effect upon the blood is felt throughout the body, not in a year or a month, but in a few days. You feel better all over because your blood, the life-giving fluid, is doing its work properly.

No matter how bad your complexion is, Stuart's Calcium Wafers will work wonders with it. You can get these little wonder-workers at your druggist's for 50 cents a package.

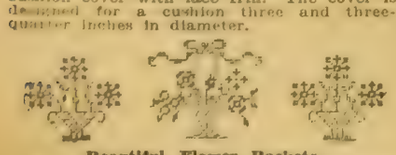
MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number.



Beautiful Lace Pin Cushion.

No. 714.—Design for an embroidered pincushion cover with lace frill. The cover is designed for a cushion three and three-quarter inches in diameter.

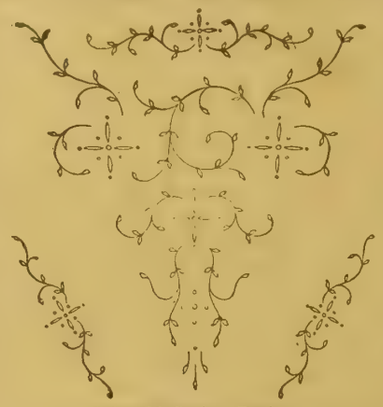


Beautiful Flower Baskets.

No. 718.—Designs for embroidering baskets of flowers, in cross-stitch style. Two transfers of each are given. The larger basket is fourteen stitches, the smaller baskets are twelve stitches deep.

Stocking Elegancies.

No. 716.—Designs for embroidering stockings. Four transfers of the vine, four of each spray of forget-me-nots and six transfers of the design of small leaves are given.



Splendid Spring Design.

No. 715.—Design for embroidering a blouse or waist.

Each embroidery pattern is 10 cents, and is well worth the money.

Please address all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Maintenance of Improved Roads.

The present year promises to be the greatest in the history of the movement for the improvement of the public roads of the United States, according to the reports received from all parts of the country by Secretary Wilson, of the United States Department of Agriculture. A joint committee of Congress is engaged in an investigation of the feasibility of federal aid in the construction, improvement and maintenance of public highways, and a number of the State Legislatures now in session are considering good road legislation. In connection with the general impetus that the good-road movement has recently had in all parts of the country, the Director of the Office of Public Roads says:

"Too much stress cannot be laid upon the importance of maintenance in connection with the work of improving the roads. The people in nearly all the states are filled with enthusiasm for road improvement and are spending enormous sums of money in the construction of superb roads, and yet almost without exception they are making little provision to care for the roads after they are built. This is true not only in the various counties, but under many of our state highway departments.

"To maintain the roads in good condition year after year requires a considerable annual outlay, but this outlay is infinitely less than the loss which must fall upon the people eventually if they allow their roads to go to utter ruin. The thing for all advocates of good roads to do is to urge continuous, systematic maintenance and the setting aside every year of an amount per mile estimated by the engineer in charge to be sufficient for the proper maintenance of the road—a course which must make for economy and efficiency."

With Winter Vegetables.

Cabbage With Cream.—Slice half a head of cabbage and cook half an hour in enough water to keep it from scorching. Then dry down, put in a small piece of butter and let it brown slightly. Then add salt, pepper and a cupful of sweet cream. The cabbage should have been scorched just enough to give the cream a rich coffee color, but not enough to taste burnt. When this has come to the boiling point, stir in two or three spoonfuls of vinegar, stirring all the time that this is being added to prevent wheying off. Serve at once.

Hubbard Squash.—Divide into halves and remove core, having washed the squash clean on the outside before cutting. Into each half put a little butter, sugar, pepper and salt and place in the oven to bake. As the butter and sugar dissolve and the juice of the squash is gradually added, there will be quite a little liquid in each part of the squash. This should be dipped up over the sides frequently as you would baste meat. When thoroughly soft, scoop out the squash from the shells, add more butter, if desired, and serve. Cooked in this way it has much the flavor of the sweet potato.

Fried Parsnips.—Pare and cut in strips half an inch thick. Parboil until tender, then roll in flour, season with salt and pepper and fry to a rich brown.

Fried Onions.—Slice and fry to a rich brown in butter or meat fryings. Season and add vinegar to taste. Serve hot. Whenn peeling, if you work before the open hearth the fumes will be taken up the chimney and the eyes not be inconvenienced during the process.

Avoid cooking more onions than will be eaten at a meal. They readily absorb odors and do not keep fresh like most vegetables.—Bessie L. Putnam.

Highest and Lowest Points in the World.

The maximum difference in elevation of land in the United States is 14,777 feet, according to the United States Geological Survey. Mount Whitney, the highest point, is 14,501 feet above sea level, and a point in Death Valley is 276 feet below sea level. These two points, which are both in California, are less than ninety miles apart. This difference is small, however, as compared with the figures for Asia. Mount Everest rises 29,002 feet above sea level, whereas the shores of the Dead Sea are 1,290 feet below sea level, a total difference in land heights of 30,292 feet. Mount Everest has never been climbed.

The greatest ocean depth yet found is 32,088 feet, at a point about forty miles north of the island of Mindanao, in the Philippine Islands. The ocean bottom at this point is therefore more than 11½ miles below the summit of Mount Everest.

The difference in the land heights in Europe is about 15,868 feet.

"N. C. Griffin, of Sumner county, Tennessee, sold twenty-eight head of first-class mules on an average of $200 each, one pair bringing $525. He also disposed of a match pair of Shetland ponies for $500.—Farmers' Home Journal.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use oil. He calls it powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 66 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

A Reasonable Plea For The Stomach

If Your Stomach Is Lacking in Digestive Power, Why Not Help the Stomach Do Its Work?

Not with drugs, but with a reinforcement of digestive agents, such as are naturally at work in the stomach. Scientific analysis shows that digestion requires pepsin, nitrogenous ferments, and the secretion of hydrochloric acid. When your food fails to digest, it is proof positive that some of these agents are lacking in your digestive apparatus.

Stuart's Dyspepsia Tablets contain nothing but these natural elements necessary to digestion and when placed at work in the weak stomach and small intestines, supply what these organs need. They stimulate the gastric glands and gradually bring the digestive organs back to their normal condition.

Stuart's Dyspepsia Tablets have been subjected to critical chemical tests at home and abroad and are found to contain nothing but natural digestives.

Chemical Laboratory. Telegraphic address, "Diffindo," London. Telephone No. 11029 Central. 20 Cullum St., Fenchurch St., E. C.
London, 9th Aug., 1905.

I have analyzed most carefully a box of Stuart's Dyspepsia Tablets (which I bought myself at a city chemist's shop for the purpose), manufactured by the F. A. Stuart Co., 86 Clerkenwell Road, London, E. C., and have to report that I cannot find any trace of vegetable or mineral poisons. Knowing the ingredients of the tablets, I am of opinion that they are admirably adaptable for the purpose for which they are intended. (Signed)
John R. Brooke, F. I. C., F. C. S.

There is no secret in the preparation of Stuart's Dyspepsia Tablets. Their composition is commonly known among physicians. They are the most popular of all remedies for indigestion, dyspepsia, water brash, insomnia, loss of appetite, melancholia, constipation, dysentery and kindred diseases originating from improper dissolution and assimilation of foods, because they are thoroughly reliable and harmless to man or child.

Stuart's Dyspepsia Tablets are at once a safe and powerful remedy. Stuart's Dyspepsia Tablets will digest your food for you when your stomach can't.

Ask your druggist for a fifty-cent box.

MAY MANTON PATTERNS.

This is the best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original. In this edition we present for consideration very seasonable patterns absolutely up-to-date, with directions for ordering.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

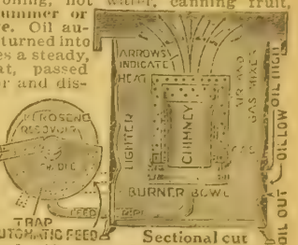
A Practical Club.

A practical club has been organized by a group of neighbor women who are enthusiastic over their new movement. They meet every two weeks at the homes of the different members, their club sessions lasting from the middle of the morning until three or four o'clock in the afternoon. This gives the women an opportunity of doing the morning and evening work at home. The member who is entertaining the club serves a midday luncheon. All come equipped with apron, needle, thimble and scissors, but they bring no work of their own, for the hostess furnishes the work for the day. The club works on whatever she wishes them to. They sewed enough rags for a hall runner for one woman; for another hostess they made two house dresses; for another they made half a dozen children's aprons; they made new curtains for a living and a dining room, and one afternoon they spent in quilting. What would be a big task for one woman to do alone—if not quite impossible—is simply a pleasure when tossed off by the skillful hands of this social company.—Janet Thomas Van Osdel.

PORTABLE STOVE

Combined Cooking and Heating

The Portable Stove will boil, bake, fry, roast—cook anything. Ideal for quick meals, washing, ironing, hot water, canning fruit, camping. **Summer or winter stove.** Oil automatically turned into gas furnishes a steady, intense heat, passed into radiator and distributed throughout the room or confined under cooking vessels that is absorbed by



Sectional cut

being cooked. Heat under control. **Not Dangerous Like Gasolene.** No wicks—nothing to clog, close up or get out of order. Heats rooms—low fire or high fire. No flues or chimneys. Light, pick it up, set it anywhere. **Many Thousands** of the Portable Oil Gas Stoves sent to families in all parts of the world. Men and women enthusiastic over its comfort, convenience and economy.

WHAT USERS SAY "It is so convenient and economical." Rev. P. V. Hawkins, Ohio. "It is clean, convenient, no trouble, burns steadily; perfect baking." Henry Schilling, Ill. **"For Baking it has no equal."** V. E. Bostwick, O. "Bakes pies, cakes, bread; never saw nicer baking done." Mrs. O. Thompson, O. "Never cooked meals so quick and easy." James Newark, Mich. "Baked, cooked, washed ironed—can do anything my range does." Mrs. M. E. King, Ky. "Cooked for a family of 6 for 5 days with 3 quarts of oil; **they are great time and fuel savers.**" H. M. Irey, Ia. "Heated a room when the temperature was 10 degrees below zero with one radiator." Wm. Baering, Ind. "With the radiator it soon warms up our dining room." J. F. Lisson, Calif. "We are using it to heat our office." McPherson Co., R. I. **"Only used a half a gallon of oil last week** for cooking, baking and ironing." E. N. Helwig, Ont.

CAN YOU DO WITHOUT the Portable Oil Gas Stove? Save time, trouble, anxiety, annoyance, expense, drudgery, fuel bills. Get rid of kindling, coal, wood, dirt, ashes—all the nuisance. **ALWAYS READY FOR USE.** Practical invention. Simple, durable. Lasts for years.

PRICE IS LOW $3.25 and up, any number of burners. Give it a trial. Not sold in stores. Send no money. Write today for full description.

Any number of burners wanted.

AGENTS MAKE MONEY Quick. Easy. Sure. Show Stove MAKING GAS—people stop, look, excited—want it—buy. B. L. Huested, Mich. "Was out one day, sold 11 stoves." W. E. Baird, S. C. "You have the best stove on market; sold 9 in 2 hours; **I do not fear competition.**" (first ordered 1—200 since). Chas. P. Schroeder, Conn., bought 40 stoves one order. Head & Frazer, Tex., write: "Sell like hot cakes; sold 50 stoves in our town." J. W. Hunter, Ala., secured 1—tested it—ordered 100 since. J. G. R. Gauthreaux, La., ordered 1; 155 since. So they go. **These men make money.** You have the same chance. You should make from $10 to $15 a day. Write for our selling plan. Do it today. Send no money.

The World Mfg. Co., 1951 World Bldg., Cincinnati, Ohio.

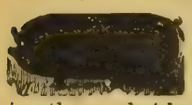
BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed because either paper is worth considerably more than the full price. The papers are as follows:

The National Farmer and Stock Grower—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.



The American Swineherd—issued monthly—a leader in its class. The hog paper. the pig paper, the brood sow paper, and strictly first-class in teaching how to top the market by producing top hogs.

The Shepherds' Journal is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

The Reliable Poultry Journal—the best and most elegant poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. **The Reliable Poultry Journal** is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read **The Reliable Poultry Journal.**

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — For One Dollar ($1.00) enclosed herewith please send us the Big Four Subscription Combination one year, consisting of **The National Farmer and Stock Grower, The American Swineherd, The Shepherds' Journal and The Reliable Poultry Journal.**

Editor's Note—The Fruitman and Gardener, published monthly, a first-class paper, can be substituted for either of the above papers if desired.

The Healthful Bedroom.

In view of the fact that the average person spends about one-third of his or her lifetime in sleep, the sleeping room becomes a matter of great importance, and every bedroom should be provided with the essentials for healthful sleep, and the daily sponge bath, if there is no bathroom in the house, and as nearly as possible the room should be kept free from anything that would tend to contaminate the air. Even a vase of withering flowers is a lurking cause of disease, and the air we breathe while we sleep should be equally as free from foul germs and disease matter as that we take into the lungs while we are awake.

A bedroom should be as simply furnished as possible, with no heavy curtains to keep out light and air, and everything about the room should be washable.

The sleep would refreshen and strengthen, whereas it is often restless and worrying, because the room is not well ventilated and the beds and bed coverings have not been properly aired.

A prejudice in favor of having one's work done early in the day should not beguile the house mistress into having the beds made up before they are thoroughly aired. A good way to air the beds and bedding is to place two chairs at the foot of the bed, shake out the covers and sheets, so that every part of them can be reached by the air and throw them over the foot of the bed over the chairs; then open up the windows, and an hour's airing each morning is sufficient.

All bedrooms should be well ventilated, as a bedroom well ventilated, of regular warmth and sunshine, will secure sound and restful sleep that will build up the body and refresh the mind, and so fit both for the duties of the day.

A matting is a cool and healthful covering for a floor in a bedroom; but even it should not be allowed to remain upon the floor for any great period of time, and the matting should be wiped up every week or two with salt water in which a tablespoonful of borax has been dissolved. The borax is used to purify and disinfect as well as to soften the water.

Soiled clothes should never be left in a sleeping room; they will so soon contaminate the atmosphere.

Always empty the slops as early as possible every morning for health's sake and have covers for all such receptacles, and at least once a week all slop jars should be washed with soapsuds and then rinsed out with strong borax water; and the wash cloths, too, should be cleaned in the same way.

To clean and purify a closet in the bedroom, scrub the shelves and floor with hot suds and when dry go over all the woodwork with hot borax water, to be sure that the closet is thoroughly disinfected, then leave the closet door open for an hour or two every day, so that plenty of fresh air can get in, and in this way keep it in a sanitary condition.—Martha.

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it,

and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Dittmann (St. Louis) Shoes.

Attention is invited to the card of the Dittmann Shoe Company on page 22. This is one of the great firms that have made St. Louis famous as the largest boot and shoe center in the United States, and the Dittmann Shoes are all sold in retail stores direct from the manufacturer, so that you can find the storekeeper in your home town and have the benefit of the full stock of Dittmann Shoes and sizes. You therefore support your home community in the first place and the industries of the nearest city that buys many million dollars' worth of farm products a year in the second place. The Dittmann Shoe Company has an honorable record of sixty-nine years in the business of making shoes, and their card in this paper is interesting and instructive.

LAME BACK and KIDNEY TROUBLE

CAN BE CURED WITHOUT A DROP OF MEDICINE

Our **MAGNETIC ABDOMINAL AND KIDNEY VITALIZER** for ladies and gentlemen here illustrated is only one of the many Shields we make. **IT IS A WONDERFUL INVENTION**, scientifically constructed and floods the system with magnetism, supplying **LIFE, STRENGTH** and **VIGOR** to the **BACK, KIDNEYS, STOMACH, LIVER, BOWELS** and **BLADDER**, giving that buoyancy, tone and renewed vitality to the system that Magnetic force alone can supply.

SENT ON TRIAL TO PROVE IT'S VALUE

Write to-day for full information and free book, **"PLAIN ROAD TO HEALTH,"** by C. J. Thacher, M. D. Describe your case fully, we advise you free how to apply **MAGNETISM** for treating any form of weakness or disease.

THACHER MAGNETIC SHIELD CO., Inc., Suite 452, 110 So. Wabash Ave., Chicago, Ill.

Three Indian Dolls For 30c.

And a year's subscription to the Universal Magazine. These dolls are pictures on linen and are ready to cut out and sew together. They are Indian Dolls—THE PRINCESS TAMBON and her sister and brother. The largest is sixteen inches high and the others six inches. Beautifully lithographed in four colors, all ready to cut out and sew. The handsomest Dolls ever put on the market. These Dolls are artistically garbed in correct Indian costume and require no additional dressing. They have real educational value. This Indian family will delight the heart of every child. The Universal Magazine is a nice, bright, cheerful, illustrated magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry— a splendid publication.

Send us thirty (30) cents for one-year's subscription to the Universal Magazine and one set of Dolls, or fifty (50) cents for two subscriptions and two sets of Dolls. The Dolls and Magazine are sent postage paid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

SPRINGTIME MALADIES.

In the spring months horses are especially liable to affections of the throat and membraneous tissues, such as coughs, influenza, pink-eye and distemper. In these troubles one certain cure and preventative is Frazier's Distemper Cure, and the relief from the first dose of this medicine is perceptible. "Frazier's" is sold on a strict guarantee to give satisfaction or money refunded. The $1 contains three times as much medicine as the 50-cent size. Write for the thirty-two-page booklet to Binkley Medical Company, Dept. H. Nappanee, Ind.

FREE TRIAL OF PLAPAO

DON'T WEAR A TRUSS

Rupture Cured by Stuart's Plapao-Pads means that you can throw away the painful truss altogether, as the Plapao-Pads are made to cure rupture and not simply to hold it; being self-adhesive and when adhering to the body slipping is impossible, therefore, they are also an important factor in retaining rupture that cannot be held by a truss. **No straps,** buckles or springs — cannot slip, so **cannot** chafe or press against the pubic bone. Thousands have successfully treated themselves at home—no delay from work. **Soft as velvet—easy to apply—inexpensive.** Awarded Gold Medal. Process of recovery is natural, so no further use for truss. **We prove** what we say by sending you Trial of Plapao absolutely **FREE**—you pay nothing for it, now, or ever. Write **today.**

Address — PLAPAO LABORATORIES, Block 888, ST. LOUIS, MO.

I Say to You MONEY TALKS

I will show you how to make $10 to $15 every day during your spare time.

I will put you in the tailoring business—make you independent—my actual business partner in your town. You share the profits.

It is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry ---a splendid publication. Send us twenty-five (25) cents and we will send you the Universal Magazine for one year and you can select a set of four (4) toy books as a premium.

Order toy books by numbers. Select either four you desire. Address your orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Patchwork Quilt.

One of the good, old fashions that is surely creeping back is that of the patchwork quilt, and the quilting parties, where a social neighborhood gathering occurs, with a dinner perhaps furnished jointly by the participants, are being again brought back. There are several reasons why we should be glad and join in the line in spirit, even though too busy with other duties to add to those of the needle, save on the occasional neighborhood gatherings, when we can make ourselves useful while at the same time having a day of enjoyment.

There are countless pieces in every home which must go into the rag-bag or become dust collectors unless put to some such practical use. The scraps of muslin and cambric worked up with calico, light or dark, may be really handsome. And there are numerous patterns which are straight work and can be put together on the machine, if preferred; or the work may serve as a catch-up when waiting, or for evening employment, when the light is not sufficient for the closer work in sewing.

This is an excellent way to make a memory album, as many a mother will prove the permanent placing of a piece of each little dress or waist of the boy or girl in a quilt being a source of great pleasure to the owner in mature life, the material and the fact that it was put together by the mother's hand rendering it doubly precious.

The present generation is lacking in the dainty seamstresses of old, the sewing machine tempting to little hand work save as the new fashions have lately brought back the fancy stitches. But with the return of the patchwork quilt the child who is beyond the pale of modern school instruction in sewing will be put into the same traces which turned out the dainty sewing of a couple of generations ago, when the "Sampler" and the patchwork were a part of the little girl's earliest education. And through this drill we shall have better sewers along all lines of work.

When selecting material, strive to have it all of nearly a similar grade, good material and fast colors. Of course, no one would think of using cotton, wool and silk in the same cover. Sort over and work each by itself. And, by the way, the filling for a covering of cashmeres and similar goods cannot be improved upon if made from a fleece of home-grown wool, carded with the old-fashioned hand cards at home if necessary. Such a filling is light and warm, and with good care it will remain light to the end, and may even be reworked and made to repeat its service. And if the ends are covered with a shield of wash goods it will need very little renovation.

Some of the old patterns may well be resurrected. There is the nine-patch, still admirable to enlist the beginner, and the still easier four-patch for the very little fingers. The basket patterns are popular and there are numerous combinations of squares and diamonds which the skillful will discover for themselves. When wanting something new, just practice upon the changes which may be made with the various common geometrical figures.

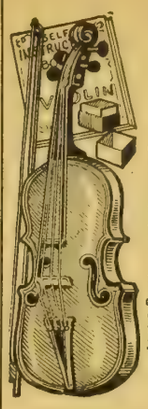
A very pretty and simple quilt is made by commencing with a center of bright color cut in a regular hexagon. On each of the six sides of this arrange a row of similar hexagons in some contrasting color, and so continue round and round until the quilt is of the desired size. The only objection to this is, that there is considerable waste in cutting this form of block, the diamond or square fitting into the piece left by its predecessor to much better advantage. Then there are the diamonds placed in strips of alternate dark and light, or strips made up of alternate diamonds and squares, which, sewed together, give an ingenious form of block work. And the more simple "Sunshine-and-Shadow" quilt is made up of rows of squares in the brightest colors running diagonally across the quilt. All these and many more will occur to the artistically-inclined, and the waste pieces may be thus put to a pleasing use.—Bessie L. Putnam.

For Poultry Raisers.

Only a few months do incubator manufacturers advertise in farm papers, and only a few of them are with us this year. We have the very best makes and those that are best worth the money. All these advertisements will be found on page 18. It is absolutely impossible to conduct a poultry farm without incubators, and if it were not so, the purpose is to do the thing properly; and that is not all; a few acres devoted to poultry by a boy or girl will make life worth living on a farm. Look over these advertisements and send for the catalogues; there is money in doing so.

No More Seed Distribution.

Congressional distribution of seeds was ended by the failure to vote the money to pay for them. The amount estimated was $256,000, and it is a good saving, no matter how it was brought about. Distribution of new and rare seeds in small quantities by the Agricultural Department and placing them in the hands of experimental farmers is all right, but the distribution of seeds by Congressmen as a gratuity to their voting constituents was a wasteful misappropriation of public money, and it will be a good thing if the practice is never revived.



VIOLIN FREE

This is a fine, handsome, clear toned, good sized Violin of highly polished, beautiful wood, ebony-finished pegs, finger board and tail piece, one silver string, three gut strings, long bow of white horse-hair, box of resin and FINE SELF-INSTRUCTION BOOK.

The Higher Life.

A fashionably-attired city woman has just left my home. Her husband earns a good salary; she lives in a high-priced, modern flat; has no children; entertains a good deal, and finds life generally dull. During her call a letter is handed to me and I recognized it as from my Cousin Josephine, who lives on a farm in Iowa. I mention this to my caller, and she exclaims: "Heavens! don't say lives. Say exists, dies, anything but lives!"

"And yet your life is an empty one as compared with hers," I said.

The caller flounced up angrily. "My life empty! I lead a full life, if ever a woman did!"

"But does anything in it really count? You entertain and are entertained; you shop and dine; you go to the theatre and read a lot of light stuff that doesn't feed your brain any more than the foam of a soda feeds your body. No; don't get angry. Your life is the same as hundreds of city women in your class. Just listen to Josephine's letter and then tell me which is the richer life:

"The children are all in bed, and I ought to be there, too, but I'll steal a little of my sleeping time to write to you. It's my first letter to you since the darling baby came and she's now nearly four months old. And such a dear! Yes, I'm busy, but what's time for if not to use? And then the children are all such a help to me. Philothea is nine now and she's such a good baby-minder. Nanny's not so good at that, for she's so full of tricks that she wants to experiment on the baby when I am not around, so I make Philothea the little mother while Nanny must help with dishes and do errands. Peter, who is five, is good at little chores, and he helps watch baby when his big sisters are at school. And John, you know, is only three, so he can't do very much except put his playthings away when he is through with them. And he takes care of the things baby throws on the floor. Then he makes a game of trying to keep his tiny garments clean. You see with such a bunch of us and no outside help each one must do his part or the burden upon some one else will be too heavy and that's the lesson I try to teach the little brood. It's a good plan to practice in the home, and when these youngsters are full-fledged and go out into the world to build their own nests they bid fair to be lifters and not leaners; workers, not shirkers.

"Lonesome? Can you imagine the queen-bee in a busy hive as being lonesome? Well, we're a hive of busy bees and we couldn't be lonesome if we would, and we wouldn't if we could. Why, child, we're living! We're blanketed with snow just now and that means that when we go over to help our nearest neighbors (six miles away, remember) celebrate their tenth wedding anniversary tomorrow evening we can all cuddle down in the big bob-sled and make a jolly sleighing party of it.

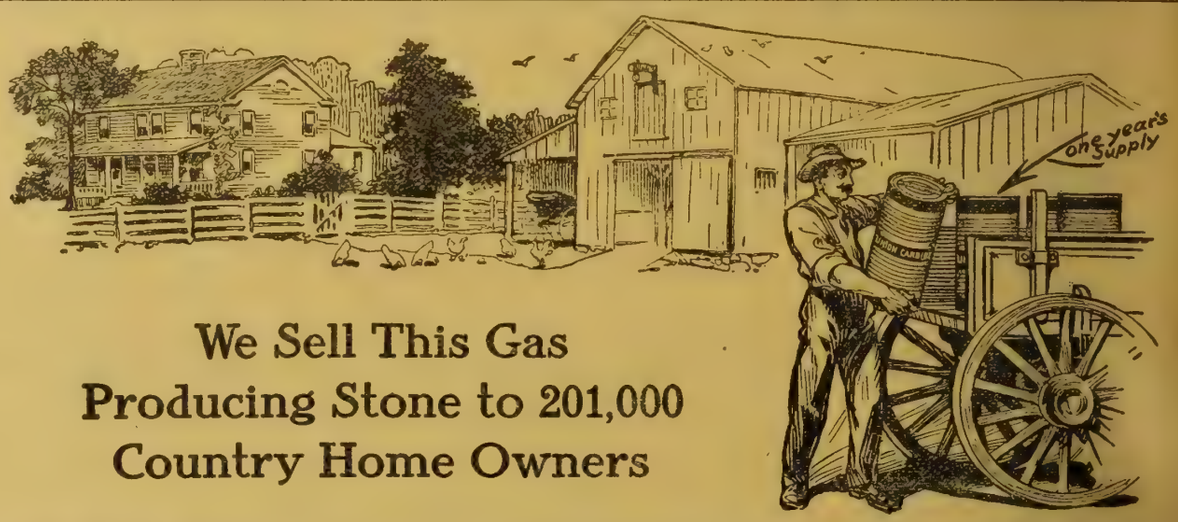
"Although we don't see as much of folks and fashion (you see I'm still answering your lonesome query) as city people do, it seems to me we see a great deal more of God, or at least of the way He works through nature. His stars shine clear and bright above us, leading us on. His sunsets give us more glorious paintings than any of the masters have ever placed in the city galleries; we have heavenly music without paying the price of opera seats. Ah, cousin, we're near to the heart of things. We're working hard, but we're not rusting out, and we're making every day count for something. I'm willing to wear old-fashioned clothes when need be, and to miss the froth of life which some people find so entertaining, just because I'd rather have the real things which I have now—my outdoor life, my precious bairns and that unspeakably precious love of my big farmer husband."—Janet Thomas Van Osdel.

Going Home With the Crowd.

Sometimes there is safety in numbers, but it depends upon who makes up the numbers. I taught in a country school for a couple of years and I learned some things about the ways of those children when in a crowd which it may do good to relate. The school was in a community which ranked high as an intellectual center. It was not far from a thriving little manufacturing city and the influence of the progressiveness of the city was felt in this section of the country. I had not been in the school two weeks before I realized that its moral tone was scandalously low. This was a distinct shock to me, knowing, as I did, the reputation of the community. However, facts were facts, and the vile writings I found about the buildings, the sly looks passed between the boys as they interpreted with double meaning the words found in the lessons, could mean but one thing. The girls were not far behind the boys. I was only eighteen myself but I determined to fight for the purity of those young people. I kept the boys after school one evening to clean off every bit of evil writing in their section of the grounds, and on the next evening the girls were requested to clean their side of the grounds. Taken individually, I found the children pleasant and clean-talking. But in crowds they were filthy. I kept with them on the playgrounds and joined in their games. So long as they were under my eye they were good, but the moment they got alone things went differently. I saw that I could keep them decent while at school and I appealed to the parents to help me by calling for their children at night. But I received no thanks for this effort save from one woman who questioned her little boy, one of the best of the lot, and he told her of some of the mischief they had been up to. This woman thanked me then and still thanks me for helping her to keep her boy clean. I tried the plan of giving the girls only thirty minutes morning and letting them go half an hour earlier than the boys. In a couple of days I learned that the girls went half a mile down the road and waited for the boys. Again I warned the mothers and again I received no thanks and no help. So I struggled on alone and did the best I could.

In the second school I taught conditions were not nearly so bad, though the community did not rank so high intellectually. But here, too, I found that in the crowd there was a tendency to tell smutty stories and say anything unfit for innocent tongues or innocent ears. Four or five of the best girls always separated from the crowd and walked home alone. I asked them to take some of the younger ones under their protection, which they gladly did.

Not many schools are so bad as the first example given, but there is a mixed class of pupils in every country school. They come from widely different homes and they are of all ages. I believe it is best for mothers to consider what conditions it is possible their children may meet, so that they may investigate and safeguard them as best they can.—Janet Thomas Van Osdel.



We Sell This Gas
Producing Stone to 201,000 Country Home Owners

The stone is artificial. To make it we heat lime and coke in electric furnaces at a temperature of 6000° Fahrenheit—the highest temperature known to science. With the aid of this great heat the materials used are fused into the curious stone known commercially as Union Carbide. This Carbide comes from the furnaces in huge chunks. These we crush into a number of different "sizes" for different uses.

LIGHTING

Packed in sheet steel drums and cans, we ship this Union Carbide direct to customers from our own warehouses, located in all parts of the United States. In these drums the Carbide will keep indefinitely and can be stored and handled as safely as coal.

Drop a piece of this Union Carbide into water and a seeming miracle takes place. The dark stone instantly changes into white slacked lime. At the instant of this transformation, the stone releases a quantity of gas, which bubbles to the surface of the water. This gas is genuine acetylene, a hundred feet of which will give more light than a thousand feet of city gas.

The process of making this gas is simply one of bringing the Carbide and water in contact. Several types of machines have been designed to do this automatically. The best of these machines bring a very small quantity of Carbide and water together at a time—just enough to supply gas to the burners when they are in use. When the burners are turned out the machine stands idle.

These machines have been perfected with the aid of the National Board of Fire Insurance Underwriters. They are now mechanically perfect—so perfect that there are over 201,000 in use. No one who has ever seen one of these acetylene lighted country homes will ever forget the beauty and brilliancy of the light. No one who has ever cooked on an acetylene range will ever again go back to coal and wood.

We do not handle Carbide gas machines. We only sell the UNION CARBIDE, which the machines all use. It is obviously to our interest to exert every effort to aid country home owners to secure Carbide machines that will insure satisfaction. To this end, we keep posted on all machines which use our product. We know which ones are best suited to different requirements, and we gladly supply information and advice to all who care to write us.

Just send us your name and address and tell us how many rooms, barns and outbuildings you wish to light. We will tell you just what type of machine you should have—tell you where it is made and give you an estimate as to its cost.

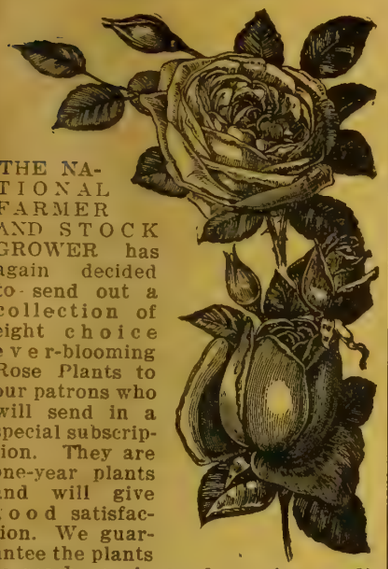
COOKING

With our letter, we will send you with our compliments a book about this rural illuminant and cooking fuel. The book tells how the lights can be fixed to light without matches. How they can be permanently fixed to walls and posts in barns and outbuildings. How the machine, the handsome bronze chandeliers and the cooking range can all be set up with little labor. It tells the whole wonder story of just why over 201,000 of our customers have found this Carbide gas much safer and many times more convenient than coal, wood and kerosene it is displacing. Write us today.

Tell us how many rooms in your house and how many barns and outbuildings you have. We will write you fully and frankly and send our free literature by same mail. Just write to UNION CARBIDE SALES CO.— 126 So. Michigan Blvd., Chicago, Ill.

A GARDEN OF ROSES.

Fine, Sturdy Plants—The Most Delightful Premium Offered by Any Farm Paper.



THE NATIONAL FARMER AND STOCK GROWER has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription. They are one-year plants and will give good satisfaction. We guarantee the plants to reach you in good growing condition, and with each package we send complete directions for planting, care and culture. The time to send the order is now—before you forget it—and you will receive the plants at the best time for planting in your section.

The collection consists of:

THE OLIVIA — A most gorgeous, distinct rose of deep, brilliant rosy red, and one which excites the admiration of everyone beholding it.

2. THE SUNBURST—An intense exquisitely beautiful rose of orange-copper and golden yellow.

3. THE BRIDE—The most satisfactory white rose of dainty, chaste, beautiful flowers and healthy growth.

4. MY MARYLAND — A pink beauty, rapidly developing a sturdy, shapely plant and large flowers.

5. SOUV. DE PRESIDENT CARNOT — A wonderfully handsome rosy-blush color creation.

6. THE METEOR—For intense, rich, velvety, crimson color no other rose compares. The flowers are large and double.

7. THE BLUMENSCHMIDT — A pure citron-yellow; a first-prize winner at every show.

8. DOROTHY PERKINS — A shell-pink, hardy climber and one that should be extensively planted.

Our Grand Special Offer.

Send us a money order for fifty cents. ONLY fifty (50) cents. We will credit you with ten-months' subscription to THE NATIONAL FARMER AND STOCK GROWER, and at the proper time we will also send you the full set of EIGHT ONE-YEAR ROSE PLANTS as described. The roses are sent out directly it is safe to dig them in the spring. Send in your order at once with fifty (50) cents and it will receive prompt attention.

Here is a Subscription Blank.

The Hale Publishing Co., 3550 Vista ave., St. Louis, Mo.:—Gentlemen:—Herewith please find fifty (50) cents. Please send me THE NATIONAL FARMER AND STOCK GROWER for ten months, and the full set of EIGHT HARDY, EVER-BLOOMING ROSES, one-year plants, postpaid, safe delivery guaranteed.

SELECTED POETRY.

HER BEST.

Have you noticed the change it sometimes makes
In a woman's face—
Passive it may be, and dull and cold,
Neutral-tinted and common-place—
When the sun falls on it? How swift it takes
Meaning and color, and soft outlines?
How strange new lights from the eyes will slip
And new tints blossom on cheek and lip?
The whole face softens and warms and shines,
And the hair, a miser grown overbold,
Shows forth of a sudden, undreamed-of gold.
Oh, there's many a woman, East and West,
Must be in the sunshine to look her best!

Have you ever noticed the change it makes
In a woman's face,
And her heart and her life, that were cold and dull,
And slightly inclined to common-place,
When love shines on them? How there breaks
Over her nature a wave of gold,
Bring her beauty unknown before,
Mellowing, widening more and more,
Lifting her up till her eyes behold
Ever-new blooms for her hands to cull,
So she and her life grow beautiful?
Oh, there is never a woman, East or West,
But must live in love's sunshine to live her best!

—Clara W. Bronson

ALL ROADS LEAD HOME.

From out the valley four roads wind away
Like pale brown ribbons in a grassy sea,
And one leads south, another north lies free,
And east and west after the others stray.

Which shall I follow? East, to the old home,
Where once the hand of love held wide the door?
Westward, where still adventure goes before
And the great prairies welcome feet that roam?

Shall I go South, where winter roses bloom,
And spring usurps all months of the bright year?
Or North, where the great pines make music clear
And the long winters robe the world in gloom?

Why should I choose? The home my youth held dear
Is but a shell, with strange, unfriendly mien;
Less weary hands adventure's fields may glean,
Too far, too strange, the West whose strength I fear.

The South would cloy me with its changeless sweet;
The North would pierce me with its icy dart;
Roads wind away, but, oh! fear not, my heart,
They all return, and here, at home, they meet.

—Ninette M. Lowater, in New York Sun.

THE SEARCH FOR THE GOOD AND THE BAD.

It never takes a kicker long,
When hunting things at which to kick,
To find where matters are all wrong,
Or where the thorny boughs are thick;
'Tis not a sign that one is wise
If one complains by day or night;
The dullest may, with half-closed eyes,
Perceive where evils are in sight.

The ones who look for things to praise
Must be courageous and alert;
They can't afford to spend their days
In nursing every little hurt;
With manly hopes, with words of cheer,
With wisdom that is deep and sound,
And with a vision that is clear
They learn where goodness may be found.

One must be wise and strong and brave
To see the good in everything,
To turn from what the wicked crave
And keep from idly caviling;
But any fool with frowning face
And evil thoughts and shuffling feet
Can very quickly find the place
Where Sin's dominion is complete.

—S. E. Kiser.

FAITH.

She kept her lamp still lighted,
Though round about her came
The throng whose faith was blighted,
To laugh at her poor flame.

She kept her sacred altar
Lit with the torch divine,
Nor let her purpose falter,
Like yours—Oh! world—and mine!

And they whose cold derision
Had mocked her, came one day
To beg of her the Vision
To help them on their way.

And barefoot or in sandal,
When forth they fared to die,
They took from her poor candle
One spark to guide them by.

—From Cell 13.

Cincinnati, Ohio

"WHY DON'T YOU WHISTLE?"

Sometimes, when things look bleak and blue
And pull upon my senses,
When I've allowed myself to view
The world through darkened lenses,
When skies seem tinged with smoke and soot,
And every flower a thistle—
This question to myself I put:
"Old boy, why don't you whistle?"

No one, I'll hazard, is immune
From fits of melancholy;
But power inheres in some old tune
To make one's spirit jolly.
When every scene on this old earth
With megrims seems to bristle,
This recipe has wondrous worth:
"Purse up your lips and whistle."

Don't let some morbid brooding hold
You in its bondage fearful,
But pipe some aria of old
Whose notes are sweet and cheerful.
If you should ask me to indite
A heartening epistle
Unto mankind, this would I write:
"Do NOT forget to whistle."

So, brother if you'd take up arms
Against a sea of sadness,
Most potent have you of all charms
To dye that sea with gladness.
Accuse no vague untoward fate,
And sling no random missile;
Your woes and foes capitulate
When you tune up your whistle.

—Detroit News.

HOW SHE SHOPPED.

She wandered down the center aisle,
Whence all but her had fled;
The lamp that lighted up her smile
Was not the kind, she said.

She halted at another booth;
There costly glass held sway;
She scorned the goblets, for, in truth,
They would not match her tray!

At every counter on the route,
From basement to the top,
She found the things that wouldn't suit,
But failed to find a mop.

She lingered at the silk display
From one o'clock till four,
Then smilingly she tripped away
To seek another floor.

From four till five she hung about
The petticoats on sale;
Then she recalled that, past a doubt,
She ought to buy a veil.

"But they are quite too near," she said;
"I'll wait till after Lent;"
'Twas then she bought a spool of thread
And had it charged and sent.

—Chicago News.

JUST A TIP.

There isn't much in this old world
But sunshine, after all;
The smiles and tears, the hopes and fears,
The wormwood and the gall,
Are all mixed up, and when I come
To analyze the whole,
I find the sunshine dominates
My heart and broncho soul.

Ye grouchy pessimist whose eyes
Reach not the skies of blue,
Join eyes with mine, where God's sunshine
Will meet your lengthened view.
Then let your face reflect it, back
In smiles of sweet content,
And shame should roll athwart your soul
For all the growls you've spent.

—Capt Jack Crawford (Poet Lariat.)

RICHES.

If I can leave behind me, here and there,
A friend or two to say when I am gone
That I had helped to make their pathways fair,
Had brought them smiles when they were bowed with care,
The riches of this world I'll carry on.

If only three or four shall pause to say,
When I have passed beyond this earthly sphere,
That I brought gladness to them on a day
When bitterness was theirs, I'll take away
More riches than a billionaire leaves here.

—Detroit Free Press.

DEFORMITIES CURED

CLUB FEET of any variety, and at any reasonable age, can be made straight, natural and useful. No plaster paris, no severe surgical operation, and the result is assured.

POTTS DISEASE when treated in time should result in no deformity; paralysis can be prevented and the growth not interfered with. Write for information and references.

SPINAL CURVATURE Recent cases usually make good recoveries and even those of long standing do well. No plaster paris, felt or leather jackets. Write for information and reference.

HIP DISEASE in the painful stage can be relieved and the inflammation permanently arrested. Shortening, deformity and loss of motion can often be corrected. No surgical operations or confinement.

INFANTILE PARALYSIS We can refer you to many responsible people all over the country, whose children, afflicted with Infantile Paralysis have been practically restored at this Sanitarium.

DEFORMED KNEES AND JOINTS of many varieties yield to our methods of treatment, and if interested you should know about it.

This is the only thoroughly equipped Sanitarium in the country devoted exclusively to the treatment of crippled and paralyzed conditions.

ILLUSTRATED BOOK FREE Write us for illustrated book which will be sent free on request to any address.

THE McLAIN ORTHOPEDIC SANITARIUM

916 Aubert Avenue ST. LOUIS, MO.

Apple Market at St. Louis.

On the last day of February, at St. Louis, apples were sold at wholesale as follows: Fair to choice Ben Davis at $2.00 to $2.50; Gano at $2.50 to $2.60; Missouri Pippin at $2.50 to $2.65; Willowtwig at $2.75 to $3.25; Winesap at $3.00 to $3.75; No. 2 and inferior fruit at $1.75 to $2.25; Eastern Greenings at $1.75 to $2.50 for scalded to $3.25 and $3.50 for fancy; Baldwins, $1.90 for No. 2 to $3.00 and $3.15 for fancy; fancy Virginia Yorks at $3.00 and $3.25, delivered. Sales: Fifty barrels No. 2 Baldwins at $1.90; part car fancy do. at $3.15; 100 Barrels Ben Davis at $2.35; 25 barrels Ben Davis at $2.05.

Potatoes, Onions and Cabbage.

On February 28th, 1913, at St. Louis, the principal vegetables were selling as follows: Cabbage, $10 to $11 per ton; Red Globe onions at 20 to 27 cents a bushel; white onions at 40 to 60 cents a bushel; potatoes, Rurals, at 48 to 52 cents a bushel; Burbanks at 47 to 50 cents a bushel; sweet potatoes at 90 cents to $1.10 a bushel.

Sheep Trade at St. Louis.

During the last week in February, on the St. Louis market, a string of Colorado lambs sold at $9.00 per 100 pounds; medium kinds at $8.25 to $8.65; fair, $7.50 to $8.00; and the culls and others that were not fat at $5.00 to $6.50; yearlings, if fat, found a good market, and the best went at $7.35 to $7.65, and fair at $7.00 to $7.25; choice wethers sold up to $6.65, and some ewes went at high as $6.15, with the bulk of the mutton sheep, the middle and latter part of the week, at $6.00; plain mutton sheep brought $5.00 to $5.50; stockers went at $3.50 to $4.50, and bucks at $4.75 to $5.00.

GREATEST
Cream Separator Offer!

The Wonderful French Machine Sold in America For First Time

The Melotte Cream Separator—Guaranteed for 15 Years

The Genuine French Melotte Sold in America for First Time

This is positively the first bona fide, no-money down offer ever made on any cream separator. No manufacturer of any cream separator ever **dared** to make such a startling offer before. All others who have ever **pretended** to offer you a free trial or to send their separator without any money down have taken care to get **something** out of you first.

But we don't want **anything.** All we ask is your simple request. We send the cream separator direct to your farm absolutely without any money down. We can afford to do this because the Melotte sells itself. It has an absolute self-balancing bowl.

We want you to read every word of this great offer. It is an offer which, we think, proves our **absolute faith** in the great **Melotte Cream Separator.** You are given the opportunity of seeing just how much cream this marvelous separator will extract from your milk before we ask you to send us one cent. Now, read every word of this wonderfully liberal offer.

Sent Without One Penny Down

30-Day Free Trial!

Your simple word that you would like to see this cream separator in your own barn or dairy house brings it to you instantly. We send you the Melotte without a bit of quibbling or hesitancy. We neither ask nor want you to send a penny. We don't want a cent of your money. The separator goes direct to you. You set it up, give it a thorough test with the milk from your own cows. We give you a free trial that **IS** a free trial in every sense of the word. It is a free trial because we don't ask you to pay us any money down—there is no C.O.D.—no lease nor mortgage. You keep your money right in your own pocket. You pay nothing to anybody.

Monthly Payments

These payments are so small that you will hardly notice them. You only pay out of your increased profits. You don't need to be without a cream separator when you can have the separator right in your dairy house while you are paying for it. In reality you do not pay for it at all. It pays for itself.

This is what we want to demonstrate to you. We want to demonstrate and prove beyond all peradventure that the Melotte Cream Separator does pay for itself. Only a few months' use of a Melotte Cream Separator and you will be satisfied that this statement is **absolutely correct.** A few months and the separator has paid for itself. It does not cost you a penny because the increased amount of cream has paid for the machine.

Melotte Runs 54 Years!!

At the Melotte works one of the Melotte Separators has been working every day (driven from the shafting) since Nov. 5, 1900, running 10½ hours per day—or 19,687 hours at a cost of only $7.50. Reckoning that a farmer works his separator one hour per day, the 19,687 hours represent (on the farm) a period of 19,687 days, or nearly 54 years. Therefore, the total cost of maintenance for the Melotte Separator for 54 years, inclusive of oil, will be only $7.50. At great trials of separators held at Boulogne, France, Oct. 5 to 9, 1905, under the auspices of the Federated Agricultural Societies of the North, the Melotte easily vanquished all other separators—proving the cleanest skimmer and taking less power—and was **Awarded the Gold Medal.**

World's Grand Prize Winner

Here is a small percentage of First Prizes the wonderful Melotte has won:

1888—Brussels—International Exhibition—Progressive Prize.
1889—Tongres—First Prize.
1890—Brussels—First Prize.
1891—Louvain—Diploma of Honor.
1892—Bouchout-lez-Anvers—First Prize.
1893—Theux—First Prize.
1894—Weert—First Prize. Medal of Higher Merit.
1895—Vienna First Prize.
1895—Drontheim—Silver Medal. First.
1896—Patay—First Prize. Gold Medal.
1897—Rennes—First Prize.
—Brussels—World's Exhibition. First Prize.
1898—Lyons—First Prize.
—London—First Prize.
1898—Poitiers—First Prize.
1900—Northants—First Prize. Paris Gold Medal and First Prize.
1901—Vise—Diploma of Honor.
Marchin—First Prize, Gold Medal.
1902—Prague—Diploma of Honor. First Prize.
1903—Reggio Emilia—Diploma of Honor. First Prize.
—Aussig—Gold Medal. First Prize.
1903—Luxembourg—Gold Medal. First Prize.
—Reims—First Prize.
—London—Gold Medal. First Prize.
1904—Heyst-Op-Den-Berg — First Prize. Gold Medal.
1904—Vouneuil S Vienne—First Prize.
—St. Louis—First Prize.
1905—Bombay—First Prize.
—Durban—First Prize.
—Orleans—First Grand Prize.
1906—Milan—First Grand Prize.
—Tours—First Prize.
1907—Amsterdam—First Prize.
1908—Starodour—Grand Prize.
1909—Saint-Gilles-Termonde—First Prize.
1910—Axel—First Prize.
1911—Sinay—First Prize.
—Brussels—Grand Prize and First Gold Medal.

Test With Other Machines

Before you decide to buy any Cream Separator arrange to test a Melotte along side of the machine you now think is the best separator in America. We want you to do this. Then there can be no doubt in your mind as to whether you are really getting the best machine. This is the only way to buy a cream separator. Then it will not be necessary to take anybody's word. You'll know which machine turns easiest—which machine is the best made. You'll know which skims the closest. You'll know which will make you the most money. Write to us about the **Melotte** and the **Melotte Free Test** today. We are the sole factory representatives in America.

Valuable Book "Profitable Dairying"

Send Today! Get This FREE DAIRY BOOK SENT FREE!

Just ask for this book and it will be sent to you. It is free. Place your name on the coupon, cut it out and mail it at once. Then we will send you our great free book, **"Profitable Dairying,"** telling you everything about cows and dairying, butter and cream—how to feed and care for cattle, how to make them twice as valuable as they are now, how to make more money than ever before out of your cows. This book is written by two of the best known dairy scientists in the country—Prof. G. H. Benkendorf, Wisconsin Dairy School Agricultural College, Madison, Wis. and K. L. Hatch, Winnebago County Agricultural School, Winneconne, Wisconsin.

We will also send you Our FREE Catalog, describing fully the great Melotte self-balancing bowl Cream Separator and telling all about our liberal terms.

ROAD IMPROVEMENT.

Wanted, an Expression of Opinion From Farmers to Assist Congress in Framing Laws and Appropriating Money For the Construction of Public Roads.

Hon. Jonathan Bourne, Jr., United States Senator, is Chairman of the Joint Committee on Federal Aid in the Construction of Post Roads. He has written The National Farmer and Stock Grower, asking us to obtain a consensus of opinion on the basic questions involved in the granting of federal aid in road improvement. Mr. Bourne and his committee are entitled to such an expression, and his list of questions can easily be answered. We advise such of our readers who are able to do so to write to Mr. Bourne, and without repeating the questions answer them by numbers, cutting out this list of questions and sending them in the letter addressed to Hon. Jonathan Bourne, Jr., United States Senate, Washington, D. C.

The Questions Are.

1. Should the government make appropriations in aid of public roads?

2. On what roads should the first government appropriation, if made, be expended: (a) all roads; (b) post roads (rural free delivery and star routes); (c) main traveled market roads; (d) main highways connecting important cities and towns in state; (e) trunk line, interstate highways connecting state capitals and large cities?

3. Should the government appropriation be expended on construction, on maintenance, on general improvement, or on any or all of these, or should the allotment by the government be unconditional, or paid as a reward after local authorities have constructed or maintained a highway in good condition?

4. What proportion of cost of construction, improvement of maintenance should be borne by the national government, state, county, road district and abutting property owners, respectively, or what amounts per mile should be paid as rewards?

5. Should the federal appropriation be apportioned among the states on basis of population, area, mileage of roads, mileage of rural and star routes, taxable valuation, or a combination of these?

6. Should the supervision of construction or maintenance of government-aided roads be by the federal government, the state and local authorities, or jointly?

Additional note by the editor—So many laws are passed and so much money is appropriated without consultation with the people it is with great satisfaction we ought to receive the appeal for information and it ought to be attended to and answered as a duty we owe to ourselves and our country.

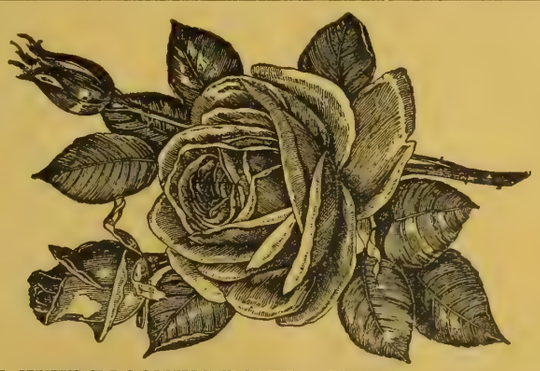
FAIRFAX, 16, 331,511.—Calved January 5th, 1909; sire, Perfection Fairfax; dam, Cherry Donald. Exhibited by J. P. Cudahy, Kansas City, Mo. At the Chicago International Live Stock Exposition of 1912 he was senior and grand champion Hereford bull. It was stated at the time that a better bull of the breed had never been seen in the show ring. In this connection we desire to invite attention to the Book of Live Stock Champions advertised on page 2. In that book there are 750 pictures, nearly all of the same size and all of equal merit to the picture of FAIRFAX, 16.



HARDY, EVER-BLOOMING ROSES.—This is a simple reminder of the most delightful subscription premium ever offered by a farm paper. We have used this premium several years and it has made the paper many good friends. Full particulars will be found on page 31 with a coupon blank to be signed by the subscriber.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912—True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

This is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors: the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, mother of champions or winner in the prize ring.

The Book of Live Stock Champions is receiving the highest praise from the live stock breeders' associations and from officials of the Department of Agriculture. It is being adopted as a text book at high schools and colleges. Active, up-to-date stockmen having an interest in their business and a desire to do their share towards live stock improvement are subscribing for the Book of Live Stock Champions themselves and recommending others to do so.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special inducements to paid-in-advance subscribers, to old friends and patrons. We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. This is an extraordinary offer.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Book of Live Stock Champions, cloth-bound edition of 1912.

GROWING STRAWBERRIES.

A Few Pertinent Remarks on the Cultivation of the Greatest Small Fruit.

Choose a well-drained piece of ground for the strawberry patch, and if it is on a southern slope the berries will be days earlier than if the land has a northern exposure. If the ground was not plowed last fall, the sooner it is turned this spring the better.

If it is plowed in narrow lands or strips with a dead-furrow to carry off the surplus water, the soil will be in condition to work earlier than if the ground is plowed in a single land; this means a great gain, as the earlier the plants are set the better rooted they will become, and whether they are grown in the matted row or any other way, the heavier the crop will be.

Get the plants from a reputable grower, and they will be true to name and his descriptions of their characteristics can be depended on; and last, but not least, they will not be from an old fruiting bed. We do not hear as much of "pedigree" plants as some years ago, but the principle is the true one, whether growing animals or plants; none should be allowed to reproduce themselves that are not up to the standard as to size, vigor and other desirable qualities.

Grow both staminate, or male, and pistillate, or female, plants. Some of the heaviest bearers are female plants, and the crop will be larger if there is a preponderance of such varieties. It has been recommended to set a row of staminate varieties to two rows of pistillate, but we had a heavy yield of perfect berries when a row of the old Wilson's Albany was set alternating with two rows of Warfield, this arrangement being continued for about three rods, when a break was made, and five rows of Warfield and eight rows of Crescent, also a female or imperfect flowering plant, and next a row of Gandy, which is a staminate or perfect flowering variety.

The Warfield and Crescent in the block between the Wilson and Gandy were intended for propagating plants, but were so full of berries that we let them fruit instead. That they had been perfectly fertilized was shown by the entire absence of "buttons," and this experience led us to use a smaller proportion of male or staminate plants, or, as they are properly termed, perfect, the flower having both stamens and pistils. The arrangement of the rows may have been a factor in the ready pollenizing of the plants, the Wilson being on the south side of the patch and the spring winds in Missouri are mostly from the south, serving as a carrier of the pollen.

Do not fail to use potash in some form on the strawberry patch or field, for the fruit will be larger and much better flavored and the texture will be firmer, also the color higher. On a small patch, the ashes from the kitchen stove, if wood is burned, will return a much better "revenue" than if made into soap. If there are no ashes available, apply sulphate or muriate of potash at the rate of 200 pounds to the acre. It will be easy to figure on this basis the quantity needed for smaller areas.

Manure from the stable is good as a source of nitrogen and humus, but the more you apply the more potash is needed, or there will be a rank growth of leaves without a corresponding yield of fruit. The humus is necessary so as to make the soil hold a good store of moisture in reserve for the berry crop, which is greedy of water, and unless there is plenty, the berries are not large and luscious, as witness the last pickings when the ground has been tramped by pickers and the heat of early summer is coming on.

Spread out the roots in fan-shape when transplanting, so that they will have a larger surface for feeding ground, and set the crown even with the surface when pressed into the earth with the hands, or with the foot, as some planters do. Cultivate as soon as set and cut off all runners as soon as they appear, for a month at least, so that the plant may be well established before being allowed to reproduce itself.

Pinch off blossom stems when setting plants and all that appear afterwards, and keep the ground loose and the weeds destroyed by frequent cultivation. When any runners are left to make plants, train them in a row with the parent plant and "anchor" with a pebble or a tiny clod, so that it may take root as soon as possible and feed itself.—D. C. Cornman.

Heavy vs. Light Seed.

During the past ten years a great many experiments have been conducted by various Experiment Stations to determine the relative effect of different-sized kernels on the quantity and quality of grain produced per acre. The work at the Nebraska Experiment Station is worthy of note on this particular subject. Tests there were made with wheat, the fanning mill being used to make the seed separations.

In the tests, Turkey Red, a hard winter wheat, and Big Frame, a soft winter wheat, were used. A lot of seed from each of the above varieties was separated into two parts, the heavier and lighter halves. These were again separated into the "heaviest heavy" and the "lightest light," only the "heaviest heavy" and the "lightest light" being sown. To check results, ordinary seed as it came from the separator was planted. The same method was followed each year for a period of eight years. The seed from each crop of the "heaviest heavy" and the "lightest light" was separated and only the heaviest quarter of the "heaviest heavy" and the lightest quarter of the "lightest light" were used for seed.

At the end of the experiment the average yields for the three kinds of seeds were practically the same, while the average weights per bushel from the crops harvested showed hardly any difference in favor of anyone particular kind of seed. From the above results it is evident that the selection of the heavier seed for sowing purposes will not materially increase the yield per acre or the weight per bushel of the crop harvested.—James D. Marshall, Colorado Agricultural College, Fort Collins, Colorado.

Chicago Packers at New Jersey.

On March 15th it was telegraphed from New York City that anticipating the removal of the tariff on beef on the hoof, the leading meat packers of the country are preparing to move their stock yards from Chicago to Jersey City.

Armour & Co., it was said, expended upward of $2,000,000 during the past several weeks buying property along the line of the Long Dock and at Sixteenth and Cole streets, where, it is understood, a great slaughter house will be erected. It was reported that Cudahy, Nelson Morris & Co. and Swift & Co. are preparing to follow Armour's lead.

Chicago for years has been the center of the packing industry. Under the proposed tariff revision, the packers believe, it will be extremely profitable to import cattle on the hoof from South America, and it will be much more convenient to handle in Jersey City than in Chicago.

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay

Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000 For Improvements

The $2,000 loan will help you in erecting your buildings, and you are given twenty years in which to fully repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle, sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based on Good Land

Finest land on earth for grain growing, cattle, hog, sheep and horse raising, dairying, poultry, vegetables and general mixed farming, irrigated lands for intensive farming—non-irrigated lands with ample rainfall for mixed and grain farming. These lands are on or near established lines of railway, near established towns.

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps with full information *free.* Write today.

OUR INDUSTRIAL POLICY.

We Are in Favor of All Foreign Farm Productions Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

THE NATIONAL FARMER AND STOCK GROWER is in favor of the United States Custom House collecting a reasonable range of duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government.

By the tariff policy that we advocate fully one-half the money required for the support of the national government should be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed on our own people.

Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time foreign goods are placed on the free list there is the same result. With moderate import duties received by the United States on various products as now collected the total that is covered into the United States treasury is over three hundreds of millions of dollars a year, and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty results in higher prices to the American consumer and higher taxation also upon our own products to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and be the greatest sufferers.

Cotton Crop For the Year.

The Census Bureau announced that the 1912 cotton crop amounted to 14,295,500, equivalent 500-pound bales, including linters. Running bales included 14,076,430.

Round bales, 81,528 bales; sea island, 73,641 bales; linter bales, 605,704; average gross weight of bales, 507.8 pounds. Ginneries operated, 25,267.

Production by states in 500-pound bales: Alabama, 1,380,756; Arkansas, 825,169; Florida, 53,874; Georgia, 1,846,303; Louisiana, 393,314; Mississippi, 1,092,552; Missouri, 58,319; North Carolina, 891,880; Oklahoma, 1,074,149; South Carolina, 1,215,973; Tennessee, 299,538; Texas, 5,120,252; Virginia, 24,385; all other states, 16,036.

GRAIN ON FARMS.

Annual Report by the United States Department of Agriculture.

Washington, March 10.—Grain of last year's crop remaining on farms, March 1, formed the subject of the Department of Agriculture's crop report, which was issued at 2:15 p. m., to-day. The Department's Bureau of Statistics estimates the amount of wheat, corn, oats and barley on farms, with comparisons for preceding years, the proportion of each crop which will be shipped out of the counties where grown, and the percentage of the 1912 corn crop which was of merchantable quality, as follows:

Wheat.—About 156,483,000 bushels, or 21.4 per cent. of the 1912 crop remained on farms, March 1, 1913, compared with 122,025,000 bushels, or 19.6 per cent. of the 1911 crop in 1912; 162,705,000 bushels, or 25.6 per cent. of the 1910 crop in 1911, and 160,214,000 bushels, or 23.4 per cent. of the 1909 crop in 1910.

About 61.6 per cent. of the 1912 crop will be shipped out of the counties where grown, against 56.1 per cent. of the 1911 crop so shipped, 55.6 per cent. of the 1910 crop so shipped, and 61.1 per cent. of the 1909 crop so shipped.

Corn.—About 1,289,655,000 bushels, or 21.9 per cent. of the 1912 crop remained on farms, March 1, 1913, compared with 884,069,000 bushels, or 34.9 per cent. of the 1911 crop in 1912; 1,165,378,000 bushels, or 40.4 per cent. of the 1910 crop in 1911, and 977,561,000 bushels, or 38.3 per cent. of the 1909 crop in 1910.

About 85 per cent. of the 1912 crop will be shipped out of the counties where grown, against 20.5 per cent. of the 1911 crop so shipped, 22.9 per cent. of the 1910 crop so shipped, and 24.9 per cent. of the 1909 crop so shipped.

Oats.—About 604,216,000 bushels, or 42.6 per cent. of the 1912 crop remained on farms, March 1, 1913, compared with 289,988,999 bushels, or 31.4 per cent. of the 1911 crop in 1912; 442,665,000 bushels, or 37.3 per cent. of the 1910 crop in 1911, and 365,432,000 bushels, or 36.3 per cent. of the 1909 crop in 1910.

About 30.9 per cent. of the 1912 crop will be shipped out of the counties where grown, against 28.8 per cent. of the 1911 crop so shipped, 30.6 per cent. of the 1910 crop so shipped, and 32.7 per cent. of the 1909 crop so shipped.

Barley.—About 62,283,000 bushels, or 27.8 per cent. of the 1912 crop remained on farms, March 1, 1913, compared with 24,760,000 bushels, or 15.5 per cent. of the 1911 crop in 1912; 33,498,000 bushels, or 19.3 per cent. of the 1910 crop in 1911, and 42,602,000 bushels, or 24.6 per cent. of the 1909 crop in 1910.

About 53.7 per cent. of the 1912 crop will be shipped out of the counties where grown, against 57.2 per cent. of the 1911 crop so shipped, 50 per cent. of the 1910 crop so shipped, and 52.5 per cent. of the 1909 crop so shipped.

The Cost of Raising Wheat.

It costs $1.04½ to produce the average bushel of wheat, according to Dr. J. H. Worst, President of the Agricultural College of North Dakota. He says that the farmers are mining the soil and robbing future generations every time they grow a wheat crop and that they are in reality producing the crop at a real cash loss every year.

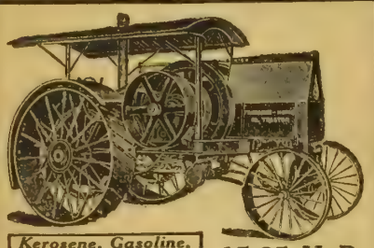
"According to the very best authorities," says Dr. Worst, "one acre producing twenty bushels of wheat mines from the soil forty-four pounds of potash, worth five cents a pound, or $2.20; twenty pounds of phosphoric acid, worth four cents a pound, or eighty cents; and forty-two pounds of nitrogen, worth fifteen cents a pound, or $6.30; a total of $9.30 an acre, or 46½ cents' worth of soil fertility for every bushel of wheat raised. The United States Department of Agriculture says that labor and other production cost, interest on investment, cost of marketing, depreciation, etc., amounts to fifty-eight cents per bushel for all wheat raised in the United States. This brings the actual cost of a bushel of wheat, including the commercial value of the constituents removed from the soil, up to $1.04½."

Since the average price received for wheat is much less than this sum Dr. Worst estimates that the annual loss to the farmers of this country runs well into the hundreds of millions on their wheat crop. The loss in North Dakota through the fertility alone which was removed by the wheat last year, says Dr. Worst, will amount to $70,000,000. Dr. Worst is Vice-President of the International Dry-farming Congress. His figures are so startling in their indication that the future of the American farmer must depend largely upon feeding crops and on the return of the manure to the soil, and that a discussion of the subject will be made a special order at the annual meeting of the Congress in Tulsa, Oklahoma, next October.

Generosity.

"Generosity will win favor with anyone, especially when it is accompanied by humility."—Goethe.

Fairbanks-Morse Oil Tractors



Kerosene, Gasoline, Distillate — 15-25 H. P.

The power of 15 horses concentrated in a single machine.

THE CORN MARKET SITUATION.

Stronger Market For Cash Grain at St. Louis and Steady to Lower Trading in the Future Contract Market.

Regardless of any other interests than our own as farmers, and looking at the subject from a purely mercenary standpoint, we must be very well satisfied with the conduct of the corn market. We especially approve of the St. Louis market because cash corn has held up so well. On March 31st, the day we are writing this article, the market sold No. 2 corn at 54 to 54¼ cents a bushel, this against 49½ to 50½ cents a bushel thirty days previous, 49½ cents sixty days previous, 45 cents ninety days previous, and 46½ cents 120 days previous, which takes us back to November 30th, when the market price decreased, owing to the immensity of the crop. Mind you, we are not talking of a market speculation, but of the market we love to quote. When the goods are delivered the price is paid over and the grain starts on its way to the mill to be ground or to the stables to be fed and consumed. At 54¼ cents a bushel on March 31st, at St. Louis, the cash market was strong.

We now turn to the speculative market at Chicago and look for the May option. November 30th, May corn sold at 48⅜ cents a bushel: December 31st, 48⅜ cents a bushel; January 31st, 52½ cents a bushel; February 28th, 53⅜ cents a bushel; and March 31st, 53⅝ cents a bushel.

We also find on March 31st that the July option was quoted at 54⅞ cents a bushel, and the September quotation at 55¾ cents a bushel. And there the story closes for the present. The corn market is held up by the fact that it is a grain that cannot be demoralized. The farmer who has it can keep it, sell it or feed it; but if he keeps it, his sleep is not disturbed thereby. The possession of a goodly number of bales of cotton may disturb the rest of the farmer, because he anxiously waits the action of other people; but when the farmer realizes that corn is cheap, he very likely starts out to buy more corn instead of selling what he has on hand.

THE WHEAT MARKET SITUATION.

A Rather Quiet Condition, Liable to Break Out at Any Time Before May 31st.

On February 28th, when reviewing the wheat market, we left the cash quotation for No. 2 soft red wheat at $1.06 to $1.09 per bushel, and No. 2 hard wheat was quoted at 90 to 92 cents a bushel. Coming back a month later, on March 31st, we find very little change, but that little is lower. The No. 2 soft wheat is quoted at $1.05 to $1.07½. Thus far we have looked upon the cash trading in St. Louis, where the soft wheats predominate and where most of the mills grinding soft wheats obtain their supplies.

Now we skip to Chicago and arrive at the wheat pit. We are new in the market where future trading is the main business. Some call it gambling, but nobody can separate the gambling from the legitimate trading, which is necessary to competition in trade.

The change in quotations, one month with another, is very small, and there seems to be a total absence of speculation. On the last day of February, quotations were 92⅞ cents for May wheat, 91⅜ cents for July wheat, and 90 cents for September wheat. The March 31st quotations were 90⅝ cents for May, 89⅞ cents for July, and 89½ cents for September.

A wise man would leave these figures as they are, because one has to feel the market by actual trading to really form an opinion of the future that is worth a cent. We are of the opinion, however, that the market will be stronger late in April or at the beginning of May. This in regard to red wheat, which some people are figuring out as being scarce. The report of wheat in farmers' hands, issued by the United States Department of Agriculture, is not a bull document, but some of the experts figure from it that No. 2 red wheat is scarce anyway.

All of our readers will find it to their advantage to obtain a package of post cards before sitting down to read The National Farmer and Stock Grower. The cards should be used for the purpose of writing to such advertisers as invite farmers to do so. The incubator catalogues, for instance, also the seed catalogues and the agricultural college and experimental bulletins mentioned in this paper. Agricultural implements also should be studied with the catalogues, so as to receive the benefits of the manufacturer's claim for superiority and new points of excellence. We wish our friends and patrons to have the benefit of all that will be a guide in their business of farming in all its branches, and a postal card will be found quite useful in this connection.

The High Cost of Bulls.

Years ago native bulls in the cattle market used to sell at $2.50 to $3.25 per 100 pounds, and thousands of Texas bulls sold at $2.00 to $2.50. Right now native bulls are selling at $6.25 to $7.25 per 100 pounds; at least that is what 980 to 1,510-pound native bulls sold for at St. Louis a few days ago.

Style, Comfort and Service
Get This Nobby Pump
"SOCIETY" shoes are now worn and approved by discriminating women everywhere. The pump here shown is one of the finest models our designers have produced—Ask for style 5338.
It is made of the finest quality gun metal leather over the new "Vogue" last. The heels are one inch high, which is a happy medium between extreme high and low. The same style is also made in tan leather.
The "Society" is made in many styles at $3.50 to $4.00, according to style and leather. Shoes of the same quality produced by a small manufacturer are sold for about a dollar more.
Our 23 big "Star Brand" factories employ over 10,000 expert shoemakers and produce over 15,000,000 pairs a year. The more we make, the less it costs to make them. You get the benefit of the saving.
Most of the medium-priced shoes for women contain paper and other substitutes for leather, but the "Society" is honestly made of finest leather. No substitutes are ever used.
"Society" and other "Star Brand" shoes are sold by 20,000 good merchants. Don't just go into ANY store and ask for them, but hunt up the "Star Brand" dealer or write to us for name of nearest merchant who sells them.
Always insist upon having the "Society" shoe with our name on the sole and our "Star" on the heel.

Corn is our greatest Crop

It is worth more than any other crop
It costs more than any other crop

A big item in this cost is over one hundred million dollars' worth of actual potash, which the corn crop takes from American soils every year—more than eight times the total importations of

POTASH

The corn plant uses over a pound and a quarter of potash for every bushel of ears produced.

It uses more than twice as much potash as phosphoric acid.

Supplement the manure or clover sod by 400 to 600 lbs. per acre of a fertilizer containing at least as much potash as phosphoric acid—0-8-8, or 0-8-10, or broadcast 300 lbs. acid phosphate and 100 pounds muriate of potash per acre after plowing and before harrowing, and drill in with the seed 100 lbs. per acre 2-8-8 goods. On muck lands broadcast 100 to 200 lbs. muriate of potash per acre.

To drive away cut worms and root lice, drill in 100 lbs. Kainit per acre with the seed. Potash makes more sound ears in proportion to the stalks. It makes much more and much better corn for either crib or silo. **Potash Pays.**

We sell potash in any amount from one 200-lb. bag up.

Write for prices and for free pamphlets on profitable use of fertilizers

CAUGHT NAPPING.

What is Lost by Not Taking "a Stitch in Time."

Many of our losses are caused by the fact that we are so often caught napping. A man could be named who has within two years about lost a fine currant plantation because he has waited every year till the currant worms were on his bushes before beginning to spray with hellebore. He had resolved that each year he would spray before the first insect appeared, but in some manner the insects got ahead and performed their deadly work before the owner of the plantation awoke to the danger. It will take years of careful nursing to bring that man's small fruit garden back to its original thrift, for the imported currant stalk borer has already annihilated a good many clumps of bushes, taking everything down to the root.

A man that owns a fine apple orchard was unwise enough not to spray his orchard in the years when the fruit crop was light. He was caught napping by the insects and his whole orchard suffered. When the first full year did come the trees had been lessened in vigor by the insects and the attacks of the insects were severe, because so many of the insects had lived over from the previous year. Spraying both for fungoid diseases and for insects should be done every year on a fixed schedule, fruit or no fruit. One orchardist of large affairs says that he took an old orchard and sprayed it for years before he saw the result in the relief from insects and fungous diseases.

Last year a big strawberry grower in Indiana got caught napping on his strawberry boxes. When the berries began to ripen he found that he had an immense crop—acres and acres of berries. In despair he went to a nearby city and advertised in the papers that anyone that would pay him a cent a quart could come and pick their own berries. He had worked for years to produce a big crop of berries and then by being caught napping lost much of the benefit from it.

The farmers in a good many localities are caught napping when they produce a great deal of farm live stock or field crops and do not get together and organize for the marketing of their products at the best advantage. That such organizations can be made a success is illustrated by the success of co-operative selling societies in Denmark and other European countries, and also in our own state of California. Shipping blindly to commission houses in the large cities is a way not to make money out of farm produce, unless the commission man is one known to be strictly honest and fair in his dealings with all the interests with which he comes into contact.

The farmer that cannot be caught napping is the one who succeeds. The farmer has many natural enemies, who are watching to catch him napping. The armies of the weeds are watching him, that they may steal upon him unawares. The borers are lying low, waiting for a chance to get at his fruit trees. They got three hundred pear trees on a Michigan farm in a recent season, and the truth was not found out till the following spring. This winter, where the snow lies deep in the orchards, the field mice and rabbits will find some owner sleeping, and when he wakes from his nap he will find that many of his young trees have been girdled and ruined. The farmer cannot afford to take very long naps.

Soil Inoculation Best For Alfalfa Seeding.

"Where the soil is very rich and properly drained, alfalfa may grow without inoculation, although in that case the plant takes its nitrogen from the soil instead of from the air," says Prof. R. A. Moore, of the Agronomy Department of the College of Agriculture of the University of Wisconsin. Wherever sweet clover grows abundantly, however, alfalfa will be inoculated naturally, as the alfalfa and sweet clover bacteria are the same. When there is any doubt regarding the presence of the proper alfalfa bacteria, soil from an old alfalfa or a sweet-clover field may be used.

For best results one ton of earth per acre should be scattered immediately preceding the sowing of the alfalfa seed. When there is no soil available within convenient hauling distance, the best plan would be to secure a 100-pound sack of alfalfa soil from the Agronomy Department of the College of Agriculture of the University of Wisconsin. This should be scattered on about eight or ten square rods of the field and the plot then sown to alfafa. The year following the seeding, soil can be taken from this patch where the infected soil was scattered, and used for the inoculation of larger areas. Another plan would be to mix the infected soil with the alfalfa seed, by which method a small amount of soil will inoculate a considerable area.

Several commercial firms are advertising for sale pure cultures of inoculating bacteria for alfalfa, but field tests carried on by the college show too much uncertainty at the present time to warrant the purchase of these cultures at the current rate. Where the soil is acid an appplication of two tons of ground lime rock or one-half ton of hard-wood ashes will materially help in getting a good catch of alfalfa.

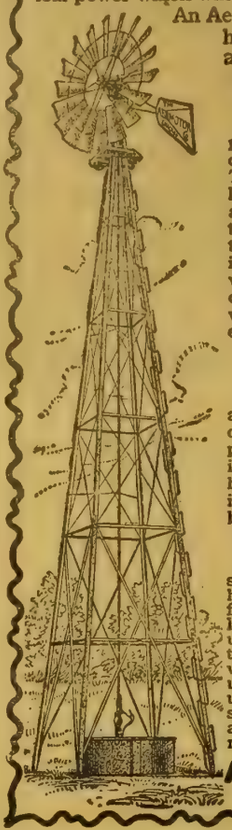
The County Farm Adviser.

We are always glad to receive the monthly bulletin issued by the Missouri State Board of Agriculture. The January number is especially interesting. The January bulletin is devoted to the subject of explaining the matter of employing a Farm Adviser, with particular reference to the Pettis County (Missouri) Bureau of Agriculture and the work of S. M. Jordan, who accepted the position of Agricultural Adviser for Pettis county on April 15th, 1912, he being the first man in Missouri to undertake work of that kind. The bulletin gives the full interesting story of the county organization in the first place, the manner in which the funds were provided, including $1,000 generously donated by the President of Sears, Roebuck & Co., through the Council of American Grain Exchanges.

The introduction to the bulletin is written by Mr. T. C. Wilson, Secretary of the State Board of Agriculture, and the main subject is an account by Mr. Jordan of the first short year's operations, the manner of organizing, the actual work done, duties of the Farm Adviser, accounts of meeting held, illustrations of farm scenes, etc. All who are interested in this subject and who wish to obtain more light upon the "Farm Adviser" movement will find the bulletin most interesting and instructive reading. A free copy can be obtained by farmers in any state by asking Mr. T. C. Wilson, Secretary, Columbia, Mo., for a copy of the January Agricultural Bulletin.

Water to Float a Navy

If all of the water which has been pumped by Aermotors could be collected in one great body, it would form a sea on which all the navies of the world could maneuver. But you do not have to pump oceans of water to supply your own needs. What you want is some reliable and economical power which will supply plenty of water for your house, barn and fields. An Aermotor of suitable size erected on a tower of proper height will do the work for you without bother or worry and with practically no expense.



Power for Pumping

It costs nothing for power if you use an Aermotor to do your pumping. More water is pumped by Aermotors for stock and domestic purposes than by any other kind of pumping machinery. They do their work silently, surely and satisfactorily. Aermotors have been pumping water faithfully for the past 25 years. Go to any part of the inhabited world today and you will find the Aermotor there ahead of you. From Alaska to Patagonia, from Hongkong to Liverpool, from Siberia to the Cape of Good Hope and on all the islands of the sea you will find them. You cannot travel far today without seeing an Aermotor standing out as the most prominent object in the landscape. Aermotors have gone everywhere because wherever they have gone they have been found to be the most economical, and most reliable device for pumping water.

Count the Cost

The price of gasoline has taken a big jump. It is likely to go up again any day. The air is free and the supply is inexhaustible. No one can corner your source of power if you use an Aermotor for pumping water. The first cost of an Aermotor is small, the upkeep is almost nothing, the service is most satisfactory. Anyone who has used an Aermotor will never be satisfied with any other pumping device. It was the first steel windmill and has always been the best. Aermotor Galvanized Steel Towers are best, too.

"Storage Solves the Water Problem"

We have just issued a large hanger, 16 x 44 inches, on the above subject. It contains over 100 pictures of Aermotor outfits which have been pumping water for the farmers of one community for from 1 to 20 years. These pictures have been made from the finest lot of farm photographs that have ever been taken. If you will put up one of these hangers in your living room it will be the most talked about object there. It is 100 pictures in one and each individual picture shows a prosperous farm where the Aermotor is used for supplying all the water required. This hanger gives valuable information about the storage of water for household and stock purposes. You should certainly have one. It is free for the asking. Just one word "Hanger" on a postal card, with your name and address, will bring it.

Aermotor Co. Twelfth Street and Campbell Avenue, **Chicago**

[Please mention National Farmer and Stock Grower.]

Empire Fertilizers.

Every farmer should know something about fertilizers. It is the easiest experimental work in the world—one field fertilized, another one not; both the same soil, the same seed bed, the same time of planting, the same cultivation, the same season, the same method in harvesting. Compare one with another. Write to the Empire Carbon Works, 421 Locust street, St. Louis, Mo., for a book on fertilizers, with formulas for all crops. Use some of these fertilizers and get your experience, so that you may know if it is profitable, and to what extent it is profitable, to use commercial fertilizers. Write for the book anyway. It costs nothing, and it will teach you something.

The American Swineherd.

We have been requested by our patrons and friends to arrange a club whereby we can offer them a swine raiser's paper as a premium with The National Farmer and Stock Grower, and we have succeeded in doing so. **The American Swineherd** is published monthly, and is usually a seventy-two-page, three-column paper, splendidly edited from practical standards and always interesting from the very beginning to the end. It is a satisfactory paper, and all who subscribe are very much pleased with it. We have entered into a co-operative arrangement with the publishers of **The American Swineherd,** whereby we can offer for a limited time The National Farmer and Stock Grower and **The American Swineherd,** both papers, for the price of one. Anyone who will send us a money order for fifty (50) cents in answer to this proposition will be supplied with both papers for one year. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE BEEF SUPPLY.

Not So Much For Export—A Large Number of Cattle Come in and Pay a Duty For the Support of Our Government.

A statement was issued from Washington, D. C., in order to show the decreased number of cattle in the country. It was shown that the number of cattle exported in the eight months ended with February, 1913, was 12,656 head, against 270,219 head in the corresponding months of 1907, and the quantity of fresh beef exported was but 4,709,047 pounds, against 175,806,649 pounds in the corresponding months of 1907.

That this shortage in the exportations is due in part at least to an actual reduction in the number of cattle in the United States is evidenced by the fact that the total number of cattle on farms, according to figures of the Department of Agriculture, was on January 1, 1913, but 56,527,000, against 72,534,000 on January 1, 1907.

Still further evidence of the demand in the United States for an increase in its cattle supply is found in the figures of the Department of Commerce, which show an enormous increase in the importation of cattle, the number imported into the United States in the eight months ended with February, 1913, being 222,000 head, against 12,500 head in the corresponding months of 1907.

The table which follows shows for the years 1907 and 1913 the number and value of cattle on farms in the United States, the number and value of those imported, the number and value of those exported, and the quantity and value of fresh beef exported, the import and export figures relating to the eight months ended with February of the years named:

Cattle.

	1907.	1913.
Number on farms January 1	72,534,000	56,527,000
Number imported eight months	12,513	222,000
Value imported eight months	$271,892	$3,680,000
Number exported eight months	270,219	12,656
Value exported eight months	$21,622,260	$759,491

Fresh Beef.

	1907.	1913.
Pounds exported eight months	175,806,649	4,709,047
Value exported eight months	$16,310,068	$595,228

THE COMMISSION OF SEVEN

Appointed to Look Into the Matter of European Farm Credits and Co-operative Loans.

President Wilson has appointed a Commission of seven men prominent in the agricultural field to conduct in Europe an investigation of agricultural credit systems and co-operative organizations among the farmers of those countries.

The men appointed by President Wilson are: Senator Fletcher, of Florida, President of the Southern Commercial Congress; Senator Gore, of Oklahoma, Chairman of the Senate Agricultural Committee under the new Senate organization; Congressman Moss, of Indiana, Chairman of the Agricultural Appropriation Committee of the House; Dr. Clarence J. Owens, of Maryland, Managing Director of the Southern Commercial Congress, and formerly President of the Southeastern Agricultural College of Alabama; Kenyon L. Butterfield, of Massachusetts, President of Amherst College, and a leader in agricultural development work; Dr. John Lee Coulter, of Minnesota, the government's expert on agricultural statistics; and Col. Harvie Jordan, of Georgia, President of the Southern Cotton Growers' Association, and former President of the National Farmers' Congress.

This Commission will co-operate with the American Commission on Co-operative Credit organized by the Southern Commercial Congress, which will visit Europe this spring. Both Houses of Congress have approved the efforts of the Southern Commercial Congress, and the action of President Wilson in appointing government commsisioners to co-operate with the Southern Commercial Congress's Commission is the first step giving the American Commission the status of a semi-official body. Upon its return from Europe the Commission is directed by Congress to submit a report on agricultural co-operation, particularly on co-operative credit systems. The Southern Commercial Congress now has all but twelve states, as well as four of the Canadian provinces, represented on its commission, so that it will be representative of the nation as well through the state delegates as through the Federal Commissioners The seven men appointed will represent the United States at the General Assembly of the International Institute of Agriculture at Rome, Italy, next May.

No-Rim-Cut Tires 10% Oversize

Not Built Like Old-Time Tires

Goodyear tires of today are not built as they once were, nor as others build tires now.

Goodyear success is due to ceaseless advancement. Every increase in sales came through increasing mileage.

And now, after fourteen years of betterments, scores of our experts spend all their time on research and experiment.

How They Work

These men wear out, on a metered machine, hundreds of Goodyear tires.

To get our tread as we make it today, 40 formulas were compared—by actual metered mileage.

To get a fabric which would stand all strains, 200 fabrics were tested out, and mileage results recorded.

These comparisons have gone on for years and years. And they still go on night and day. For we know that no tire can lead in sales unless it also leads in mileage.

What They've Done

This research department cost us about $100,000 per year. On this year's output that's about five cents per tire.

But note the result:

All the remarkable mileage you get from Goodyear tires is due to this ceaseless improvement.

No-Rim-Cut tires—the tires that end rim-cutting—were developed in this shop. With the old-type tires, 23 per cent met with rim-cut ruin.

And from this shop came the 10 per cent oversize, which adds one-fourth to the average tire mileage.

Men Not Misled

In these days of odometers, men know which tire serves best. And that tire alone can outsell all others.

Under this test Goodyear tires have outsold every other tire in existence.

And the sales have doubled over and over, as the tires became better known. Last year's sale by far exceeded our previous 12 years put together.

That's the result on actual use, on hundreds of thousands of cars. And you'll adopt them, like the rest, when you once try them out.

Average Profit $2.90 Per Tire

Here's another reason why you get so much in a Goodyear tire. Our average profit last year was but $2.90 per tire.

Goodyear tires cost all the way from $15.55 to $104.95, according to size and type. The most popular size—34x4—costs from $32.95 to $37.90, differing with type and treads. And our average profit on all these tires was exactly $2.90 per tire.

That's why you get at the Goodyear price tires with so much mileage. Tires that can't rim-cut—oversize tires. This is due to the fact that so much of the cost goes into things that count.

No other tire in all the world offers you equal value.

Death of Dr. De Laval, Inventor of the Cream Separator.

Carl Gustaf Patrick De Laval, known throughout the world as the inventor of the cream separator, died on February 3d, in Stockholm, Sweden, his native city, at the age of 67 years.

Dr. De Laval was best known to fame for his invention of centrifugal cream separators and as the founder of the cream separator concern which bears his name.

His activities, however, were by no means confined to the development of the cream separator. He was one of the most prolific and versatile of the world's great inventors, and in addition to his invention of the first continuous cream separator he achieved notable success in various other fields of scientific endeavor and practical usefulness.

Shortly after his invention for separating cream from milk by means of a centrifugal machine in 1878 he invented the steam turbine which bears his name. Among other of his notable inventions were the milk tester, a centrifugal churn, an emulser, a mechanical cow milker, a new form of lamp, a frictionless vessel, an explosion-proof steam boiler and a process of extracting metals from ore by electrically-

DR. CARL GUSTAF PATRICK DE LAVAL, Inventor of the Centrifugal Cream Separator, Whose Death Was Reported in February.

developed magnetism; in fact, he was tireless in his activity in working out unsolved mechanical problems of every kind, and until the very last he continued actively at work in his experimentation of old and new projects, his brain as fertile and his energy as unremitting as ever.

Many honors were bestowed upon Dr. De Laval. From the King of Sweden he received the Cross of Commander of the Order of Wasa and that of Knight of the Order of the North Star. He was made a member of the Academy of Sciences in 1886 and received the Academy's Gold Medal in 1892. In 1896 he was made an honorary member of the Agricultural Academy in Sweden, and in 1904 the Engineers' Society of Germany unanimously awarded him a medal for his pioneer development of the steam turbine.

Few men have conferred more lasting benefits upon mankind than Dr. De Laval. The cream separator and the milk tester, both conceived by him, though further developed by others, have alone saved billions of dollars to the world's dairy interests and largely made possible the wide use of dairy products as we know them to-day.

Dr. De Laval well deserved the comparison so often made of him with our own great Edison. As the inventions of Edison have made possible the tremendous advance in the development of electricity and its practical application, so dairy machines invented by Dr. De Laval have made possible the equally wonderful progress in the last twenty-five years in the field of dairying, and Dr. De Laval has rightly been called "the Edison of Dairying."

THE FEEDING OF ANIMALS.

Old Ways and New Ways—Old Conditions and New Conditions.

Vast interest, of recent years, is being manifested in the problem of increasing the yield of crops. The matter of feeding these crops so as to get the most pounds of butter-fat or flesh out of them is of no less importance. Just as some farmers are producing one-fourth to one-half larger yields per acre than their neighbors on land of equal richness, so some feeders and dairymen are producing one-fourth to one-half more pounds of flesh and butter-fat with the same number of pounds of feed, and ofttimes with the same quality and type of animals.

Both animals and plants demand a balanced ration for the most thrifty, healthy, mature growth. That is to say, they must have a certain amount of nitrogenous or muscle-building matter in their food, a certain amount of carbohydrates or fat-building material, and a certain amount of mineral elements, viz.: iron, calcium and phosphorus, to make the greatest possible use of their entire ration. Take, for instance, the growing of corn on marsh or muck soil. Often there is enough nitrogen to grow many hundreds of large crops, but only a very few corn crops can be raised on these soils without the application of fertilizer. The mineral constituents, phosphorus, potassium, lime, magnesium and iron, available to plants in such soils, are comparatively low, and in order to produce satisfactory crops some of these elements, principally potash and phosphorus, must be supplied to the soil. The plant food of such soils is said to lack "balance."

An analogous case to this is the feeding of fattening animals on a ration of corn and such "roughage" as straw, prairie hay and corn fodder. Large quantities of fat-building material are consumed by the animal in this ration, but very little protein or muscle-building matter. The mineral constituents are also low. This, then, is an unbalanced ration, and it certainly could not be fed so as to get the greatest possible returns from it. In this case the corn ration should be supplemented with some feed material running high in protein, like alfalfa, cowpeas, clover and cotton cake. In the case of hog feeding, tankage should be used, if a clover or alfalfa pasture is not to be had. In addition to raising the protein content of the ration, leguminous hays also supply considerable quantities of minerals, particularly lime and phosphorus, which are so necessary in the ration of young, immature fattening animals.

Not many years ago, in large numbers of Western feed lots, the method of feeding followed locally-established customs or was largely a guess as to its merits. To-day most feeders are able to work out properly-balanced rations, and, in the case of mixed farming, crops are so planned as to afford the right material for a balanced ration.

An old practice of the Missouri feeder, when feed was abundant, was to purchase his stock cattle in the fall. These were usually picked up in his own neighborhood; sometimes, however, the Kansas City or Omaha market was resorted to. Stalk fields, fodder, hay and straw were purchased for fall and winter feed. As one stalk field gave out the cattle would be driven to another until the weather became severe, and then hay and fodder with some corn was fed until January or February. The corn ration would then be raised slowly to a "full feed." Often wheat straw alone was used for a filler. Usually, however, these feeders had fine clover pastures coming on, and as soon as the danger of frost was over and the clover had gotten a good start the cattle were "turned in." At this time, if the cattle were on "full feed," the corn ration was usually lowered and the clover became a substantial part of the ration. Later, as the cattle adjusted themselves to the grass and clover, they were given all the corn they would "clean up." This remained the ration until the new corn reached or passed the roasting-ear stage, when green corn fodder was introduced. This feed was slowly increased until the old corn was largely replaced. After the fodder lost its succulent character the corn was pulled from the stalk for feeding. Old corn was used again only for the last two or three weeks of the feeding period, which lasted over a year.

Many good cattle were produced that way, and much money was thus made. But there are few good stalk fields to be purchased these days. Corn is gathered closer and not many farmers would have stock in their stalk fields throughout all kinds of weather. Neither straw nor corn fodder can be purchased as readily. Very few pastures of any kind can be rented. Therefore, much of the cheap feed of ten years ago cannot be had at any price now. As a result, fewer cattle are going on feed. The lack of rough feed has cut down the number of cows, and, therefore, the local steer supply is reduced also.

It is now the time to double the yield of crops and to so combine these crops as to make rations which will produce the greatest possible number of pounds of flesh or of butter-fat, as the case may be.—Roy C. Bishop.

GET Longer Better & More WOOL

HIGH SPEED EASY ACTION

that will net you from 15c to 20c more on every sheep you shear with a Stewart No. 9 Machine. Don't labor with hand shears, in the old, hard, sweaty way. Don't have aching, swollen wrists. Don't scar and disfigure your sheep with uneven shearing and spoil the wool with second cuts. Take off the fleece smoothly and quickly in one unbroken blanket with a

Stewart No. 9 BALL BEARING Shearing Machine

and get a length and quality of wool that will bring the highest price. The Stewart runs so easily a child can turn the handle while you shear. Extra profits soon pay for it. It's the most perfect hand operated shearing machine ever devised. Has ball bearings in every part where friction or wear occurs. Has a ball bearing shearing head of the latest improved Stewart pattern. Price complete, including 4 combs and 4 cutters of the celebrated Stewart pattern, only ..... PRICE $11.50

Get one from your dealer, or send us $2.00 and we will ship C.O.D. for the balance. Money and transportation charges back if you are not pleased with it.

CHICAGO FLEXIBLE SHAFT COMPANY,
182 Ontario St. CHICAGO, ILLINOIS

Write for FREE catalogue showing most complete line of Sheep Shearing and Horse Clipping Machines.

The Best for Clipping Horses, Mules and Cows

Stewart Ball Bearing Clipping Machine

It's a valuable outfit that should be in every stable. Those who know the horse best have agreed that to clip him at the proper time improves him in every way. He looks and feels better, does more work, rests better and gets more good from his feed.

Insist on having the "Stewart." It's the easiest to turn, does the fastest work, stays sharp longer and is more durable than any other clipping machine made. Get one from your dealer, price only..... $7.50 or send us $2.00 and we will ship C. O. D. for the balance. Satisfaction guaranteed.

The Shepherds' Journal.

The inquiry in regard to the management of sheep on the farm and on the range can best be answered by furnishing our readers with a splendid paper that is devoted to Sheep Husbandry. We have therefore made arrangements whereby we can offer The National Farmer and Stock Grower and **The Shepherds' Journal**, both papers, for one year, for fifty cents. This is getting the producer close to the consumer without the help of the middleman. **The Shepherds' Journal** is a magnificent paper, issued monthly on superfine paper and adorned to the last degree with illustrations from life. The National Farmer and Stock Grower has some claims to be a good paper, and **The Shepherds' Journal** is doing something for us. We therefore offer that anyone sending fifty (50) cents to pay for The National Farmer and Stock Grower for one year can select **The Shepherds' Journal** for one year as a premium. We guarantee satisfaction. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Hogs Weighing Heavier.

The average weight of hogs marketed so far this year in St. Louis is 177 pounds, against 162 pounds during the same period last year.

WOOL MEN!

We can interest you. Do you know that St. Louis is a **Spot Cash** market? In 20 years we have handled **more separate lots** of wool, each season, than any other commission house here. Over **40 years' experience** in the business, and your shipments receive our personal attention. We guarantee **top prices, quick sales** and **prompt cash returns.** Write for our 1913 Wool Circular, giving full particulars and points in regard to the preparation of wool for market. Wool Sacks, Shipping Tags, Market Reports, etc., sent Free upon request.

Write what you have to offer. Estab. 1874.

FARMERS AND THE TARIFF.

What Congress is Likely to Do, and What Congress Will be Responsible For if the Protective System is Legislated Out of Business.

The National Farmer and Stock Grower is not a political paper, and we regret very much that protection of American farming, manufacturing and commercial interests, through the collection of customs duties, is considered a political question, when it really is an economic and business matter, one that cannot be decided in connection with social and sentimental questions that so largely influence the alignment of political parties.

We venture the assertion that if the people of the United States were permitted to vote on the tariff question alone, and not have it mixed up with all other subjects that divide people into parties, the vote on the tariff would be overwhelmingly in favor of the protection to American industries of all kinds through the imposition of custom duties, that would shut nothing out entirely but would collect some money for the support of the government on all raw materials and manufactured goods admitted from foreign countries.

In law making, Congress exerts a wonderful power, and it is often exercised unwisely and to the disadvantage of the American people. A case in point is the removal of the tariff on coffee, which enabled the foreign combinations to put up the price before the coffee reached our seaports and almost doubled the cost to the American importer and trebled the profits of the Brazilian syndicates that control the output.

Another example of misdirected legislation is taking the duty off hides, which has resulted to the benefit of the owners of foreign hides, who simply added the duty to the price. They paid the duties to the United States government when the duties were collectable by law, and put it in their own pockets when they found that the United States government had made them a present of it by admitting the hides free of duty.

We understand the general idea in Congress is that all they have to do is to remove the 1½-cent-a-pound duty on dressed meats, or the small duty that is paid on imported beef cattle, and then go round to the butcher shops and buy beefsteaks 10 cents a pound cheaper. They are entirely mistaken. They can make a present of the duties to the foreign syndicates engaged in the meat trade, but they cannot prevent them accepting and keeping the present. They can admit cattle on the hoof free of duty, but there the power of Congress ends. They can discourage the American farmer and induce him to get rid of his sheep, but they cannot get him to start up again. The wheat grower who has a nice old time producing wheat that will pay a profit of six to ten dollars an acre, under present circumstances, can easily be induced to quit raising wheat, but when Argentine and Canadian wheats come in on top of a good crop here and the market becomes demoralized for the time being, then look out for the farmer forgetting to sow the usual crop of wheat in this country.

Congress can do much damage, but cannot heal the sores again. People in the United States are not going to prosper on the money that goes to Australia for wool, or on the money that goes to Canada for wheat, or on the money that goes to Argentine for beef. We prosper on the money that is paid to our own people. It goes out and it comes back again. It gets into circulation. But the money that is sent abroad remains there, and our exports are not any larger from that source of revenue.

The farm productions of this country are ample for all purposes. One-half of the time our grain productions sell at prices that barely return the cost of production. There has never yet been a time when there was a bonanza in grain growing. Through years of low prices and sacrifice, cattle have for once reached what may be called high prices, but only because of the changes that on the one hand have destroyed cattle ranges, but the cattle ranges cut up into farms have not yet produced the maximum of beef. Year in and year out farm productions bring moderate prices, and the burdens of the consumer are not caused by the wholesale cost of anything the farmer raises.

We have no hesitancy in saying as our editorial opinion that the admission of farm products free of duty from other countries will gradually undermine the productive industries of this country. The change will not take place in a day, but we will soon be in the position of a family when the head of it gambles his earning away instead of taking the money home to his wife. Industrial enterprises will be in difficulties, for the reason that trade will be dull and wages high. Less people will be employed and many industries will be at a standstill. The farmer will be able to feed himself, but he will find himself short of money; he will practice economy and produce crops that cost the least for seed and the least cost for labor.

Farmers will remember that Canada saved us from the acts of our own Congress, so far as the bogus reciprocity bill was concerned, but we cannot expect to have Canadians refuse free trade when they are still able to conduct their own protective system. We cannot expect much assistance from manufacturers who are Protectionists, because they are usually Protectionists for themselves alone; and we cannot expect much help from anyone unless we do the work ourselves. Congress will finally have to accept responsibility for its acts, but that is away off. When great injury is done and cannot be undone, it is poor satisfaction to fix the blame, and that is all the recourse we will have.

In another column will be found an article entitled "Our Industrial Policy." If every farmer who is interested in this subject will address a Congressman and a Senator endorsing this policy it will be harder and harder to get a bill through Congress that will do away with the protective policy of the government, so far as the farming interest is concerned.

To Admit Wool Free of Duty.

Hon. Woodrow Wilson, President of the United States, and Hon. Wm. Jennings Bryan, Secretary of State, are reported to have secured an agreement with Congress to admit foreign wools into this country absolutely free of duty. The President has no vote; neither has the Secretary of State any vote; but they have much influence, and they may succeed in depriving our government of twenty million dollars annually in revenue and in presenting it to the owners of foreign wools. The inevitable decrease in wool and mutton production in the United States will lay at their door.

At the St. Louis market, full loads of native stock steers averaging 638 to 896 pounds sold at $5.00 to $7.75 per 100 pounds.

GOOD BOOKS AND PAPERS.

AUTOMOBILE AND BUGGY CATALOGUE.—This is the fifth year the Elkhart Carriage and Harness Manufacturing Company, of Elkhart, Ind., have been manufacturing automobiles. Many of our readers have dealt with this company for a great many years, and if you are interested in cars it will no doubt be to your advantage to write for their catalogue. This catalogue shows photographic views of all their models and gives you the standards by which to value any car. Their advertisement is in this paper.

CONSERVATION OF SOIL FERTILITY.—This is a booklet on plant growth and plant food; it is a clear-cut, well-supported statement in regard to the use of commercial fertilizers to increase crop yields with profit to the farmer. It is by Prof. Emmons B. Dunbar and issued free by the International Agricultural Corporation, Buffalo Fertilizer Works, Buffalo, N. Y.

ALFALFA PRODUCTION.—There are many good books on the subject of Alfalfa, but there is one to be had by simply writing for it that covers the entire subject. It only consists of eighteen pages and yet so thoroughly does it instruct in the planting and care of Alfalfa it can be called a "gold mine." It shows how valuable a crop Alfalfa is, the Alfalfa advantages, history and distribution, seed bed preparation, plant food required, bacteria a great help, where lime is required, the nurse crop, car of the plant, points in making hay, top dressing, Alfalfa as a pasture, machinery for Alfalfa, and a grand summary of points in growing Alfalfa. The booklet on Alfalfa growing can be had free by addressing Middle West Soil Committee, Department Q, Postal Telegraph Building, Chicago, Ill.

AUTOMOBILE INSTRUCTION BOOK for the operation, care and adjustment of Overland automobiles. This is a splendid book of instruction and should be obtained and carefully studied by all who intend to buy automobiles. It is a publication of a hundred pages of unusual completeness and gives a clear insight to the mechanical perfection of the Overland car. Every part is clearly illustrated. Any of our readers can obtain a copy by writing to the Willys-Overland Company, Toledo, Ohio, and asking for it. Please mention this paper when writing.

ECONOMICAL IRRIGATION BY PUMPING.—This is a most elaborate and splendid book issued by the American Well Works, of Aurora, Ill. The illustrations show different methods of irrigation on a large or small scale, pumping from deep and shallow wells and from rivers and reservoirs, together with the pumping arrangements for the small farmer to the elaborate district equipments providing water for many irrigated farms. It shows how the wells are bored, the different types of wells, and every possible information concerning horse power required to raise water to different heights. Interested farmers should mention The National Farmer and Stock Grower and write to the American Well Works, Aurora, Ill., for a copy.

Get A Canadian Home In Western Canada's Free Homestead Area

The Province of **Manitoba** has several New Homestead Districts that afford rare opportunity to secure **160 Acres** of excellent agricultural land **FREE.**

For Grain Growing and Cattle Raising

this Province has no superior and in profitable agriculture shows an unbroken period of over a quarter of a century.

Perfect Climate; Good Markets; Railways Convenient; Soil the very best, and social conditions most desirable.

Vacant lands adjacent to Free Homesteads may be purchased and also in the older Districts lands may be bought at reasonable prices.

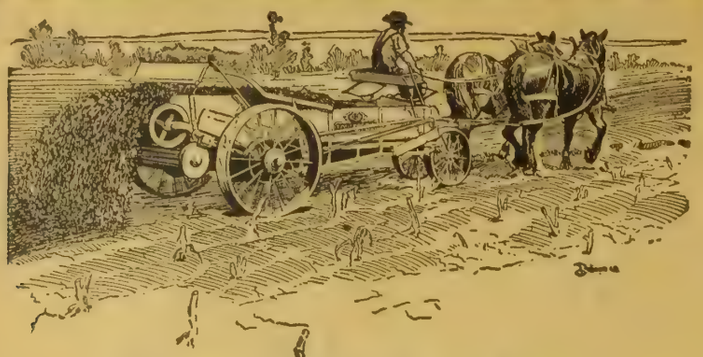
SPLENDID LINE OF FENCE WIRE.

The readers of our paper who are needing farm fence, poultry fence or barbed wire will find it to their advantage to secure the catalogue of the Coiled Spring Fence Company. Write them your request on a postal card and they will mail the catalogue to you free. This company sells direct to the farmer at money-saving prices. Their ad. appears elsewhere in this issue. Address, Coiled Spring Fence Company, Box 256, Winchester, Ill.



Your Soil Is Alive

TO all intents and purposes, soil is alive. It breathes, works, rests, it drinks, and, most important of all, it feeds. It responds to good or bad treatment. It pays its debts, and pays with interest many times compounded. Being alive, to work it must be fed. During the non-growing seasons certain chemical changes take place which make the fertility in the soil available for the next season's crop. But this process adds no plant food to the soil. Unless plant food is added to soil on which crops are grown, unless the soil is fed, in time it starves. There is one best way to feed your soil. Stable manure, which contains all the essentials of plant life, should be spread evenly and in the proper quantity with an

I H C Manure Spreader

I H C manure spreaders are made in all styles and sizes. There are low machines which are not too low, but can be used in mud and deep snow, or in sloppy barnyards. They are made with either endless or reverse aprons as you prefer. Frames are made of steel, braced and trussed like a steel bridge. Sizes run from small, narrow machines for orchard and vineyard spreading, to machines of capacity for large farms. The rear axle is placed well under the box, where it carries over 70 per cent of the load, insuring plenty of tractive power at all times. Beaters are of large diameter to prevent winding. The teeth that cut and pulverize the manure are square and chisel pointed. The apron drive controls the load, insuring even spreading whether the machine is working up or down hill, or on the level. I H C spreaders have a rear axle differential, enabling them to spread evenly when turning corners.

A local dealer handling these machines will show you all their good points, and will help you decide on the one that will do your work best. Get literature and full information from him, or, write

Crossing the Bull For the Dairy Herd.

"In selecting a bull to head the dairy herd, it is not enough that the animal be a pure-bred and registered bull," says George R. Samson, Instructor in Animal Husbandry at the Oregon Agricultural College. "He should be both of these, it is true, but in addition he should be from an Advanced Registry dam. If this is impossible because there are no Advanced Registry cows in the locality, the bull should be the calf of a cow which is known to be a fairly heavy milker, a high tester, and a persistent milker. His sire should be a Register of Merit animal, if possible.

"The animal which is being selected must be a good representative of his breed, and strong in constitutional vigor and masculinity. If he is old enough to be considered a tested sire—that is, if he has daughters which have been milking for a year—it should be seen that his offspring have uniformly inherited the excellent qualities of their sire.

"When selecting a new herd bull one should not be in too big a hurry to get rid of the old one until his heifers have shown their quality. Know, if possible, what the old one has done, as well as what the new one probably will do, before the change is made completely."

SELLING THE CREAM.

The Most Remunerative and Easiest Branch of the Dairy Business.

At first, every man to his inclination; and last, every man to what his experience tells him, is best. Investigating the dairy business can be done without asking questions. All you have to do is to look on. It is not the most laborious work in dairying that pays best. Buttermaking on the farm is the most laborious, and is profitable only when large capital is employed and the operations are comparatively on the basis of a small creamery; milking cows and selling the whole milk is easier than buttermaking; but milking cows, selling the fresh cream and feeding the skim milk to pigs and calves, compared with farm buttermaking, is a perfect luxury.

We have a case in mind: Mr. J. C. Hopkins, of Greene county, Ill., was the first dairyman to sell certified milk in St. Louis. He had the perfect product and could not sell it at wholesale at a reasonable price; he therefore determined to retail it himself. He opened a milk depot on the principal street of St. Louis, and from this place he proceeded to build up a first-class retail delivery trade. This, to all appearance, he did successfully, first selling his own milk and then buying more milk from other farmers and selling it also. He was in a fair way to become one of the few large city milk and dairy product distributers. He was constantly increasing his city operations, when all of a sudden he sold out his city business to one of the large dairy distributing concerns and he contracted his milk output for a limited time at a satisfactory figure. Then, said he: "Let them do the distributing and send me a check." He had built up a milk trade in a high-quality product and then, becoming a dangerous competitor for the best city trade, he obtained what he wanted in the first place.

But producing certified milk is expensive, inasmuch as all farm operations have to be keyed up to a certain sanitary excellence, and when his contract for a certain price expired, certified milk was plentiful in St. Louis and it was up to him to sell his milk for less money. Then, instead of going back to the retail distribution again, he cut out the whole-milk delivery, separated his cream, kept the skim milk at home and only contracted his cream. He has a good class of cows; the butterfat production is above the average; he keeps up the quality of his product and takes life easier—but with no less money.

The following is what he said when he was interviewed on the subject: "I am not certain that the production of cream is proving more profitable than the certified-milk business, but it is more satisfactory in several respects. Our greatest obstacle in the certified-milk business was securing men who were willing to take the care necessary in handling the product. It is almost impossible to make the average farm hand understand that absolute cleanliness in the dairy is absolutely essential in order to keep down the bacterial count, so that milk can be certified. In producing cream it is not necessary to employ so many men, and our labor bill is not so large. While we were selling milk we had to haul a big, heavy load to town every day, no matter what were the conditions of the weather or roads. A much smaller bulk is handled when we sell only cream, and generally we do not have to deliver the product more than two or three times a week. By producing cream we have all the milk for feeding to the young stock on the farm, and this is, in itself, a very important and desirable thing. We generally had no trouble in keeping men enough, but the help problem indoors was a very serious one. It was almost impossible to keep competent help in the house, and, therefore, the burden on the women of the household became too great. We had to plan in some way to get along with fewer men and the method we are following now seemed to offer the solution of this problem."

The Value of Steel Wheels.

One of the most practical, serviceable and economical departures in modern agriculture has been the introduction and constantly-growing use of steel wheels for wagons. Only a few years ago the Electric Wheel Company entered upon the manufacture of this efficient equipment for farm vehicles. Yet so thoroughly has the value of the steel wheel been proved, and in so many ways, that its liberal use throughout the country is not surprising.

Whether for changing the old wagon into a low-down farm truck, thus making a handier, lighter-draft wagon with tire troubles eliminated; whether for making a vehicle easier to haul in soft fields and on muddy roads; no matter what the purpose in using wide-tired wheels, they have always demonstrated their real economy.

It is estimated that broad-tired steel wheels have a draft from 30 to 100 per cent. lighter than the ordinary narrow tires. The old wagon can be made as good as new with a set of steel wheels. The Electric Wheel Company has a catalogue describing these wheels and their uses, and will be glad to send the book to farmers who write for it. Address, Electric Wheel Company, Box 40, Quincy, Ill.

Ravenous Rabbits.

It has been computed that eight or ten rabbits eat or destroy as much grass as one sheep.

$15.95 AND UPWARD

AMERICAN SEPARATOR

THIS OFFER IS NO CATCH. It is a solid proposition to send, on trial, fully guaranteed, a new, well made, easy running separator for $15.95. Skims hot or cold milk; making heavy or light cream. Designed especially for small dairies, hotels and private families. Different from this picture, which illustrates our large capacity machines. The bowl is a sanitary marvel, easily cleaned. Gears thoroughly protected. Western orders filled from Western points. Whether your dairy is large or small, write us and obtain our handsome free catalog. Address:

DE LAVAL CREAM SEPARATORS

No Excuse for Any Cow Owner Being Without One

There is no reason why any cow owner who sells cream or makes butter should be without a cream separator and there is no excuse why he should not have the best separator.

Any creameryman or experienced dairyman will tell you that a good cream separator will give you a great deal more and a great deal better butter than you can make with any gravity setting system, and equally, of course, more and better cream, if you are selling cream.

The DE LAVAL is acknowledged by creamerymen and the best posted dairymen the world over to be the **World's Standard"** and the one and only separator that always accomplishes the best results possible and always gives satisfaction.

You cannot make the excuse that you can't afford to buy a De Laval, because it will not only save its cost over any gravity setting in six months and any other separator in a year, but is sold either for cash or on such liberal terms that it will actually pay for itself.

A little investigation will prove to you that the truth of the matter is that you really can't afford to make cream or butter **without** the use of a DE LAVAL cream separator.

The nearest De Laval local agent will be glad to demonstrate this to your own satisfaction, or you may write to us direct.

THE DE LAVAL SEPARATOR CO.

165 BROADWAY, NEW YORK. 29 E. MADISON ST., CHICAGO.

NAVY BUTTER KEEPS WELL.

Butter Made From Pasteurized Sweet Cream Classed in Highest Market Grade After Several Months in Cold Storage.

Two hundred and seventy-seven samples of butter packed for the navy last spring and summer were recently opened and examined by experts at the Department of Agriculture after having been kept in sold storage for from seven to ten months, and were found to be of fine quality, being graded as "extras," the highest market grade. The excellent keeping quality of this butter is attributed to the fact that it was made from pasteurized sweet cream.

The United States navy requires about 600,000 pounds of butter annually, which must be of high grade and good keeping quality, as it is sometimes necessary to provision a fleet for a cruise of several months which may extend to tropical waters. At the request of the Navy Department the Dairy Division of the Bureau of Animal Industry, Department of Agriculture, has prepared the specifications for the navy butter and supervised its manufacture in recent years.

The specifications call for fresh butter, made during the early summer from pasteurized sweet milk or cream; it must be strictly "extra" in grade when scored at the time of packing; the moisture must not exceed 13 per cent. in tinned butter and 14 per cent. in tub butter; and there must be no preservative other than common salt, the quantity of which must be between the limits of 2½ and 3¼ per cent. at the time of packing. The entire process of manufacture, packing, etc., must meet the requirements of the Dairy Division Inspectors, who have authority to reject any product that is not up to standard.

Navy butter in 1912 was all packed in five-pound tins, which are lacquered both inside and outside and hermetically sealed. This butter was produced in four different creameries located in three states—California, Minnesota and Pennsylvania.

The government inspectors took a sample daily at each creamery, and these samples were placed in storage at a temperature of zero or below. In order to test the keeping qualities of the butter the samples were taken out and scored when from seven to ten months old. The scoring was done by three experts independently, and the average scores ranged from 91 to 92½, the butter thus being in the grade known as "extras." The experts all agreed that it was a fine lot of storage butter, well made and very uniform.

The scientists of the Dairy Division have for several years been conducting experiments in making butter from pasteurized sweet cream as compared with that made from ripened or sour cream, and the results have demonstrated that butter made from sweet, pasteurized, clean-flavored cream is superior in quality and will keep longer in storage than butter made in the ordinary way.

Peerless Fencing and Gates.

Those farmers who have used Peerless Fencing for years and have come to know its quality will naturally have confidence in the claims made for one of the newer products of the Peerless Wire Fence Company, 242 Michigan street, Adrian, Mich.—the Galvanized Self-raising Gate. This gate was popular right from the start and sold well beyond the 10,000 mark the first year it was on the market. Hundreds of farmers have voluntarily written to the company, saying that it was the best gate they ever saw, and while it has many exclusive labor-saving features it is cheaper than the average steel and wire gates. For catalogue address Peerless Wire Fence Company, 242 Michigan street, Adrian, Mich.

Cost of Building a Creamery.

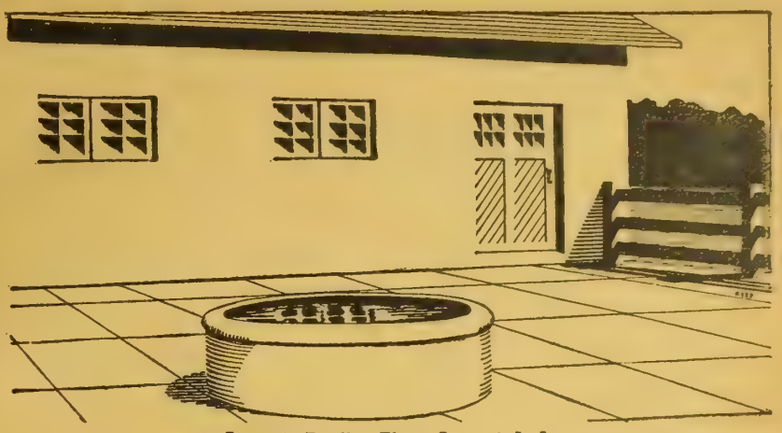
Creamery builders must figure the cost, first, of the building; second, of the equipment. A suitable and convenient building will contain a main work room, store room, refrigerator, engine and boiler room, coal room, and an office. Such a medium-sized creamery would measure 28x48 feet. In some sections labor and material are much cheaper than in others and the cost varies accordingly. However, we can place the limit of cost of such a construction between one thousand and fifteen hundred dollars.

Where only gathered cream is received the equipment required is less than where whole milk is received. In the first instance of the gathered-cream plant, the following would be necessary: Fifteen-horse-power boiler; ten horse-power engine; a well and pump; weigh-can and scales; Babcock testing equipment complete; combined churn, capacity, 600 pounds butter; buttermilk vat; cream ripener; starter can, wash sink. Besides this there will be shafting, piping, pulleys, belting, etc. By making two churnings a day in the rush season, 1,200 pounds of butter could be manufactured per day in a plant of this size. The cost of equipment would be approximately $1,200.

In a whole-milk creamery, a separator or two separators, having a capacity of thirty-five hundred pounds per hour; a milk-receiving vat; a milk heater; a skim-milk tank and weigher; and one or two milk pumps must be added. This would make an additional cost of about $700.

In some cases it might be advisable to install machinery for artificial refrigeration. The cost of this would be something like $1,000 more.

The total cost, therefore, of a creamery without artificial refrigeration will vary from $2,200 to $3,000. In the long run it pays to build well and to use first-class equipment in a creamery, and this is the basis of the foregoing figures. In many cases on record creameries started by promoters or representatives of constructive companies have cost exorbitant prices and out of all proportion to the business that they are able to do.—G. A. Gilbert, Colorado Agricultural College, Fort Collins, Colorado.



Concrete Feeding Floor, Syosset, L. I.

Wouldn't you like

a concrete barn, trough and feeding floor as neat and practical as those shown? You'd be surprised to find how easily you and your men could build them. Our free 168-page Farm Book tells how. Just send a postal for it.

About the cement for that concrete: Did you ever stop to figure out that the reason this Company is the largest in the world is because more cement users insist on getting Atlas than any other brand? They do it for the same reason that there are over five million barrels of Atlas in the Panama Canal, and seven hundred thousand barrels of Atlas in the Keokuk, Iowa, Dam. Isn't that the cement you want?

Have you our FREE 168 page Farm Book on concrete work? Write us for it now.

If your dealer cannot supply you with Atlas, write to

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

INTEREST ON FARMERS' LOANS.

Origin of the Movement to Secure to the Farmer Money Loans at a Reasonable Rate of Interest.

Readers of The National Farmer and Stock Grower will be able to see the results of their own efforts in the widespread movement now on foot to bring about a system of credits whereby co-operative associations of farmers will be able to secure loans on suitable security at fair rates of interest for the conduct of their business.

It was in the year 1905 that The National Farmer and Stock Grower printed and published the petition of which we give the text in this issue. The said petition was signed by many farmers in the Western States, all the way from Texas to North Dakota, and when we received the signatures to the petition they were bound together and forwarded in November of that year to the Hon. James Wilson, United States Secretary of Agriculture, and acknowledged by him.

At the time the petition was forwarded to the Secretary of Agriculture, all that has since been said about European methods and co-operative societies was fully set forth and considerable interest was manifested in the subject, but it required time for the seed to germinate and to grow; but the tree is now at the bearing age, and we may confidently expect that it will bear good fruit. Right now we are glad to see that the whole world is interested in the movement.

Congress has appropriated money to pay the expenses of investigation in other countries, and there is a meeting to be held at Chicago this month to take into consideration ways and means to bring about the desired result. We believe from these efforts the time is at hand when the farmer will be able to obtain money at the lowest instead of the highest rates of interest.

THE ORIGINAL PETITION.

A Petition by Farmers of the United States in Relation to the High Rate of Interest on Farm Loans.

To the Honorable James Wilson, Secretary of Agriculture, Washington, D. C., and through him, our friend and representative, to His Excellency, the President of the United States, and to the United States Senate and House of Representatives:

We, the undersigned farmers, ranchmen, land owners and citizens of the United States, do hereby present this petition for your consideration and represent that the **Rate of Interest** charged upon **Farm Loans** is uniformly **Too High**, and that in hundreds of thousands of instances the rate is so burdensome and unreasonable as to perpetuate loans and interest charges and cause many honorable, industrious farmers to lay down their burdens and forsake agricultural pursuits.

The first purpose of this petition is to request that in the ordinary course of the operations of the Department of Agriculture the subject of farm loans will receive most thorough, complete and exhaustive investigation. The commission charged for making loans, the rate of interest paid in different states, the deductions from the amount loaned when paid over to the borrower, are all fit subjects for investigation, and, in our opinion, will reveal high and unreasonable overcharges and burdens which are too great for farmers to bear.

This application or petition is not for the purpose of stating the exact situation throughout the different states so much as it is to suggest the direction in which praiseworthy and valuable service can be rendered the farmers of the country in establishing the actual conditions in regard to the facts, without room for dispute or opening for denial; and if these conditions are found, as we believe they will be, proving the existence of great wrongs which ought to be righted, we look to the Secretary of Agriculture to make such representations as will open the way to the permanent establishment of a better order of things, in keeping with the most enlightened government on the face of the earth.

We have been informed concerning the older settled states, where lands have enhanced in value for over a hundred years, that the rates of interest upon farm loans are on a par with city real estate and other business securities, and therefore in said localities there is no cause for complaint; but we desire to represent that it is different in an immense territory of the Western country, and examination into loans made in all the states will show by contrast that we, who are paying 7, 8, 9, 10 and even as high as 12 per cent. interest besides deductions on account, are in pressing need of relief.

We are informed that in France and Germany certain banking systems under government authority and supervision are loaning money on farm lands at 4 and 5 per cent., and that bonds issued by said institutions at 3 per cent. to raise said money are readily sold at par value. We are also informed that in New Zealand a class of settlers improving the frontier district are aided with government loans at low rates of interest and with reasonable terms for repayment of the principal.

Believing it to be the policy of the United States government to build up a nation upon a foundation of free and unincumbered homes for the people, and believing that the good intention of the government is being defeated by the present system, which establishes and maintains high rates of interest which the majority of the farming people are unable to pay, we therefore ask the immediate investigation of this subject that a better and more wholesome condition of affairs may be brought about by patriotic and conservative legislation.

Cash Grain at St. Louis.

On the 31st of March, 1913, the following prices were paid on the St. Louis market for cash grain:

Wheat.—No. 2 red wheat, $1.05 to $1.07; No. 3 red, $1.03 to $1.05; No. 4 red, 95 to 98c.; No. 2 hard, 90 to 91c.; No. 3 hard, 89c.; No. 4 hard, 87 to 88c.

Corn.—No. 2 corn, 54 to 54¼c.; No. 3 corn, 52½ to 53½c.; No. 4 corn, 51c.; No. 2 yellow, 54½c.; No. 3 yellow, 53 to 54c.; No. 4 yellow, 52c.; No. 2 white, 54½ to 55c.; No. 3 white, 52½ to 54c.; No. 4 white, 52c.

Oats.—No. 2 oats, 32¾ to 33c.; No. 3 oats, 32½c.; No. 4 oats, 31½c.; No. 2 white, 35½c.; standard, 34½ to 35c.; No. 3 white, 33½ to 34c.; No. 4 white, 32½ to 32¾c.; No. 2 rye, 60c.

These quotations show St. Louis, compared with others, to be a strong grain market. Any of our readers who have grain to ship and who wish to be posted right up to date will be supplied upon application to this office. We will see that they receive the latest quotations from a first-class firm in good standing. This in answer to inquiries we often receive concerning the grain market.

Light, handy butcher steers, 800 to 900 pounds, were selling at $7.00 to $8.00 per 100 pounds during the first days of April on the St. Louis market.

Put Your Grain in the Sack and Not in the Stack

YOU know that many times there is grain enough wasted in your straw stack to pay your thresh bill. Why? Because you have not insisted upon the best machine to do your threshing. The

Red River Special

saves it and puts the money into your pocket. Why? Because it employs the only true and certain method of beating the grain out of the straw. All other machines expect the grain to drop out.

The Red River Special **beats it out** just as you do by hand with a pitchfork.

The Big Cylinder, the "Man Behind the Gun" and the uplifting shakers **beat all the grain out** before the straw leaves the machine.

Thousands of farmers are saving their thresh bills by using the Red River Special.

You can, too, if you insist upon a Red River Special doing your work.

Calvin Brown and seven other farmers of Higginsville, Mo., say, "It really does save the farmers' thresh bill by not wasting his grain."

R. F. Lumm, farmer of Percival, Iowa, says "The Red River Special saved all the grain."

You can save yours. Hire a Red River Special. Write for proof.

Marketing and Farm Credits.

The First National Conference on Marketing and Farm Credits will be held April 8th, 9th and 10th at the Hotel Sherman, Chicago, Ill. The Committee on Arrangements is Col. Frank P. Holland, Publisher Farm and Ranch, Dallas, Texas; Frank E. Long, Publisher Review, Chicago; and Ben F. Biliter, Publisher Farmers' Guide, Huntington, Ind. The meeting will last three days. The Secretary of the meeting is Chas. W. Holman, 1408 Steger Building, Chicago, Ill.

FORAGE CROP BULLETIN.

Dollars For Farmers in Hog Raising.

There are dollars for farmers in the Forage Crop Bulletin No. 136, just issued for free distribution by the Agricultural Experiment Station of the Iowa State College. It points the way for a use of green pasturage to pork production that will help the farmer to sell his corn crop for prices ranging as high as $1.03 a bushel when hogs are quoted at only $6.00 a hundred. Three years of investigations, conducted by John M. Evvard, W. J. Kennedy, H. H. Kildee and E. T. Bobbins, are included in the bulletin, and it is one of the most complete reports put out by the Animal Husbandry Section of the Station.

The test as made and published leaves no doubt of the value of green pastures in fitting pigs for market. Compared with pigs fed in dry lot, forage-fed pigs increased profits more than five-fold in many cases. Alfalfa-grazed pigs in 1911 gave a profit of more than $3.00 each, as compared with 61 cents for dry-lot pigs. Different forages when grazed by pigs gave a profit ranging from $30 to $80 an acre, charging the corn used in the ration at 59 cents a bushel and selling the hogs at $5.00. When the hogs were figured at $6.00, the profits ranged as high as $154, that being credited to an acre of rape forage.

Although one trial of rape showed such unusual profits, the experimentalists consider alfalfa to be the best forage crop for pigs. It may be counted on for the cheapest gains per pound and it meets a good many other demands that rape does not satisfy. The various forage crops netted the following acre profits (counting hogs at $5.00 and corn at 50 cents):

Alfalfa in 1911, $65.99; red clover in 1909, $32.34; in 1910, $34.62; rape in 1909, $27.50, and $27.72; in 1910, $37.51; and in 1911, $80.37; sweet clover in 1910, $42.07; in 1911, $23.46; a mixture of oats, clover and rape in 1909, $32.30; a mixture of oats, Canadian field peas and rape in 1909, $22.83; in 1911, $39.52, $53.45 and $64.63; and blue grass and timothy in 1909, $15.23.

If any farmer is interested in the foregoing statement, he should study it from the original source of information. The bulletin referred to is No. 136 and entitled "Forage Crops For Swine." It is a pamphlet of thirty pages. It gives the facts and figures and evidence supporting all the conclusions arrived at. It is printed in handy form. Although it is issued in Iowa, they are always generous in distributing their bulletins and especially to those who show an interest in the special subject under consideration. Anyone desiring a copy should write to the Director Agricultural Experiment Station, Ames, Iowa.

THE OATS MARKET SITUATION.

Oats Not Selling High, But the Market Nearly as Strong as at Any Time in Six Months.

On March 31st, at the close of the day's trading, cash oats were quoted at 32¾ to 34 cents bushel on the St. Louis market. Since last August 34 cents was the highest monthly closing quotation.

At Chicago, on March 31st, the May oats option closed at 34⅜ cents; July at 33⅞ cents; and September at 34 cents. For several months past this stacks up as a fairly average market.

In the last few years we have seen oats sell in market down to 29 cents a bushel and as high as 57 cents, and we may not have caught the extreme fluctuations.

We might observe here that we are going through a very quiet time in the grain trade. The floods in the country have had a paralyzing effect on general movements. The general demand has very little urgency, but for the large number of millions of people that have to be fed the grain crops would be going begging. The matter of feeding the people is up to the farmer, but with oats in market at 33 cents, corn at 55 cents and the average wheat at $1.00 a bushel the farmer ought to be considered as doing his full duty. It is up to the consumer to get his grub at reasonable prices when the farmer is only cashing his actual cost of production and paying the freight. All grains could be advanced 50 per cent, above present prices and the farmer would not get rich, neither would the consumer pay more than a fair price for bread without undue profits were being made between the price the farmer receives and the price the consumer pays.

IF YOU are at all interested in

Home-Mixed Fertilizers

I would like to send you my book on the subject. It contains formulas and plenty of information for farmers who want to get the most and the best for their money. The book will be sent free upon request.

Certified and Guaranteed Roofing.

On page 20 will be found the advertisement of the General Roofing Company. In addition to furnishing a splendid roofing material this company is prepared to assist farmers in designing their buildings.

A good example of a guaranteed roofing is that made by the General Roofing Manufacturing Company. It is known by the trade name of "Certain-teed." The word is taken from the two words "certified" and "guaranteed." After this concern had been in business a number of years and their roofing had proved its wearing qualities they placed a guarantee of fifteen years on it and gave it the name "Certain-teed," meaning the roofing is certified and guaranteed by them.

The General Roofing Company has many distributing centers in order to save the buyer some freight charges, but for the purpose of answering the advertisement address the General Roofing Manufacturing Company at East St. Louis, Ill.

SEED CORN 146 BU. ACRE

DIAMOND JOE'S BIG WHITE—A strictly new variety. None like it. It is the Earliest and Best Big White Corn in the World—Because it was bred for most Big Bushels, not fancy show points; because grown from pure inherited stock; every stalk bearing one or more good ears; because scientifically handled, thoroughly dried and properly cured and had the most rigid inspection. Also all other leading standard varieties at **FARMER PRICES. OUR BIG ILLUSTRATED FARM AND GARDEN SEED CATALOG** mailed **FREE.** A postal card will bring it to you. Write for it today. Address

Motto For the Swine Breeder.

"Some knowledge of hogs and their rearing is essential, but an inexperienced man with an open mind may accomplish much. He has many sources of information—his neighbors and other breeders who have had practical experience; the standard and current literature on swine; the work of the state and national agricultural departments and stations; the agricultural press; meetings of breeders, Farmers' Institutes, and others. No one knows everything about swine husbandry, but anyone with a desire for knowledge can find abundant opportunity to learn. An excellent principle worth recalling in this connection is, that wrong practices once acquired are difficult to overcome, just as wrong traits bred into a herd require a long time for eradication. Slow, but sure, is a good motto for the swine breeder."—From Coburn's "Swine in America."

He Won the Grand Prize.

At the National Corn Show held recently at Columbia, S. C., the grand prize for the best ten ears of corn at the show was won by Charles Short, who farms near Greensburg, Ind. Being interviewed at the Corn Show, he said:

"The variety of my corn is Reid's Yellow Dent. We live about four miles from town, and have under cultivation about 190 acres. We have 60 acres of this corn, and it averaged a yield of about 90 bushels per acre."

"What quantity and kind of fertilizers did you use?" asked the reporter.

"I used a fertilizer composed of 5 per cent. potash and 9 per cent. of phosphoric acid," replied Mr. Short. "I put about 80 pounds to the acre, drilled into the row."

"Only 80 pounds to the acre?"

"Yes; that was all. We can grow corn without using fertilizers at all, but we get a better quality by using a little. This field was gone over with a cultivator seven times during the crop. In getting this corn up to the standard I had been trying for, my efforts covered a period of about fifteen-years' breeding, and that means corn in rotation, thorough preparation of the seed bed, seed breeding and selection, continuous cultivation and suitable fertilization."

Points For the Farmer.

The following points are worthy of consideration by all farmers:

The loss to agriculture due to weeds exceeds millions of pounds sterling annually.

The greatest factor in the spread of weeds is the use of impure seed.

Always ascertain what weed seeds are present in a sample before purchasing.

Reject any samples that contain an excess of weed seeds.

Cheap seed is always bad, but high-priced seed is not necessarily always good.

Never sow weed-infested seed on the score of cheapness.

The sowing of cheap weed-infested seed is the most expensive policy that a farmer can adopt.

Always ascertain the germination of grass and clover seeds before buying.—Farmers' Union Advocate, New Zealand.

High-type Effort.

"Live stock husbandry represents a high type of constructive effort, and swine breeding offers as much satisfaction and gain as any other branch. It may profitably engage the attention of the man who raises hogs merely for financial motives, but a breeder who attains a foremost place in his calling has an interest in his business not inspired solely by rewards in money. The compensations in swine raising are ample for the man who desires to make his work a profession, as hundreds who have a just pride in their achievements can testify."—From Coburn's "Swine in America."

When Hog Cholera Rages It's a Fine Thing to Know YOUR Hogs Are Safe

E. Myers, President, E. Myers Lye Company

Next time you read in your paper about an epidemic of hog cholera, how it is killing off hogs like flies and causing the loss of thousands and thousands of dollars, and you are beginning to wonder where it's going to break out next, just remember this: You can assure the safety of **your** hogs by taking this inexpensive precaution—go to your dealer and get a few cans of

Merry War Powdered Lye

Mix it with the hog's feed or drinking water according to the directions printed on the label and feed it **twice every day. This treatment has prevented hogs from catching cholera, even though raging right in the neighborhood.** It has been **proved** time and time again. Here is just one example among hundreds of similiar ones:

"We have had hog cholera all through our district. Those who have been using Merry War Powdered Lye have missed it. One man in particular who buys it by the case has cholera all around him, but so far his hogs have escaped." **C. M. COOPER, Prop., "The Right Place," Dawson, Nebraska.**

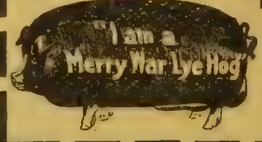
There Are No Substitutes

Don't experiment with an old-fashioned, ordinary lye. Get MERRY WAR POWDERED LYE—the **time-tried** remedy—the specially prepared lye that is **safe** to feed to hogs—that actual **experience** has **proved** to be the **safest, most dependable preventive** of hog cholera the world has ever known. **Insist** on the genuine and **refuse substitutes.**

Costs only 10c a can—enough to protect a hog from cholera, keep him free from worms and make him strong, healthy and on his feed for **two months.** Tones up digestion and prevents feed waste by changing every pound into firm flesh and juicy fat. Produces the kind of hogs that bring top notch prices.

At the price of **5c per month, per hog** you insure against sickness and greatly increase the size of your hogs.

Make a test for yourself. MERRY WAR POWDERED LYE comes in 10c cans (**120 feeds per can**). It is convenient to buy in case lots—4 dozen cans for $4.80 at grocers, druggists or feed dealers everywhere. **There are no substitutes. WE WILL SUPPLY YOU DIRECT $4.80 for 4 dozen cans—IF YOUR DEALERS WON'T SUPPLY YOU.** Write for our valuable booklet "How To Get The Biggest Profits From Hog Raising." Sent FREE for the asking.



Which Kind Do You Want?

The Auto, Reo the Fifth.

We continue to receive the most enthusiastic letters from our patrons upon the reliability, economy and efficiency of the Reo the Fifth, and particularly upon its unique smokeless oiling system, says R. E. Olds, President of the Reo Motor Car Company. Willis Barber writes that he has just completed a run of 17,000 miles with his Reo the Fifth, in which he used but two gallons of lubricating oil. He says that it is next to impossible to get his Reo engine to smoke, and that he is astonished at the small amount of water which the Reo cooling system requires, which is another good proof of the perfect design and smooth-running qualities of its motor. This is the same model Reo which R. M. Owen drove 1,460 miles as the official pilot car in the last Glidden tour from New York to Jacksonville on less than a quart of water. For full particulars and car catalogue please mention this paper and address R. M. Owen & Co., Lansing, Mich.

YOU HAVE MADE IT; WHY NOT SAVE IT?

STEEL Shingles Will Save You a Pile of Money

When you think how cheap Edwards Steel Shingles are, how much longer they last, how much easier they are to put on than commonplace roofing, it's hard to tell just how much we do save each buyer. It's a **big pile of money.**

They Beat Wood Shingles

The best wood shingles to be had nowadays seldom last 10 years, and it's a long, slow, tedious job putting them on. Besides, any building with wood shingles is a regular "fire trap"—apt to burn up any moment. Edwards Steel Shingles last over twice as long as wood, and as they come in big clusters of 100 or more, anybody can put them on in almost no time. Furthermore, they are **absolutely fire-proof** and are **guaranteed** so by a $10,000 Cash Bond.

No Chance of Rust

Unlike ordinary iron roofing, Edwards Steel Shingles never rust. With the Edwards Steel Shingle, the nails are completely covered by our patented interlocking device, and the edges are made absolutely **rust-proof** by the famous Edwards Tightcote Process. No chance for rust.

Remember, too, that Edwards Steel Shingles are much easier to put on than any other roofing.

Write for Factory Prices, Freight Paid

Edwards Steel Shingles are not only the **longest lasting** and **easiest laid** roof in the world, but their cost is amazingly low. That's because we sell direct from factory to user. And with 100,000 good customers, we only want a small 9% profit per sale. And we pay the freight. Just send a postal for our latest Roofing Book 457 and Special Factory Prices. Then see for yourself what astonishing prices you can now get on the World's Finest Roofing Material. Give size of your roof, if possible. Write today and our proposition will come by return mail. 407-457 Lock Street Cincinnati, Ohio

NECESSARY ON A FARM.

The Crocodile Wrench—Actually Six Handy Farm Tools in One.

Yes, an absolute necessity. The Crocodile Wrench means business. Every farm ought to have an extra wrench or two, especially when the wrench is a Crocodile Wrench premium, which is a pipe wrench, a nut wrench, has three dies for cleaning or cutting threads, and a screwdriver. The picture is small, but the Crocodile Wrench is twice as long, and it is full size for any purpose. It is drop-forged from the best tool steel, scientifically tempered. Requires no adjustment. Simple and always ready for use. Nothing to get out of order. Dies will fit threads on all standard farm machinery. Light, strong and durable. No farmer can afford to be without it.

Special Inducements.

Our Subscription Proposition: Send us One Dollar and we will send you THE NATIONAL FARMER AND STOCK GROWER for two years, and we will send you, postage paid, safe delivery guaranteed, ONE CROCODILE WRENCH. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

OUR INTEREST IN FORESTRY.

An Important Subject For the State Rather Than For the Individual Farmer.

One of the very live topics of the day is that of forestry. For more than twenty years the preservation of our forests has been urged, and the national government has taken some great measures to preserve our national forests. More than 150,000,000 acres of land are now included in national forests.

Yet the work is but begun. We need to preserve not only our forests, but our forest opportunities. This latter work seems to devolve on the different states, for in the states most of the land has passed out of the hands of the national government.

Forest opportunities comprise the locations that are not now forested, but should be, because the land is not of a character that will ever make it usable for anything else.

Great stretches of poor, sandy land are to be found in all of our states. On such soil certain kinds of trees will grow. The writer has seen in Maine great forests of pine on soil so sandy that the foot sank deep in it at every step. Some of those hills are so sandy that they are worthless for agriculture when the stately pines have been removed. The same is true of many spots in the West. This fact is not fully appreciated in our great prairie states, where the bulk of the land is of a deep rich loam, suitable for almost any kind of farming.

Yet even in these states some poor land is found that should be owned by the states and systematically reforested.

There are large strips of low lands on the borders of lakes where drainage will never be possible because of the proximity of the lake, and because of the too abundant soil water underneath. Yet in such places the tamarack and like trees will grow, and doubtless there are in other parts of the world, in the temperate zone, water-loving trees that could be imported to this country and made to grow in such locations.

Private enterprise cannot take such matters in hand, because private interests must be paid now. But the state (which is the people) can afford to wait any length of time, for the state never dies.

Every state should have a forestry department and proceed to acquire these useless lands and reforest them and look after them. The banks of a million streams need protection in this way, and the roots of the trees would compact the soil and hold it from being washed into the streams. In time we would have a multitude of small forests, but aggregating an immense total.

The many small forests must take the place of the few large forests that have disappeared or are in process of disappearing.

In the rougher states the situations suitable for forests are still more numerous, for the mountains are usable principally for forest growths. The time will doubtless come when every mountain and desert island will be owned by the respective states in which they are, and will be clothed with magnificent forests, yielding a large annual toll to commerce and for fuel.

Fortunately, many of our states are already moving in the matter

All You Want To Eat

In every farmer's pantry there is usually food enough for the family, available for its daily needs. If the boys are working hard, or growing fast and get really hungry, as boys often do, or if company comes unexpectedly the food in the pantry sometimes fails to "go around" just when it is wanted.

So with your crops; they feed very much as you do. There is enough plant food in the soil to produce for years the ordinary every day crops our fathers used to raise; but along comes a good season, heat, sun and rain all working well together,—you have put in good, live seed, cultivated just right, and everything is pulling along finely for a bumper crop. But a bumper crop is larger than an ordinary crop and needs more food to support it, and it wants it **now**—while it is growing. If the available fertility isn't there in the soil the crop fails just for that one reason and no other. See to it that the available elements are in your soil this year.

EMPIRE FERTILIZERS

supply that kind. These fertilizers supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather and the plant food supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

Agents wanted where we have none. Address early for prices and terms,

EMPIRE CARBON WORKS
421 Locust Street, St. Louis, Mo.

and are beginning to take over cheap lands wherever they can be secured. One thing that frequently helps out is the fact that often such lands have become forfeited to the state for unpaid taxes and can be secured with but little trouble.

The Beef Trade.

"In giving evidence before the Empire Trade Commission, Mr. George Goodsir, a well-known authority in the meat trade, in reply to Mr. Rider Haggard, gave a valuable statement in regard to the so-called American Beef Trust. He briefly sketched its influence in North America, and added that in the Argentine Republic, **the members of the same group already owned or controlled almost half the output of the state,** while within the past twelve months their operations had been extended to Australia, **where they were organizing their forces and making preparations with a view to obtaining an entrance into the trade between that country and the Motherland.** So far there was no evidence that they had reached New Zealand, but it might be only a question of months before their influence was also felt in that dominion. As to the policy and effect of trust methods Mr. Goodsir said that, although their policy at first might sometimes be to cut profits to a minimum, and even, on occasions, to work at a loss, later on, as the monoppoly of the trade was secured, they were in a position to squeeze the producer at one end and the consumer at the other."—Farmers' Union Advocate, New Zealand.

Do not overlook the Book of Live Stock Champions, which is advertised on page 2.

WESTERN RANGE HORSE SALES.

Horsemen East and West are advised that the great market for Western Range Horses is at St.Louis. The announcement is hereby made that twelve of these Auction Sales of Range Horses will be held at the National Stock Yards, Ill., during the season of 1913 by

Campbell & Reid and Western Sale Stables Co.

At each of these sales from 1,200 to 2,500 Horses will be offered in suitable lots and sold at auction for the high dollar without reserve. The offerings are always selected with the utmost care from the very best Horse Ranches of the Western and Northern country. The best Horses now being sold in the domestic sale rings were originally well-bred Range Horses, fed, educated and mannered to be good work stock. The first Auction of the season will be held on

THURSDAY, JUNE 19,

And every two weeks thereafter a sale on Thursday will be held until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address

In the list of country produce sold on the St. Louis market is sunflower seed at $2.75 to $3.25 per 100 pounds.

FIELD WORK IN SPRING.

Grading, Testing and Shelling Seed Corn—A Contribution From the United States Department of Agriculture.

[By C. P. Hartley, Physiologist in charge of Corn Investigations, United States Department of Agriculture.]

Take time by the forelock and get the seed corn and the corn planter ready for operation before the rush of other spring work. The soil and the seed are two prime requisites of a profitable corn crop. At this time of the year there are many days when weather or soil conditions prevent plowing or other field work, that can profitably be used in improving the quality of the seed corn. The seed supply can be improved in quality and productiveness by discarding the poor ears and the poor kernels.

Cull Out Objectionable Ears Before Testing or Shelling.

The best time to grade seed corn is before shelling. The Office of Corn Investigations of the United States Department of Agriculture proved by careful field experiments that an ear having kernels of undesirable shapes produces ears most of which have kernels of undesirable shapes. All ears that are undesirable for one reason or another should be discarded before making germination tests.

Good Care Obviates Much Germination Testing.

At this season for several years past a number of satisfactory means have been described for testing the germination of a few kernels from each seed ear. Those who have neglected to take good care of their seed corn may now find "dead" ears among their supply. In such cases it will be profitable to test the germination of each ear separately. Where well-adapted varieties are grown that properly mature before frost, poor germination has never been found among ears selected as soon as mature and cared for properly. Those who have given their seed proper care should pick out 100 representative ears and make a germination test of ten grains from each ear. If these ears germinate well it is not necessary to test the balance of the seed supply.

Why Nub the Seed Ears?

Before shelling, the small kernels should be discarded from an inch or more of the tips of the ears. Accurate field tests have proved these small kernels to be less productive than the fully-developed kernels of the same ears. The thick, irregularly-shaped kernels should also be discarded from the butts of the ears. These kernels produce satisfactorily, but their size or shape prevents the corn planter from dropping them satisfactorily. It is convenient to nub the entire supply of ears before the shelling process is begun.

How to Shell Seed Corn.

Many farmers who plant twenty or forty acres of corn carefully shell their seed by hand and are profited by so doing. A few remarkably-successful, extensive corn growers shell hundreds of bushels by hand. Where much seed is required there is a strong temptation to run it through the corn sheller. Hand-shelling is profitable for the small farmer and therefore more profitable for the extensive farmer. The sheller breaks or cracks some of the kernels and there is not the opportunity of examining kernels from different portions of each ear as in shelling by hand. After being nubbed the proper way to shell the seed ears is to shell by hand, one ear at a time, into a sieve that will let the chaff fall through and leave all the kernels from the ear in plain view for inspection. If unsatisfactory, all the kernels can be easily discarded and another ear shelled. The ears should not be shelled directly into the general seed supply, for it would then be difficult to separate and discard the undesirable kernels. germination of each ear separately.

Does Your Planter Drop Satisfactorily?

If the corn planter gave trouble last spring, better order a new one now. A poor corn planter is an expensive implement to use. Even though the planter dropped satisfactorily last year, it should be tested with this year's seed supply before planting time arrives. The kernels of a variety of corn frequently vary in size from season to season, and different plates may be needed this year from those used satisfactorily last year.

Under favorable field conditions 10 to 20 per cent. of the kernels or young stalks are destroyed. Where extensive plantings are made with first-class seed and thinning is impracticable, about five kernels should be planted for every four stalks desired. Where help is obtainable that will attend properly to the thinning, it is more profitable to plant twice as many kernels as stalks desired, and thin out the weak plants as soon as they become too large and hard to be destroyed by cutworms.

"Missouri King" Sold For $5,000.

"Missouri King," the grand champion saddle stallion of 1911 and 1912, owned by Sheriff W. P. Hawkins, Bowling Green, Mo., was sold at Mexico, Mo., March 5th, 1913, to J. F. Ball, of Los Angeles, Calif., for $5,000. Mr. Ball represents E. R. Maier, of Los Angeles, who is prominent in Pacific Coast horse circles. "Missouri King" will be shown this year at the Pacific Coast Fairs and Horse Shows. With the exception of "Rex McDonald," he is, perhaps, the greatest saddle stallion ever raised in Missouri. A first-class picture of "Missouri King" is in the Book of Live Stock Champions advertised on page 2. Two pictures of the famous "Rex McDonald" are also shown in the book.

Potash Pays the Farmer.

The advertisement of the German Kali Works on page 5 relates mainly to Potash, one of the three foods necessary to plant growth and satisfactory development. The farmer will find in the agricultural bulletins much information in regard to potash, most of it supporting the assertion that "Potash pays the farmers," and that intensive agriculture (which means large crops from every acre) can only be conducted by and with the free use of available commercial fertilizers used in proper proportion, with potash equally as important as nitrogen and phosphoric acid. Seventy bushels of corn with 5,000 pounds of fodder belonging thereto take from the land 105 pounds of nitrogen, 42 pounds of phosphoric acid and 100 pounds of potash, and in some crops the proportion of potash is much larger. Our readers will do well if they will investigate the subject closely and will write to the German Kali Works at one of the addresses in the advertisement and ask for the price of potash and for the circulars on the profitable use of fertilizers.

Lambs From Colorado.

Early in April, C. C. Garrett, from Colorado, marketed 518 head of eighty-pound lambs which sold at $8.50 per 100 pounds on the St. Louis market.

HORSE AND MULE SALESMEN.

Relief For Rupture Without Operation

We Allow A 60-Day Test—Entirely At Our Own Risk—To Prove It

No longer any need to drag through life at the mercy of leg-strap and spring trusses. No reason in the world for letting them force you to undergo a dangerous operation.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drug-stores should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—Cluthe Co., 125 E. 23rd St., New York City

Mississippi Cattle in the Native Division.

Our readers are probably aware that the live stock markets have two divisions for yarding cattle. One is called the Native Division, and the cattle admitted to that division can be shipped out again to any part of the United States to be placed on farms or to be slaughtered, as the case may be. The other division is called the Quarantine Division, and the cattle yarded therein, although perfectly healthy, are from the country that the government authorities know to be a tick-infested country. In Mississippi, for instance, most of the state is under quarantine, and when the cattle arrive in market, although they can be sold to the slaughterers, they cannot be shipped out again to go on farms and mix with other cattle. Neither are some of the slaughterers able to receive them. The consequence is, that the main demand for this class of cattle is from the packers, and generally sell for less than if, like the natives, they had the full benefit of all the buyers on the market.

On March 31st, at the National Stock Yards, Ill., the market of St. Louis, Messrs. Milton-Marshall Commission Company received twenty-two head of steers and stags from Messrs. W. J. Davis & Son, of Hinds county, Mississippi, and, that county being free from ticks, the cattle are allowed to be classed as natives and sold to anybody and everybody who may be inclined to buy them. The twenty-two head were sold by the Milton-Marshall Live Stock Commission Company; the average weight was 876 pounds, and the remarkably good price obtained was $7.50 per 100 pounds. On the day of sale the market was handicapped by a blockade caused by the floods, therefore some buyers were unable to bid on the cattle; but it is certain that the salesman was enabled to get better bids than if the cattle had been limited in selling to the buyers in the native division.

Upon further investigation it appears safe to say that cattle in the Southern States that can be yarded in the native division will sell for an average of a dollar per 100 pounds higher than if they are forced to be yarded with other Southern cattle in the quarantine division. Southern stockmen will find it to their interest to clear their country of the cattle tick, for it is worth a cent a pound in the market and the cattle will be worth considerably more to the grower because the feed will fatten the cattle instead of the ticks. Good progress is being made in the direction of cleaning out the ticks, and in every case it pays to do so.

Western Range Horses.

We are again authorized to announce that Campbell & Reid and Western Sale Stables Company will hold their sales of Western range horses and mules on the St. Louis market as usual during the season of 1913. The first sale will be held in the middle of June, as usual.

Ranchmen who will have stock for sale will find it to their advantage to consign to these sales, because they are the best conducted of all the sales of Western range horses. Eleven or twelve of these sales are held each year. The number offered may be 1,200 or 2,500 at each sale. The sales take place with the regularity of clockwork, being held every other Thursday after the first sale. Horsemen having horses to sell should write to J. J. Searcy, Sale Manager, National Stock Yards, Ill.

St. Louis Wool Quotations.

These quotations represented basis of trade late in March: Nearby growth, 22c. for low to 23c. for choice; fine at 16c. for heavy to 20c. for light; lambs', 18 to 20c.; burry, 13c. for hard to 19c. for slight; Southern, 12c. for hard burry to 21c. for clear; fall clip or loose, 18 to 20c., and fine, 13c. for sandy; Northern or Western, 20c. for dark to 21c. for bright medium; 13 to 18c. for fine, and 12½c. for hard burry to 18c. for slight; tub-washed, 23c. for burry to 34c. for clear; Angora goat, 15c. for burry; 29c. for choice.

First-class Commission House.

The best-organized live stock market is St. Louis, and one of the best firms doing business in that market is the Milton-Marshall Live Stock Commission Company. Shippers who consign stock to this firm to be sold can be assured of obtaining the best results possible. Mr. A. J. Milton, President of the company, is an expert cattle salesman, and, assisted by his brother, L. H. Milton, make splendid sales. J. S. Jackson and J. S. Mulberry, selling hogs, are equally expert in their department, and Thos. Freels, Sheep Salesman, is noted for skill, ability and good judgment. It is a finely-equipped firm, doing business efficiently in the interest of their customers. All who will apply to Mr. R. E. Marshall, Secretary, P. O. Box 94, National Stock Yards, Ill., stating what they have to ship, will receive special information concerning the market prospect, coming directly from the salesmen.

St. Louis Horse and Mule Trade.

When the Eastern floods began and the railroads were in trouble, the firms shipping horses and mules to the East had to suspend operations. This was followed by the floods in the South. Naturally, the mule trade was quiet and lower. Early in April the Eastern situation improved and the same favorable change was expected in the lines to the South. Mr. T. H. Holland, of Holland, Nugent & Maxwell Bros., National Stock Yards, said on April 1st: "We will be glad to send the exact condition of trade to any shipper of horses and mules, just the same as we do to our regular customers. Any day and any hour an improvement may set in."

Hog Market and Prices.

On the last day of March, 1913, the top price for hogs was $9.35 per 100 pounds, paid for a load weighing 164 pounds. They were fine, light summer-weight butcher hogs. The bulk of 950 hogs on the market sold at $9.15, and this included all weights of good hogs, from 180 to 275 pounds. These figures cover the market for good hogs, but the coarse and common hogs sold at $8.50 to $9.00 per 100 pounds, and light pigs at $6.50 and up. We refer to the market at the St. Louis National Stock Yards, where about 2,500,000 hogs are sold each year.

Concrete on the Farm.

It is easy to mix concrete; it is easy to construct buildings of it; it is easy to obtain an education in concrete construction. You can get the books for nothing; all you have to do is to write for them. Furthermore, by writing for the books you will also get quotations giving the nearest source of supplies to your farm. See page 11 and write to the Atlas Portland Cement Company, Dept 165,- 30 Broad street, New York City, and ask for the Free Farm Book.

BUSINESS NOTICES.

The Perkins Wind Mill and Engine Company is an old-established and reliable manufacturing firm, with excellent points of superiority in the manufacture of farm implements and appliances. The list is set forth on page 12, and a very satisfactory catalogue can be had by addressing Perkins Wind Mill and Engine Company, 50 Main street, Mishawaka, Ind.

Book of Champions on page 2.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have therefore made arrangements to furnish our subscribers with the **Reliable Poultry Journal** on the most advantageous terms, and we know that the publishers are getting out such a magnificent paper the arrangement cannot possibly last long. All who are interested in poultry raising should consult their own interest and subscribe at once. We will send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

NATIONAL EGG-LAYING CONTEST.

The Pen of S. C. White Leghorns From England Are Still in First Place and Are 115 Eggs in the Lead of Their Nearest Competitor.

A Pen of White Orpingtons From Kentucky Made the Best Record For February.

Hints on Feeding Baby Chicks — Maine Method of Feeding Laying Hens.

The hens in the egg contest at the Missouri State Poultry Experiment Station at Mountain Grove are still doing considerably better than they did in the first contest. They laid 2,224 more eggs in February, 1913, than during February of last year. The grand total for the first three and a half months has now reached 21,636 eggs, 8,666 of these being laid in February. Pen No. 2, S. C. White Leghorns, from England, are 115 eggs in the lead of their nearest competitor. The contest is on in earnest now, and some hens which had not laid much up to this time are now laying regularly and are climbing up towards first place. Every month from this on there is certain to be many changes. Pen No. 56, White Orpingtons, from Kentucky, won the silver cup for the best record for February by laying 195 eggs in the twenty-eight days.

The standing of the ten leading pens (ten hens to the pen) for the first three and a half months, including the last fifteen days of November and all of December, January and February, is as follows:

Pen No.	Eggs.
2—S. C. White Leghorns, England	656
23—Silver Wyandottes, Illinois	541
19—Silver Wyandottes, Iowa	518
57—Black Langshans, Missouri	488
33—Barred Plymouth Rocks, Illinois	477
20—White Wyandottes, Arkansas	474
59—Black Orpingtons, Canada	459
30—Buff Wyandottes, Vermont	443
24—White Wyandottes, New Jersey	438
58—Buff Orpingtons, Missouri	433

A pen of S. C. Rhode Island Reds, from Florida, is only one egg behind the last-mentioned pen.

The ten best pen records for the month of February are as follows:

Pen No.	Eggs.
56—White Orpingtons, Kentucky	195
2—S. C. White Leghorns, England	180
49—Black Langshans, Missouri	180
19—Silver Wyandottes, Iowa	178
57—Black Langshans, Missouri	175
27—Silver Wyandottes, Missouri	165
33—Barred Plymouth Rocks, Illinois	163
20—White Wyandottes, Arkansas	161
37—S. C. Reds, Missouri	161
30—Buff Orpingtons, Vermont	159

Black Orpington, No. 2,052, in Pen No. 59, laid twenty-seven eggs in twenty-eight days. Seventy-eight hens out of the seven hundred have not laid an egg. A few contestants have made the mistake of sending old hens. Others did not have their stock mature enough. To make a good record in a contest like this the stock should be hatched early and fully matured by the time the contest begins. The best individual hen records to date are as follows:

Hen No.	Eggs.
66—S. C. White Leghorn, England	84
68—S. C. White Leghorn, England	82
2,076—Buff Orpington, Missouri	81
600—Buff Wyandotte, Missouri	79
65—S. C. White Leghorn, England	79
860—Buff Wyandotte, Vermont	79
709—Buff Plymouth Rock, Missouri	78
735—Black Langshan, Missouri	78
656—White Wyandotte, Arkansas	77
601—Silver Wyandotte, Iowa	77
2,158—Buff Orpington, Missouri	77

Results From Feeding Tests.

In this feeding experiment the positions of the ten pens remain the same, with the exception that the pen fed according to the New York method of feeding laying hens has advanced from ninth to seventh place. Where feed of all kinds is kept before the hens they seem to be doing best and laying the greatest number of eggs. The pen in which the hens feed themselves from hoppers and in which feed of various kinds are kept before them are forty-two eggs in the lead of their next competitor, the pen fed according to the Canadian method of feeding. So far, this experiment indicates that hens will lay more eggs in the winter months where they are hopper-fed, or fed from an automatic feeder, than where they are hand-fed. The results for the summer months may prove the opposite to be true for hot weather.

Pen No. 63—Maine Method of Feeding Laying Hens.

Dry grain fed in litter.

Early-morning feed—Cracked corn.

10:30 a. m. feed—Equal parts of wheat and oats.

Feed—About two quarts to fifty fowls.

Dry Mash—First Month.

300 pounds wheat bran.
100 pounds corn meal.
100 pounds cheap flour.
100 pounds beef scraps.

Dry Mash—Second Month.

200 pounds wheat bran.
100 pounds corn meal.
100 pounds cheap flour.
100 pounds gluten feed.
100 pounds meat scraps.

Third month—Same as second, only add fifty pounds linseed meal.

Fourth month—Same as second.

Fifth month—Same as third.

After this, feed as second month and add fifty pounds linseed meal every alternate month.

Green food—Sprouted oats, cabbage, mangels, etc. Grit—Shell and charcoal.

Hints on Feeding Baby Chicks.

The hatching season is on and it might be well to give a few suggestions as to how to feed or start baby chickens.

The first two or three weeks of a chicken's life is perhaps the most critical time in its history. If you can get the chicks safely over this period, then your problem is nearly solved. Then any feed which will give best results, which will tend to decrease the mortality, is not expensive, even if you have to buy it and pay a good price. You cannot afford to let anything stand in the way of providing the best feed obtainable to feed your chicks for at least the first three weeks after hatching. We have found that practically every farmer and poultry raiser has a little different method of feeding. If you are getting good results, I should not advise you to change it. While the method mentioned here is perhaps not the best, yet it has proven to be simple and safe in most cases.

Provide a hover for the hen and chickens, or a comfortable brooder for the incubator-hatched chicks. Cover the floor with clover chaff or fine cut straw or other litter free from mold or mustiness. Sprinkle a little fine grit over the floor and provide a fountain of pure water. Place the chicks in the brooder, but do not feed them for about forty-eight to seventy-two hours after they are hatched. The first food we give them is a little good-grade commercial chick feed, which is sprinkled in a clean place on the floor. This is fed at morning, noon and night. As soon as they have learned to eat, we sprinkle this feed in the litter and let them have the fun of scratching for it. Between meals, about 10 o'clock in the morning and about 2:30 in the afternoon, we sprinkle a little rolled oats or pinhead or steel-cut oats on the floor. We provide all the sour milk or buttermilk we can get the chicks to drink from the first day until the stock is fully matured. We prefer this to feeding them beef scraps. We also cut up an onion occasionally and give to the youngsters. This furnishes them with green food and also seems to aid in keeping them healthy. After the chicks are about ten days old we begin to feed a dry-mash mixture made as follows:

Two parts bran; one part corn meal; and one part shorts or middlings.

We mix in a little bone meal and a little fine charcoal and also include one-half pound of fine salt with every one hundred pounds of this dry mash. This is kept in a hopper or box where the chickens can eat it any time they become hungry. The same dry mash is used until the chickens have fully matured. If you cannot get sour milk or buttermilk, it will be necessary to add one-half part of dry beef scraps to the dry-mash mixture. After the chicks are from two to three weeks old we gradually change their grain food from the commercial chick feed to a mixture of two parts wheat and one part cracked corn or Kaffir corn. After the chicks are a month old, their grain food is all fed from hoppers. Try this method of feeding if you wish, but don't give up your own if you are already succeeding with it.

Trap-nest Your Hens and See Which Ones Lay.

That the only sure way to know which hens in a flock are doing the work and which are not "earning their keep" is by using the trap-nest, is the belief of Prof. James Dryden, of the Poultry Husbandry Department of the Oregon Agricultural College.

"High egg production is not a characteristic of any one breed of fowls," says Prof. Dryden. "The trap-nest has demonstrated this. There is no particular shape or type that indicates good laying qualities, so far, at any rate, as our present knowledge goes.

"The only certain method of separating the good layers from the poor is to use the trap-nest and keep a daily record of eggs laid. It is not always the fault of the feed and care that they don't do any better. It is the misfortune of the hen herself very often; she couldn't lay if she wanted to.

"It requires considerable time to keep a trap-nest record of a flock of hens. Not every farmer has the time, but if a few farmers in every county would trap-nest a flock of hens, in a few years all the farmers of the county would very likely have stock that were from heavy-laying trap-nested fowls. Where it is possible for a farmer to devote a little time to it each day he will be well repaid for the labor.

"The Oregon Experiment Station is trap-nesting a large flock each year and it is doing the best it can to furnish the farmers of the state with stock from good layers, with the object of increasing the egg yield in the state. It is desirable, of course, to keep a full year's record for each hen, but if that is not possible, a record for a part of the year would be valuable. For instance, a record of the first six months of laying, beginning probably in November, would show which were the good winter producers.

"Those that wouldn't produce well during the first six months would not be good fowls to keep for breeding, and they could be killed off. If it isn't possible to keep a six-months' record, then a three-months' record would be valuable. Hens that produced well for three months, beginning November, would be the most profitable fowls in the flock, and they should be retained for breeding early winter layers.

"It has been shown in our experiments that the poor layers during the first year are usually the poor layers the second year. If at the end of a full year's record all hens that had laid less than 100 eggs or 120 were to be killed off, it would save the farmers keeping a lot of fowls at a loss for another year. From 25 to 50 per cent. of the fowls in the average flocks do not pay for their keep."

Kitchen Floors.

If kitchen floors are painted with boiled linseed oil they are cleaned very easily.

$7.55 Still Buys World's Champion 140-Egg Incubator

Double cases all over; best copper tank; nursery, self-regulating. Best 140-chick hot-water brooder, **$4.85.** Ordered together, **$11.50.** Freight Paid (E. of Rockies). No machines at any price are better. Satisfaction guaranteed. Write for book today or send price now and save time. Jim Roban, Pres.

FUSS AND FEATHERS.

A Few Remarks About Farm Poultry and Sprouted Oats.

"Fuss and feathers" is a common term of reproach, generally uttered behind the backs of fussy people. But sometimes the fuss and feathers produce excellent results. The writer has in mind the case of an amateur poultry raiser, who recently sold a young rooster for $150. He keeps but a small flock of poultry and is interested in them chiefly as show birds. He attends several of the neighboring small poultry shows and generally brings home some prizes. But this winter he not only took some prizes, but made such a reputation for the bird with which he did it that he was able to sell him for the sum mentioned above. This man has been a great fusser about his poultry, spending a great deal of time on them. This winter he has been following a regular system of sprouting oats, so that the fowls can have green food all through the winter months. He keeps three tubs of oats going all the time, as it takes two or three weeks to get a batch of oats into a condition where they will be green food instead of grain food.

He does this by taking three metal tubs and punching holes in the sides so they will permit the water to run out, after the water has been poured on the oats. He places one tub above the other, the tub above sitting on sticks placed across the tub below. This enables him to keep the oats moist with the least amount of trouble. He pours on the water, warm, about once a day, but needs only to pour it on the top tub, as it will run out of that into the second, and from the second into the third.

The tubs are in the basement and close to the furnace, but where they will also get light. Some of the oats sprout quickly, and others are slow in developing. He waits till some of the sprouts are several inches long before he begins feeding, and then gives the fowls all they will eat. He says that this kind of food keeps the birds in good condition and healthy and does not enable them to get fat. It means early development and early eggs.

With this goes a variety of food, of about every kind imaginable. To most people this excessive care looks like a waste of time, but this amateur turns his time into money. It is but another demonstration of the fact that, to make money from poultry raising, a great deal of care must be given to it.

The fact that poultry raising requires much care makes it a business best adapted to women, whether the raising of poultry be on the farm or on a town lot. It requires a person good at infinite details. For this reason we see many women very successful in it. On the farm the opportunity for women to engage in this work is very much greater than in the town, as the farm presents large possibilities for the securing of feed that costs little or nothing, such as grains wasted in the fields, grass that would not be harvested, and grasshoppers and other insects that no one has a use for except as a food for the poultry. The combination of woman and farm poultry is bound to be a large factor in the future prosperity of this country.

Root Sales at St. Louis.

During the last week in March the roots received from the country at St. Louis were sold on the basis of the following quotations. Quote by the pound: Golden Seal, $3.35; Lady Slipper, 14c.; Seneca, 36 to 38c.; Pink, 20c.; Black, 7c.—damp, dirty less; May Apple, 4c.; Snake, 24 to 26c.—stemmy and leafy less; Kansas Black Snake (Echinacea), 10c.—split root half price; Oklahoma Black Snake, 9c.—Missouri worthless; Angelica, 5c.; Wahoo—Bark of root, 20c.; bark of tree, 5c.; Blood, 4½c.; Blueflag, 5c.; Sassafras—Bark of root, 5c.; Wild Ginger, 8c.; Spikenard, 3c.; Scullcap leaves, bright, 9c., but dark less; Wild Ginseng, $6.25 to $6.50; cultivated do., $2.50. The National Farmer and Stock Grower receives occasional inquiries concerning the sale of roots and is glad to get someone in the trade to answer them, but the first thing needful is for those inquiring to say exactly what quantity they have to ship and to send a sample of the goods.

St. Louis Feather Quotations.

Consignments of feathers received from the country were sold on the St. Louis market during the last week in March as follows. Quote by the pound: Prime white live goose, 63c.; prime gray do., 44c.; old white, 36 to 38c.; x, 27 to 31c.; xx, 15 to 18c.; xxx, 7 to 10 cents; tare, 10 per cent. on small sacks and 3 per cent. on large. Duck feathers—White, 44c.; dark, 30c. Chicken—Prime dry-picked body, 3c.; wet, damp and quill-mixed, 2c. Turkey—Body, dry, 8c.; quill-mixed, 18c.

The Rough-Road Car

By R. E. Olds, Designer

After 26 years of experience, I tell you a car for the average road ought to be built like this.

Overcapacity

The builder must know the needed strength. Then he must add at least 50 per cent, as we do in this Reo the Fifth.

He must know his steel—have it made to his formula. Then analyze it twice to make sure of it.

He can't test gears with a hammer. He must, as we do, use a crushing machine of 50 tons' capacity.

Not Enough

Tires are expensive. But oversize tires are essential to low upkeep. We use 34x4.

Roller bearings cost five times as much as common ball bearings cost. But the right car must have them. In Reo the Fifth we use 15, eleven of which are Timkens.

Drop forgings are costly, but we use 190 to avoid the risk of flaws. We use a $75 magneto, big brakes and springs, a doubly heated carburetor, a centrifugal pump. And not an engine goes out until 48 hours have been spent in five radical tests.

Reo the Fifth, without these extremes, would cost in the building $200 less. But in the next five years repairs and upkeep would cost you several times that much.

I Know

These are things I know. I have learned them from tens of thousands of cars in my 26 years of car building.

These extra precautions cost this concern two million dollars per year. We are not spending that without knowing the need of them.

We save by efficiency—by building all our own parts. We save 20 per cent by building only one model. Then we spend all those savings on hidden parts. To give you a car which, year after year, will serve you as well as when new.

Look below the frills when you buy a car. All modern cars are attractive. Find out what the maker hides.

A one-summer car is built very differently from a car that is built for keeps. If you want an honest car—a car that endures—watch these inner features.

New Control

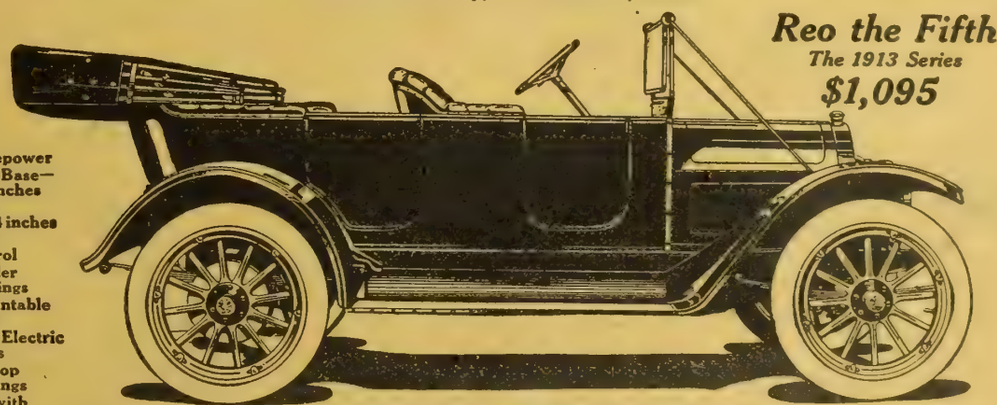
Reo the Fifth has our new control. All the gear shifting is done with one center rod, entirely out of the way. It is done by moving this rod only three inches in each of four directions.

There are no levers to clog the way of the driver. Both brakes are operated by foot pedals. And this car, like all the leading cars, has the left side drive.

A 17-coated body, nickel trimmings, electric lights, genuine leather—all the luxury you want.

Write for our catalog and we will direct you to the nearest Reo showroom. They are everywhere.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.
Canadian Factory, St. Catharines, Ont.



Reo the Fifth
The 1913 Series
$1,095

30-35 Horsepower
Wheel Base—112 inches
Tires—34 x 4 inches
Center Control
15 Roller Bearings
Demountable Rims
Three Electric Lights
190 Drop Forgings
Made with 5 and 2 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170). (Gray & Davis Electric Lighting and Starting System at an extra price, if wanted.)

LIVE STOCK BREEDERS' CARDS.

The NATIONAL FARMER and STOCK GROWER

is a first-class medium for the purpose of advertising pure-bred beef or dairy cattle, hogs and sheep, horses, jacks and jennets, goats and poultry. The circulation is always upwards of a hundred thousand copies, and the average of all editions in 1912 was 123,483 copies. We can let live stock breeders state what they have to sell for very little money. Breeders will find it to do astonishingly good service. Send your copy for an estimate to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

CARPENTER'S BEST BARGAINS.

Fifty Poland-Chinas, 40 to 200 pounds; twenty-five Durocs, 100 to 150 pounds. All of the Poland-China Hogs were sired by the great Meddler and Walbrige Boars and from some of the most noted Sows in America. Durocs sired by Mortgage Lifter and the mighty Col. Prince; Dams, TRY-STATE FAIR winners or others just as good. My catalogue and price list are free. Write for it and mention this paper.

THE GRANDVIEW BREEDING FARM, Marmaduke, Ark.

POLAND-CHINA PIGS.

Orders booked now for Spring Pigs. Will do to ship May. $12 and $15. Big, fine Pigs. Best of breeding. Come and see or write.

WHITE CHINESE GEESE. Fawn and white and pure white. White Orpingtons, Silver-laced Wyandottes and White Leghorns. Eggs for hatching. Prices reasonable.

W. M. SAWYER, Lancaster, Mo.

SINGLE COMB WHITE ORPINGTONS,

Cook and Kellerstrass Strains.

Eggs, $3.00 for 30; $7.00 per 100; from heavy-laying, large, massive, true-typed stock. Can fill orders promptly.

RAYMOND RUEBUSH, Sciota, Ill.

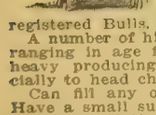
SALE OF HOLSTEIN CATTLE.

Cows, Heifers and Young Bulls.

I will sell the following high-grade Holsteins. They have plenty of quality and breeding and are in good condition.

50 Yearling Heifers and 50 1½-year-old Heifers—just being bred to a son of a 24-pound dam.

100 2 to 2½-year-old Heifers and 100 2½ to 3-year-old Heifers—bred to a high-class registered Bull; to freshen from December 1, 1912; to March 1, 1913.



250 Matured Cows, very heavy producers, springing up, ready to freshen soon; most of them in calf from registered Bulls.

A number of high-colored, registered Bulls, ranging in age from six months up, out of heavy producing dams, and selected especially to head choice herds.

Can fill any order, from one animal up. Have a small surplus of excellent registered Cows and Heifers I will dispose of. Write me regarding your wants.

JAMES DORSEY, Dept. F. & S. G., Gilberts, Kane County, Illinois.

TEMPLE HILL STOCK FARM,

Get a Yesterlaid hatch

of vigorous, heavy-laying Ranged Raised Leghorns. 95% fertility! Ordered by 15 Experiment Stations! Special introductory offer on 30-egg orders includes "Poultrology" free—most valuable poultry book published. 144 pages; 70 pictures.

Yesterlaid Egg Farms, Dept 23 Pacific, Mo.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.

WILLARD MILLER, R.F.D. 2, Anita, Iowa.

DOGS FOR SALE.—White and Silver Gray Spotted Shepherds, with glass eyes. Natural-born heelers. **J. C. BENTLEY, Brighton, Macoupin County, Ill.**

SADDLERS.

Forty Saddle Stallions, Mares, Colts and Fillies of the best Denmark and Chief blood. Special prices on Stallions for the next thirty days. J. F. COOK, Lexington, Ky.

PURE-BRED REGISTERED ANGORA GOATS,

Bred from the choicest strains of imported Angora Goats. Sweepstakes and First-prize Winners at the American Royal Show. Satisfaction guaranteed.

R. C. JOHNSTON, Lawrence, Kansas.

JACKS AND PERCHERONS.

We have twenty-five of the biggest and best mammoth Jacks in Kentucky and a few Percheron Stallions. We will cut the price from $100 to $300 per head on every one. We have a big stock of High-grade Percheron Mares, Hampshire Swine and big Black Pigs. Write your wants and visit the Cloverdale Farm.

H. T. BROWN & CO., Lexington, Ky.

TAMWORTHS FOR SALE. The Bacon Hog; the largest and most prolific breed; early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at the State Fairs of the year 1912, including a bunch of championships. Imported stock owned be me were winners at Royal Show, London, England, 1907. Mature Sows will fatten from 600 to over 700 pounds; Boars 1,000 to 1,200 pounds.

CHAS. FORD, Mortonsville, Woodford County, Kentucky.

55 BREEDS

Pure-bred **Chickens, Ducks, Geese, Turkeys,** also **Incubators, Supplies** and **Collie Dogs.** Send 4c for large poultry book, Incubator Catalog and Price list. **H. H. HINIKER, Box 25, Mankato, Minn.**

CHAMPION DUROC-JERSEY PIGS

For sale out of prize-winning Sows and by Col. Prince, 35,707, he by Prince of Cols., the two greatest living Boars. One champion yearling Show Boar.

J. H. HENDERSON, Locust Hill Duroc Farm, Box 80, R. R. 6, Jackson, Tenn.

EGGS FOR HATCHING

From stock scoring 90 to 95¾. Write for mating list. Twelve standard varieties.

MUELLER FARM, Wellsville, Mo.

43 VARIETIES poultry, pigeons, ducks, geese, water fowl, incubators, feed and supplies. Catalogue 4 cents. **MISSOURI SQUAB CO., Dept. Z P, Kirkwood, Mo**

MILL CREEK STOCK FARM.

THOS. H. EZELL, Proprietor,

Breeder and dealer in registered high-class Starlight Jacks and Jennets from four months to eight years old. (No partial Jacks.) Written guarantee. Catalogues contain pictures of each animal. Also Jersey Cattle.

Long Distance Phone, Main 1326.

Butter Profits

You ought to get more butter profits. Jersey Cattle mean more butter profits, because they yield more butter fat at less net cost of keep than any other breed.

THE JERSEY

excels in beauty of dairy type. She is a persistent milker. Jerseys are easily acclimated. They live long and keep healthy. They mean *steady* butter profits. Write now for Jersey facts. Free for the asking.

AMERICAN JERSEY CATTLE CLUB 324 W. 23d St., New York

The sausage eaten in this country in the course of a year would encircle the earth more than six times.

MONEY IN BEANS.

A Crop That is Enriching California, Michigan and New York, Yet is Neglected in Other States, to Their Loss—A Comparison With Wheat.

"Why do not farmers raise more beans?" We were asked that question by a man who said: "If the crop of the white navy beans was multiplied by three it would not be too large for the market to handle and the people to consume." Usually beans reach the consumer as they leave the farmer, except for cooking. Wheat is ground into flour and made into bread, and several profits are added to the original cost; but the bean leaves the farm and is placed upon the dinner table without any manipulation, and maybe, for that reason, a bushel of beans is often worth three times the farm value of a bushel of wheat.

The United States production of the bean during the year 1909 (the last census year) was 11,251,160 bushels, and the crop was grown upon 802,991 acres. The farm value of the crop was $21,771,482. The crop averaged fourteen bushels to the acre, and the price per bushel on the farm averaged $1.94, making the crop average of $27.16 per acre.

But average tables include many states where beans are not grown systematically, and they figure on local markets as to price. Many a better showing is made. For instance, in 1912, in Effingham county, Illinois, where the most beans are raised of any county in Illinois, the average yield was seventeen bushels per acre, and the price realized was $3.00 per bushel, bringing the crop value up to $51 per acre. The average farm value of beans given by the Department of Agriculture for six years is $2.35 per bushel, and the average farm price of wheat is placed at 91½ cents a bushel for the same period. The average crop per acre of wheat in the United States in 1912 was 15.1 bushels, which was valued on farms, December 1st, 1912, at 80.9 cents, or $12.22 per acre. Whenever beans and wheat are compared, the result is always to the advantage of the bean grower.

Although beans are charged a customs duty of 25 cents a bushel, the imports amount to 1,200,000 bushels a year. The principal states producing navy beans are California, 3,323,608 bushels; Michigan, 5,282,511 bushels; New York, 1,681,506 bushels. All other states produced less than a million bushels. In other states bean growing is advancing.

There is no question about locality. Beans will grow on almost any soil and in any country. In Europe the largest crops are raised in Spain, Italy, Austria and in Great Britain. In England thirty-three bushels were raised to the acre in 1910. Wherever wheat and corn will grow, beans can be grown. In large sections, where cowpeas are grown, being planted when corn is laid by, beans could be raised and matured. And it is an open question whether or not beans can be planted and matured after oats and wheat crops are harvested. The most successful bean growers of the Northern States recommend planting about the middle of June. Experts agree that the plowing should be at least six inches deep. As legumes, beans equal cowpeas, soy beans, etc., and have a place in the rotation of crops.

In recent years the canners by vigorous exploitation sold an immense quantity of beans, and are ready to establish canneries wherever beans are grown in sufficient quantities, and this should cause the farmers, the Agricultural Experiment Stations, the Farm Advisers and the Agricultural Department at Washington to take more interest in beans, a crop that is coming to the front on three items—easy cultivation, satisfactory yields and good prices.

CHAMPION SEED CORN PREMIUMS

Offered to Our Readers Who Send Us a Special Subscription—Yellow Dent Corn Pure Bred Since 1847.

Johnson County White Corn That Won Many Grand Championships.

This is the Last Time This Season the Offer Will Appear.

The subject of seed corn is of the utmost importance, especially at this time. Pretty good seed corn is easy to get, but superior seed corn is scarce. Even the successful seed corn growers have good and bad seasons, and there is great variation, one year with another, in vitality and quality of their seeds.

Only one thing can be guaranteed, and that is, pure-bred seeds, like pure-bred animals, produce true to type, and sometimes after years of careful selection in breeding there is worked out an almost imperceptible improvement. The road to improvement is rough and rocky, and upon it there are many obstacles; but ultimate success is possible, and only possible, by using seeds of the right breeding and quality. The backward road is easy to travel by using seeds of no breeding and only containing the qualities that even negligence in farming cannot destroy. Promiscuous seeding of unknown corn results in smaller crops of low-grade corn. Nature may save the crop by an excellent season, but the general result is bad.

As a step towards general improvement, every corn grower should have one or more experimental plots each year, using small quantities of different seeds that have proven to be superior in the great corn contests of the United States.

The National Farmer and Stock Grower has furnished opportunities for farmers to obtain such seeds for the past five years.

We are now distributing small quantities of seed corn distinctly different and grown by two great corn improvers—one, D. L. Pascal, of Iowa, who has grown Reid's Yellow Dent Corn that he obtained pure from the originator. Mr. Pascal has won many prizes. He has also furnished us seed from which our subscribers have grown ears of corn that have won prizes at State and Interstate Fairs and at the National Corn Show. Reid's Yellow Dent Seed Corn has been bred pure since the year 1847.

The other eminent corn breeder whose seed corn we are distributing is the famous L. B. Clore, of Indiana, growing Johnson County White Corn. His World's Fair and National Corn Show championships are many, and no corn improver on the face of the earth is his equal. He is now barred from competition.

We have bought the seed corn we send out from Mr. Pascal and we have bought seed corn from Mr. Clore. We will send it out in twenty-ounce packages as subscription premiums. We will be able to fill all orders received during the month of April.

Our Subscription Proposition.

Anyone who will send us the amount of sixty (60) cents we will send The National Farmer and Stock Grower for one year, and we will send as a premium a package containing twenty ounces of Yellow Dent Seed Corn grown by Mr. Pascal, or, if preferred, we will send twenty ounces of Johnson County White Corn grown by Mr. Clore. Take your pick of which corn you desire, and if you wish both kinds, send one dollar ($1.00) and be credited with two-years' subscription and two twenty-ounce packages of seed corn. All seeds are sent out on the day the subscription arrives. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Wool Sales in St. Louis.

St. Louis was always a first-class wool market, and received and sold an average of 27,000,000 pounds of wool during the past five years. There are not many firms in the wool commission business, but quite a number of houses are there that buy for the account of Western mills. If there is any activity in wool, the St. Louis trade is very quick to take advantage of it, and oftentimes the St. Louis market has led an advance. One of the commission firms handling wool strictly on commission is A. J. Child & Sons, 511 North Main street, St. Louis, Mo. They have been in business in St. Louis thirty-eight years. They have a card in this paper, and sheep raisers who wish to keep in touch with the market should write them for their wool market reports.

It would be worth considerable to farmers, and in general to most American industries, if Congress would adjourn immediately. Taking the duty off wool and adding twenty millions to the internal taxes looks like suicide.

Elkhart Vehicles and Harness

have a world-wide reputation for high quality and our prices have made them famous.

FORTY YEARS'

experience selling to the consumer means success.

We ship for examination, **guaranteeing** safe delivery, satisfaction and to save you money.

Catalog shows all styles of pleasure vehicles and harness, pony vehicles and harness, spring wagons, delivery wagons and harness.

May we send you large catalog?

Write for it to Highway Magazine, 532 Walnut street, Cincinnati, Ohio.

Pigs Without Worms

I'll Stop Your Losses from Worms—I'll Prove It 60 Days Before You Pay

Little pigs only a few weeks old are often found loaded with worms. Hogs of all ages suffer from these deadly parasites. Then cholera, swine plague and other contagious diseases get in their destructive work. Stock troubled with worms don't thrive; they cough, have fever, act dull, and don't gain a pound. Your feed is wasted; your profits are stolen. Your animals frequently die, causing total loss of many dollars. I'll stop all this **quick** with Sal-Vet, the great worm destroyer and conditioner. I have done it for thousands of others. I'll do it for you, before you pay me a penny, if you will just send me the coupon.

Read This Letter: "Have fed Sal-Vet to my hogs and lost none. Neighbors both sides of me, east and west, have had cholera bad. One west of me, on adjoining farm, lost about forty hogs and pigs with cholera; the one east, on adjoining farm, lost all he had, excepting four."
A. J. HOFFMAN, Leipsic, Ohio.

SAL-VET

Send No Money—Just the Coupon

If you will fill out the coupon—tell me how many head of stock you have—mail it to me, I'll ship enough Sal-Vet to last them 60 days. You simply pay the small freight charge when it arrives, and when the 60 days are up report results. If it does not rid all your stock of the deadly stomach and free intestinal worms, I'll cancel the charge—you won't owe me a cent. [72]

Prices 40 lbs. $2.25, 100 lbs. $5.00, 200 lbs. $9.00, 300 lbs. $13.00, 500 lbs. $21.12. No order filled less than 40 lbs.

S. R. Feil, Pres. **THE S. R. FEIL CO., Dept NFSG Cleveland, Ohio**

60-day trial shipments are based on 1 lb. of "Sal-Vet" for each hog or sheep, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular packages.

SIDNEY R. FEIL, Pres. THE S. R. FEIL CO., Cleveland, Ohio
Ship me enough SAL-VET to last my stock 60 days. I will pay the freight and report results in 60 days and will then pay for it if does what you claim. If it does not you are to cancel the charge.

BREEDING ARMY REMOUNTS.

List of Stallions Approved and Owned by the Government and Where Located.

Four Breeds Represented — The Morgan, Standard-bred Trotters, American Saddle Horse and the Thoroughbred.

The United States Department of Agriculture has completed for the present the purchase of stallions for the use in the encouragement of the breeding of horses for military purposes. Four Morgans, ten standard-breds, eleven American saddle horses and nine thoroughbreds have been purchased. These stallions, with four or five Morgans from the Morgan Horse Farm and six thoroughbreds presented to the government, will be available for public service during the season of 1913, making a total of at least forty-four stallions. Local wishes will be respected, and the breed of the stallion placed in a community will be that which is most generally preferred by that community. Accordingly, the Morgans will stand in Vermont and New Hampshire; the thoroughbreds mainly in Virginia; the saddle horses and standard-breds mainly in West Virginia, Kentucky and Tennessee. Furthermore, every effort is to be made to avoid competing with privately-owned stallions, and horses will not be placed in communities which are already well supplied.

The government has not spared expense in the purchase of horses. The first requisites were that they should be good, sound individuals, and registered in the proper stud books. Good breeding was, therefore, essential, and in many cases stake and show-ring winners were obtained, but no horse was bought solely because he was a race winner or solely on account of his pedigree.

These horses will be available for public service on liberal terms. The owners of sound mares, with a square trotting gait, may breed such mares free of charge, provided they give the government on option on the foal during the year it is three years of age at $150. However, the government will not hold the breeder of a foal to his option if he wishes to be released, but will allow him to cancel the option at any time by paying the service fee. This fee will be $25 for mature stallions and less for those under five years of age. In buying the colts, the War Department has agreed to purchase both mares and geldings. No service fee will be charged unless the owner elects to cancel his option. If the government buys the colt, no fee is charged; if the colt is offered to the government and purchase refused, no fee is charged.

On account of the provision for free service, the government believes that the mares bred should be suitable for the purpose, and therefore it will be necessary to breed only those which are free from the following unsoundness: Bone spavin, ring bone, side bone, heaves, string-halt, lameness of any kind, roaring, periodic ophthalmia and blindness, partial or complete. Mares must also be free from manifest faults of conformation, such as curby hocks; pacing mares will not be bred. Approved mares will be given a certificate of registration in the Remount Brood Mare Register of the Agricultural Department.

For further information mare owners in Vermont and New Hampshire should write to W. F. Hammond, in charge of the New England Horse Breeding District, Middlebury, Vt.; and those in Virginia, West Virginia, Kentucky and Tennessee should should correspond with H. H. Reese, in charge of the Central Horse Breeding District, Front Royal, Va.

Feeding Cattle in Mississippi.

Prof. E. R. Lloyd, of the Mississippi Agricultural Experiment Station, speaking of his experience in cattle feeding, said:

"When the feeding of a single steer under uncommon conditions was displaced by the feeding of a car-load under ordinary farm conditions, beef producers began to profit by the work of our Experiment Stations. Last winter this station fed and finished two car-loads of Mississippi-raised steers and made a net profit of nearly $500 per car on them. Such practical experiments as this encouraged many cattle raisers in the state to feed and finish their steers rather than sell them at a low price off the pasture. The feeding of cattle on the farm means much more to the farmer than merely the profit on the cattle. It means more manure to apply to the soil, a richer soil, and cheaper crops in future."

On the Farm and in Town— Here are Shoes that Stand the Test for Wear and Comfort

Outdoor Shoes

Knocking around out-of-doors, a man gives a shoe the hardest kind of wear. The moisture of wet weather and repeated dryings—these test the life and comfort of a shoe.

The best materials possible at the price, experience in cutting, and careful workmanship—that's the secret of Dittmann Quality.

Long Standing

on your feet from morning until night, madam—but you will feel it less if your busy feet are wearing Dittmann Shoes.

We've been 69 years making comfort shoes—and we combine style with the comfort and quality.

In the house—on the street—it's a good habit to wear Dittmann Shoes.

The Hercules Stump Puller.

The following letter explains itself. It was written from Warm River, Idaho, January 10th, 1913, addressed to the Hale Publishing Co., as follows: "Gentlemen:—In reply to yours in regard to the Hercules Stump Puller, beg to say that it has more than made good in every respect. I pulled 178 stumps, ranging from six inches to fifteen inches in diameter, in seven hours. My machine is the smallest all-steel puller the Hercules people manufacture. It is my first experience with a stump puller. Respectfully, Yours, H. W. Estes."

The advertisement of the Hercules Stump Puller is on page 23. Anyone who desires to receive a copy of the Free Book on Stump Pulling should address Hercules Mfg. Co., 140 21st street, Centerville, Iowa.

Dried Fruit Quotations at St. Louis.

These prices quoted on March 30th represent sale of farmers' shipments at wholesale: Apples—Evaporated rings—Inferior, 3 to 3½c.; fair to prime, 3¾c.; choice at 3.85 to 4c.; chops, cores and peelings, ½ to ¾c.; sun-dried—Dark and poor, 2 to 2½c.; large bright quarters, 3c. Peaches—Sun-dried halves, 5 to 6c.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages, and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Asparagus Bed.

Nearly in all our big cities there are market gardeners who have found that there is a great deal of money in the raising of asparagus. What is true in the case of market gardeners is also true of farmers, many of whom have long since discovered that the asparagus plant is a money-maker when market conditions are right and the growing and marketing are properly done. Every farm should have a good, big asparagus bed, even when shipping is not intended. It will provide a large amount of very delicious food in the early spring, when such green food is at a premium.

Talking with a market gardener, the writer asked him what one thing had proved most profitable to him. He replied that his five-acre patch of asparagus made him more money than anything else; but he said also that he gave this part of his farm a great deal of attention. It was easy to believe. The writer pushed his way through a part of his patch several months after cutting had stopped. The stalks were then as high as his head and very thick, showing that the soil was being maintained at a high state of fertility.

This was actually the case, for the owner said that it was his custom to begin hauling on barn-yard manure as soon as the cutting was over in the late spring, and haul on as much as he could spare, while in the late fall and during the winter he spread additional manure over the area covered by the asparagus.

It is of no use to attempt to raise asparagus without manuring it heavily. It is a gross feeder and a gross user of water. Where little manure is given and the supply of water is limited, it is vain to expect much from this plant. The market gardeners know by experience that only by heavy manuring can big and early stalks be expected.

In setting out a new asparagus bed, the land must be well prepared before the plants are set. It should be plowed as deeply as possible and plowed again as soon as the first-turned sod has rotted. Manure should be applied to a depth of several inches, and this also plowed or cultivated in.

The furrows for the placing of the plants should be about six feet apart, and the asparagus plants set in the furrows about a foot apart. Some say six inches apart, but this will be found to be too close if the land is made rich and kept so. This is to encourage the growing of big stalks, rather than a greater number of smaller ones.

Setting the plants seven or eight inches below the surface will give enough room above them. The old idea was that a trench several feet deep should be dug, partly filled with manure, but that the plants themselves should be at least two feet below the surface of the ground. This practice has long since been discarded. It was a wrong practice for several reasons. First, it required too long growth of a stalk before it got to the top of the ground, where it could be cut for market; second, the plant was below the effect of the sun, and the elaboration of plant food did not go on as rapidly as it would have done if the plant were a foot nearer the surface; third, it was more affected by bad drainage; and, fourth, the cost of setting out a bed was much greater under the trench method.

Two-year-old plants are probably best for setting, though this is a matter that is a cause of much discussion. Some use three-year-old plants and some use one-year-old plants. The latter, if used, have to be very carefully set out and tended.

Long Sleep For a Horse.

Great harness horses almost invariably have other characteristics of greatness in addition to their extreme speed. Trainers invariably inquire as to the temper of their pacer or trotter after it is known that he possesses speed. Independence Boy, 2:01½, the Columbus pacer, who still holds the world's record for the three fastest heats ever paced in a race, many will recall had his left hind ankle fractured during a grand circuit heat last fall. He has been in a sling ever since a week ago.

The almost human capacity for making himself comfortable while afflicted brings out many interesting little tricks the great pacer planned to get the most comfort out of his predicament.

Hanging in his big leather and canvas swing, day after day, he managed to hobble into a certain position and then relax his four limbs while he snoozed away for a little respite. However, he did not get a single night's sleep during the eight or nine weeks he was strapped in "the rafters," and one of the oddest incidents ever noted about a healthy horse was noted when he was relieved.

When his ankle was pronounced strong and the canvas was removed he stood on his four legs, looked around at his attendants with genuine horse satisfaction, and with a "here goes for a snooze" tumbled on his downy bed of oat straw and slept for fourteen straight hours. So sound was his slumber that the attendants thought it advisable to turn him over after eight hours, and he was turned over from one side to the other without even stopping his snoring or awakening. Horsemen and veterinarians declare it was the most remarkable exhibition of absolute slumber they had ever seen.

Independence Boy, during his illness, permitted the most exacting attention to his injury without a cross twitch of the ear. He is now permitted to ramble about the lawn outside of his stable, and only yesterday kicked his heels high, declaring by the act that he was practically as good as ever. Charley Hayes, his owner, of course, thinks Independence Boy his best friend, and the animal's intelligent and patient manner during his long siege have made at least one such thing as "horse sense."—American Sportsman.

Dittmann (St. Louis) Shoes.

Attention is invited to the card of the Dittmann Shoe Company. This is one of the great firms that have made St. Louis famous as the largest boot and shoe center in the United States, and the Dittmann Shoes are all sold in retail stores direct from the manufacturer, so that you can find the merchant in your home town and have the benefit of the full stock of Dittmann Shoes and sizes. You therefore support your home community in the first place and the industries of the nearest city that buys many million dollars' worth of farm products a year in the second place. The Dittmann Shoe Company has an honorable record of sixty-nine years in the business of making shoes, and their card in this paper on page 22 is interesting and instructive.

Goodyear Automobile Tires.

At automobile shows it is customary to take stock of the cars with a view of ascertaining which tire equipment is in the lead. At Boston, Mass., recently, with 310 cars of various makes on exhibit, 120 were equipped with Goodyear Tires, and Goodyear is a Western-made tire. All automobile owners must renew their tires at some time, and it is well to be acquainted with the tire that the manufacturer is able to advertise, first, "more in use than any other tire," and, secondly, "furnishing 25 per cent. more mileage than any other tire." Read the advertisement on page 7 and write to Goodyear Tire and Rubber Company, and ask for the Tire Book, fourteenth edition, as advertised in The National Farmer and Stock Grower.

Pull Out Stumps With the Famous Hercules!

Pull an acre or more of stumps a day. Pull any stump in 5 minutes or less. Don't have loafer land when it's so easy and cheap to *pull the stumps out!* Make 1000% profit by using the Hercules. $1281.00 the *first year* on 40 acres! $750.00 every year after. Let us *prove* it.

Low Price and Book Free!

Get the facts. Read our book. Tells what all steel, triple power means. Shows many features of the Hercules. Shows many photos and letters from owners. Postal will do.

Lost Motion.

Some observing man has been making a business within the past year of investigating the methods of modern surgery in some of the best institutions, and he declares that from 10 to 30 per cent. of the time now taken might be eliminated. That is, this amount of time under the influence of an anaesthetic might be cut out, an item which might easily turn the tide of affairs from the unfavorable to the favorable.

If this is true of skilled workmen, how much more is it likely to be true where the main thought is in getting the work done and done properly? The farm is in many ways a typical illustration of this, for while the manufacturer and mechanic have many tools and a multitude of machinery to assist them, the duties of the farm are so varied and cover so wide a range of space that comparatively little has come to supply the needs.

Some time before long much of the farm work will be shortened by machinery; but in the meantime we can individually do a great deal to help ourselves. There are few kitchens in which many steps are not needlessly taken. We get into the habit of going on the impulse of the moment, without regard for the short cuts quite as easily followed. Did you ever stop to think, when getting a meal or washing dishes, how a trifle changed in some way might help in this matter? There are occasional houses so planned that kitchen, dining room and cellar seem to be most closely united for practical purposes; but they are few. In the majority of farm homes there is still chance for a saving of lost motion, and some of this might be gathered up by a little brain work when the labor is being performed. Think over it, and see if this may not apply in your own home. If the skilled surgeon potters without suspecting it, thereby endangering human life, what may we not be losing in the every-day routine of farm life? And yet our time is worth saving; the extra time which we might have could be used in still further bettering existing conditions.—Bessie L. Putnam.

Three Indian Dolls For 30c.

And a year's subscription to the Universal Magazine. These dolls are pictures on linen and are ready to cut out and sew together. They are Indian Dolls—THE PRINCESS TAMBON and her sister and brother. The largest is sixteen inches high and the others six inches. Beautifully lithographed in four colors, all ready to cut out and sew. The handsomest Dolls ever put on the market. These Dolls are artistically garbed in correct Indian costume and require no additional dressing. They have real educational value. This Indian family will delight the heart of every child. The Universal Magazine is a nice, bright, cheerful, illustrated magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashion and poetry—a splendid publication. Send us thirty (30) cents for one year's subscription to the Universal Magazine and one set of Dolls or fifty (50) cents for two subscriptions and two sets of Dolls. The Dolls and Magazine are sent postage paid, safe delivery and satisfaction guaranteed. Address THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Among the Flowers.

When arranging the summer garden, be sure that the ground is thoroughly enriched. This can be more easily done before the seeds are sown than later, although frequent applications of liquid manure later are always beneficial.

If seeding is done among the spring flowering bulbs, work well-decayed fertilizer between the bulbs, for they are gross feeders and the drain upon the soil must be made good, if a robust summer growth is expected.

In bedding plants, take into consideration the surroundings before deciding upon any pronounced colors. If you have a light background, a bed of scarlet salvia or geraniums will be beautiful, especially if margined with the old-fashioned "Dusty Miller," or the dwarf white-edged Mme. Salleroi geranium. But if the bed is backed by a red brick wall, a more unfortunate combination could scarcely be imagined. White or delicate tints will prove more pleasing in such a place.

When receiving fresh plants from the florist, examine them carefully to make sure that no insect specimens which are new may be acquired with the flowers. A nice little colony of mealy bug or aphis is sometimes traced to such a source. In the case of house plants, give them a window by themselves until you are sure that they are immune from such pests.

The beginner will do well to confine her attention to one or two standard species, studying their habits and needs and growing them in the best possible forms. A few well-grown plants are much preferable to a gardenful of shabby specimens. And the present preference is for massing quantities of a single kind instead of growing a multitude of varieties in small quantity..

One will find nasturtiums, the tall-growing varieties, as easily grown and as satisfactory as any variety. When success is attained with these, pansies and sweet peas may be added to the list. One grower makes a specialty of dahlias, and is rapidly adding to her collection, while another has a fine collection of lilies.

But the fact should be emphasized that any well-grown flower is decorative; any neglected one a disgrace; that is, unless circumstances positively prevent giving it attention.

The floral fashions, like those of dress, move in cycles, and many of the old favorites in our grandmothers' gardens are now finding favor. In the Phipps Conservatory at Pittsburg, one of the finest in the world, an entire house was devoted to these old-fashioned plants during the Easter display and attracted no little admiration.

Among the old-fashioned perennials, the Physostegia, or False Dragon, deserves favor as a mid-summer bloomer. Its tall spikes of delicately-tinted flowers are similar in form to those of the False Foxglove.

Do not forget that some of the wild flowers are among our most ornamental plants. Every locality has some which may be successfully transplanted and which seem especially fitted for certain spots. The dainty blues have a charm where a low, modest growth is desired. Ferns and violets may border the shaded porch. And the tall bells of the meadow lily hang gracefully over the edge of the garden fence.

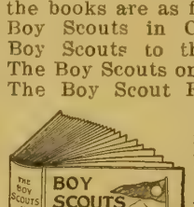
If you have a special fancy for foliage plants, do not allow gruesome thoughts to enter your head if the pure white freak sprout of the white-edged geranium fails to grow. There is no superstition attached to it, but for purely physiological reasons it cannot be expected to live. No flowering plant can live—unless it be parasitic—without some green parts in the leaves.—Bessie L. Putnam.

A PREMIUM FOR BOYS.

A Series of Books Offered as a Premium to The National Farmer and Stock Grower.

This is a proposition for boys who are ambitious to become good, strong men in mind and body. The Boy Scout Movement is by far the greatest and best influence in boys' lives. BIG BOYS, LITTLE BOYS of city, town and country are intensely interested in stories of adventure, the tales that have a dash and go to them, that carry the reader along from beginning to end with absorbing interest and enthusiasm.

We have obtained the books of the Boy Scout Series, written by Colonel George Durston and Major Robert Maitland. These are tales in which the Boy Scouts figure as characters. The books are such that they are never let go for a minute until read through and through. The titles of the books are as follows: No. 1. The Boy Scouts in Camp. No. 2. The Boy Scouts to the Rescue. No. 3. The Boy Scouts on the Trail. No. 4. The Boy Scout Fire Fighters. No. 5. The Boy Scouts Afloat. No. 6. The Boy Scout Pathfinders. No. 7. The Boy Scout Automobilists. No. 8. The Boy Scout Aviators. No. 9. The Boy Scouts' Champion Recruit. No. 10. The Boy Scouts' Defiance. No. 11. The Boy Scouts' Challenge. No. 12. The Boy Scouts' Victory. Each book is nicely bound in cloth, of handy size, and each one is a treasure that any boy will be glad to have.



We are going to make it easy for any boy to get these books. The National Farmer and Stock Grower is published at fifty cents a year. Any boy who will get us one subscriber and send us fifty cents to pay for same can select any two of these books, which we will send as subscription commission, postage paid, safe delivery guaranteed. If he wishes to receive two more books, all he has to do is to send us one more subscription and the fifty cents to pay for it. For six one-year subscriptions the entire set of twelve books will be sent. Boys can start a library with a full set of Boy Scout Books and take it in turns reading them. Address all orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ECZEMA

(Also called Tetter, Salt Rheum, Pruritus, Milk-Crust, Weeping Skin, etc.)

DR. J. E. CANNADAY
Well Known Eczema Specialist

Considering the thousands of letters of praise that Dr. Cannady has received from his patients it is probable that no other living physician has received higher honor.

ECZEMA CAN BE CURED TO STAY, and when I say cured, I mean just what I say—C-U-R-E-D, and not merely patched up for awhile, to return worse than before. Remember I make this broad statement after putting twelve years of my time on this one disease and handling in the meantime nearly half of a million cases of this dreadful disease. Now, I do not care what all you have used, nor how many doctors have told you that you could not be cured—all I ask is just a chance to show you that I know what I am talking about. If you will write me TODAY I will send you a **FREE TRIAL** of my mild, soothing, guaranteed treatment that will convince you more in a day than I or anyone else could in a month's time. If you are disgusted and discouraged, just give me a chance to prove my claims. By writing me today you will enjoy more real comfort than you had ever thought this world holds for you. Just try it and you will see I am telling you the truth.

Dr. J. E. Cannaday, 1209 Court Block, Sedalia, Mo.

References: Third National Bank, Sedalia, Mo.

Could you do a better act than to send this notice to some poor sufferer of Eczema?

A GOOD, DEPENDABLE LINIMENT

For any troubles that may be laying up your horse is Absorbine, the antiseptic liniment. This liniment has been on the market for a good many years and has made good. One reason for its great success is, that it does not blister or remove the hair, and horse can be used during treatment. Get your horse ready for spring work by removing any blemishes that may be present. Mr. Geo. Law, Sherrard, Ill., writes under date of December 26th, 1912: "I had a horse about two years ago that had a bunch on his hind leg, caused from a neglected wire cut, but I took it off slick and clean with Absorbine and a bandage and sold him for two hundred dollars, which I thought was fine." Absorbine at dealers, $2.00 a bottle, or sent direct, charges prepaid, upon receipt of price. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

GOV'T JOBS OPEN

The new Parcel Post will compel the appointment of thousands of Railway Mail Clerks.

Examinations Everywhere May 3rd

$900 to $1800 a year

Rapid advancement to higher Government Positions. No "lay-offs" because of STRIKES, FINANCIAL FLURRIES or THE WHIMS OF SOME PETTY BOSS. THE POSITION IS YOURS FOR LIFE. Country residents and city residents stand the same chance for immediate appointment. Common sense education sufficient. Political influence NOT REQUIRED.

We are Preparing Candidates Absolutely Free of Charge.

Send coupon immediately for schedule showing the places of the May 3d examinations. Don't delay. Every day you lose means the loss of just so much coaching before the rapidly approaching examinations.

We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

STRAWBERRY CULTURE.

The Small Fruit Crop That Far Exceeds in Value All Others in the Same Class.

There are few localities in the United States where it will not pay richly to have a strawberry bed or a strawberry field; whether it shall be a bed or a field depends on whether one wants to grow the strawberry for home needs or for commercial purposes.

Many a boy and girl on the farm could send themselves through college with the profits from a strawberry field, if they only knew it. The great labor in the strawberry plantation comes at a time of year when the college and the school are not in session.

There is such a world of experience that can be drawn on in behalf of the strawberry that one has most to consider what not to say. The first great item in the procedure is to form the determination to give early care to the strawberies. Most of the beds that have proved failures, whether on farms or in the towns, have failed simply from lack of care. Therefore, to determine to give good and constant care is the first requisite for success.

The writer has found that the preparation of the ground must be thorough, and the soil must be light enough so that it will not bake hard and crack open in the dry part of summer. Manure must be applied freely, and, if that fails, commercial fertilizers, in the form of potash salts, phosphates and nitrates, should be bought and applied to the ground. The strawberry must have a large supply of readily-available food if it is to be a blessing to its owner.

A new bed or a new plantation should be set out each spring, so that a new two-year-old bed area will come into full bearing every year. The writer has never found that keeping a bed for many years pays. It might under very careful treatment, but it would mean a very large job of thinning every year. The trouble with the old bed is that too many plants take root, with the result that each plant becomes a dwarf, rather than a giant bearing giant berries.

Early spring setting of the plants is better than late setting. The plants in the early spring are not too far advanced to do well when transplanted. The supply of moisture is better then, and this is of great importance, as it enables the plants to get well rooted and growing vigorously before the summer drouth comes on.

Keeping the weeds down is a very easy task, provided one goes over the ground about every two weeks with a soil rake or a hoe, stirring up the surface soil, so the weed seeds cannot take root. Fighting weeds is difficult only when the weeds are permitted to get a start. If the ground is thus frequently stirred early in the season, it frequently will require no attention late in the summer.

The soil must be kept free from weeds, and the oftener it is cultivated on the surface during the dry season the better, as this will hold the moisture for the roots of the plants. The second year not too many additional plants should be allowed to set. It is better to prevent overcrowding than to suffer from the effects. Every plant grown should be a big plant, with massive crown and heavy, shiny leaves. This means an abundance of big fruit.

If the plantation is to be of considerable size, the planting should be in long rows, so that most of the work of cultivating can be done with the horse cultivator, rather than have to be done by hand.

Assisting the Doctor.

While everyone cannot have the opportunity to study thoroughly anything that belongs to trained nursing, most people can, if they try, pick up little points from doctors and nurses that will be a help to them in time of need and of very great assistance to the physician. Some hundreds are kept poor by paying doctor bills because the mother has not taken the time and trouble to lay in a supply of remedies to have ready in emergencies, and all the things needed are very inexpensive and most of them can easily be prepared at home. The hoarse sound of the croupy cough does not startle the mother into spasms if she knows how to relieve her little one and does it quickly. Accidental poisoning is also a frequent occurrence and everyone should learn the simple antidotes to use until the doctor arrives. How to bind up a cut or manage a severe bruise or sprain is also useful knowledge.

It is well to be supplied with hot-water bags or salt bags of different sizes, as nothing proves better than a good, dry heat to quiet pain, and a frequent change of hot plates well wrapped in woolen cloths and placed over the suffering joint as the patient lies in bed will bring great relief.

Unless one can afford a trained nurse, it is well to learn how to take the patient's temperature of pulse, and it is very easy to understand how to tell the pulse, and not at all difficult to learn to use the clinical thermometer.

Many a life has been sacrificed because the doctor had no means of knowing certain facts connected with his patient's illness, which would have been of vital importance to him and might have assisted him in saving a life.

There are certain healing agents that every woman should have in the family medicine closet, and among these beneficial lotions a strong boric solution is one of the best. A cut should always be washed with this solution, and also a bruise, if the skin is broken. This is healing, because it is antiseptic and excellent to use while waiting for the doctor, on small wounds often proving all that is needed, and this solution is prepared by dissolving one-half ounce of the powder in one pint of boiled water. A weak boric solution is specially adapted to the chafings and other irritations of infants, and it may be used freely, and it is fine for bathing the eyes and for washing out the ears and mouth; and by having good remedies to use just when they are needed you will not only assist the doctor, but you may save a human life and much suffering.—A. M. H.

Grapevine and Magazine Premium.

We are offering the most extraordinary value in a premium that will be found on page 27. The Ladies' Magazine for the household has no superior; there are some that cost more, but with no more intrinsic value. Then there is one-year's subscription to this publication, The National Farmer and Stock Grower; and the third item of the combination is an assortment of eight two-year-old grapevines. These are mailed direct from the most successful grape nursery in New York state, with directions for planting, care, etc. This is the accepted time to receive a dollar's worth that will grow in value and give great pleasure to the family. Fill out the coupon on page 27 and you will not regret it.

MORE MONEY IN HOGS.

It is an economic fact of great importance and one that has of late been commented on by many writers that the food supply of the United States is not keeping pace with the rapid growth of population, and especially that of the cities. This is more noticeable in the country's meat supply than in any other of our food products.

There is good money in hog raising at the present prices, ranging between seven and eight cents, and a prominent packer gives it as his opinion that we are facing a period of relatively high prices, which will continue for a number of years. It is of the utmost importance, therefore, to exert every effort to prevent the outbreak of hog plagues and keep hog losses down to the last notch, so that every hog may be marketed in good condition.

Merry War Powdered Lye quickly puts hogs on their feed—tones up their systems, makes them healthy, sleek and fat and prevents hog cholera. When ready for market a bunch of Merry War Powdered Lye fed hogs will be in prime condition and command top-notch prices.

The expense of Merry War Powdered Lye treatment is very small, only about five cents a month per hog. It is for sale at all druggists, grocers and feed dealers at 10 cents per can. The most convenient way to buy it is by the case of four dozen cans for $4.80. The E. Myers Lye Company have recently issued a most valuable book on "How to Get the Biggest Profits From Hog Raising," a copy of which will be mailed free to any one interested on request. Address E. Myers Lye Company, Dept. 22, St. Louis, Mo.

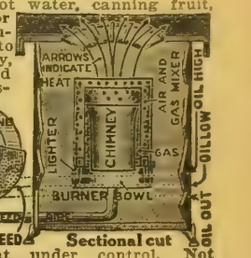
Pigs Without Worms.

Attention is particularly invited to the card of the S. R. Feil Company on page 21. All of us know that a National Bank can make money faster than a drove of healthy hogs, but they lose money equally fast when they are unhealthy. The S. R. Feil Company make a clean-cut offer which is worthy of acceptance.

PORTABLE STOVE

Combined Cooking and Heating

The Portable Stove will boil, bake, fry, roast—cook anything. Ideal for quick meals, washing, ironing, hot water, canning fruit, camping. **Summer or winter stove.** Oil automatically turned into gas furnishes a steady, intense heat, passed into radiator and distributed throughout the room; or condensed under cooking vessels the heat is absorbed by articles being cooked. Heat under control. **Not Dangerous Like Gasolene.** No valves, no wicks—nothing to clog, close up or get out of order. Heats rooms—slow fire or fast fire. No flues or chimneys. Light—pick it up, set it anywhere. **Many Thousands** of the Portable Oil Gas Stoves sent to families in all parts of the world. Men and women enthusiastic over its comfort, convenience and economy.

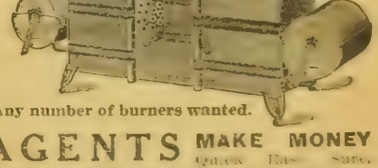


Sectional cut

WHAT USERS SAY "It is so convenient and economical." Rev. P. V. Hawkins, Ohio. "It is clean, convenient, no trouble, burns steadily; perfect baking." Henry Schilling, Ill. **"For Baking it has no equal."** V. E. Bostwick, O. "Bakes pies, cakes, bread; never saw nicer baking done." Mrs. O. Thompson, O. "Never cooked meals so quick and easy." James Newark, Mich. "Baked, cooked, washed ironed—can do anything my range does." Mrs. M. E. King, Ky. "Cooked for a family of 6 for 5 days with 3 quarts of oil; **they are great time and fuel savers."** H. M. Irey, Ia. "Heated a room when the temperature was 10 degrees below zero with one radiator." Wm. Baering, Ind. "With the radiator it soon warms up our dining room." J. F. Lisson, Calif. "We are using it to heat our office." McPherson Co., R. I. **"Only used a half a gallon of oil last week** for cooking, baking and ironing." E. N. Helwig, Ont.

CAN YOU DO WITHOUT the Portable Oil Gas Stove? Save time, trouble, anxiety, annoyance, expense, drudgery, fuel bills. Get rid of kindling, coal, wood, dirt, ashes—all the nuisance. **ALWAYS READY FOR USE.** Practical invention. Simple, durable. Lasts for years.

PRICE IS LOW $3.25 and up, any number of burners. Give it a trial. Not sold in stores. Send no money. Write today for full description.



Any number of burners wanted.

AGENTS MAKE MONEY Quick Easy Sure. Sell Self MAKING GAS—[illegible] excited—want it—buy. B. L. Huested, Mich. "Was out one day, sold 11 stoves." W. E. Baird, S. C. "You have the best stove on market; sold 9 in 2 hours; **I do not fear competition.**" (first ordered 1—[illegible] since). Chas. P. Schroeder, Conn., bought 40 stoves one order. Head & Frazer, Tex., write: "Sell like hot cakes; sold 50 stoves in our town." J. W. Hunter, Ala., secured 1—tested it—ordered 100 since. J. G. R. Gauthreaux, La., ordered 1; 155 since. So they go. **These men make money.** You have the same chance. You should make from $10 to $15 a day. Write for our selling plan. Do it today. Send no money.

The World Mfg. Co., 1952 World Bldg., Cincinnati, Ohio.

Beautiful Apron Premium.

To introduce our splendid Universal Magazine we are offering a useful fancy apron as a premium. Hand-embroidered tea aprons are always in great demand among ladies and girls, and this is an article anyone would be proud to own. We offer this beautiful apron stamped on fine white lawn, including piece for pocket and strings, also a year's subscription to our popular Universal Magazine, filled with choice stories, departments for all the family, thirty-two pages, etc., all for only thirty cents. Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Consideration For Others.

Consideration for the rights of others in public assemblies is often deplorably lacking. I was attending a lecture in a course to which I hold a season ticket. These lectures are educative and inspiring. So helpful are they in their influence that the lecturer endeavored to give them to people who will not pay the price of a lecture, and so has arranged that after all the paid-for seats are occupied, the empty seats may be occupied free of charge by outsiders. In the two free seats directly in front of me there sat down an overdressed woman and her escort. The woman was attired in silks and furs and bedecked with jewels. Her hat, a yellow panne velvet, broad of brim and high of crown, was loaded with long, black, willow plumes. This big hat completely hid the lecturer from my view. He is a man whom you must watch while he is speaking, for there is as much in the play of emotions upon his face and in his unstudied gestures as there is in the truths he utters. On the programme, in large black-face type, there is printed a line requesting ladies to remove their hats. I would rather miss almost anything than to request a woman to remove her hat, for usually the one who does not out of consideration for others remove it of her own accord is of an ugly or at least a self-centered disposition and will not take kindly to such a request. I waited until I had seen both the man and the woman read the programme, and I knew that they could not fail to see the line requesting the removal of hats. After missing about fifteen minutes of the lecture I leaned over and asked the woman, as pleasantly as possible, if she would remove her hat. She gave me a glare. Then I learned that she was making it unpleasant for people behind me, too, for a man in the row back of me whispered to his companion: "Good; now we'll be able to see the doctor's face."

The woman glared at me again and then she said to her escort in a tone audible to me: "I won't do it! It's none of her business!" None of my business! And, remember, it was through the courtesy of those who were paying for their seats that this woman and her companion were privileged to sit there free of charge and hear a lecture worth two dollars a seat.

Another woman invariably prepares to go home five or ten minutes before the close of the performance, whether it is a play, a lecture or a church service. She rustles about putting on her rubbers, her hat and her coat. The minute the final word is spoken she is ready to leave her seat. An onlooker for the first time would expect to see her dash out the door to make a train or to keep some important business engagement. But she is the last to linger, chatting with acquaintances and seeming oblivious to the fact that she has partially spoiled the last moments of that performance or service for those surrounding her.

The climax of a good lecture, sermon or play should be in its final word, and if one of the audience doesn't appreciate this fact for herself, she should at least allow others to get the benefit of it.—Janet Thomas Van Osdel.

Star Brand Shoes on Sale.

A very large proportion of all hides and skins produced by farmers by raising cattle, sheep and goats enter into the making of shoes. Shoemaking used to be an exclusive Eastern industry, and money was expended unnecessarily in freight bills going and coming. Of recent years shoemaking has become a Western industry, and shoes are made better and cheaper by reason of the change, because the waste in transportation and in other ways has been recovered and put into the shoes. Roberts, Johnson & Rand Shoe Company, of St. Louis, have demonstrated that a great shoe business can be built up by them in the West, and on page 4 one of the leading brands is advertised. This firm has cut out the wholesaler's profit as another economy, and sells direct to 20,000 retail merchants, who have proven by handling them that "Star Brand Shoes Are Better." The advertisement on page 4 is worth reading.

The Books We Read.

"They turn out books in plenty, they print 'em by the mile, and one in fifty millions is worth a reader's while." Thus sings Walt Mason in the Chicago News, and every discriminating reader will agree with the merrily philosophical Mr. Mason that the quantity is undoubtedly at the expense of quality. A popular book of last year, published by a good house, and strong in plot and character delineation, has in it over twenty grammatical and rhetorical errors. These were picked out only casually when the story was being read solely for entertainment. Probably there are as many more errors in the narrative which were passed unnoticed. The price of this book, with hundreds of others in its class, runs above the dollar mark.

In contrast consider the classics, most of which can be purchased for about twenty-five cents apiece. This is in a cheap binding, of course, but yet it is a very readable form. These books have lived for years, and because of their recognized worth have found a permanent place in our literature. One reading of them is only the beginning of a life-long friendship with them, during which time they will comfort, entertain and instruct. Take George Eliot, perhaps the greatest of modern novelists, and see how feebly does the popular novel of the day compare with her works. The strong plots, the powerful character delineations are presented to the reader in choicest English. Or who can fitly entertain better than our beloved Charles Dickens?

"The Marble Farm," by Hawthorne, happens to lie close at hand. That, as will any classic, opens up a whole new world, nay worlds, to the person who has never read it. First, what is the Marble Farm? Nobody has ever better described it than does Hawthorne in the first chapter of his book. By the time the first chapter is finished the reader will doubtless be hunting up the nearest art collection in the hope of finding therein a cast of Praxteles' Marble Farm. And he will also read all his encyclopedia tells him about Praxteles. Several chapters farther on the reader will be wondering who Guido's Beatrice Cenci is. And that will lead him to look up the painter Guido and also the fascinating, if gruesome, story of the Cencis. This is only the beginning of all the references that he will find himself looking up because he is so interested he cannot help himself. The book in question is only one of the vistas that open up in the reading of any worth-while book. In the present enormous output there is an occasional book that is very much worth while and which will find its place on the shelves besides those other tales that have withstood the test of time. But the reader must have the discrimination to know what is worth while, and if he cannot select for himself he will be safe in falling upon those writings which have earned the right to be named classics.—Janet Thomas Van Osdel.

Mysteries of Scent.

The mysteries of scent will probably never be solved, and it is a matter of everyday observation that, while the trained shooting dog will pass a sitting partridge, a terrier or a fox will find the nest.

OWN A BUSINESS

WE WILL HELP YOU

"I made $88.16 first three days," writes Mr. Reed, of Ohio. Mr. Woodward earns $170 a month. Mr. M. L. Smith turned out $301 in two weeks. Rev. Crawford made $7.00 first day. See what others have done.

The subscription offer includes a magnificent collection of **Eight Two-year Standard Grapevines.** These grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe; **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World one year; The National Farmer and Stock Grower one year;** and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar.

The Making of Aprons.

The average housewife has little fear of getting too large an allowance of aprons, and yet in many instances she economizes in this article to an extent that is really extravagance. There are now so many materials used in their making, so many different styles, that if she really so rules she can have an adequate supply at comparatively small cost.

Of course, there are the large aprons which cover the entire front of the dress, a most useful kitchen garment. If they are finished with a small ruffle, this will prove more than a mere ornament, for the frill in more than one instance proves its worth in deflecting from the bottom part of the dress some liquid which has been accidentally dropped, finding its way downward.

There is the great oilcloth apron, not handsome, but exceedingly useful. This will require for a person of average size about one and one-fourth yards of table oilcloth. White or white with a tiny line of color is preferred. Cut in one piece and without plaits. It should come up well in front and on the shoulders, and be wide enough to protect the sides of the skirt. Cut crosswise of the cloth; the width of the piece should be sufficient to make the length of the garment. Bind with ordinary cotton braid. Also fasten the shoulder tabs to the back in the same way. This apron has the advantage that any soiled spot can be quickly removed with a damp cloth or sponge. It is most useful in doing some kinds of housework; but where there is much bending over, the strain in places will make it incline to crack. For cooking and washing dishes it is very serviceable, but when washing or scrubbing, the movements would be restricted or the apron is soon cracked and broken.

The dainty housewife who must wait upon her own guests, wears a dainty apron for serving, and over this, when re-entering the kitchen, she wears the great, serviceable gingham one. The latter is as quickly doffed when about to return to the dining room, and the dainty one is again her only protection.

It may be only of white calico with a pale pink or blue figure. It requires a piece just as long as the cloth is wide for the main part. Each of the four corners of the square are slightly rounded. Along two adjacent sides a narrow ruffle is basted and the seam covered by stitching over it white wash braid. The two remaining sides are hemmed in a very narrow hem. Across the middle of these sides a belt is fastened, the slight fullness in the middle being removed by two small pleats. This makes a small bib of the rounded corner, which protects the waist. A tiny pocket bordered with braid completes the apron.

Larger ones may be made in the same way by using percale or gingham. Or two breadths may be used instead of one. One woman used plain unbleached muslin, trimming with red. These aprons looked almost like linen and were really ornamental as well as cheap and durable. Of course, only fast red should be used in the combination. When blue trimming "drents" a little in washing it only serves to make the white look a bit whiter; but the pink tinge is never a desirable one, showing on the face of it the cause.

For the little quiltings and sewing bees which are surely working back, a round apron of dainty muslin with a spray of wild roses embroidered in "shadow" work is most attractive. Catch a few crochet rings around the edge and pass a ribbon through with small bows at the belt. Then when through work, the ribbon may be drawn up and you have the litter all in a bag, where it can easily be disposed of without scattering upon the carpet or rug.—Bessie L. Putnam.

"National" Spring Style Book.

On page 3 will be found the advertisement of the National Cloak and Suit Company, with a coupon that can easily be cut out and mailed. This advertisement is specially addressed to farmers' wives and farmers' daughters, who are enabled to dress themselves perfectly and with strict economy by taking advantage of the books, measurements and samples furnished by the company. Our patrons are advised to use the coupon at once, as it will not again appear this spring. See page 3.

Feed Family of Four For Ten Dollars a Week.

Four adults leading fairly active lives can be supplied well-balanced meals at a cost of $2.50 a week, each. This has been proved at the practice cottage of the University of Wisconsin Home Economics Department, where young women are taught practical home making.

Four young women students take entire charge of the preparation of meals at the cottage each week. The girls not only do all the cooking and serving, but also all the marketing and planning of the various meals. There is much rivalry to see who can serve the best meals at the lowest cost.

A sample menu shows that at a cost of $2.50 a week per person they have oranges, bacon, poached eggs, toast and coffee for breakfast; cream of tomato soup, spaghetti with onion sauce, hot rolls, baked apples, and chocolate for luncheon; and bouillion, beef pot roast, browned potatoes, fruit salad, fresh cake with whipped cream and coffee, for dinner.

Too Many Feet in Bed.

A Harvard student, who, for obvious reasons, does not care to have his name appear, passed up this one: "A cousin of mine, in the western part of the state, came to Boston for a visit, and dropped out at Cambridge to call on me. He asked if he could share my room with me that night, and I told him he could if he came in early enough. He started for a theater, and when midnight came without any trace of him, I called in my regular room-mate, who had sought quarters elsewhere to make room for my cousin. I decided that my relative was going to make a night of it in town.

"We had hardly got to sleep, however, when he came in, packing a highly-flavored breath. We said nothing, and he soon climbed into the bed with us. Everything was quiet for a few minutes, when evidently he sat up, put his mouth close to my ear and whispered: 'Jim, there are six feet in this bed.' 'Forget it,' I said; 'you're crazy.' With that he climbed out, groped his way around to the foot of the bed and began to paw our feet. 'You're right,' he said, after a minute. 'I've counted 'em and there's only four.' "—Boston Traveler.

HOG WORMS—WORMY HOGS.

Hog worms are killing more hogs than cholera. In most cases of so-called hog cholera it is worms, not cholera. Hog worms are very dangerous. They wreck the entire system of the hog. They cause inflammation of the stomach and bowels, and death is the result. A wormy hog will not fatten or grow. The hog man should bear in mind that no simple remedy will rid hogs of worms. If farmers and hog men will keep their hogs free of worms and lice, disease will be scarce and they will have healthy, thrifty hogs.

There is a remedy known as Snoddy's Hog Cholera Powder. The manufacturer of this powder claims it is death to hog worms and also destroys disease germs, and has proof to convince anyone. People who have hogs should investigate this matter, as it is important. Write for "Free Hog Book" to Dr. D. C. Snoddy, Dept. H, Nashville, Tenn.

GRAND INVENTION!

NO MORE WASH DAY!

EASY METHOD Of Cleaning Clothes

Cleans Family Wash in 30 to 50 Minutes—Woman's Hardest Work Made Easy—No Motors! No Chemicals!

NOT A WASHING MACHINE

DOES THE WORK IN ONE OPERATION.

SEE HOW SIMPLE—DIFFERENT, EASY. Put on any stove—add water, then soap, then cloths—**move knob occasionally.** In 5 to 8 minutes first batch washed—next batch same way, same water—in 30 to 50 minutes family wash clean. **No labor, no injury to clothes.**

Cleans woolens, flannels, blankets, or colored clothes, as well as white goods, finest laces, curtains, bed clothes. **Saves time, fuel, labor.**

EASY WAY in 30 to 50 minutes cleans washing which before took entire day. All metal, strong, durable, sanitary, light in weight. Easily used, cleaned, handled—always ready. Child or weakly woman can use it. Saves washday drudgery.

Users Praise the "Easy Way."

J. McGee, Tenn., writes:—"One young lady **cleaned day's washing in one hour** with Easy Way—another in **45 minutes.**" Mrs. T. Bullen, Canada, writes:—"I washed **bedding, heavy quilts, curtains, etc., without rubbing.**" Lauretta Mitchell, O., writes:—"Done a **big washing in 45 minutes—sold 3 already.**" A. D. Poppleton, N.Y.:—"Gives perfect satisfaction. Washed bed quilts, **greasy overalls** and **fine clothes.** Greatest thing on earth. F. E. Post., Pa., writes:—

TWO WEEKS WASHING IN 45 MINUTES.

Clothes cleaned **without rubbing."** J. H. Barrett, Ark., after ordering 38 Easy Ways, says:—"You have the grandest invention I ever heard of." J. W. Myers, Ga., says:—"Find check for 12 Easy Ways. Greatest invention to womanhood, forever abolishing miserable wash day. **Sells itself."**

AGENTS GETTING RICH

R. O. Cowan, N. Y., placed 13 in 6 hours—(profit $39.00.) Mrs. J. Brown sold 10 in 3 days—(profit $30.00.) K. J. Blevins, O., writes: "Made 7 calls, sold 5 one day." (profit $15.00.) R. H. Latimore, Pa., writes: "Sold 4 this morning. **Never yet turned down."** A. G. Witt, Pa.: "Received Easy Way yesterday; sold 4 today—not out for orders." Mrs. Gerrish, Mont., ordered sample, then 1 dozen—then 100—**(profit over $300.00.) Just made one shipment 1000 Easy Ways** to Russian agent. N. Boucher, Mass., orders 75 more, says: "Everybody wants one, **best business I ever had."** A. S. Verrett, La., sold 8 in one day—(profit $24.00.)

FREE SAMPLE To Agents

We want managers, agents, men or women, home or traveling, all or part time, to show, take orders and appoint agents. **Easy Way new article,** not worked to death. Best seller out. Every family wants one. People glad to see it demonstrated; buy without being asked, and throw away costly washing machines to use it. **Only 2 sales a day means $36.00 a week profit.**

Price only $6.00 ready for use. Sent anywhere. Not sold in stores. **Order one for your own use.**

Send for Free Sample offer, special agents' proposition, etc. Costs nothing to investigate. Send name and address anyway for full description. Write today. **Harrison Mfg. Co., 2288 Harrison Building, Cincinnati, O.**

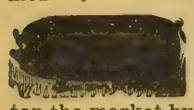
BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed because either paper is worth considerably more than the full price. The papers are as follows:

The National Farmer and Stock Grower—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.



The American Swineherd—issued monthly—a leader in its class. The hog paper. the pig paper, the brood sow paper, and strictly first-class in teaching how to top the market by producing top hogs.

The Shepherds' Journal is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

The Reliable Poultry Journal—the best and most elegant poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. **The Reliable Poultry Journal** is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read **The Reliable Poultry Journal.**

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — For One Dollar ($1.00) enclosed herewith please send us the Big Four Subscription Combination one year, consisting of **The National Farmer and Stock Grower, The American Swineherd, The Shepherds' Journal** and **The Reliable Poultry Journal.**

Editor's Note.—The Fruitman and Gardener, published monthly, a first-class paper, can be substituted for either of the above papers if desired.

Some Uses For Salt.

If you want the best and cheapest table salt, buy it by the fifty-pound sack—the kind that the farmers use to salt the stock. This is coarser-grained than the table salt, but it is much purer, and also much cheaper. It may incline to become hard and lumpy, but you can afford to break the lumps, having the satisfaction that you are getting the pure article, and at such greatly reduced rates.

If the griddle happens to get scorched when baking cakes, a spoonful of salt rubbed over it will restore it to perfect working order. If the flatiron shows roughness, treat it in a similar way. For a mild sore throat, a gargle of salt and water may be sufficient to ward away the necessity of calling in the doctor. Salt is a better dentifrice than many of the fancy powders sold at fancy prices.

For preserving vegetables, salt is a much simpler method than the laborious long-cooking processes now commonly employed. If sweet corn is cut from the cob, cooked until soft, a teacupful of salt added for each six quarts of corn, and then sealed while hot in ordinary glass cans, it will keep perfectly. When ready to use, pour off the inch or two of juices which should cover the top of the corn in the can, and unless you like it highly seasoned, it will be best to drain off all the brine. Freshen, add a very little sugar to replace that which the salt has taken from the vegetable, reheat, and the corn is ready for the table. String beans may be prepared in the same way; and those who have tried them declare that tomatoes fixed by the same process are as good as when fresh from the garden.

Black and white wash goods are kept clear in color until worn out by using a spoonful of salt in the rinse water. Salt sprinkled around their haunts will rout some species of ants. —Bessie L. Putnam.

Making Over For Children.

Sometimes a little dress that is entirely outgrown can be made plenty large enough by making it all over, and it is well worth the trouble if the material is still good, and sometimes they are prettier than when new.

A little challie dress that was entirely outgrown was ripped apart and the pieces carefully pressed; then a new waist and sleeve lining were cut and made to fit the little girl, and the dressed trimmed with plaid goods to match the challie. The skirt was cut apart six inches from the bottom and enough of the plaid goods inserted to make it the right length, and a new yoke, belt and cuffs were made of the plaid, and the dress was ready for another period of usefulness.

Bands of insertion can be used to lengthen white dresses and to join belts and cuffs or for vests in the waist where they have to be opened to make them large enough.

Yokes and guimpes have lost none of their popularity and are excellent styles for cutting over old garments, and the guimpes are so easy to make that a child can have several to wear with the same dress, and any dress can be altered so it can be worn over a separate waist.

Little drawers can be pieced at the top to make them large enough, and yokes can be used to lengthen underskirts.

Lovely summer hats can sometimes be made from old ones with very little trouble or expense. If the little girl has outgrown her hat, you can remove the crown and take out a row of braid to allow it to fit the head, then make a new crown of some soft material, and it is easy to lower a high crown by removing several rows of braid or to give height to a low one by adding several rows. The fancy straw braids are a wonderful help in transforming old hats, and these braids come in every grade and color.

A little percale dress that was entirely outgrown but still good was pieced out to make it plenty large enough, then it was boiled in strong suds with a little soda added to remove as much of the color as possible; then it was colored a dark blue with Diamond dye for cotton; and some boys' cotton waists were colored at the same time, and they were pieced out to make them plenty large enough first, and they were nice and serviceable garments when finished.

Some faded lawn dresses were colored a pretty shade of light blue and made over for the little girls, and they were as pretty and nice as new garments.

If a dress is too short-waisted, a belt put in will often be all that is needed, or the shoulder seams may be ripped and a piece set in, and the cuffs and belts can be made of the same material.—M. H.

The Day For Pouts and Puckers.

When Margie came into the room with a pout on her pretty red lips and an ugly pucker between her blue eyes, Aunt Hester looked up with a smile.

"Oh, oh, Margie!" she said, laughing. "It's Monday, isn't it? Well, don't you know, dear, that Monday isn't the day to pout up pretty lips and pucker little noses? This is the day when lips should curl into pretty smiles and noses crinkle in fun."

Margie's eyes opened wide in surprise, then in another moment up curled the lips and out came the frown.

"Will to-morrow be a good day, Aunt Hester?" she asked.

"Let me see—Tuesday. That is the day when mothers do get so tired with big ironings that they ought to see smiles chasing each other all day long. Smiley girls are very much needed on Tuesday."

"Can we have them Wednesday?" asked Margie.

"Oh, Wednesday would never do for pouts and puckers. That is mending day, and mother's thread would get into snarls and nothing would go quite right if the pouts and puckers were about!"

"But Thursday would be all right," said Margie. "That's mother's easy day."

"But it's calling day, and you surely would not care to welcome callers with ugly pouts and puckers, now, would you?" said Aunt Hester.

"And Friday's sweeping day. I suppose mamma'd want smiles then, too," said Margie slowly.

"I know it," said Aunt Hester.

"And Saturday's her hardest day," continued Margie.

"Indeed, yes," answered Aunt Hester. "Pouts and puckers are such sour things that I'm afraid they'd curdle the milk and spoil all the baking. We'll have to shut the door on them on Saturday. And on Sunday, of course, we couldn't think of letting them peep in for even a moment."

"But that makes all the days, Aunt Hester," said Margie.

"Does it really? Then there doesn't seem to be any day when we have a place for them, does there? Well, I suppose we shall just have to keep the smiles for every minute of every day of the week, then, won't we?"

"Yes, we will," answered Margie, curling her lips into such a dear little smile that the whole room seemed full of sunshine, although the sky was covered with black clouds and it was raining hard.—Janet Thomas Van Osdel.

$250 Motorcycle Given Away

YOU see in this picture a boy riding one of the $250 Pope Motorcycles we are giving away. In other parts of the picture are the faces of several other boys. They are hard to find but by turning the picture about you will be able to see them. Mark at least two of the faces with a cross (X) and send the picture to me with your name and address and I will tell you all about the contest and how to win the seven horse power motorcycle and many other prizes.

1500 Votes Free I will send you a special coupon good for 1500 votes toward the motorcycle. All you got to do to get this coupon is to send your name and address at once. **PEOPLE'S CO., 538 Popular Building, Des Moines, Iowa.**

FREE TRIAL OF PLAPAO

DON'T WEAR A TRUSS

Rupture Cured by Stuart's Plapao-Pads means that you can throw away the painful truss altogether, as the Plapao-Pads are made to cure rupture and not simply to hold it; being self-adhesive and when adhering to the body slipping is impossible, therefore, they are also an important factor in retaining rupture that cannot be held by a truss. **No straps,** buckles or springs—cannot slip, so **cannot** chafe or press against the pubic bone. Thousands have successfully treated themselves at home—no delay from work. **Soft as velvet—easy to apply—inexpensive.** Awarded Gold Medal. Process of recovery is natural, so no further use for truss. We **prove** what we say by sending you Trial of Plapao absolutely **FREE**—you pay nothing for it, now, or ever. Write **today.** Address—**PLAPAO LABORATORIES, Block 888, ST. LOUIS, MO.**

MAY MANTON PATTERNS.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Hound Dog Bill.

Sam Stannard, a former member of the House of Delegates, was hunting in the Ozarks.

"The farmer called his dogs strenuously: 'Here, Bill! here, Bill!'" Stannard relates. "One dog came running up, but the farmer continued to call: 'Here, Bill!' Another dog responded, but the farmer continued his call of 'Here, Bill!' until three dogs galloped up and wagged their tails.

"'Are all of your dogs named Bill?' I asked the farmer.

"'Yes,' he replied.

"'What's that for?'

"'When I want a dog I want at least one to answer. Then again, I'm not going to worry my fool head off trying to think of names for dogs.'"—Post-Dispatch.

Native Cattle at $8.80.

One of the first cattle sales in April on the St. Louis market consisted of eighteen head, averaging 1,304 pounds, that sold at $8.80 per 100 pounds. The consignment was shipped in by Mr. H. D. Martin, of Callaway county, Missouri, and were the best cattle out of 1,500 head sold on the market that day.

South African Explosives.

South Africa not only supplies itself with explosives, but exports dynamite in large quantities to Australia and the East. The saving to Australian mines by this means is estimated to be £125,000 a year.

We have made arrangements with the publisher of **The Fruitman and Gardener** whereby we can furnish both papers for the price of one. It is a limited arrangement on the co-operative plan that we help each other, giving our efforts towards increasing each other's business. **The Fruitman and Gardener** is all right in

every respect, with a special talent in adapting articles for all climates. No better paper is published for the money, and we have selected it as the best of several that have been offered. Anyone who will send us the usual fifty (50) cents for one-year's subscription to The National Farmer and Stock Grower can select **The Fruitman and Gardener** for one year as a subscription premium. This offer will not last long, for the reason that the number we can accept on this half-price arrangement is small. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

FRUIT GROWING.

Good Land Required For Thrifty Trees—Practical Talk on the Treatment of the Soil.

Whether it be a commercial or family orchard, the owner is anxious for bearing time to come that he may enjoy the reward for his labor and money outlay; but often he is doomed to more or less disappointment because he has not considered the requirements of fruit trees.

He would not expect a colt or calf to grow into a large, thrifty animal if it had its feed doled out to it with stingy hand; but the tree is frequently set in poor ground and no later fertilization is given it, and yet it is expected to bear fruit at the appointed time of its kind.

The writer has frequently heard men say that poor ground is better for an orchard than rich soil; but observation shows this to be a serious error. Of course, if rich soil means one fertilized with barn-yard manure only, then we have too rank growth of wood and leaf and little or no fruit, as there is an excess of nitrogen; but add phosphoric acid and potash in some form of commercial fertilizer to balance the nitrogen and we have a thrifty tree that has a wood and leaf growth of great luxuriance and a heavy crop of fruit also.

The tree that has been well fed is not nearly so apt to fall a victim to insect pests and it is safer from fungous diseases than the stunted, underfed one, that has little vitality to resist any enemy, even as the half-starved child falls before a disease that the well-nourished one easily recovers from.

There is a difference in the requirements of trees at different periods, and on different soils, clay soils usually requiring larger applications of phosphoric acid than of potash, while sandy soils reverse the order. It is perfectly safe to apply 400 pounds acid phosphate and 100 pounds muriate of potash for two or three years before the orchard is expected to bear, and if there has been much manure put on the ground before or after the trees were set out, a heavier application might be advisable to balance the nitrogen in the manure and to hold it, as an excess of nitrogen beyond the needs of the crop is leached away and lost. This not being the case with phosphoric acid and potash, one can use a considerable quantity beyond the yearly needs of the trees, or any other crop that is grown, and know that succeeding years will witness benefit from these fertilizers.

In the latitude of Central Missouri and south, cowpeas should be planted every year in the orchard, and either be pastured with pigs and poultry, or else, after the seed is gathered, the ground should be disked well so as to incorporate the leaves and stems with the soil as well as possible, and in late August sow to rye for a cover crop, which may again be pastured until it is warm enough the succeeding spring to sow cowpeas again. This treatment of the orchard will fill the soil with humus so that it can stand the drouths of mid-summer, when the bearing trees require large quantities of moisture to mature their fruit, and also furnish nitrogen, thus saving the barn-yard manure for corn and other field crops.—D. C. Cornman.

INCUBATOR EXPERIMENTS.

A Few Remarks on What They Arrived at in Pennsylvania After Considerable Work.

The word "tentative" is not generally understood, but it means that you can accept a conclusion arrived at until by further experiences you can improve upon it or change it. At the Pennsylvania Experiment Station they went into investigations of poultry matters, and in their modesty in estimating the value of the conclusions arrived at they regarded their apparent results as "tentative." When we say "they" we refer to Homer W. Jackson and W. A. Cochel, who are jointly responsible for Bulletin No. 120, issued by the Director of the Experiment Station, State College, Center county, Pa. Such bulletins are free to farmers in the home state, and when a farmer in another state writes and says he is interested he generally receives a copy.

Experiments that require months and years to conduct and many pages to describe can often be boiled down in very small space, which comes under the head of "Conclusions" or "Summary," and another way to express it is by calling it "the milk in the cocoanut." A careful editor will study the account of all the work done, go into the why and wherefore of all the different issues and then improve upon the bulletin as published by the experimenters; but when they say "tentative" instead of final conclusions were arrived at the editor takes a short cut to the conclusions, which in this case were as follows:

General Incubator Experiments.

Under natural conditions eggs not promptly incubated are subject to daily warming by contact with the hen's body, which appears to have an important influence on the life and vigor of the embryo chick.

Warming for sixty minutes gives better results than for thirty or 120.

Eggs held for incubation gave better results when laid flat in the incubator and turned daily.

No special difference due to position was noted in eggs held for less than sixteen to eighteen days.

In both tests the poorest results were secured with eggs placed on end and turned daily, as compared with eggs laid flat, or placed on either end and not turned.

Influence of age of eggs on hatchability varied greatly, presumably due to season or conditions of breeding pen.

Washing eggs for hatching materially reduced hatchability.

Eggs placed on end in incubator for first three days of incubation suffered no perceptible injury.

Eggs turned twice daily generally gave better results than those turned once daily.

Crude Fibre in Rations of Laying Hens.

Rations carrying 3½ per cent. of total weight in crude fibre seem to give better results than those with lower or higher precentages.

Fowls can keep in fairly good condition on a ration carrying 5 per cent. fibre, but will show decreased egg yield.

Fowls fed freely on rations carrying over 5 per cent. fibre suffer from serious intestinal disorders.

Fowls on rations carrying 6½ per cent. fibre and over will probably keep in fair condition if consumption is reduced to maintenance requirements.

Fowls do not seem to make any appreciable use of coarse floor litter to supply deficiency in fibre content of ration.

Confining fowls to house pens or permitting them to run in large yards seems to have no bearing on relative performance on different percentages of fibre.

Amount of green feed consumed is governed to some extent by proportion of crude fibre in ration.

Fowls keep in better health and lay better with bran as a source of fibre than alfalfa meal.

Fowls will not eat alfalfa meal unless compelled to do so by mixing with other more palatable feed stuffs.

Fowls apparently are fond of alfalfa hay, but the proportion actually consumed is small.

Comparison of Simple Rations With Variety in Feeding Laying Hens.

Pullets of Barred Rock, Rhode Island Red and Leghorn breeding will keep in good health on rations carrying very large proportions of corn if bran is also liberally supplied.

A ration of corn, bran and meat scrap does not result in heavy production when long continued.

Eggs from hens on such a ration are larger than where wheat is the principal grain fed.

Hatchability of eggs and vigor are increased by a liberal use of corn in the rations.

The results of this experiment with pullets should not lead to the adoption of extremely heavy corn feeding if other grains are available.

Further experiments will be necessary to prove that a corn, bran and meat ration is a safe ration for general use, particularly with fowls in confinement.

These experiments were made with pullets; care must be exercised in applying results to flocks of older hens.

Eggs can be produced more cheaply on a corn, bran and meat ration than on more varied rations, if the same proportionate egg yield is secured.

Oranges vs. Doctors' Bills.

A London School Board has recently voted to give an orange to each of the 600 children in a certain school for the poor once a week as a preventive against influenza, a disease admitted to be highly infectious. One of the medical fraternity, in commenting upon the resolution, not only heartily endorses it, but wishes that the number of oranges might be increased to two a day. He adds that while this allowance may not entirely shut out the disease, it is certainly a step in the right direction.

If oranges are good for the London children in preventing diseases, they are equally good for our own. The juice is mildly acid, and a corrective against various maladies. The sugar in the fruit is a necessary part of the normal food, and the flavor is an agreeable one, which incites to a better digestion of the food previously eaten. As a laxative the orange has properties which render it a most valuable medicine.

We are too apt to curtail in the so-called food luxuries and then rush to the doctor for medicine, when a little something is the matter, forgetful of the fact that it is much easier as well as cheaper to keep well than to get well. The single visit of a physician will pay for several dozen of oranges at present prices, and the latter will prove much the more agreeable. There is also the saving in pastry making, which should not be lost sight of. The orange is quickly tucked into the lunch box or pocket, without danger of injury in transit to school, or of its damaging any other article of food with which it comes in contact. It is relished more than the regulation pie, and is both cheaper and more wholesome. Surely there is wisdom in cutting out some of the candies and pastry and substituting oranges.—Bessie L. Putnam.

Get the Chopper that Really Chops

Making appetizing, wholesome dishes from "left-overs"—particularly meat—is the every-day purpose for which you use a chopper. You can have these bits of meat cleanly chopped or just mangled—it all depends on the chopper you use. The

ENTERPRISE Meat AND Food Chopper

with its four-bladed, sharp steel chopping knife gives the chopping cut. It is the one real chopper designed to cut meat AND food, it is the great utilizer of foods that would ordinarily be wasted. It means economy in table cost and better living. Remember "AND." Say it to your dealer; then you will get what you will be delighted with—the Enterprise Meat AND Food Chopper. A still lower priced machine is our Standard Enterprise Food Chopper.

If you write us, we will send you "The Enterprising Housekeeper," more than 200 tested recipes and household helps, for 4 cents in stamps.

THE ENTERPRISE MFG. CO. OF PA.
Dept. 87, Philadelphia, Pa.

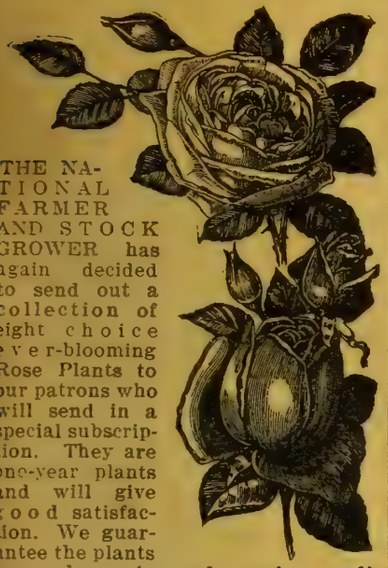
Three Indian Dolls For 30c.

And a year's subscription to the Universal Magazine. These dolls are pictures on linen and are ready to cut out and sew together. They are Indian Dolls—THE PRINCESS TAMBON and her sister and brother. The largest is sixteen inches high and the others six inches. Beautifully lithographed in four colors, all ready to cut out and sew. The handsomest Dolls ever put on the market. These Dolls are artistically garbed in correct Indian costume and require no additional dressing. They have real educational value. This Indian family will delight the heart of every child. The Universal Magazine is a nice, bright, cheerful, illustrated magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry— a splendid publication.

Send us thirty (30) cents for one-year's subscription to the Universal Magazine and one set of Dolls, or fifty (50) cents for two subscriptions and two sets of Dolls. The Dolls and Magazine are sent postage paid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A GARDEN OF ROSES.

Fine, Sturdy Plants—The Most Delightful Premium Offered by Any Farm Paper.



THE NATIONAL FARMER AND STOCK GROWER has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription. They are one-year plants and will give good satisfaction. We guarantee the plants to reach you in good growing condition, and with each package we send complete directions for planting, care and culture. The time to send the order is now—before you forget it—and you will receive the plants at the best time for planting in your section.

The collection consists of:

1. THE OLIVIA—A most gorgeous, distinct rose of deep, brilliant rosy red, and one which excites the admiration of everyone beholding it.
2. THE SUNBURST—An intense exquisitely beautiful rose of orange-copper and golden yellow.
3. THE BRIDE—The most satisfactory white rose of dainty, chaste, beautiful flowers and healthy growth.
4. MY MARYLAND — A pink beauty, rapidly developing a sturdy, shapely plant and large flowers.
5. SOUV. DE PRESIDENT CARNOT — A wonderfully handsome rosy-blush color creation.
6. THE METEOR—For intense, rich, velvety, crimson color no other rose compares. The flowers are large and double.
7. THE BLUMENSCHMIDT — A pure citron-yellow; a first-prize winner at every show.
8. DOROTHY PERKINS—A shell-pink, hardy climber and one that should be extensively planted.

Our Grand Special Offer.

Send us a money order for fifty cents. ONLY fifty (50) cents. We will credit you with ten-months' subscription to THE NATIONAL FARMER AND STOCK GROWER, and at the proper time we will also send you the full set of EIGHT ONE-YEAR ROSE PLANTS as described. The roses are sent out directly it is safe to dig them in the spring. Send in your order at once with fifty (50) cents and it will receive prompt attention.

Here is a Subscription Blank.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:—Gentlemen: — Herewith please find fifty (50) cents. Please send me THE NATIONAL FARMER AND STOCK GROWER for ten months, and the full set of EIGHT HARDY, EVER-BLOOMING ROSES, one-year plants, postpaid, safe delivery guaranteed.

SELECTED POETRY.

FATAL MATHEMATICS.

A man should marry a woman half his own age plus seven years.—Old Maxim.

See how the Fates their skill combine
To spoil a tale of "might have been."
They met when he was twenty-nine,
And she was only seventeen.

For years in absence they adore
Each other, just as lovers do;
To greet when he is thirty-four,
And she, alas! but twenty-two.

When next their mutual gaze they fix
The waiting time was nearly o'er,
For he was going thirty-six,
And she admitted twenty-four.

They parted then (as I'm alive,
It was a piteous sight to see)—
Until he totaled forty-five,
And she had weathered thirty-three.

Their fates will never now entwine,
Their courtship's course is nearly done;
For she's a girl of sixty-nine,
And he a swain of eighty-one.
—Harold Adye, in the New York Sun.

THE ROAD UV LOVE.

I've read a little, now an' then,
Pertainin' to the ways uv men,
An' sich-like, an' I'm free to say
There's jest one road that leads away
Frum trouble. An' there's room to spare
On that same road, most anywhere.

It doesn't matter what we be—
The man that has his pedigree
All cleaned an' ready fer excuse
Will find it ain't one bit o' use
Fer traffic, on this road that leads
Through shady lanes o' kindly deeds.

An' when the bitterness that springs
Up ghost-like, frum remembered things—
Jest little things that me an' you
Might well have done, but didn't do,
Begins to sting us like a goad,
It's mighty good to find this road.

Why, man alive! if I could stay
An' tell o' them I meet each day
Along this road where signs pint true
Unto the end we're comin' to,
You'd be right glad to leave yer load
An' jine us, here, on this old road.

But I ain't time to tell to you
The many faces, old an' new,
I find along this road uv love—
This road you know I'm speakin' uv—
Where honest hearts an' friendly ways
Pint to the land where glory lays.
—Clyde Addison Wright.

THE COST OF LIVING.

"I do not see why folks complain,"
Said Jorkins, "of the price of meat;
For fifty cents a pound you get
A sirloin steak that can't be beat.
For the same money you can buy
A luscious English mutton chop.
Why should you ask for more than that?"—
Yes, Jorkins keeps a butcher shop.

"The cost of living ain't so high,"
Said Jobkins. "Why should folks find fault?
For half a dollar you can buy
A full three-months' supply of salt.
Just think what people had to pay
Right after our great civil war!
I tell you, flour cost money then!"—
Yes, Jobkins keeps a grocery store.

But Jobkins went to buy some meat
And said that Jorkins was a skin;
And Jorkins, paying Jobkins' bill,
Declared he had been taken in.
And when the coal man asked for pay,
They both set up a mighty shout;
And just as they were feeling worst,
The plumber came and cleaned them out.
—Somerville Journal.

WE MET; 'TWAS IN A CROWD.

We met, 'twas in a crowd,
And I thought he would shun me;
He came; I could not breathe,
For his eye was upon me.
He spoke; his words were cold.
And his look was unaltered,
I knew how much he felt,
For his deep-toned voice faltered

I wore my bridal robe,
And I rivaled its whiteness;
Bright gems were in my hair:
How I hated their brightness.
He called me by my name,
As the bride of another.
Oh! thou hast been the cause
Of this anguish, my mother.

And once again we met,
And a fair girl was near him;
He smiled and whispered low,
As I once used to hear him.
She leant upon his arm;
Once was mine and mine only.
I wept, for I deserved
To feel wretched and lonely.

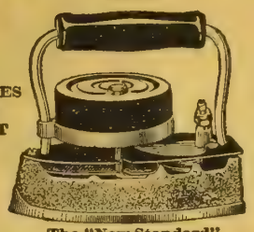
And she will be his bride
At the altar he'll give her
Those vows that are too pure
For a heartless deceiver;
And the world may think me gay,
For my feelings I smother.
Oh! thou hast been the cause
Of this anguish, my mother.

$27.00 TO $40.00 PER WEEK

FOR AGENTS

NEW SELF-HEATING IRON

MAKES ITS OWN HEAT



The "New Standard"

WRITE FOR FREE SAMPLE PROPOSITION

It takes women by storm. Quick, easy sales. Grandest aid to women ever invented. Entirely new. Sells almost on sight. Show 10 people—sell 8. Even 2 or 3 sales a day net you $27.00 to $40.00 a week. No experience required. No need to stop your regular work. Sell evenings. Go right into home and demonstrate. Everybody is interested. Women make as much money as men. Saves its cost every month. Women simply can't resist. Selling is almost as easy as giving them away. All year business. Field hardly touched. Every home a prospect. Not sold in stores. Sells on its merit. Right size—right weight—right price. Looks good. Is good. Carry it anywhere. Iron anywhere. No stove needed. Six sales a day should be easy. Double that isn't hard work. Think of the profit. Write quick for FREE SAMPLE PROPOSITION and agents selling plan.

C. BROWN MFG. CO.
1011 Brown Bldg.
Cincinnati, Ohio

A RED HOT SELLER

Then farewell, farewell to him
Who my fond heart once cherished;
Then forgive, oh! I pray,
Ere I lie down and perish.
As you pause above my grave
And your feelings you smother,
Then forgive, as I now do,
Oh! forgive my poor mother.
—Exchange.

THE CHAUFFEUR'S STORY.

"I shudder yet," the driver said, "whene'er
I tell the tale—
I'll think of it till I am dead! Its memory
turns me pale.
'Twas when I drove old Brown's imported
high-power racing car—
And I was young and reckless—courted all
the thrills there are!

"Upon the day this occurred, I'd fifty miles
to go
Ere lunch, and you can take my word, I
wasn't driving slow;
The road was good, but narrow. A rail
fence on either side,
And the car sped like an arrow in a swift
and easy glide.

"I took the curve at forty miles, then at
our highest speed—
I shot along those forest aisles with just
the road to heed—
When suddenly there stepped into our track
a little child
With golden hair and eyes of blue—just
looked at us and smiled.

"Not fifty feet ahead was she—and I, too
scared to touch
Or think of the emergency, or e'en throw
out the clutch:
And even then it was too late—no time to
turn aside—
No space, no field, no open gate—the road
was ten feet wide!

"All these I saw as in a dream—the lassie's
happy face,
One of those moments that will seem to
hold a lifetime's space—
'Twas just one smile of innocence—ah,
would it be her last?
And then—she climbed up on the fence, and
watched me thunder past!
—Ted Robinson.

THE DEAR OLD FACTORY PIE.

I am thinking, sadly thinking of the days
that are gone by,
The days when I was gladdened by a piece
of factory pie;
Oh, the dear old basement hashhouse where
I used to go to eat,
Where the coffee and the sinkers made my
happiness complete—
Where the dear old fried-egg sandwich used
to set me back a dime,
Where the waitresses were friendly and the
sandwiches sublime.

I am thinking, sadly thinking, of the appetite I had
When the kitchen odors pleased me and a
small steak made me glad;
Oft the table cloths were dirty and the
crockery was thick,
Where the waitress gayly shouted: "Turn
'em over, and be quick!"
Ah, the coffee and the doughnuts that they
used to serve me there,
When my joy was never shattered by the
finding of a hair.

I am thinking, sadly thinking, of those
golden days of yore,
And I can not cease to wonder why they
make such pies no more.
Oh, the dear old basement hashhouse where
the sinker gave me joy
When I drew the meager wages of an eager
errand boy,
Where the waitresses were friendly and the
sinkers were sublime,
Where the rattle of the dishes cheered my
soul at eating time.
—S. E. Kiser.

GOD KNOWS BEST.

Sunshine and shadows—evening bells and
prayer;
Darkening clouds and rainbows—these we all
must share.
Crowns of thorns and roses; rest, eternal
rest,
Oh, heart of mine—don't worry—God knows
best.

If He filled our days with sunshine and
never any rain,
If He filled our lives with gladness, and
never any pain,
We would be so happy, we would love this
golden land,
We'd cease to look for guidance from His
protecting hand.

He sometimes sends His moonbeams, then
darkest, starless night,
Lest we forget our Father's Home and
never long for light.
So let your Savior guide you when with
sorrow oppressed.
Oh, heart of mine—don't worry—God knows
best.
—Katherine Ward, in New York Globe.

Farmers' Association Formed.

WISCONSIN POTATO GROWERS' ASSOCIATION. Organized November 14, 1912. President, John Hess, Rhinelander; Vice-President, A. J. Pinkerton, Waupaca; Treasurer, Ben F. Faast, Eau Claire; and Secretary, J. G. Milward, Madison.

LAME BACK and KIDNEY TROUBLE

CAN BE CURED WITHOUT A DROP OF MEDICINE

According to the words of those who say they have been cured to stay cured by using MAGNETIC SHIELDS, which do what all the medicine on earth cannot do; they ACTUALLY INSTILL NEW LIFE AND ENERGY INTO THE SYSTEM, overcoming congestion, soreness and pain.

WE PROVE IT TO YOU POSITIVELY

Not in one case or a dozen cases but in multitudes of cases, where people say they have been cured of Paralysis, Rheumatism, Lung Trouble, Kidney, Liver, Stomach and Bowel Troubles, nervousness and most every other form of disease after medicine failed.

Our MAGNETIC ABDOMINAL AND KIDNEY VITALIZER for ladies and gentlemen here illustrated is only one of the many Shields we make. IT IS A WONDERFUL INVENTION, scientifically constructed and floods the system with magnetism, supplying LIFE, STRENGTH and VIGOR to the BACK, KIDNEYS, STOMACH, LIVER, BOWELS and BLADDER, giving that buoyancy, tone and renewed vitality to the system that Magnetic force alone can supply.

SENT ON TRIAL TO PROVE IT'S VALUE

Write to-day for full information and free book, "PLAIN ROAD TO HEALTH," by C. J. Thacher, M. D. Describe your case fully, we advise you free how to apply MAGNETISM for treating any form of weakness or disease.

THACHER MAGNETIC SHIELD CO., Inc., Suite 452, 110 So. Wabash Ave., Chicago, Ill.

Overland

Increased orders over 100%

THE leading agricultural states of our own country, and the three principal agricultural provinces of Canada, have already contracted for over 100% more Overlands than they did a year ago. They wanted even more than this but we could not supply the demand.

American farmers have already taken more than twice as many Overlands as they bought last year—and the season is only half gone.

A few of the individual increases for Overlands for 1913, over 1912, by states and provinces, are as follows: North Dakota, 152%; Kansas, 134%; California, 101%; Colorado, 93%; South Dakota, 85%; Texas, 84%; Minnesota, 78%; Iowa, 61%; Oklahoma, 61%; Nebraska, 54%; Saskatchewan, Canada, 150%; Alberta, Canada, 150%; Manitoba, Canada, 150%.

We are shipping over 150 cars a day.

In spite of that, we are over 5,000 cars behind our "immediate shipping orders."

If *you* are in the market for a car, *examine this Overland at once.*

It costs 30% less than any other similar car made, and in most cases is bigger, better made, more powerful, more comfortable, more serviceable and more completely equipped than any of the average $1200 cars manufactured.

There is an Overland dealer near you. Look him up and ask to see this car—the best buy in America. Catalogue on request to the factory. Please address Dept. 89.

50 Cents a Year. Published Monthly by The Hale Publishing Co. 5 Cents a Copy.

and Stock GROWER

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912—True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

This is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors: the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, mother of champions or winner in the prize ring.

The Book of Live Stock Champions is receiving the highest praise from the live stock breeders' associations and from officials of the Department of Agriculture. It is being adopted as a text book at high schools and colleges. Active, up-to-date stockmen having an interest in their business and a desire to do their share towards live stock improvement are subscribing for the Book of Live Stock Champions themselves and recommending others to do so.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special inducements to paid-in-advance subscribers, to old friends and patrons. We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. This is an extraordinary offer.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Book of Live Stock Champions, cloth-bound edition of 1912.

COTTON IN THE SOUDAN.

The British Government Loaning Planters Fifteen Millions of Dollars to Raise Cotton in the Soudan.

While Congress is in session devising every possible ways and means to foster foreign agriculture at the expense of the agricultural interests of the United States, the British legislators are not idle in taking care of their own people.

The Chancellor of the Exchequer stated before Parliament that the time had come when something ought to be done to give the English mill owner some cotton raised under British control, and without any contrary argument he obtained unanimous vote of fifteen millions of dollars for the benefit for the development of cotton growing along the banks of the river Nile.

The Chancellor said in regard to American cotton that, no matter what the crop may be, there is danger of it being cornered, and he would prefer that British mills be more certain of another supply.

Egyptian cotton, he said, was better from the point of view of the manufacturer and also better from the point of view of the workman, because it was cleaner and healthier to work with than American cotton.

Discing Corn Land Before Breaking.

[By J. C. Hackleman.]

The importance of a good seed bed for corn is not sufficiently appreciated. A poor stand of corn may be due to a poor seed bed as well as to inferior seed or other causes. Briefly, the sort of seed bed which is desirable for corn is one which is loosened deeply, from six to eight inches, but which is well settled together below with a mellow and well-pulverized surface.

One of the best ways to begin the preparation of such a seed bed is with a disc harrow before plowing. This is particularly true of stalk land, while the weighted disc will not only cut the stalks so they may be turned under, but it will also pulverize the surface so that when the soil is inverted, the organic matter which is thoroughly mixed with the soil will not delay the re-establishment of capillarity.

The discing of stubble land is also important. Such discing will make the plowing at least a half horse easier and will provide for much more rapid decay of the stubble. Many men are coming to believe that the same can be said of sod land. Naturally, much depends upon the season as to the best time for doing this. Fall discing or early winter discing on stalk land is usually preferable. Spring discing, however, is much more common and is preferable on stubble land.

With the present late spring, many men who have not already disced their corn land will fail to do it. Of course, no absolute rule can be laid down regarding this, but if dry weather should follow the present wet period, the man who takes time to disc his corn land before plowing will surely be a gainer, as the soil will be prevented from becoming so compact and hard and will work up into a much better seed bed and the moisture conserved by such preparation may be needed before corn is mature.

Missouri Should Grow More Cowpeas.

[By M. F. Miller.]

The cowpea crop is not sufficiently appreciated in most parts of Missouri. As land becomes higher in price, and as it becomes more and more necessary to maintain the fertility to secure a net return, cowpeas or similar crops must come into more general use. They build up the soil, as does clover, but they have the advantage of a much shorter growing season and of lending themselves for use as a catch crop to be plowed under or pastured down for soil-building purposes.

It is true that cowpea seed is somewhat expensive and that cowpeas are hard to cure, but the return that can be secured from them when a man understands how to handle them is as great or greater than that from clover. At present, practically all the cowpea seed in Missouri is produced in the Southeast Missouri lowlands. There is no reason why the uplands of Central or South Missouri cannot produce cowpea seed profitably. This would cheapen the cost of the seed for the individual farmer. Small pea threshers are now on the market which will enable farmers growing small amounts of peas to save their own seed and even put some on the market.

The farmer on average to thin land in Missouri who expects to make good net returns from now on will usually find the cowpea one of his most profitable crops, when he learns to handle it.

Cantaloupes From Cuba.

The first arrival of cantaloupes to reach the St. Louis market this season was disposed of April 18th by the Barry Commission Company, 815 North Fourth street. Half a dozen crates, containing twelve melons each, about the size of a Rugby football, came from Cuba. The fruit was of extra-fine quality and appearance and attracted attention on the market. Offered at auction, they brought $1.25 each.

Hotel and restaurant keepers, on the alert for table novelties, were the principal buyers. The equipment arrived two weeks earlier than the first of last year.

Say,—but that's fine cement! Of course it is, it's ATLAS,—

SWEET POTATOES A MONEY CROP

The Requirements For Successful Planting—Making the Bed—Method of Cultivation—Favorite Varieties.

There is no truck crop that pays better than sweet potatoes, if one understands their requirements. It is not enough to grow them, but they must be properly cared for at digging time, and if not sold at once must be cured or dried out, or they will not keep; but "catch your hare first;" or, in other words, grow the potatoes and the rest is comparatively easy.

Nearly every one who does not make an extensive business of growing sweet potatoes depends upon buying the plants needed, and this is a very satisfactory plan, especially for the beginner, who does not understand making the hotbed. A few suggestions as to the later work may serve to point the way to success, as the writer remembers how much help he received from directions given in one of the city papers by the late Chas. Murtfeldt, more than twenty years ago, on the subject of planting sweet potatoes.

The knowledge gained from the article in question has been supplemented by many years of growing the crop, and in that time many different varieties have been tried and different ways of making the "bed" for the plants, and we found that except for very early planting the level row was by far the best. For early crop the ground was deeply plowed and harrowed till well pulverized, then the plow was run so as to throw two furrows together to form a ridge. This ridge was raked down by hand and the plants were set fourteen inches apart.

We never lost a plant, for when opening a hole for it a half pint of water was poured in and this furnished plenty of moisture to keep the plant from wilting until it could take root. After the plant was set in this wet soil, we drew the dry soil all about it to prevent evaporation. The ground was hoed between the plants when needed, and the space between the rows was cultivated with horse power, and when the vines shaded the ground they were laid by. We also omitted this cultivation altogether on patches that were set late, when we had old straw or other litter which we could use as mulch. We found that plants set in ridges did not make such thick tubers as when planting in less deep, loose soil, and this, as well as the fact that moisture is saved by level planting, led us to adopt the latter method for the main crop. We like the little early yellow Jersey and also the Nansemond, but for late planting the Southern Queen always made the heaviest crop, as it seems to stand dry weather better than other varieties; in fact, one year of protracted drouth, this kind was the only one that made any crop at all.

Sandy land, if plenty of potash is furnished, seems to be the preference of the sweet potato, but very fine tubers can be grown on any kind of land if the proper elements of plant food are present. Some growers do not favor manure from the barn, as it produces a rank taste to the potato, and use nitrate of soda to stimulate the growth of vine, and this is well, as barn-yard fertilizer should not be applied to ground to be planted immediately in crops whose value lies in the root.

The first crop of sweet potatoes the writer ever raised was grown on Missouri clay upland that had been farmed for twenty or more years without any fertilizer, but as there was an accumulation of wood ashes about the place, these were applied to the patch and the result was very good. We have seen better crops grown by the application of 200 pounds nitrate of soda, 400 pounds acid phosphate and 200 pounds sulphate of potash, the soil being similar, and the grower realized a net profit on the crop of one hundred dollars an acre. Not so bad, when we consider that on unfertilized soil in the same neighborhood farmers were complaining that there was no money in growing crops of any kind. —D. C. Cornman.

FERTILIZERS UP TO THE FARMER

The Farmer by His Own Practical Experiments Must Decide the Questions That Experts Disagree Upon.

We never took any stronger position, or a safer one, than when we said it was up to the farmer to make his own experiments with fertilizers. There is great talk about farm-yard manure being all that is necessary to fertilize crops and add humus to the soil; but farm-yard manure is not so plentiful on the farms, and in this day of gasoline farm power farm-yard manure is getting to be a scarce article. When we go to the cities to ship out the manures from stables and stock yards we are told that there is not enough to fill the requirements of the seed growers, let alone the general grain farmer; and then again we are not able to get it for the hauling or cost of transportation, as was formerly the case.

We are reminded of the corn contest originated and financed by the good old monthly American Agriculturist when the North Carolina planter by reckless use of barn-yard manure and commercial fertilizers produced 255 bushels of corn on one acre; that a New Yorker in the same contest produced with commercial fertilizer 213 bushels at a cost of only sixteen cents a bushel, and the Nebraska farmer, who, with ninety loads of barn-yard manure, was third in the contest by raising 171 bushels of corn at a cost of forty-seven cents a bushel. One would imagine that ninety loads of barn-yard manure on the rich black loam of Nebraska would excel the sandy soil of New York with commercial fertilizers, or at least it would be grown at less cost. But then, before manure spreaders were invented, barn-yard manure, by reason of labor expense, was an example of high cost of living.

The farmer has to fertilize some of his lands to convince himself what commercial fertilizers are worth. The agricultural professors are to some extent "hobby riders," their experiments are not conducted for profit and loss, and they have great difficulty to bring themselves down to the actual farm level where the farmer has to balance his cash and take in as much or more than he pays out. One professor says that there is money in putting ten dollars an acre on land by using raw rock phosphate, which is not an available fertilizer, and at the same time will condemn every commercial fertilizer. Others equally eminent say that available fertilizers are used with profit, and that raw rock and other forms in which the fertilizer is not available are worthless goods.

The farmer must decide for himself. Every year that passes by without a fertilizer experiment is a year lost. When the time of planting is gone by the year is lost. No other industry compares with farming in lost opportunities. "We have left undone those things that we ought to have done" can be written on most farms. Ten years from to-day farms will have to produce very much larger crops or they will not pay interest on the investment.

Rotation is not everything; neither is it new. The ancestor of the writer of this article, William Hale, of London, England, had in his keeping the Doomsday Book of St. Paul's Cathedral, and he had in charge the leasing of the church lands, and in those leases were written the rotations insisted upon by the owner of the land and which had to be grown by the tenant under pain of forfeiture of his lease. Those rotations may have been improved upon since, but the leases of three hundred years ago antedate anything like intelligent agriculture in this country.

In building up European soils commercial fertilizers are not overlooked, and the agriculture of England has never failed to draw upon this country for cotton-seed meal and raw cotton seed before the age of the oil mills.

We repeat, that farmers will find it necessary to conduct experiments and to do it upon the lines laid down by the commercial fertilizer manufacturers, for the reason that the statements made in their literature are clear and capable of verification or discredit. Turn to any other source and you will find nothing that will lead you in any positive direction, unless it be the road to inactivity by reason of the lack of concise instructions that an average farmer can understand.

WHEAT MARKET SITUATION.

Prices on a Very Conservative Basis, Apparently Without Speculation.

If there are to be any decided fluctuations and speculative operations in the wheat market this year, we look for them in the month of May. On May 31st the May contracts have to be closed by limitation, and then we usually have quiet times in the wheat market, because the next option is July, and that is not an excitable option to trade in under ordinary circumstances.

It does not appear that there is enough speculation in the wheat market to cause any complaint. Indeed, a little speculation is better than stagnation. During the month of April, however, the wheat market strengthened in a substantial manner.

On March 31st we left the May wheat option quoted at Chicago at 90⅝ cents a bushel, and on April 30th we find it advanced to 92⅛ cents.

On March 31st we left the July option quoted at 89⅞ cents a bushel, and on looking it up again on April 30th we find the price advanced to 92⅜ cents.

On March 31st we left the September option quoted at 89½ cents, and on April 30th we find the quotation is 92⅛ cents.

Grain men know that No. 2 red wheat is valued at 3 cents a bushel more than No. 2 hard wheat, but they are not accustomed to seeing 15 to 17 cents a bushel difference, as now now upon the cash St. Louis market. On April 30th No. 2 hard wheat was quoted at 93 to 95½ cents a bushel, and No. 2 soft wheat at $1.09 to $1.11 per bushel.

We have always claimed that St. Louis is the best wheat market on the continent, and the reasons for it are that the millers tributary to the St. Louis market prefer to grind soft wheat, and that St. Louis is directly in the center of the soft-wheat-growing territory. The goods suit the market and the market suits the goods.

THE OATS MARKET SITUATION.

A Slight But Satisfactory Gain in Prices During the Month of April.

If we look back to last August we find the best oats were selling at 31 and 32 cents a bushel, and when we go back to the time cash oats sold at 29 and 30 cents a bushel, a couple of years ago, we feel like congratulating ourselves that cash oats at St. Louis are selling around 35 cents a bushel.

In reviewing the market we left the May option on March 31st at 34⅜ cents, and we find it again at 35⅝ cents a bushel on April 30th.

We left the July oats option on March 31st quoted at 33⅞ cents, and we find it again on April 30th at 35 cents.

We left the September option at 34 cents on March 31st, and we find it again a month later at 34½ cents.

The gains are very small, and yet each one is gained by a hard struggle and the market appears to be utterly devoid of speculative elements.

But the most gratifying feature of all is the St. Louis cash trade, wherein the money is paid over for the grain in sight that has been graded by the official inspector. Cash oats were selling at St. Louis on March 31st at 32¾ to 33 cents a bushel, and on April 30th the price for No. 2 oats had advanced to 35 cents.

We see that the traders regard oats to be a good property, notwithstanding there is plenty of remnant of the largest oats crop in history, and it reminds us of the large and ever-increasing population that no act of Congress can take away. Oats are not yet selling for what they are intrinsically worth, and we hope to see the day when farmers will receive 50 cents a bushel for oats on the farm.

Be Sure You Get a Pure Leather Shoe

OVER 90% of all shoes sold for less than $4.00 contain *substitutes* for leather in the heels, counters and soles.

Why pay pure leather prices for such shoes when you never know they are adulterated until you wear them and find them unsatisfactory.

There is one way to be sure you are getting an honest leather shoe. Simply ask for "Star Brand" shoes with the star on the heel and the name on the sole.

"Star Brand" is the largest selling line of shoes in the world. Over seven million pairs sold during 1912. Every pair is honestly made of good leather. No substitutes for leather are ever used.

"Star Brand" shoes are made in over 750 styles—in all the different leathers—for men, women and children. A shoe to meet every demand, both as to style and grade.

Don t pay leather prices for paper shoes. Always ask for and insist upon having "Star Brand" shoes. Nearly 20,000 good merchants sell them. Don't just go into ANY store, but hunt up the "Star Brand" dealer or write to us for the name of the nearest merchant who sells them.

"Star Brand Shoes Are Better"

ROBERTS, JOHNSON & RAND
MANUFACTURERS Branch of International Shoe Co. ST. LOUIS

THE CORN MARKET SITUATION.

The April Movement Scores a Slight Advance in Prices.

When prices were at the bottom last December, few people expected that we would obtain a ten-cent advance in the price of corn in four months, and the corn market has done a little better than that.

On December 31st, 1912, cash corn on the St. Louis market sold at 45 cents a bushel; on January 31st at 49½ cents; on February 28th at 50½ cents; and on March 31st at 54¼ cents; and finally at St. Louis, on April 30th, we get a price of 58 cents. Here is a clear gain of 13 cents in four months.

We are also reminded that we are quoting the current price of a grain crop that was the largest in history, and yet with the country full of corn we are quoting an advanced market.

In the option trading the gain has been almost equal. At Chicago, on March 31st, the May option was quoted at 53⅝ cents; on April 31st the quotation is higher at 55½ cents a bushel. In the same time the July option advanced from 54⅞ cents to 56¼ cents; the September option advanced from 55¾ cents a bushel to 56¾ cents a bushel. These one-cent advances do not make people rich, but they look especially good when in the past, under similar circumstances, the quotations have usually gone the other way.

Certified and Guaranteed Roofing.

On page 20 will be found the advertisement of the General Roofing Company. In addition to furnishing a splendid roofing material this company is prepared to assist farmers in designing their buildings.

A good example of a guaranteed roofing is that made by the General Roofing Manufacturing Company. It is known by the trade name of "Certain-teed." The word is taken from the two words "certified" and "guaranteed." After this concern had been in business a number of years and their roofing had proved its wearing qualities they placed a guarantee of fifteen years on it and gave it the name "Certain-teed," meaning the roofing is certified and guaranteed by them.

The General Roofing Company has many distributing centers in order to save the buyer some freight charges, but for the purpose of answering the advertisement address the General Roofing Manufacturing Company at East St. Louis, Ill.

DIPPING VATS FOR HOGS AND SHEEP.

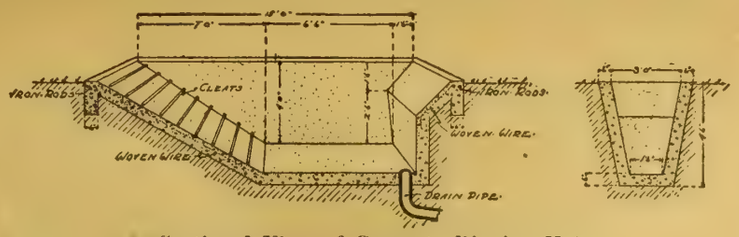
Plans and Instructions For a Concrete Vat.

The passing of the range, the breaking up of the Western ranch into farms and orchards, has caused a decided change in the nation's method of producing meat. The increased prices have made stock raising profitable everywhere. This fact is particularly true of hogs. To grow bone and to put on flesh, swine must be healthy and must have sanitary surroundings. Nothing retards the growth of a hog so much as lice. Years of experience have shown that the best remedy for destroying lice and fleas is dipping in a chemical solution. Dipping also keeps the skin of the animal in a healthy condition and thereby aids its growth. Because of cheapness in first cost and lasting qualities, most dipping vats are now built of concrete.

The best place to locate a dipping vat is close to a fence, near the water supply, and convenient for a chute leading from a small well-fenced lot or corral. At the narrow end of the chute, and in line with it, lay out the dipping tank (in accordance with the dimensions on the plan below) with the entering slide next to the chute. Make the excavation the same depth as the inside of the finished vat, and of the same shape but twelve inches wider. Dig the deep part of the hole first and then slope the earth for the "entrance-side" and the "climb-out." Lay the outer drain pipe with its end even with the surface of the finished concrete bottom.

The side walls only will require forms. If the banks stand firm, inside forms alone will be needed. Make these of old one-inch lumber on 2x4-inch uprights. The full inside length of the tank is fifteen feet, but the deep part is only six feet six inches long. The clear widths at the top and bottom are respectively three feet and one foot six inches. Since the concrete floor, as well as the side walls, is six inches thick, set the side wall forms in place upon six-inch concrete blocks, so that the floor may be built under them. Space the forms properly and cross-brace them firmly upon each other.

Mix the concrete one part Portland cement to two parts sand to four parts crushed rock or one part cement to four parts pit gravel. Lay the floor and inclines directly on the solid earth. The concrete for the sloping ends should be made only medium wet, so that it will tamp well and stay in position without the use of forms. In the concrete for



Sectional View of Concrete Dipping Vat.

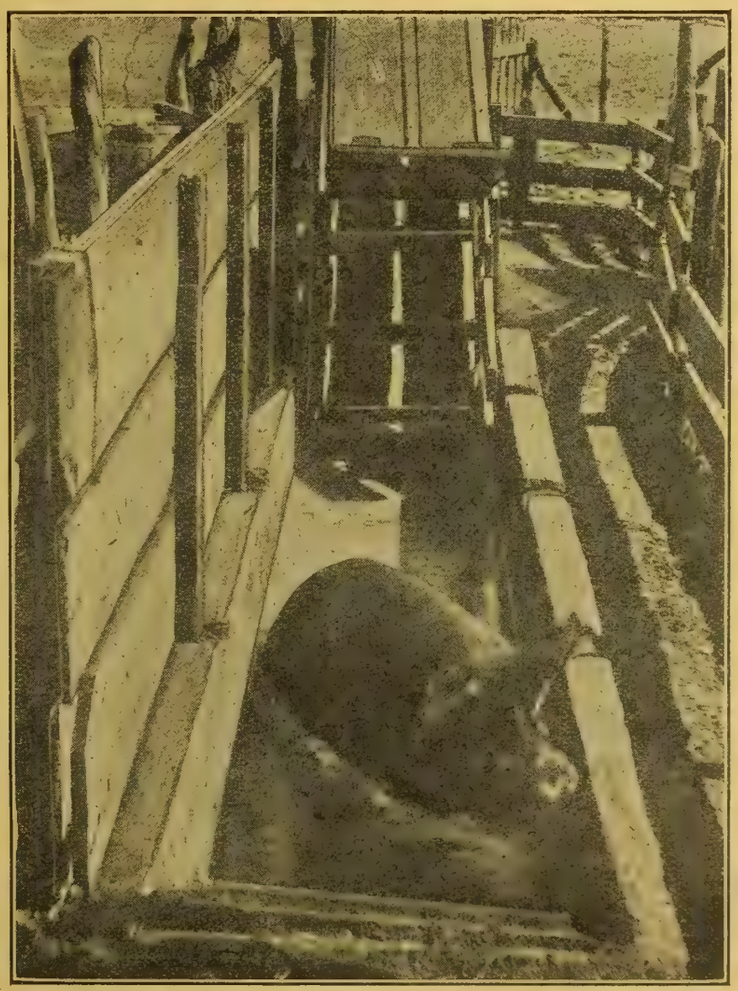
the inclines, two inches from the top, place strips of woven wire fencing to prevent possible cracks from heaving by the frost. As an aid to the animals in climbing out, imbed in the concrete of the "climb-out" the turned-up ends of iron cleats bent at right angles similar to a capital "U." Old wagon tires, straightened and cut in lengths not greater than twenty inches and turned up four inches at each end will do. Leave one-inch clearance between the flat surface of the cleats and the concrete and space the cleats eight inches apart. Fill the six-inch space between the earth and side forms with concrete mushy wet. In placing this concrete, be sure that it strikes the wooden form instead of the earthen side, as dirt in the concrete may make a weak, leaky wall. Carry the walls six inches above the surrounding ground (to prevent surface water from running into the vat) and in each corner, two inches below the surface, lay two old iron rods The entrance slope should be smooth to slide the animals into the vat without skinning them up; therefore finish its surface with a wooden float and a steel trowel.

At the leaving end of the vat there are often built two "dripping pens" with their division fence on a line with the center line of the vat, so that the gate at the dipping vat, hung to this fence, may close either pen, when it is full, and allow the animals from the vat to pass into the empty pen. The floor of these pens is built the same as a sidewalk or feeding floor, except that the surface is grooved and sloped so that the dip running off the animals will drain back into the vat.

For a dipping vat of the dimensions shown, there will be required three cubic yards of crushed rock, one and one-half yards of sand and five barrels of Portland cement. These materials will usually cost about $10.00.

This same tank may be used for dipping sheep in order to cure mange, scab and other diseases caused by parasites. On account of the resistance of the wool, it is advisable to keep sheep in the tank at least one minute. Very lousy hogs should remain equally long. This result may be secured by the use a drop door, called a "soaking gate," operated from above by a rope and pulley. If a longer tank is wanted, for each three-foot increase of length in the body of the tank there will be required one-half cubic yard of crushed rock, one-fourth yard of sand and four bags of cement.

When not in use a concrete dipping vat needs no care other than providing it with a good cover or so enclosing it as to prevent accidents. It will not rot or rust out and will require no repairs. Such an improvement is a paying investment for every farmer.



How the Concrete Dipping Vat is Used.

Girls Will Make Boys Hustle.

In the past the boys enrolled in the Missouri Boys' Corn Growing Contest have had a nice, quiet, little time dividing up $1,000 in prizes at the State Corn Show. But this year they will have the girls to reckon with, for the contest has been opened to both boys and girls between the ages of ten and twenty years. It is just as easy for a girl to get a share of this prize money as it is for the boys. The girls will not be required to do any of the actual work, but will be expected to keep all records and pick their sample of corn for the State Corn Show. Of course, there is no objection to girls doing such parts of the work as they can do. There must be at least two girls in every corn-growing county of Missouri who are sufficiently interested to get into this contest and make the boys hustle. Besides the prizes the Missouri Women Farmers' Club will give a $25 cash scholarship in the College of Agriculture to the girl between the ages of fifteen and twenty who wins first prize in this contest. This is your chance to show what Missouri girls can do when they try. Corn-planting time is near. Records should be kept from the start, so send your name to-day to T. R. Douglass, Secretary Missouri Corn Growers' Association, Columbia, Mo., and get full particulars concerning this chance to win your share of this fine lot of premiums.

Oats straw at $6.50 per ton and wheat straw at $7.00 per ton, were the latest St. Louis sales in April.

ARGENTINE AGRICULTURE.

Plow Contest—Wheat Classification — Co-operative Society — Beet-sugar and Apple Growing.

The following items were furnished by the United States Department of Commerce:

Over twenty importing houses entered plows for the tests held by the authorities of the Province of Buenos Aires, commencing on March 30th.

Programmes are already in circulation for the Rosario Rural Society's Show to be opened on August 30th. By reason of the success attained by last year's event the categories of the Fat Stock Show have been increased, and cash prizes will be awarded in addition to the usual medals, etc. Requests for space must be made between forty and ninety days before the above opening date. The Fat Stock Show will be run conjointly with the usual prize stock exhibition, and a gold medal will be awarded to the champion steer, all breeds competing, in addition to the awards for each category.

At Chivilcoy an agricultural co-operative society is being formed for the further protection of the agriculturists of that district. The capital has been fixed at $200,000. It will open a bank for advancing loans to "chacareros" and stores which will supply goods to their members at cost price.

The Agricultural Department has circulated Argentine consuls abroad, and also foreign cereal exchanges, with reference to the regional type of wheat with which the department has recently been dealing. The circular states that to the end of January over 3,500 samples of wheat had been received from the various cereal zones, which had been classified as Rosario, Buenos Aires, Bahia Blanca, Pacific and Entre Rios. After individual classification, the samples from each particular zone were mixed in quantities proportional to the number of packages, the mixture representing the type of that zone for January. The result given was: Buenos Aires zone, 70,730 kilos per hectoliter (61.918 pounds per bushel); Bahia Blanca, 78.850 (61.257 pounds per bushel); Pacific, 78,820 (61.234 pounds per bushel); Entre Rios, 77.350 (60.092 pounds per bushel).

An experiment has been made in the Province of Mendoza in the cultivation of beets for sugar. A well-known variety was planted, and in 750 square meters (8,073 square feet, or about one-fifth of an acre), sown in August, 1,200 kilos (2,645 pounds) of beets were obtained in February. After this excellent result, the beet-sugar industry may soon become an important one in that province.

The Department of Agricultural Education has approached the various schools in that line and experts to formulate a plan for the cultivation of apples on a large scale in the country, both for ordinary eating purposes and for the manufacture of cider, for which it is said there is a great market in the capital and other cities. It is pointed out that about 975,000 dozen apples are annually imported from Europe, North America and Australia, and that these might be supplied from various parts of the republic. To satisfy local consumption alone, about 65,000 more apple trees might be planted, which would represent an annual income of $160,000. At present the cultivation of apples is practically confined to a small portion of the Province of Buenos Aires, and the supply from that source is of little consequence in comparison with the demand in the capital alone

THE WATER TABLE.

Where It Can be Seen—The Variation Thereof—The Lowering of the Table a Cause of Drouth.

The surface of the water in the soil is known as the water table. This may be seen in a well, where it is doubtless much lower than in the soil a rod or so away. In dry weather it sinks very low and in wet weather is near the surface. In low, undrained land it is always high or near the surface. Where it remains long near the surface it stops the growth of all plants except those adapted to living in very wet soil, such as flags, rushes and marsh grass.

When the country was new the water table was everywhere very high, especially in the forests, where the shade from the trees kept the soil always moist. There were no drainage ditches then, and the water drained off but slowly. The coming of drainage ditches greatly lowered the soil water everywhere, and the result was seen in the death of many of the big trees that had stood for centuries.

An illustration of this effect was seen when the lagoons were built in Jackson Park, Chicago, to prepare for the World's Columbian Exposition. An expert on trees told the Park Commissioners that the construction of the lagoons would lower the water table in the whole park, and that many of the best trees in the park would be destroyed. The park covers about a square mile, and the effect of the drainage was felt everywhere. The predicted result occurred, and the trees that had adapted themselves to a certain condition of moisture could not live when deprived of the supply to which they had been accustomed. They died by the scores in all parts of the park.

Government investigations have been made covering a large part of the United States to find out what the general lowering of the water table has been in all the states, of the Middle States especially. In the four states of Illinois, Missouri, Iowa and Wisconsin the general level of water in wells is over ten feet lower than it was eighty years ago. This is a tremendous factor in crop production, for it shows that in the summer time the water in the soil is many feet lower than it used to be, and this makes the loss from drouth more extensive than under conditions as they existed eighty years ago.

With the continued increase in the drainage of land, this lowering is sure to continue. This is going to make irrigation more of a factor in the humid states than it has ever before been. As a crop insurance, where land conditions permit, irrigation will at some time in the future play a large part in all of the so-called humid states; that is, in those states in which it has always been considered that the rainfall was sufficient for all needs of the soil.

This is not an argument against drainage, but it illustrates the fact that we can not have a good thing without some opposite factor going with it. There are many advantages in good drainage. There are some disadvantages, and one of these is the rapid running off of the water, producing such floods as those that have recently wrought ruin in Ohio and other states.

Would it be possible or feasible to construct flood gates to drainage systems, which gates could be closed when it is desirable to prevent the rapid running off of the water? Could the water table be partly controlled in this way?

You can have Running Water in your House and Barn, at even temperature Winter or Summer, at Small Cost.

A STUDY IN MUSHROOMS.

Not Appreciated at Their Value—The Tame and Wild Varieties.

Americans have never really appreciated the value of the mushroom, either tame or wild. The mushroom is considered a dangerous thing to deal with, and so it is. But knowledge makes it safe.

The writer has for many years made a study of wild mushrooms and has done some cultivating of the cultivated variety. For the novice the tame mushroom is safest, as he is less likely to get a poisonous mushroom.

Yet danger may lurk even in the midst of the perfectly safe and edible cultivated variety, not because of the variety itself, but because the spore of a wild, poisonous variety may get in, and, in the bed where the good mushroom is growing, the poisonous one may also come up and be plucked and eaten without being recognized.

About a dozen years ago an accident of this kind occurred in mushrooms grown from some imported spawn. It is probable that some wild poisonous variety was inadvertently allowed to germinate in the manure in which the spawn was being prepared. So when it was used by a grower in this country, it resulted in a poisoning. Such occurrences are rare, but should be looked out for.

The protection comes in the person that grows mushrooms knowing them so thoroughly that if a wrong variety by any chance appears it will be recognized by the man that is gathering them for market. For this reason an uninstructed person should not be put to collecting the mushrooms when they are ready for market.

The spawn can be obtained of any seed house, and horse manure, abundant on every farm, provides the medium in which the threadlike body of the plant will develop. A warm basement of a barn or a cave will give the temperature needed during the fall months. The summer months are too warm for the growing of mushrooms to advantage.

It is not necessary to go into details of procedure, for these can be obtained of the men that sell the spawn. But this caution should be given: Do not soak the heap with water, lest the spawn be killed entirely, and when the bed has begun to produce, apply water only lightly, as water and manure produce a combination very favorable to the rotting of the delicate plants of which the edible mushroom is the fruit.

The wild mushrooms can be studied with the help of government reports, which the writer has found very satisfactory. There are several varieties that produce very abundantly in the fall of the year. Among these is agaricus melleus, or honey-colored mushroom, which grows in masses near the roots of trees or around old stumps. The writer has picked at one time over 200 caps from a single clump around a stump. When cooked like oysters, they remind one of that delicacy and are good fried.

The cultivated variety is agaricus campestris and it also grows wild in the open fields, especially in old pastures where the grass is kept short and horses are pastured. A knowledge of this and other varieties will add an important item to the table supplies of many an American home.

The Supply of Organic Matter in the Soil.

[By M. F. Miller.]

The most fundamental cause of decreased soil productiveness in Missouri is the gradual depletion of the organic matter. A good supply of organic matter in a soil is necessary, first, to keep the soil loose and friable; second, to maintain the supply of nitrogen; and, third, to make available the mineral plant foods through its decay. Commercial fertilizers will, for a time, bring remunerative results on worn land, even when the organic matter of the soil is not maintained; but the continued profitable use of commercial fertilizers on most soils is dependent upon the maintenance of the supply of organic matter.

The growing of grain crops is the most important cause of the depleted supply of organic matter in our soils. Organic matter cannot be maintained under grain farming, unless larger amounts of manure are added to the soil than can be made by feeding the grain crops. Where a man cannot buy manure, as is usually the case, it is necessary, therefore, to alternate grain crops with organic-matter-building crops, such as clover and cowpeas, either feeding all of these back or turning a part of them under.

Thus far, we have lived largely upon the virgin fertility of our soils. From this time forth we must learn to increase soil productiveness, and maintaining of organic matter is the first principle.

"Concerning the Middleman" is the title of an interesting article on page 30. It shows the difference between the speculator and the salesman.

No-Rim-Cut Tires 10% Oversize

How Do We Afford Them?

You ask, perhaps, how tires like these can be sold at Goodyear prices.

The utmost in tires--the final result of 14 years of betterments.

Tires that can't rim-cut—tires 10 per cent oversize.

One process alone costs us a million dollars yearly more than processes generally used.

How are such tires—tires that give such mileage—sold as low as Goodyears? Let us tell you.

Our Cost

We are the world's largest tire builders. We build almost as many tires as any other two plants combined.

Our factories are new. Our equipment is modern. We have invented a wealth of labor-saving machinery. We employ efficiency experts.

Our capital cost is exceedingly low, due to small capitalization.

Grade for grade, our cost of making must be far below the rest.

Our Profit

Then our profit is kept at the minimum. To assure you of this, every year we advertise our profits. In times past this profit has averaged around 8½ per cent. out of which must come the interest on millions of capital invested. This year, with our reduced prices, we do not expect to exceed that.

Those are the reasons why tires like these can be sold at the Goodyear prices.

Lower Prices

Of course tires can be made to cost less. Tires can be sold at half our prices, yet pay a larger profit.

But tire cost means the cost per mile. Goodyears cost far less per mile than any other tire that's built.

The Evidence

This is shown by the fact that Goodyears far outsell the rest, after 2,000,000 have been used.

Our sales last year were larger than the previous 12 years put together.

That's the result of testing these tires on hundreds of thousands of cars. Men have proved enormous savings.

The No-Rim-Cut feature ends rim-cutting completely. The 10 per cent oversize, with the average car, adds 25 per cent to the tire mileage.

You will see these savings clearly when you test these tires.

POSTAL SAVINGS BANK DEPOSITS

Ought to be Used For the Purpose of Making Loans to Farmers on the Security on Their Lands and on Other Securities to Co-operative Associations of Farmers.

In The National Farmer and Stock Grower of December, 1912, the suggestion was first advanced that the money deposited in postal savings banks ought to be devoted to the purpose of making loans to farmers, under proper regulations, at low rates of interest, in order that farmers who have the best security to offer of any class of people may be able to obtain money at least on equal terms with other business interests.

Since then it appears that this view is receiving some attention and favorable comment, and if the subject has the consideration it merits it will not be long before the idea will receive the sanction of Congress and money heretofore locked up and hoarded will be available for the best possible purpose in which it can be used.

Up to the end of March the total amount of money deposited with the government was $33,500,000, and we have no doubt that within a few years the total will reach five hundred millions of dollars. Despite the fact that bankers generally opposed the establishment of the postal savings system, 7,248 banks and trust companies have qualified to receive the funds, so that they can loan the money out again. Of the number of banks qualified, 3,808 are national banks, 2,412 state banks, 401 savings banks, 573 trust companies and 54 private banks.

We do not pretend to know much about banking laws, but we do know that national banks cannot accept loans with farm lands as security, because Mr. B. H. Harris, of a bank of Champaign, Ill., is now asking that the laws be changed so as to permit them to do so. We wish to say that unless farmers insist that the money deposited in postal savings banks be made available for farm loans, that the only interest that will not have the benefit of cheap money will be the farming interest.

On page 32 of this publication will be found a **Petition to Congress** that ought to be presented with not less than a million signatures. Each farmer who is interested in this movement should get the blank signed up and tear the page out of the paper and mail it to this office. We will then send more blanks to be delivered to other farmers.

The whole story is this: The United States government is now in the banking business, receiving deposits at postal savings banks that will eventually amount to hundred millions of dollars. Upon most of this money the government pays an interest charge of two and a half per cent., and a little of it bears three per cent. We insist upon it that the government should not tax the people to pay interest on these deposits, but that the money be loaned out again, and under proper regulation it should be made available for farm loans at a rate not over one or one and a half per cent. more than the government pays for it.

We contend that the money should be loaned out through banks and trust companies, if they will accept the proposition to do so at a fair rate; but rather than have the banks use these deposits at high rates of interest the Postoffice Department should be enlarged to take charge of all the loans to farmers.

Don't fail to understand the situation and get to work and do something for the common good of the farming industry.

OUR INDUSTRIAL POLICY.

We Are in Favor of All Foreign Farm Productions Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

The most important item we can publish at the present day is our industrial policy, so far as it relates to the tariff which is now under consideration at Washington.

The National Farmer and Stock Grower is in favor of the United States Custom House collecting by law a reasonable range of duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, the amount of said duties to be applied to the support of the national government.

By the tariff policy that we advocate fully one-half the money required for the support of the national government can be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed on our own people.

Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time foreign goods are placed on the free list there is the same result.

With moderate import duties received by the United States on various products as now collected the total that is covered into the United States treasury is over three hundreds of millions of dollars a year, and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty displace home productions and result in higher prices to the American consumer and higher taxation also upon our own products to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives far better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called counsellor in cities will be the first to find it out and be the greatest sufferers. The farmers who can provide for themselves will be slow to increase their products in the face of injurious legislation.

At the present outlook there is every reason to believe that a law will be passed that will be distinctly and positively injurious to all American industries, and to the agricultural and stock-raising interests worse than all others. Without charging legislators who will vote for admission of foreign farm products free of duty with anything more than ignorance and incompetence, we do say that they are serving foreign countries better than their own.

Praises Houston's Department.

That the United States has the best organized Department of Agriculture in the world was the opinion expressed to Secretary Houston by M. Vilmorin, a French agricultural expert, who has spent the last year touring the world studying agricultural systems, and who was recently in Washington. Secretary Houston expressed his pleasure at the compliment, and said the United States hoped to do even greater things in the way of helping its farmers.

Interest on Farm Loans.

Evans, La., April 18, 1913.

Editor National Farmer and Stock Grower, St. Louis, Mo.:—Dear Sir:—I see you are leading a great movement in the interest of farmers. I can say I do more than appreciate the article headed "Interest on Farm Loans." As a subscriber I wish to compliment and thank you very much. It is hitting the nail on the head. Just a few moves like this and we will arise. I will be pleased to see this movement go through. Yours Very Truly, R. D. EVANS.

Our Rose Premiums.

Attention is invited to our rose premium subscription offer on page 31. We have furnished rose premiums for several years, and the plants we buy from the American Rose and Plant Company to fill these orders give general satisfaction. There are some few exceptions, but we test them every year and they are all that is claimed for them. We can fill orders in the month of May. In the meantime, all who are entitled to them should have received them. It is better to be late than too early with roses.

Book of Champions on page 2.

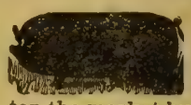
BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed because either paper is worth considerably more than the full price. The papers are as follows:

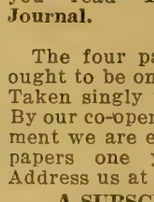
The National Farmer and Stock Grower—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.



The American Swineherd—issued monthly—a leader in its class. The hog paper. the pig paper, the brood sow paper, and strictly first-class in teaching how to top the market by producing top hogs.

The Shepherds' Journal is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

The Reliable Poultry Journal—the best and most elegant poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. **The Reliable Poultry Journal** is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read **The Reliable Poultry Journal.**



The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — For One Dollar ($1.00) enclosed herewith please send us the Big Four Subscription Combination one year, consisting of **The National Farmer and Stock Grower, The American Swineherd, The Shepherds' Journal** and **The Reliable Poultry Journal.**

MARVELOUS HARVESTS.

What Experimenters are Doing to Show the Possibilities of Agriculture.

While farmers are going upon their own way making such progress as they may with the light before them and experiences gained in pursuit of their occupation, investigators are investigating the minutest details of plant breeding and culture from the standpoint of the possibility of a single seed or of only a few grains of seed.

Although these investigations are upon unworkable conditions, requiring labors that the results would not justify, the contemplation of the experiments and results will do no harm. Our attention has been called to them by the Literary Digest.

In one case by laboratory experiments, twenty seeds of grain yielded an increase of over 700,000, and that within the year.

How It is Done in France.

"The principle is simple. It consists in preparing seed-beds in widely-spaced lines on very mellow land; then at the end of two months dividing the tufts springing from each grain, replanting each of these rooted shoots thus detached; and finally in hoeing and earthing up these new plants many times in such manner as to provide at all the points brought into intimate contact with the earth the growth of numerous adventitious shoots, each of which bears an ear.

"It is, in sum, a combination of 'slipping,' transplanting and pruning.

"The system is, in truth, not new, but a very ancient one, used immemorially by the Chinese, and to it is due the enormous yield on their fields, which have been treated like gardens.

"While our (French) peasants throw broadcast handfuls of grain on the harrowed earth, offering rich pasturage to pillaging birds and rodents, the Chinaman, after furrowing the earth with his wooden plowshare, without turning it, crumbles each lump in his hands till it is like fine powder. This done, at planting time he walks slowly down each furrow carrying a grain-drill which is a marvel of ingenious simplicity.

True Intensive Farming.

"Picture to yourself two pointed plowshares about twenty inches apart and connected by a transverse bar supporting a hopper filled with grain, from which issue two slender bamboo tubes designed to conduct the grains so that each will drop in the wake of one of the shares. The diameter of each tube is just great enough to allow the passage of one grain at a time without letting it drop until it receives the impulse of a slight shock given by means of the handles which complete the apparatus.

"The sower pushes the drill in front of him, inclining it now to the right and now to the left, in such sort that each inclination causes the issue of a single seed, which is instantly pressed under by the track of one foot or the other. The seed plot is thus made in the form of a 'quincunx,' each planted grain being at a distance of sixteen to twenty inches from its neighbors in every direction.

"At the end of a few weeks germination begins. When the young plant is ten or twelve inches in height, there are a score of stalks about its stem, each provided with a fringe of rootlets. The farmer covers each with loose earth by means of careful hoeing, thus raising the level of the furrow. Each stalk again proliferates, and there are soon fifteen to twenty new stalks around its stem, which detach themselves. All are the indirect issue of a single grain, which proves therefore to have been the parent of 300 to 400 stalks, each bearing an ear.

"Transferring this method to experimental fields and perfecting it, it has been found possible to separate from the stem each of the primitive stalklets with its own roots, transplant it, and then treat in the same way each of the new plants thus formed.

The Actual Experiments.

"Thus Philippe Miller planted a seed in the experimental gardens at Cambridge in June, 1776; in August, 1777, he obtained as a harvest from this single seed 576,000 seeds. For unknown reasons the experiment was not repeated until June 12, 1903. On this date our compatriot Bellenoux treated in this manner twenty grains of wheat planted in one square yard of carefully mellowed earth. On April 9 he separated and replanted the numerous stalklets springing from the earth. On October, 8 of the same year, then on March 3 of the next year, and finally on May 13 he repeated the operation. On July 30, 1904, each of his twenty grains had produced 604 clumps bearing 28,388 ears, containing a total of 709,701 grains.

"This prodigious harvest from twenty grains corresponds to a yield of nearly three tons to the acre."

To the objection that this was essentially a laboratory method, and therefore impractical, it is replied that recent experiments have proved its success on a large scale.

The French Woman at Work.

"Toward the end of October, 1911, a French woman, Mlle. Louise Chevalier, residing at Tiflis, in the Caucasus, planted one grain of barley. As soon as the young plant issued from the soil it was earthed up with care, and produced fifteen stalks. In February and March, 1912, two new earthings produced ninety-nine stalks. By May 12 the single grain had produced 212 stalks, and on June 10 our compatriot harvested 236 stalks, 212 ears and 5,300 grains.

"This yield of 530,000 per cent. encouraged her to put two and one-half acres under cultivation. One of our Tiflis readers, to whom we owe these interesting figures, tells me that the field is now (December) in its first earthing, and that from a planting of one grain in a space eighteen inches square there have sprung 20,000 clumps, each of twelve to fifteen stalks, which will be correspondingly multiplied this spring.

"Further still, an Algerian colonist, Mr. Bourdiol-Humbert, has been planting wheat and oats in the same field for five years. He makes his furrows thirty-six inches apart and plants the seeds therein at a distance of twenty inches from each other. Then he harrows the earth constantly, stirring the soil, and without rotation, he has harvested an average yield of 1,800 pounds of oats per acre and 1,600 of wheat; while his neighbor's yield was a scant 830 pounds of oats and 500 of wheat."

The Useful Post Card.

All of our readers will find it to their advantage to obtain a package of post cards before sitting down to read The National Farmer and Stock Grower. The cards should be used for the purpose of writing to such advertisers as invite farmers to do so; also to write for agricultural college bulletins mentioned in this paper. Agricultural implements also should be studied with the catalogues, so as to receive the benefits of the manufacturer's claim for superiority and new points of excellence. We wish our friends and patrons to have the benefit of all that will be a guide in their business of farming in all its branches, and a postal card will be found quite useful in this connection.

GOOD BOOKS AND PAPERS.

THE STOCK EXCHANGE FROM WITHIN.—The American spirit of fair play should impel all those who are in doubt about the Stock Exchange to read this book, the first of its kind to appear in this country. An interesting subject well told and bearing light on the "inside" of the Stock Exchange. It is by William C. Van Antwerp, and is issued by Doubleday, Page & Co., New York City. Price, $1.50.

THE SHEEP AND ITS COUSINS.—This interesting book, with sixty-one fine illustrations, gives the early history and names of sheep, both foreign and domestic. Contains much of interest and value to the sheep breeder. Price, $3.50. It is by R. Lydekker, F. R. S., and issued by E. P. Dutton & Co., New York City.

CO-OPERATION IN NEW ENGLAND, URBAN AND RURAL.—Tells how far industrial co-operation was practiced in New England and the result of its operation there. An enlightening subject, interestingly and clearly set forth. Price, $1.50. It is by James Ford, Ph. D., and issued by New York Survey Associates, Inc., of New York City.

MILK AND ITS PRODUCTS.—This book is a treatise upon the nature and qualities of dairy milk and the manufacture of butter and cheese. It is of great value to the dairyman, and particularly to the dairy student who desires to have set in simple and concise form the principles underlying the modern dairy practice. Price, $1.50. It is by Prof. Henry H. Wing, and issued by the MacMillan Co., of New York City.

A MANUAL OF PRACTICAL FARMING.—This splendid book gives in a plain, practical manner useful knowledge and the result of scientific research as applied to the common things in agriculture, without the use of technical terms or confusing tables. A good book, easily read and understood. Price, 50 cents. It is by John McLennan, Ph. D. Issued by the MacMillan Co., New York City.

PRACTICAL POTATO CULTURE.—A practical and thorough treatise on the potato, brimming over with useful information on this subject. Price, 50 cents. It is by Mr. E. A. Rogers, Secretary Johnson Seed Potato Co., of Brunswick, Me.

SHEEP FARMING IN NORTH AMERICA.—This book will prove of value to every sheep owner. It contains many practical ideas that are the outcome of developments of recent years and are not found elsewhere in book form. Price, $1.50 By John A. Craig, and issued by the MacMillan Co., New York City.

HOW TO KEEP HENS FOR PROFIT.—Those who have been looking for the reason why their poultry ventures were not yielding a fair profit; those who are just starting in the poultry business; and seasoned poultrymen, will all find in this book much of value. Price, 50 cents. By C. S. Valentine. Issued by the MacMillan Co., New York City.

PAVEMENTS AND ROADWAYS.—This is issued in the form of a hundred and twenty-page booklet in the interest of triangle mesh wire for the re-enforcement of concrete in the construction of pavements and roadways. It is full of useful information and is issued free to farmers by the American Steel and Wire Co., 72 West Adams street, Chicago, Ill.

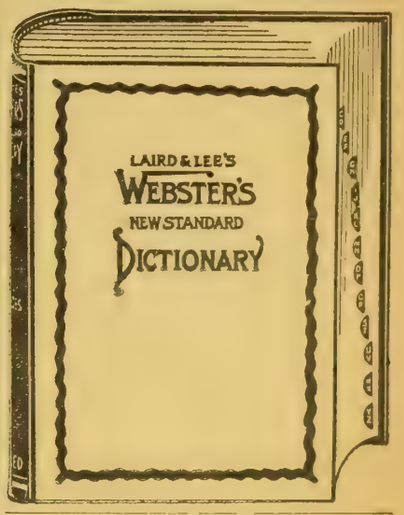
CO-OPERATION IN AGRICULTURE.—A comprehensive discussion of the principles that underlie the organization and management of the American co-operative associations in agriculture. A first-class book for the fruit grower and breeder. Price, $1.50. By G. Harold Powell. Issued by the MacMillan Co., New York City.

FARM MANAGEMENT.—This book is a study of the business principles in farming. The conclusions in the book are based on thorough investigations and on cost accounts, census data, travel and study in different parts of the United States, and experiences in farming. A splendid publication and of equal value to farmers or students. Price, $1.75. By G. F. Warren, Ph. D. Issued by the MacMillan Co., New York City.

WEBSTER'S DICTIONARY.

Greatest Value as a Subscription Premium — Costs More Each Time We Buy Them and Soon Will Be Beyond Our Reach.

This is Laird & Lee's Webster's New Standard Dictonary of the English Language, a wonderful book, 750 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces.



Our offer to you: Send us One Dollar and we will send you The National Farmer and Stock Grower for two years, and we will also send you, postpaid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to any one who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

CLASSIFIED ADVERTISEMENTS.

AGENTS—$173 IN TWO WEEKS MADE BY MR. WILLIAMS, Illinois, selling the Automatic Jack, Combination 12 tools in one. Used by auto owners, teamsters, liveries, factories, mills, miners, farmers, etc. Easy sales, big profit. Exclusive county rights if you write **QUICK. Automatic Jack Company, Box O, Bloomfield, Indiana.**

FREE!—Big book on poultry of all varieties, and hatching eggs at bargain prices. **THE BELGRADE POULTRY FARM, Box 300, Mankato, Minn.**

FARM AND RANCH LANDS.

MICHIGAN.—WE SELL OCEANA FARMS—Greatest Fruit county. Also Potato, Corn, Alfalfa, Stock. List free. **Hanson & Son,** Hart, Mich.

MISSISSIPPI.—Farms of 80 to 120 acres near railroad; high; healthy; no overflow. Rich; rolling; cultivated; housed; fenced; sufficient timber. Best land in Mississippi. $12 to $15 an acre. **Jarnagin & Co.,** Goodman, Miss.

TEXAS.—Wanted, one thousand (1,000) white families to settle in Harrison county. Fine lands cheap. Plenty rainfall, timber, railroads, rural routes, churches and schools. For information, write **Young Men's Business Club,** Marshall, Texas.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Bldg., Chicago.**

GO SOUTH SIR! **Buy Farm Land** **AND PROSPER**

at $10 an acre up along Southern Ry., M. & O. R. R. and Ga. So. and Fla. Ry. Values rapidly advancing. Plenty of rain—no blizzards. Growing cities demand more farm produce. Beef, poultry and dairying pay handsomely. Big profit in apples, truck, alfalfa, corn, cotton. Great industrial openings in all parts of the South. "Southern Field" magazine, land lists, and state booklets—Free

M.V. RICHARDS, L. & I. Agt., Room 71, Washington, D.C

INCREASING DAIRY PROFITS.

A Simple Statement How to Do It, by One of the Ablest Dairy Authorities.

Profit is the difference between cost of production and the selling price. To insure the largest profit in milk production, the cow owner must know that each cow in the herd is producing enough milk to pay for feed, labor, interest, taxes and depreciation, and then leave some for profit. In one herd, eleven cows produced $200 worth of butter-fat above feed cost, while four others ate $20 worth of feed more than the returns for their butter-fat paid for. So that the whole fifteen only averaged $15 each above cost of feed. While, if the man had had only the best eleven, he would have had $20 more money, saved the feed and the labor of handling. The only certain way in which these "robber" cows can be located is by yearly records of milk production. No man has yet been found who can guess accurately on every cow in a herd. Records may be made by the owner, or by several joining together in a cow-test association, and employing a man to do the work.

Having located the unprofitable cows, and eliminated them, their places can be filled in a few cases by purchase. The prices are getting high. The best way is through the purchase of a pure-bred sire from a profitable cow, and the saving of his daughters out of the best cows in the herd. Each community should adopt one breed and all buy sires of the same breed. In a short time the grade surplus stock will command from $10 to $50 apiece above the common scrub stock, because of the large amount of it to be found in one community and the reputation they will acquire for breeding that one class of stock.

Profits can usually be increased by better feeding. Each cow must have enough food—first, to maintain herself; second, with which to make the milk she yields, and any surplus above this is stored up in the form of fat to be used later when she don't get enough food. The cow that has the ability to produce forty pounds of milk a day, does not make milk as cheap as she would when fed to her capacity. In the judgment of the writer, the dairy cow that has the ability to make thirty pounds of milk a day, or better, cannot eat enough alfalfa hay to enable her to do her best work, and she should be fed some form of grain or by-product concentrate low in protein to supplement the alfalfa hay eaten. Every cow must have enough feed. The feed she does eat must contain the minimum amount of protein required for her maintenance and for production of milk. An insufficient amount of feed limits production; an insufficient amount of protein limits production.—H. E. Van Norman, College of Agriculture, Berkeley, Calif.

FRUIT AND DAIRYING.

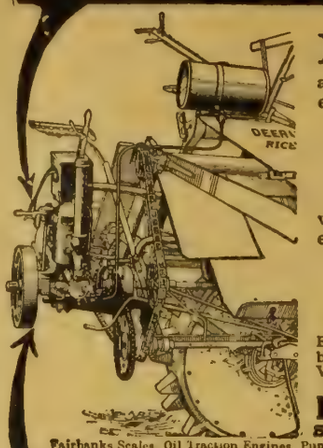
The Dairy and the Orchard a Splendid Combination—Apples, Rather Than Small Fruit.

If there is one thing more than another that hampers the fruit grower it is the lack of manure. There is no crop grown that requires more fertility than does fruit. What, then, would appear more businesslike than the coupling of the dairy and orchard? I am speaking mainly of apple orchards, as they work in better as a farm and dairy adjunct than does small fruit—peaches, pears and plums. These can, of course, be planted, and with profit, too, if the dairy interests are not so great as to take up all the time, as small fruit will not grow without care, any more than a cow will succeed without regular milking.

In my opinion, a five or ten-acre apple orchard on a forty to sixty-acre dairy farm would seem to be in good proportion. This undoubtedly induces the thought that this land would not be lost, as it could be used as pasture land and thus get the apple crop extra, but not so. To the true horticulturist, cows in an apple orchard are about as much out of place as would be a bull in a parlor. This orchard land should be as thoroughly cultivated as is the corn field and guarded as carefully from stock. Too much manure in an orchard is not desirable, especially in a bearing orchard, as it induces wood growth at the expense of fruit. The design in planting an orchard is its fruitfulness rather than for good growth, so that no dairyman need feel that his little orchard is going to require all the manure made on the farm at the expense of field weeds. With from a light to fairly liberal sprinkling of barn-yard manure each spring and this thoroughly disced in and the ground thoroughly cultivated up to July 15, then a cover crop sown and the work is practically finished until the crop is ready to be gathered, taking for granted that the varieties are largely winter apples. I do not wish to infer that this orchard is to pose as a mere plaything; far from it. Like all other crops, it is full of hidden rocks and shoals made up of hard days' work, diseases and insect pests that require muscle, study and spray material, which spells cash. This, however, is not radically different in this respect than is the farm and dairy. We have to buy cows occasionally in order to reinforce the dairy herd, binders and mowing machines for the harvesting of our crops, and wagons, horses and harness as a means of transporting our products, and from the implements required for the working of the dairy farm can be found all tools necessary for the working of the orchard except pruning and spraying tools and apparatus.

Little do many of our working dairymen realize as to the amount of hidden treasure that lies buried in the neglected orchards that grace—no, disgrace—their farms. Trees trimmed by cows and robbed of every blade of grass and the ground pounded hard as a rock through continued tramping can do nothing more than barely live, let alone bearing fruit; but when given equally good treatment with other crops or dairy cows, then will the orchard fill the bushel and show the gold. Now, don't fall into the common error of saying that the writer, like many writers, is paid for spinning out words rather than wisdom, for the first is not so. As to the latter, I am handing out wisdom gained from personal experience as well as experience gained from the doings of others; indeed, I know of a case in Southern Illinois where a ten-acre orchard was abandoned about twenty-two years ago and the farm of 120 acres given entirely over to dairying. In these years a young man had been produced and in some way he inherited a streak of extraordinary good sense, which for the past three years he has bestowed on that fifty-year-old orchard, and out of those old trees two new silos have been built, the house newly shingled and painted and a new family surrey bought. He further says that all his father wants himself and family to know is to pull teats the year around and to smell like the stable. I am told on good authority that this orchard cleared over $200 per acre last year. —Wm. Hardy, Rural Route No. 2, Tunnel Hill, Ill.

This Engine Saves Your Crops



Harvest regardless of soil conditions. Don't be held back by wet fields. Wherever a binder **thrown out of gear** can go, your binder equipped with a

Fairbanks-Morse Harvester Engine

will run and **cut the grain.** Engine cuts, elevates and binds. With this equipment you can

Greatly reduce number of horses used,
Cut heavy, tangled or wet grain with ease,
Cut more acreage per day,
Avoid risk of overworking team.

Engine comes complete for attachment to any standard binder frame. Is as simple to handle as the binder. Write at once for Catalog No. EE 692

How Poor Milk is Produced.

"The conditions that have the most objectionable effect on the milk are dirty barns, dirty milk cans, uncleanly dairy utensils, manure in the barn-yard, cows not properly bedded, dirty ponds of water for the cows to wade into and drink. Also flies in the milk because the cows are not sprayed with a fly killer, cows' udders and teats not kept clean or washed before they are milked. The common use of a dish rag to wash out the cans and milk utensils, instead of a brush. The lack of using a cleaner and cleanser."—F. W. Culbertson, of Washington, in the Cheesemakers' Discussion Club of the New York Produce Review.

DAIRY NOTES.

The cold-storage industry is recently treated in a bulletin by George K. Holmes, of the Bureau of Statistics, United States Department of Agriculture. It is probably the most important piece of literature on a very great subject, and it does not detract from the value of the industry.

The New York Produce Review and American Creamery says: "Compared with 35½-cent fresh butter, new cheese at 12½ and 13 cents doesn't look very attractive. It is at times like the present that the combined butter and cheese factory in the cheese districts brings home the bacon."

It is expected that when Congress gets through with the tariff bill considerable money will be sent to Australia for butter for the reason that the Canadian tariff on butter is higher than the American tariff will be.

From Sidney Center, N. Y., it is reported that many of the farmers who own Holstein dairies are buying in a few Jerseys in order to raise the quality of their milk to secure the extra 10 cents a hundred pounds now paid for the milk testing 3.8 per cent. butter-fat or over.

Read the article on page 23 entitled "The Iron of the Future."

$15.95 AND UPWARD
AMERICAN SEPARATOR

THIS OFFER IS NO CATCH. It is a solid proposition to send, **on trial, fully guaranteed,** a new, well made, easy running separator for $15.95. Skims hot or cold milk; making heavy or light cream. Designed especially for **small dairies, hotels and private families.** Different from this picture, which illustrates our large capacity machines. The bowl is a **sanitary marvel, easily cleaned.** Gears thoroughly protected. **Western orders filled from Western points.** Whether your dairy is large or small, write us and obtain our handsome free catalog. **Address:**

DETECTING DAIRY LOSSES.

Cost of Cow Testing Associations—How They Do It in California—Evening and Morning Test Once a Month.

A conservative estimate of the butter-fat production of the average dairy cow in California would place the amount at about 150 pounds, but calculations made from statistics for 1912, which are available, show that the production is still lower than this, being nearer 125 pounds. Under prevailing conditions in California, no dairyman can afford to feed and care for those cows whose records approach such a mark as either of these, and even where cheap pastures are available there is a limit below which a cow does not pay for her keep. For the year ending March 1, 1913, the average price paid for butter-fat in California, based upon a two-cent margin, San Francisco quotations, was thirty-three (33) cents, and during the same time the price of alfalfa hay hovered around the $12 mark. If an ordinary cow is fed alfalfa alone, which is common though probably not the best practice, she will consume annually an amount near to five tons, and there will be other additional expense in the nature of labor to milk and care for her. Using the two sets of figures mentioned, those relating to expense and those relating to profit, a pencil and paper will quickly show that there must be a great number of cows in this state which are a dead expense to their owners. How many dairymen know whether or not they have cows which are in this class?

Profitable dairying is an established possibility. Regardless of the low average production cited, this condition is not a problem incapable of being solved, as facts and figures even here in California have already shown. The solution lies through the use of milk scales and the Babcock test. Periodic and systematic herd testing is the means of turning loss into profit, and is a matter deserving of the attention of dairymen, for it forms the true basis from which the cow's actual performance may be determined. High cost of production demands economy, and dairymen are compelled to eliminate from their herds the poor producers.

Many dairymen own Babcock testers but too few use them. The value of the test is lost unless regularly made. Where dairymen find it impossible to make periodic and regular tests, one of the most satisfactory means of conducting the same is through the form of a cow-testing association. The nature of these associations is co-operative, each dairyman paying in proportion to the number of cows owned. In the Ferndale Association the cost per year is eighty (80) cents for each cow in herds of fifty or more, and one dollar ($1.00) in smaller herds. The present year this association has 2,600 cows under test, and two testers are maintained. In the Stanislaus Association the cost is one dollar and fifty cents ($1.50) per cow, and in the Tulare Association one dollar and twenty-five cents ($1.25) per cow. These amounts vary according to the number of cows entered, and in no case are they prohibitive when the value received is considered. The results in one herd, which has been tested regularly for three years, show that the average butter-fat production was 256 pounds for the first year, 290 pounds for the second year, and 335 pounds for the third year. While the first-year's average is higher than the annual production of the common dairy cow in the state, the great increase during the two succeeding years simply serves to show the possibilities through periodic testing for butter-fat production.

In testing dairy herds for annual butter-fat yield, system and regularity are essential points. The plan of testing an evening and morning milking once each month has been found very satisfactory, as this gives a close estimate of a cow's ability, if carried on regularly throughout an entire year. When testing periods occur at regular intervals, the figures thus obtained can be used to estimate the yield for the month, or for the fifteen days before and after test day. In the association the tester visits each dairy once each month. The milk of each individual cow is weighed night and morning, a composite sample taken and a test for butter-fat made. Owners of cows are provided with record sheets for each cow, and on these the tester enters the monthly calculations, making it an easy matter for the dairyman to pick out the unprofitable producers. Procedure, such as this, eliminates guesswork, and puts the whole matter on a logical basis. Every dairyman could test his own cows, but too often he fails to do this, and it is for such a reason that a co-operative movement proves its value. Where it is impossible to maintain a community enterprise, individual owners must take the work upon themselves, for through the use of milk scales and the Babcock test lies the true means of determining a dairy cow's worth. In these days, when the cost of feed is universally high, cows must deliver the goods.—By L. M. Davis, in Circular 95, College of Agriculture, Berkeley, Calif.

New York Milk Market.

"There is quite an increase in the milk supply in the sections from which New York draws her receipts, and while some factories are disposed to make butter because of the relatively high prices for such, the arrivals of market milk are running about 3 per cent. heavier than a year ago. For the week the total receipts were 312,400 cans of milk and 12,670 cans of cream. Demand did not increase sufficiently to take up the supply and the surplus caused a weaker feeling than was anticipated. A special meeting of the Exchange was called to discuss the situation, and it was decided to lower the rate one-fourth of a cent, to become operative April 11. Shippers in the 26-cent freight zone are now receiving 3½ cents a quart net for Grade B, and 3¼ cents for Grade C. The cost, delivered in New York, is $1.71 and $1.61, respectively, per forty-quart can."—New York Produce Review and American Creamery, April 16.

DAIRY AND CREAMERY.

The production of milk, although increasing, cannot possibly keep up with the demand for city, state, federal, local and general milk inspectors.

Late in April, in St. Louis, extra creamery butter was selling at 33 cents a pound; firsts, 30 cents; seconds, 28 cents; ladle-packed, 25 cents.

Cheese quotations, late in the month of April, on the St. Louis market, were as follows, quote per pound: Northern—Twins, 14¾c.; Singles, 15c.; Longhorns, 15¼c.; Young Americas, 15¼c.; Prints, 16½c.; Limburger, 19c.; Swiss, 24c. for No. 1 and 22c. for block and No. 2; Brick, 14 to 14½c.

An Ayrshire cow is credited with 22,106 pounds of milk in one year, 4.02 per cent. fat, equal to 1,046 pounds of commercial butter.

$65,000,000
would be saved annually by the exclusive use of
DE LAVAL
CREAM SEPARATORS

It is estimated that a million cow owners in the United States are still skimming their milk by some wasteful "gravity" method.

At an average of four cows to the farm and an average cream loss of $10. per cow per year (it is more often from $15. to $25.) all of which could be saved with the use of a De Laval Cream Separator, this alone represents an annual cream loss of $40,000,000.

Then there are, all told, perhaps a half million inferior and old and worn out machines in use whose owners could easily save $5. per cow per year by exchanging their "cream wasting" machines for De Lavals, and figuring on an average of six cows per farm, this represents another loss of $15,000,000 at least.

Then to this tremendous cream waste through the use of inferior separators must be added the excessive cost for repairs on cheap and inferior machines and the cost of replacing machines which should last from ten to twenty years but which are ready for the scrap heap in two or three years. There must also be taken into consideration the loss in lower prices received for cream and butter due to inferior quality of cream produced by poor separators, all of which must easily equal at least $10,000,000 more.

This makes a grand total of $65,000,000 which would be saved to the cow owners in this country by the exclusive use of De Laval Cream Separators.

At first sight these figures may seem startling but any experienced dairyman or creameryman will agree that the cream and other losses without a separator or with an inferior one will average a good deal higher than the above estimates and that these figures are really very conservative.

Any cow owner who is selling cream or making butter and who is not using any cream separator or an inferior machine, is really paying for a De Laval in his cream losses and at the same time depriving himself of the benefit of its use.

De Laval Separators are not only superior to all others in skimming efficiency but are at the same time cheapest in proportion to actual capacity, while they are so much better made that they last from two to ten times longer.

No cow owner can logically make the excuse that he cannot afford to buy a De Laval, because it will save its cost over "gravity" separation in six months and over any other separator in a year and is sold for either cash or on such liberal terms that it will actually pay for itself while it is being used.

It will surely be to your advantage to join the million and a half satisfied users of De Lavals. A little investigation will prove to you that the truth of the matter is you really cannot afford to sell cream or make butter WITHOUT the use of a De Laval Cream Separator.

The nearest De Laval agent will be glad to demonstrate this to your own satisfaction or you may write to us direct.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The Auto, Reo the Fifth.

We continue to receive the most enthusiastic letters from our patrons upon the reliability, economy and efficiency of the Reo the Fifth Automobile advertised on page 19, and particularly upon its unique smokeless oiling system. Willis Barber writes that he has just completed a run of 17,000 miles with his Reo the Fifth, in which he used but two gallons of lubricating oil. He says that it is next to impossible to get his Reo engine to smoke, and that he is astonished at the small amount of water which the Reo cooling system requires, which is another good proof of the perfect design and smooth-running qualities of its motor. This is the same model Reo which R. M. Owen drove 1,460 miles as the official pilot car in the last Glidden tour from New York to Jacksonville on less than a quart of water. For full particulars and car catalogue please write to R. M. Owen & Co., Lansing, Mich., and kindly mention this paper.

Greatest Value to Cow Owners.

The advertisement of De Laval Cream Separators on page 11 is well worthy of attention of all who own cows. It applies more particularly to dairymen, but there is no other farm production that is worth as much for so small an investment as butter-fat, and the butter-fat from milking a few cows, properly separated, realizes more money than any grain crop on the farm.

Plants For the Shaded Porch.

For sub-tropical richness on a shaded porch there is nothing more appropriate than the rubber plant **Ficus elastica,** the dark green, glossy leaves of which persist for years. This plant delights in a rich, fibrous loam, with plenty of root room and frequent draughts of liquid manure. So long as the newly-formed leaves are as large and of as good color as their predecessors one may feel assured that the plant is thriving. The new foliage is a sure index as to health, and when it dwindles or lacks intensity of color, there is probably a shortage in nourishment or a larger pot is needed.

Each new leaf is originally encased in a delicately-tinted sheath of light brown, which drops as the leaf is ready to expand. The contrast with the light green of the new leaf and the dark hue of the matured one is as pleasing as it is unusual.

While the old leaf is occasionally shed at the base, strive to encourage persistence as long as possible by keeping the plant always in health, for a leaf that drops is never replaced and a bare stem is not inviting. Also guard against injury of the terminal bud, which induces branching. The single stem, covered with great ovate leaves of perfect form, is the ideal plant.

Water freely during the growing season, which should be practically continuous. Sponge the leaves or spray frequently to keep the plant free from dust. The scale is its chief insect enemy, and this can be readily routed, the large, glossy leaves furnishing no secret nooks for hiding.

When the old plant insists upon branching, new ones may be started by partly severing a branch near the main stem and binding damp moss over the incision. In due time the slip will take root in the moss, after which it may be severed from the parent stem and potted.

The old-fashioned leopard plant, **Farfugium grande,** is another strikingly beautiful foliage plant with thick, leathery leaves often nearly a foot across, dark green, beautifully mottled with cream or yellow. But beware of exposing it to the hot sun. Even a single hour will ruin its appearance.

A mixture of rich loam and muck suits this plant, good drainage being assured. Liquid manure applied frequently will increase the luxuriance of growth, for it is a hearty feeder. If it strives to blossom, nip the flowering stem at once. The flowers, rarely produced, are yellowish green and unattractive, while the effort made to produce them drains uselessly upon the plant. The mottled foliage of a well-grown specimen is quite as handsome as any flower and much more so than any this plant would produce.

The scale and aphis are its chief enemies. The former may be easily sponged off, as with the rubber tree; the latter is prone to attack the young, downy leaves, and may be treated with an infusion of tobacco tea.

Sanseviera Zeylandica is an elegant plant with variegated foliage, which thrives well either in or out of doors without direct sunshine. The leaves are very dark green, barred transversely with white, and as beautiful as the spike of white flowers. It is easily grown, enduring more neglect than almost any other plant, yet responding most generously to good treatment.—Bessie L. Putnam.

Jewish Agricultural Experiments.

At Chicago, in January, Prof. Aaron Aaronsohn, Director of the Jewish Agricultural Experimental Station at Haifa, Palestine, discoverer of wild wheat which scientists predict will ultimately double the wheat supply of the world, explained his experiments with the plant before a scientific fraternity of the University to Chicago. He asserted that the discovery would revolutionize the cultivation of wheat in the United States.

The scientist said that many other varieties of great commercial value had been produced at the Experiment Station. Among these is a variety of the sesame plant, the oil-producing qualities of which had been doubled.

The lecturer recommended the importation of other plants from the Orient into America, affirming that millions of dollars could be gained in this way.

Peter Frohling a prosperous feeder of Webster City, Iowa, had four loads of cattle of his own feeding on the Chicago market, April 30th. The steers averaged 1,584 pounds and sold to Swift & Co. at $8.75 per 100 pounds. He also had twenty-seven head of 1,400-pound stags at $7.60.

The Shepherds' Journal.

The inquiry in regard to the management of sheep on the farm and on the range can best be answered by furnishing our readers with a splendid paper that is devoted to Sheep Husbandry. We have therefore made arrangements whereby we can offer The National Farmer and Stock Grower and **The Shepherds' Journal**, both papers, for one year, for fifty cents. This is getting the producer close to the consumer without the help of the middleman. **The Shepherds' Journal** is a magnificent paper, issued monthly on superfine paper and adorned to the last degree with illustrations from life. The National Farmer and Stock Grower has some claims to be a good paper, and **The Shepherds' Journal** is doing something for us. We therefore offer that anyone sending fifty (50) cents to pay for The National Farmer and Stock Grower for one year can select **The Shepherds' Journal** for one year as a premium. We guarantee satisfaction. Address, **HALE PUBLISHING CO., 3550 Vista Ave.,St.Louis,Mo.**

CANADA WINS AGAIN.

The Colorado Silver Trophy For Oats Won a Second Time by Canada.

The most recent achievement of Canada's West is winning for the second time the magnificent $1,500 silver trophy awarded by the state of Colorado for the best peck of oats. At Columbus, Ohio, in 1911, J. C. Hill & Sons, of Lloydminster, Saskatchewan, placed a peck of oats grown on their farm in competition with oats from every part of the world. The judges had no difficulty in deciding, and the award was given to the Saskatchewan-grown oats. In 1912, the National Corn Show had no exhibition, and our Canadian friends had no opportunity. In 1913, the exhibition was held at Columbia, S. C., and it was one of the best yet held. At this exhibition, which comprised corn and all the smaller grains, Hill & Sons, of Lloydminster, had on exhibition for the contest another peck of oats grown on their Saskatchewan farm in 1912. There was no trouble for the judges, no time necessary to be lost in reaching a decision. Hill & Sons won, and for the second time their name will appear on the crest of the cup. The third space will doubtless be occupied by their name, and then this splendid trophy will be theirs.

During the past few years Western Canada grains—wheat, oats, barley and flax—have been in competition with grains from all other countries, and in every case their superiority has been shown. It is not only in oats, but it is in wheat, in barley and in flax that Canada more than holds its own, when placed side by side with grains from other parts.

Western Canada presents innumerable opportunities for the big farmer who wants to cultivate his thousands of acres, the medium man satisfied with a few hundred acres, the man who is content to farm his free homestead of one hundred and sixty acres; it has opportunities for the investor, the capitalist, the business man, the manufacturer and the laborer.

Men's Acre Yield Contest For 1913.

The Men's Acre Yield Contest organized in January, 1912, proved to be one of the most interesting classes of the 1912 State Corn Show held in Columbia during Farmers' Week, January 13-17, 1913. Practically every one who visited the show asked to see the reports and final scores on the acre yield. Mr. Morris McCauley, of Doniphan, Mo., won the sweepstakes prize in the Men's Acre Yield Class, with Mr. L. F. Cottey, of Edina, second. The judges based the awards on practicability of methods, score of the ten-ear sample, net profits from the acre and the yield of air-dry corn.

The Men's Acre Yield Contest will eventually become one of the largest classes in the State Corn Show, for after pure seed corn is disseminated throughout every part of the state the work will naturally tend towards increasing the yield per acre by more intensive methods of culture. Very few farmers to-day realize just how hard it is to produce 100 bushels of corn on a measured acre, and fewer still know just how much per bushel it costs to produce an average crop of corn.

The Missouri Corn Growers' Association will award several hundred dollars in prizes in the Men's Acre Yield Contest alone this coming year and every Missouri farmer who is interested in corn improvement should write to-day for information regarding this contest. Remember, there will be a sweepstakes prize, valued at $150, for the best acre yield.

For all information regarding this contest or the Boys' Acre Yield Contest address T. R. Douglass, Secretary, Missouri Corn Growers' Association, Columbia, Missouri.

Missouri Butcher Heifers.

On the St. Louis market, May 1st, J. L. Reading, of Pike county, Missouri, marketed a consignment of fancy light-weight native heifers, 681 pounds average, that topped the market at $8.65 per 100 pounds. These were fed since November last year on a ration of crushed corn, cotton-seed cake and alfalfa hay. Mr. Reading makes a specialty of handling heifers and tries to see how good he can make them. Of such cattle the St. Louis butcher trade sells a great many.

Feather Prices at St. Louis.

In the wholesale market of St. Louis, May 1st, feathers were quoted as follows: Prime white live goose, 63c.; prime gray do., 44c.; old white, 36 to 38c.; x, 27 to 31c.; xx, 15 to 18c.; xxx, 7 to 10c.; xxxx, 3c.; tare, 10 per cent. on small sacks and 3 per cent. on large. Duck—White, 44c.; dark, 30c. Chicken—Prime dry-picked body, 3c.; wet, damp and quill-mixed, 2c. Turkey—Body, dry, 8c.; quills (mixed), 18c.

St. Louis Fur Trade.

On May 1st it was reported that the season was virtually over and prices were about two-thirds of winter values. For current receipts quotable round: Raccoon, 25c. to $1.00; mink, $1.00 to $2.00; 'possum, 30 to 50c.; skunk (central), 75c. to $1.25; muskrat (do.), 40 to 45c.; civit, 50 to 60c.; house cat, 10 to 15c.; gray fox, $1.00 to $1.50; red fox, $2.50 to $4.00; wolf, 25c.

Mule Trade at St. Louis.

Holland, Nugent & Maxwell Bros. on May 1st reported all grades of miners and big mules selling readily at satisfactory prices. Out-of-class big mules and light-boned cotton mules should be left in the country, as there is no demand for them.

Native cows are selling remarkably well at the St. Louis National Stock Yards. On May 1st the top price paid was eight cents a pound, a gross price of $104.80 for a fat cow weighing 1,310 pounds.

WOOL MEN!

We can interest you. Do you know that St. Louis is a **Spot Cash** market? In 20 years we have handled **more separate lots** of wool, each season, than any other commission house here. Over **40 years' experience** in the business, and your shipments receive our personal attention. We guarantee **top prices, quick sales** and **prompt cash returns.** Write for our 1913 Wool Circular, giving full particulars and points in regard to the preparation of wool for market. Wool Sacks, Shipping Tags, Market Reports, etc., sent Free upon request.

Write what you have to offer. Estab. 1874.

A. J. CHILD & SONS, St. Louis, Mo.

[Please mention National Farmer and Stock Grower.]

St. Louis Sales of Sheep.

Mutton sheep were selling at the St. Louis National Stock Yards on May 1st at $5.45 to $6.50 per 100 pounds. The sales included twenty-five head, 115 pounds average, at $6.50; thirty-seven head, 130 pounds, at $6.50; and ten head, 165 pounds, at $5.75, Stock sheep sold at $4.25 to $5.00 per 100 pounds, and bucks at $5.00 to $5.25 per 100 pounds.

BARNES KNOWS HOW.

A recent letter from Charles E. Barnes, of Taylorville, Ill., who breeds the champion strain of Buff Plymouth Rocks, says:

"At the late National Buff Rock Club Show, held with the Illinois State Show, at Springfield, January 6-11, last, with 243 Buff Rocks in competition, I won five ribbons, on five entries, winning the much-coveted national ribbon for the best colored male, with eighty-one males competing. I also may say I have raised my chicks on Chamberlain's Perfect Chick Feed for the past ten years." Yours truly, CHARLES E. BARNES, Taylorville, Ill.

A Pocket Book Circulation Premium.

THE NATIONAL FARMER Folding Bill Book.

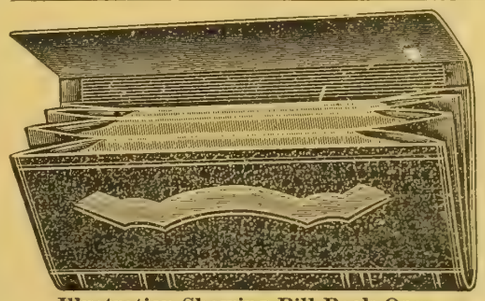

Illustration Showing Bill Book Open.

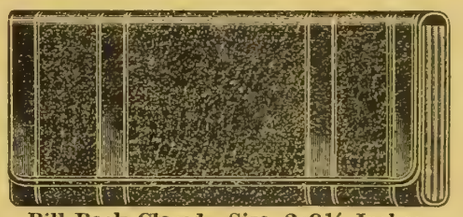
Convenient to carry Currency, Bills, Notes, Receipts, Railroad Tickets, Lodge Identification Cards, Stamps, Etc.

BEST VALUE AND MOST SERVICEABLE PREMIUM EVER OFFERED.

Every Prospective Subscriber Wants One and Needs One.



Bill Book Closed—Size, 3x8½ Inches.

National Farmer Folding Pocket Bill Book, Genuine Seal Grain Leather Cover, Very Fine Finish, Fancy Embossed, Good Quality Throughout.

Our Subscription Offer.

WE have adopted THE NATIONAL FARMER FOLDING BILL BOOK as a subscription premium with the best monthly farm paper in the United States.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in The National Farmer and Stock Grower. There are thirty-two pages, four columns to the page. It is published monthly.

What To Send Us.

Send us a postoffice money order for sixty (60) cents, or 60 cents in clean, new one-cent stamps, and we will send you the good publication, The National Farmer and Stock Grower, for one full year, and we will mail you one NATIONAL FARMER FOLDING BILL BOOK, postpaid, safe delivery and satisfaction guaranteed. Address,

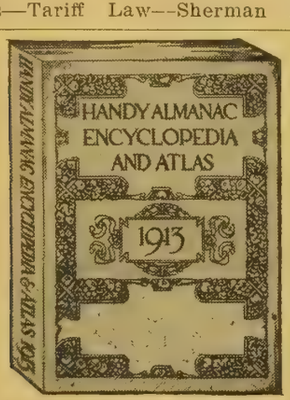
THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

HANDY FARM ENCYCLOPEDIA AND BUSINESS ATLAS FOR THE YEAR 1913.

A Book of Knowledge For Home or Office—Book Mailed Promptly on Receipt of Order.

For the purpose of furnishing the subscribers of THE NATIONAL FARMER AND STOCK GROWER a splendid book of up-to-date information we have published the HANDY FARM ENCYCLOPEDIA AND BUSINESS ATLAS, a book of 216 pages, 6x9 inches, including a carefully-prepared index and a number of maps printed in colors.

To give an idea of some of the good things it contains we mention the subjects treated of, such as the Postal Banks—the Parcels Post Mail—new Pension Law—new Eight-hour Law—Highest Structures in the World—Olympic Records—World's Crops—Aeroplane Records—United States Flag Regulations—Arbitration Treaties—Explanation of Initiative, Referendum and Recall—the Panama Canal—the Panama Exposition—Astronomical Calculations and Eclipses For 1913—How to Foretell the Weather—Average Weather in Various States—Domestic and Foreign Postage—Weights and Measures—Interest Laws—Statute of Limitations—Tariff Law—Sherman Anti-



trust Law—Length of Railways and Telegraph Lines—Length of Ocean Cables—World's Longest Bridges—Highest Mountains—Governments of the World—Sporting World's Records—Important Dates in American History—Rules For Spelling and Punctuation—Household Hints—Cooking Time Table—First Aid to the Injured—Etc.

There is very much more in the book than we have stated, and in addition thereto there is the vote at the Presidential election.

A Subscription Proposition.

Anyone who will send us fifty (50) cents for one-year's subscription to THE NATIONAL FARMER AND STOCK GROWER can select the HANDY FARM ENCYCLOPEDIA AND BUSINESS ATLAS as a free premium. We will send the book postage paid, safe delivery guaranteed. Money refunded if not satisfied.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.: Herewith please find Fifty Cents to pay for one-year's subscription to THE NATIONAL FARMER AND STOCK GROWER, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the HANDY FARM ENCYCLOPEDIA AND BUSINESS ATLAS.

COST OF RAISING HORSES.

Average Figures Given by 10,000 Correspondents of the United States Department of Agriculture.

Reports have been received from about ten thousand correspondents of the Bureau of Statistics of the Department of Agriculture upon the cost of raising colts on farms to the age of three years. The average for the United States is found to be $104.06; or, if we deduct the value of work done by the horse before he has passed his third year, namely $7.52, the net cost is $96.54; this is 70.9 per cent. of the selling value of such horses, which is estimated at $136.17.

The cost varies widely by states, from an average of $69.50 for New Mexico, $71.59 for Wyoming, and $82.47 for Texas, to $156.60 for Rhode Island, $149.98 for Connecticut, and $141.80 for Massachusetts.

Itemized, the average cost is made up as follows: Service fee, $12.95; value of time lost by mare in foaling, $10.06; breaking to halter, $2.22; veterinary service, $2.04; care and shelter, first year, $4.98; second year, $5.36; third year, $6.35; cost of grain fed, first year, $4.14; second year, $7.14; third year, $9.56; hay, first year, $4.14; second year, $5.61; third year, $8.48; pasture, first year, $2.56; second year, $5.41; third year, $6.21; other costs, $5.01; total, $104.06.

The total cost for all feed is $56.30, being $21.68 for grain, $19.23 for hay, $14.18 for pasture, and $1.21 for other feeds. The total cost of care and shelter is $16.69. Of the total cost, 54 per cent. is charged to feeds, 16 per cent. to care and shelter, and 30 per cent. to other items, as enumerated above.

As more than half the cost of raising a three-year-old horse on the farm is chargeable to feeds, it is readily observed how important is the influence of variation in prices of feedstuffs upon such cost.

Breeding Army Horses.

The Bureau of Animal Industry of the United States Department of Agriculture has completed arrangements for standing of government stallions in the state of Virginia to encourage the breeding of horses for military purposes in that section. The horses will be placed as follows for the season of 1913:

At Front Royal, Warren county, the Thoroughbred stallions Henry of Navarre, Octagon and Demodus; the Saddle stallions Richmond Choice and Victor Peavine.

At Gainesville, Prince William county, the Thoroughbred stallions Gold Heels, Foot Print, Ganadore and Dandy Rock.

At Aldie, Loudoun county, the Thoroughbred stallion Charcot.

At Harrisonburg, Rockingham county, the Thoroughbred stallion Jack Parker.

At Savannah, Alleghany county, the Thoroughbred stallion Kind Sir.

At Staunton, Augusta county, the Thoroughbred stallion Belfry, II.

At Lexington, Rockbridge county, the Thoroughbred stallion Boola Boola.

At Crab Bottom, Highland county, the Thoroughbred stallion Single File.

At Monterey, Highland county, the Thoroughbred stallion Lynchburg.

At McDowell, Highland county, the Thoroughbred stallion Myles O'Connell.

At Fredericksburg, Spotsylvania county, the Standard-bred stallion Richford Jay.

These stallions are now available for breeding under the plans already outlined by the Department. Competent men are in charge at each of the points named.

Rid Your Hogs of WORMS and You'll Have HEALTHY Hogs

E. Myers, President, E. Myers Lye Company

An enormous part of the swine plague known as "cholera" that sweeps over the country killing hogs and causing a loss of millions of dollars every year, is not **cholera** at all. It is stomach, intestinal or lung **worms.** The symptoms of hog worms are easy to detect. When you see a hog slinking around with his nose to the ground, hair sticking up, tail down, coughing, off his feed and losing flesh, don't jump to the conclusion that he's getting "cholera". He has **worms,** and if you don't act quickly your whole herd will have them, too. Feed all your hogs **twice daily** according to directions on every can on a ration mixed with

Merry War Powdered Lye

It destroys hog worms quicker than anything else in the world. And, even though there should be an epidemic of **real** hog cholera in your neighborhood, **your** hogs will be healthy and strong to resist it. MERRY WAR POWDERED LYE is the **proven preventive of hog cholera.**

The Folly of Vaccination

Vaccination may be all right for putting a hog's system in a condition to resist the cholera germ. But no amount of vaccination will cure a single hog of worms, nor will it make him well if he's sick. Vaccination will not keep him on his feed, make him fat, sleek, skin free from scurvy, and condition him so that he will be a prime hog at market time. **That's what** MERRY WAR POWDERED LYE does. Feed it to your hogs from weaning time on and you'll have healthy hogs. Cholera won't alarm you and your hogs will weigh in heavy.

Read This Convincing Evidence

C. F. NEWMAN, Lebo, Kan. "Have best results with my hogs and no sickness since I've used Merry War Powdered Lye while our neighbors have lost heavily."

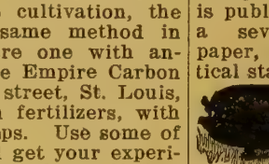
Refuse Substitutes

Don't experiment with ordinary, old-fashioned lye. **It might prove dangerous.** MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed hogs. Experience has **proved** its worth. **Insist** on getting it. **There are no substitutes.**

10c A Can—120 Feeds

MERRY WAR POWDERED LYE is for sale at most grocers, druggists and feed dealers. It is convenient to buy in case lots, 4 doz. cans, $4.80. **Order direct from us in case lots (4 doz. cans $4.80) if dealers won't supply you.**

E. MYERS LYE COMPANY, Dept. 22 ST. LOUIS, MO.



FREE

If your dealers can't supply you write us stating their names. We will see that you are supplied and also send you, **free,** a valuable booklet "How To Get The Biggest Profits From Hog Raising."

Heavy-weight Pigs.

On the Chicago market, April 24th, Mr. E. G. Miller, of Melbourne, Iowa, marketed a load of 351-pound hogs at $8.65 per 100 pounds. They were last May pigs, his own feeding, and very choice. This items shows very clearly what good breeding, ample feeding and good health in hogs will do. The gross price was $30.36 per head.

Empire Fertilizers.

Every farmer should know something aobut fertilizers. It is the easiest experimental work in the world—one field fertilized, another one not; both the same soil, the same seed bed, the same time of planting, the same cultivation, the same season, the same method in harvesting. Compare one with another. Write to the Empire Carbon Works, 421 Locust street, St. Louis, Mo., for a book on fertilizers, with formulas for all crops. Use some of these fertilizers and get your experience, so that you may know if it is profitable, and to what extent it is profitable, to use commercial fertilizers. Write for the book anyway. It costs nothing, and it will teach you something.

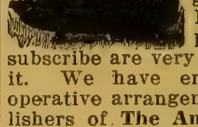
Stood Up For His Department.

The Farmers' Co-operative Demonstration Work of the United States Department of Agriculture was in danger of being withdrawn from Oklahoma. It appears that one of the experts of the Department was wrongfully accused of pernicious political activity. Secretary Houston issued an ultimatum that the work would be withdrawn from Oklahoma unless harmonious co-operation was assured.

An effort was made by the Board of Agriculture to have the Department expert dismissed and another man appointed. When satisfied there was no foundation for the charge of political activity, Secretary Houston took the position that his Department should not be criticised without cause.

The American Swineherd.

We have been requested by our patrons and friends to arrange a club whereby we can offer them a swine raiser's paper as a premium with The National Farmer and Stock Grower, and we have succeeded in doing so. **The American Swineherd** is published monthly, and is usually a seventy-two-page, three-column paper, splendidly edited from practical standards and always interesting from the very beginning to the end. It is a satisfactory paper, and all who subscribe are very much pleased with it. We have entered into a co-operative arrangement with the publishers of **The American Swineherd,** whereby we can offer for a limited time The National Farmer and Stock Grower and **The American Swineherd,** both papers, for the price of one. Anyone who will send us a money order for fifty (50) cents in answer to this proposition will be supplied with both papers for one year. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



YOU HAVE MADE IT; WHY NOT SAVE IT?

NECESSARY ON A FARM.

The Crocodile Wrench—Actually Six Handy Farm Tools in One.

Yes, an absolute necessity. The Crocodile Wrench means business. Every farm ought to have an extra wrench or two, especially when the wrench is a Crocodile Wrench premium, which is a pipe wrench, a nut wrench, has three dies for cleaning or cutting threads, and a screw-driver. The picture is small, but the Crocodile Wrench is twice as long, and it is full size for any purpose. It is drop-forged from the best tool steel, scientifically tempered. Requires no adjustment. Simple and always ready for use. Nothing to get out of order. Dies will fit threads on all standard farm machinery. Light, strong and durable. No farmer can afford to be without it.

Special Inducements.

Our Subscription Proposition: Send us One Dollar and we will send you THE NATIONAL FARMER AND STOCK GROWER for two years, and we will send you, postage paid, safe delivery guaranteed, ONE CROCODILE WRENCH. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Ho.**

SCIENCE IN AGRICULTURE.

What It Has Taught—Muscle and Manure—Increase in Variety of Crops, Etc.

Not long ago we read the statement (written, too, by a farmer) that the "Science of Agriculture" consists mainly of muscle and manure, and he also stated that "sixty years ago we had twice as much of each as we have now."

It would seem that in the light of all the researches of science in these later years there was no reason for such a statement. If it were really true that the Science of Agriculture, which is conceded to be the most important science in the world, is, first, manure, then muscle, the man who possesses the muscle should also possess brain sufficient to understand the science of "why or how manure aids in his farming." Sixty years ago the farmer could not inform us regarding the elements of his farm manure; he could give no definite reason for the size of his plants or tell the reason that grains or cereals were developed, or why these cereals possessed fine milling qualities, or were deficient.

The "Science of Agriculture" has taught us that the size of a plant is controlled by nitrogen, the formation of grains by the content of phosphorus or phosphoric acid, and the the fine or poor quality of grains, vegetables and fruits, etc., by the content of potash. And the man who owns brains as well as brawn must have discovered that some farm manures possess qualities which are in others lacking. Sixty years ago the elements of plant life were not truly known, and the brawny farmer's system of farming was on the "hit-or-miss" plan. He grew only the staple crops because the demand for special crops was limited and the changed conditions of farming are shown in these later years in the increasing demand for market-garden crops and fruits. The many varieties of vegetables and fruits grown now were then considered as luxuries and only a small space was devoted to them. Fifty or sixty years ago the soil had not been worked or cropped so extensively, and the farm manures were perhaps adequate to the growing of the staple farm crops; but under the present system of management the amount is not sufficient to meet the annual losses from the sale of crops, much less to provide an increase, and "science" has supplied the deficiency with the artificial or commercial fertilizer which, intelligently used, is effective in its work. It is true that farm manures are exceedingly valuable, and not one pound should be wasted; their vegetable content improves a clay soil by rendering it more open and porous, so that water and air may penetrate more freely and thus act directly upon the dormant or insoluble constituents contained in it, and the soils that are light and sandy, making them more compact, because the open spaces are more filled.

The fermentation or decay of manures produces bacteria which assist in growth, but the plowing under of certain crops, combined with commercial fertilizers, I have found in a series of experiments, will produce as good results. It is a well-known fact that farm manures contain, as a rule, too much nitrogen in proportion to their content of phosphoric acid and potash. This is shown by the lodging of wheat, oats or other grains.—E. A. Season.

FIGURING FARM PROFITS.

Different Ways to Figure—Farm Profits Undervalued—One of the Best Plants to Turn Under.

There are a good many ways of figuring the same thing. By one kind of figuring we may make a crop appear a loser of money for us and by another process we may make it a winner of money. We have many instances of this diverse kind of figuring.

Here comes an expert and tells a farmer that a certain product taken from his land has in it, among other things, several pounds of nitrogen, worth, if he has to put it back on the land in the form of a commercial fertilizer, fifteen cents per pound. The value of the other fertilizing elements are figured up and the cost of the labor, the man's wages, the cost of the team and the cost of marketing, and the farmer is shown that he is selling his product at a loss.

That is one way to figure, and it may be right for some kinds of land and some conditions. But it is an old saying that "circumstances alter cases." There are many farms where the loss of the nitrogen is of no consequence because the soil has in it a large supply, and the arrangement of crop rotation is such that the supply of nitrogen is being constantly renewed automatically. And this kind of a rotation should be aimed at.

Even where there is no such rotation, conditions may be such that the supply of nitrogen is kept up at a very insignificant cost. The writer has in mind a big dairy farm, where over 150 cows are kept, or were being kept at the time the writer visited that farm. There was a great surplus of manure to be applied to the fields the year round, for the soiling system was partly followed. That surplus manure being applied to the fields year after year made them very rich. It was an unsalable product and had to be disposed of. The nitrogen it carried back to the fields could not be figured at a cost of fifteen cents per pound or at any other certain figure.

Then there is a figuring on the interest. Often a man that thinks himself an expert at agricultural figuring will figure six per cent. on the entire investment as a part of the cost. Along comes another man and refuses to figure in the interest at all. He says that a man has no right to figure in six per cent. or any other per cent. as a part of his expense. There is no such expense, unless he is actually paying that or some other rate on his land.

To assume that any man can take a certain sum of money and loan it out safely at six per cent. or like interest, is a fallacy. He may do that; he may not. Many a man has tried to do it and has lost, not only his interest, but his principal as well. Simply because a man owns a certain amount of property is no reason why he should figure a fixed interest as an emolument that necessarily goes along with it. His investment in his farm is an insurance of permanent occupation for himself, and that is worth more than a doubtful interest.

There are a good many kinds of farm profits. Work in the open air and in the sunlight is one of them, and this is immensely undervalued by farmers. The stuffy offices, stores, factories and workshops in a great city are not to be compared with the freedom of the farmer working surrounded with the glories of nature. Even the drifting snow and the driving rain have in them a fascination to the man hwo has learned to see the glories of country life.

Health and happiness on the farm are two profits that are undervalued.

You Need Empire Fertilizers

to enable your crops to take advantage of good weather conditions. No matter how fine the weather or how good your own cultivation of the soil, there is never enough plant food in the soil of the **available** sort to produce the largest possible crop. Why not take the advantage good weather and cultivation can give you with the aid of our ready-to-act plant food? A small amount to the acre supplies just the **available** elements needed to produce large crops of vegetables, grain or forage.

EMPIRE FERTILIZERS

These fertilizers supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather and the plant food supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

Agents wanted where we have none. Address early for prices and terms,

WESTERN RANGE HORSE SALES.

Horsemen East and West are advised that the great market for Western Range Horses is at St.Louis. The announcement is hereby made that twelve of these Auction Sales of Range Horses will be held at the National Stock Yards, Ill., during the season of 1913 by

Campbell & Reid and Western Sale Stables Co.

At each of these sales from 1,200 to 2,500 Horses will be offered in suitable lots and sold at auction for the high dollar without reserve. The offerings are always selected with the utmost care from the very best Horse Ranches of the Western and Northern country. The best Horses now being sold in the domestic sale rings were originally well-bred Range Horses, fed, educated and mannered to be good work stock. The first Auction of the season will be held on

THURSDAY, JUNE 12,

And every two weeks thereafter a sale on Thursday will be held until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

$2.00 per bottle, postpaid on receipt of price.
VISIO Remedy Ass'n, 2472 Calumet Ave., Chicago, Ill.

Louisiana Steers at St. Louis.

On May 1st, at St. Louis, L. F. C. Pierce, a well-known shipper and extensive cattle feeder of Caddo Parish, La., was on the market with a load of steers. They were well-finished products and sold for $7.25 per 100 pounds and well displayed their feeder's ability when they tipped the scales at 864 pounds. This is the highest price realized for Louisiana steers in some time. The cattle were sold in the quarantine division.

Colorado Lambs at St. Louis.

On April 30th, at St. Louis, W. C. Macey marketed 266 head of 75-pound lambs, which sold at $7.85 per 100 pounds. They were clipped lambs from Colorado and the first arrivals of the season at St. Louis. Another consignment, not so good, nearly the same average, sold at $7.60 per 100 pounds.

On May 1st, W. C. Macy had in another consignment, weighing 71 pounds, that sold at $8.00 per 100 pounds. The salesmen managed to advance the market.

The St. Louis Wool Market.

The wool market is not high; indeed, it takes light-shrinkage, medium wool to sell at 20 cents a pound, and other wools at 15 to 18 cents; but St. Louis is always fully up to Eastern standards, and is a quick market when others are slow. A. J. Child & Sons do a strictly commission business in wool and have done so for twenty-nine years. Write for their wool circular and address the letter to A. J. Child & Sons, 515 North Main street, St. Louis, Mo.

Southern Cattle in St. Louis.

Milton-Marshall Live Stock Commission Company, National Stock Yards, Ill., made the following report of cattle from Alabama, Lounsiana and Mississippi, April 30:

"We have had light receipts of Southern cattle here this week, and a good, strong market has prevailed on all classes. While there have been a few good, fat cattle on the market, the bulk of the receipts have been canner and yearling stuff. Some good cattle sold here yesterday at $8.10 per 100 pounds, averaging around 1,100 pounds. These were experimental cattle, fed by the State Agricultural College of Starkville, Miss.

"The demand has been better for cows than for anything else. We sold some just fair light-weight cows at $5.50 per 100 pounds; some fairly good heifers at $6.50. The bulk of the good cows are selling from $5.50 to $6.25, while medium grades are selling from $4.50 to $5.25. The bulk of the canners around $4.25. Yearlings are selling from $4.00 to $5.00, owing to flesh and quality. Calves from $4.50 to $6.00, with vealers from $7.00 to $9.00. It looks as if we would have a good, strong market all season on all classes of cattle from the Southern territory."

St. Louis Hog Market.

At the St. Louis National Stock Yards, on April 30th, the top price was $8.65 per 100 pounds, and those that brought the money averaged 178 to 194 pounds. Best mixed hogs sold fairly well at $8.45 to $8.55, while the plain mixed and heavy offerings went at $8.25 to $8.40. Some strictly good heavy hogs, that is, those weighing around 300 pounds, sold at $8.30 to $8.35. The best grades of lights, weighing 165 pounds, sold at $8.25 to $8.60, while the fair offerings sold around $8.00 or but little better, and some of them not quite as good as that.

The Milton-Marshall Commission Company, doing business at the St. Louis National Stock Yards, give it as their opinion that most of the hogs going to Kansas City would net the shippers more money if they were sold at St. Louis.

East St. Louis Sale of Herefords.

At the St. Louis National Stock Yards, April 22d, Sidney B. Smith, of Springfield, Ill., conducted a sale of Herefords. The result was an average of $174 for thirty-six head. Twelve females averaged $192, and twenty-four bulls averaged $163. The top-price female was the cow Mamie, consigned by John R. Buss, sold for $370 to J. M. Burlbaw, of Farmington, Mo. Mr. Buss also consigned the top-price bull Curley Chief, sold to Wm. M. Weiss, of Perryville, Mo., for $300.

Shorthorns at Omaha.

At South Omaha, Neb., April 22d, the sale of Shorthorn cattle by Geo. Allen & Sons, of Lexington, Neb., resulted in an average of $316 for eight bulls and $319 for forty-five females. The best price for a bull was $415, paid by W. A. Wells, of David City, Neb., for Blossom Lad, calved March, 1912, and the high figure for females was $765, paid by Bellows Bros., Maryville, Mo., for the cow Golden Lady.

First-class Commission House.

The best-organized live stock market is St. Louis, and one of the best firms doing business in that market is the Milton-Marshall Live Stock Commission Company. Shippers who consign stock to this firm to be sold can be assured of obtaining the best results possible. Mr. A. J. Milton, President of the company, is an expert cattle salesman, and, assisted by his brother, L. H. Milton, make splendid sales. J. S. Jackson and J. S. Mulberry, selling hogs, are equally expert in their department, and are noted for skill, ability and good judgment. It is a finely-equipped firm, doing business efficiently in the interest of their customers. All who will apply to Mr. R. E. Marshall, Secretary, P.O. Box 94, National Stock Yards, Ill., stating what they have to ship, will receive special information concerning the market prospect, coming directly from the salesmen.

Texas Steers in St. Louis.

On May 1st, at the St. Louis National Stock Yards, sales of Texas and Oklahoma cattle were as follows: Forty head 1,121-pound steers at $7.65; fifty steers, 858 pounds, at $7.15; twenty-five steers, 840 pounds, at $6.50; seventy-six steers, 850 pounds, at $7.15; and thirty-one head, 723 pounds, at $6.15. All quotations being at the price stated per 100 pounds.

April Receipts at St. Louis.

At the St. Louis National Stock Yards, in the month of April, 1913, live stock receipts were above the average in all departments. The arrivals were 49,184 cattle, 180,479 hogs, 48,611 sheep and 8,379 horses and mules.

Sale of Pure-bred Shorthorns.

The sale of Shorthorn cattle by F. W. Harding, of Anoka Farms, at Waukesha, Wis., in April, resulted in a grand average of $564 for thirty-seven head. Eleven bulls averaged $708.65, including three young bulls—Cruickshank Fashion, sold at $1,200; Gloster Mine at $1,625; and Prince Lavender at $1,100. The heifers averaged $502.30 for twenty-six head, including Sultan's Aconite, 2d, at $1,750, and Mischief E., 3d, at $1,075. The top-priced buyers were Hearts' Delight Farm, Chazy, N. Y.; Howell Rees, Pilger, Neb.; H. H. Diers & Son, St. Olaf, Iowa; and E.A.Hess,of Council Bluffs,Iowa.

An Appreciated Compliment.

"I take five or six farm papers and I like The National Farmer and Stock Grower the best of them all."
—Clifford Schutt, Rock Falls, Ill.

$10,000,000 A Year Wasted On Trusses

Wrong to Buy Anything For Rupture Without Getting Sixty Days Trial

A conservative estimate shows that nearly ten million dollars a year—in this country alone—is practically wasted on worthless rupture appliances—all because people trust to a mere try-on instead of making a thorough test.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial — the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times —including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why druggists should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—CluthesCo., 125 E. 23rd St., New York City

Western Range Horses.

We are again authorized to announce that Campbelll & Reid and Western Sale Stables Company will hold their sales of Western range horses and mules on the St. Louis market as usual during the season of 1913. The first sale will be held Thursday, June 12th, and the second on June 26th, and thereafter sales will be held every two weeks. Ranchmen who are likely to have horses for sale will find it to their advantage to consign to these sales, because they are the best conducted of all the sales of Western range horses. Eleven or twelve of these sales are held each year. The number offered may be 1,200 or 2,500 at each sale. The sales take place with the regularity of clockwork, being held every other Thursday after the first sale. The sales are always largely attended by buyers. Horsemen having horses to sell should write for any information they require to J. J. Searcy, Sale Manager, National Stock Yards, Ill.

Great Horse and Mule Salesmen.

At the last sale of horses held at the St. Louis National Stock Yards in April by Holland, Nugent & Maxwell Bros., 1,050 horses were sold at auction. A large proportion were draft horses and good Eastern chunks, and they sold readily at fair prices. Farm chunks and farm mares also sold readily. Messrs. Holland, Nugent & Maxwell Bros. sell horses at auction on Monday and Tuesday of each week. Mr. T. H. Holland, Chief Auctioneer and Manager, will be glad to advise car-load shippers in regard to the class of horses they can ship to the St. Louis to advantage. Address, T.H.Holland, National Stock Yards, Ill.

Great Importing Horse Firm.

The catalogue issued by Trumans' Pioneer Stud Farm, of Bushnell, Ill., includes Shire, Percheron, Belgian, Suffolk and Hackney stallions and mares. A list of horses sold by this firm in one month includes twenty-three Shire stallions, one Shire mare, thirteen Percheron stallions, three Percheron mares and four Belgian stallions. Their new catalogue for 1913 is just out and will be sent to any of our readers who will write for it.

Life of a Show Horse.

Mr. and Mrs. John Gerken and Charles L. Bailey were standing together along the rail at the Brooklyn Horse Show on Saturday evening, when the club class for harness horses was in the ring. A bay mare entered as Elegant suddenly attracted the Kentucky horseman's eagle eye and he turned to Mrs. Gerken and exclaimed:

"There is old Contributor in harness as sure as you live. Do you realize that just ten years ago tonight I was on that mare in this ring when she won the saddle championship for you, beating Mrs. Grosvenor's Petroleum?"

Sure enough, the harness mare of 1912 was Mrs. Gerken's saddle champion of 1903, La Contributor. While owned by Mrs. Gerken, she won sixteen first prizes and two championships. She won third prize in harness at the Brooklyn Show, and looked as fresh on her legs as she was a decade ago, notwithstanding the fact that she has been doing service as a runabout horse for several years in Brooklyn.—New York Herald.

Ten-thousand-dollar Saddle Horse.

My Major Dare, a famous Kentucky saddle horse, was sold recently by Mr. Paul Brown, of St. Louis, to Mr. R. A. Long, of Kansas City, for the sum of ten thousand dollars, and the sale included a few mares and colts, bringing the total amount up to $16,000. Mr. Brown is giving up the breeding of saddle horses on his farm near Kansas City, and Mr. Long is establishing a breeding farm for that purpose. Mr. Brown recently purchased My Major Dare from Mr. Presley, of Bowling Green, Ky., is breeder of My Major Dare, and in his hands won many blue ribbons and championships.

Purchase of a Fine Jack.

Mr. Thos. H. Ezell, of Nashville, Tenn., himself a breeder of the highest-quality jack stock, has purchased the good colt Ben Hord (now named Ezell's Champion), raised by Davis & Wallace, of Lewisburg, Tenn., for a fancy price. The actual cost is not made public, but it is known to be well up in four figures. This colt will be two years old in May; stands full fifteen hands standard, and measures to grow to 15¾ hands standard; is 116 inches from mouth to root of tail; ears measure 34½ inches from tip to tip; has a nine-inch bone, large foot, deep body, flanks down; weighs 915 pounds, and is short-haired and black with white points. Ezell's Champion is bred in the purple. Mr. Ezell bought this colt to be his herd jack and to add to his show string of jacks and jennets. This colt was exhibited once and won the championship.

Topped the May Market.

On May 1st, at the St. Louis National Stock Yards, E. K. Lee & Son, of McLean county, Illinois, brought in a load of 1,272-pound steers that went to the packers at $8.25 per 100 pounds. Lee & Son had fed these beeves for about 100 days on corn and timothy hay, and they gained right at three pounds per day. These cattle topped the market on the first of May.

Hog Market Quotations.

All hogs are sold at the price stated per 100 pounds, and there are many grades of hogs in a great market. At Chicago, on May 1st, the top of the market was $8.80, paid for a small lot of fancy summer-weight butcher hogs averaging 200 pounds. The general market was quoted as follows by the Live Stock World: Bulk of sales, $8.45 to $8.65; mixed, 215 to 250 pounds, $8.35 to $8.50; mixed, 170 to 210 pounds, $8.45 to $8.60; medium weights, $8.45 to $8.55; light butchers, $8.60 to $8.70; heavy butchers, $8.50 to $8.60; light shipping, $8.65 to $8.75; heavy shipping, $8.45 to $8.55; heavy packing, $8.15 to $8.35; rough heavy packing, $8.00 to $8.15; throwout packing sows, $7.75 to $8.05; fair to choice light, $8.45 to $8.65; light-light, 125 to 165 pounds, $8.35 to $8.60; pigs, good to fancy, $7.40 to $8.65; pigs, inferior to fair, $6.50 to $7.35; boars, poor to good, $3.50 to $4.35; stags, subject to dockage, $8.50 to $8.80; government throwouts, $4.00 to $6.00; government pigs, $1.50 to $3.00.

Good Sale of Hackneys.

Trumans' Pioneer Stud Farm, Bushnell, Ill., have sold to Samuel Insull, Hawthorn Farm, Lake county, Ill., the imported Hackney stallion "Tollington" and the imported Hackney mares "Nene Lady Gay," "Lynd-

Milton, Marshall LIVE STOCK Commission Company

Shipments of Cattle, Hogs and Sheep solicited for sale upon the St. Louis Live Stock Market.

The St. Louis Market is the most active and competitive of all markets. Many shippers selling elsewhere will obtain better returns at St. Louis.

We are thoroughly equipped to obtain the very best results in the interests of our customers, and in all market matters we will be found to be leading the procession.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have therefore made arrangements to furnish our subscribers with the **Reliable Poultry Journal** on the most advantageous terms, and we know that the publishers are getting out such a magnificent paper the arrangement cannot possibly last long. All who are interested in poultry raising should consult their own interest and subscribe at once. We will send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

MISSOURI EGG-LAYING CONTEST.

Seventy Pens, Ten Hens to the Pen—700 Birds in All—Report For 4½ Months, 136 Days.

Black Langshans Make Record For the Month of March—English White Leghorns Lead For the Entire Time.

Twelve Pens Lay Over 200 Eggs Each in 31 Days—One Hen Lays 29 Eggs in 28 Days—Methods of Feeding—Important Suggestions.

At the end of four and a half months the race is becoming more interesting. The majority of the hens have settled down to business and nearly every pen is making a very creditable showing, some doing much better than others, of course. The total record for the month was 12,889 eggs, which runs the grand total for the four and a half months up to 34,525 eggs. No remarkably high records have been made thus far, but the general average is much better than last year.

The English pen of S. C. White Leghorns is 120 eggs in advance of the next highest pen. From the results obtained thus far at this place and at Storrs, Conn., and from our own knowledge of conditions, we believe the English breeders have been studying the question of breeding for egg production much more than have the breeders of this country. This is one of the objects of this contest. We hope to stimulate some such interest in this country. Notwithstanding the views of some of our leading authorities to the contrary, we believe if the fowls have been properly bred, if given reasonably good care and reasonably good feed, they will produce a greater number of eggs than another pen of fowls of the same variety which have been carelessly and promiscuously bred, even though this last-mentioned pen may get as good or perhaps better feed than the first-named pen. Our observations and investigations thus far bear out these facts.

One Buff Orpington pullet, No. 647, laid 29 eggs in 28 consecutive days in March, laying two eggs in one day. She then went broody for the second time this season. Broody hens now begin to trouble us. Six hens—one White Wyandotte, one Buff Plymouth Rock, one Black Langshan, two White Orpingtons and one Buff Orpington—each laid thirty eggs in the thirty-one days. One hen which made a high record last year has only laid two eggs this year. Another high-record hen is also making a good record the second year. A pen of Black Langshans, No. 57, from Missouri, won the silver cup for the best record for March by laying 248 eggs in the thirty-one days. Three out of the twelve highest pen records for March were made by Black Langshans, two were White Wyandottes and two were Silver Wyandottes.

Pen Records—136 Days.

The twelve highest pen records for the first four and a half months of the contest are as follows, three pens out of the twelve highest having tied:

Pen No.	Eggs.
2—S. C. White Leghorns, England	890
23—Silver Wyandottes, Illinois	761
57—Black Langshans, Missouri	736
19—Silver Wyandottes, Iowa	711
33—Barred Plymouth Rocks, Illinois	668
58—Buff Orpingtons, Missouri	640
49—Black Langshans, Missouri	637
30—Buff Wyandottes, Vermont	633
20—White Wyandottes, Arkansas	627
24—White Wyandottes, New Jersey	627
56—White Orpingtons, Kentucky	627
43—S. C. Rhode Island Reds, Florida	620

Pen Records—Month of March.

Nineteen pens of ten hens each laid more than 200 eggs per pen during the month. The twelve highest pen records for March were as follows:

Pen No.	Eggs.
57—Black Langshans, Missouri	248
2—S. C. White Leghorns, England	234
56—White Orpingtons, Kentucky	233
49—Black Langshans, Missouri	224
27—Silver Wyandottes, Missouri	223
47—Buff Plymouth Rocks, Missouri	222
46—R. C. Rhode Island Reds, Indiana	220
23—Silver Wyandottes, Illinois	220
11—Black Minorcas, Iowa	219
39—Barred Plymouth Rocks, Iowa	219
9—S. C. Brown Leghorns, Missouri	218
53—Black Langshans, Indiana	216

Individual Records.

During the first 136 days of this year's contest the leading pen has laid more eggs than the two leading pens of last year's contest laid in the first 151 days. The leading hen this year has laid 113 eggs in the first 136 days of the contest, and the leading hen last year laid 116 eggs in the first 151 days. The individuals and pens are each making better records this year than last. The twelve leading hens have made the following records for the first 136 days:

Hen No.	Eggs.
66—S. C. White Leghorn, England	113
860—Buff Wyandotte, Vermont	108
735—Black Langshan, Missouri	104
600—Buff Wyandotte, Missouri	103
656—White Wyandotte, Arkansas	103
2,076—Buff Orpington, Missouri	102
708—Buff Plymouth Rock, Missouri	102
68—S. C. White Leghorn, England	102
601—Silver Wyandotte Iowa	101
62—S. C. White Leghorn, England	101
2,158—Buff Orpington, Missouri	101
65—S. C. White Leghorn, England	100

The Feeding Test.

We are now beginning to hatch a few chicks from these pens to determine, if possible, if the different methods have any noticeable influence on the percentage of fertility of the eggs, the hatchability of the same and on the liability of the chicks. We have male birds of the same age and breeding in all pens.

In the pen where the same kind of feed has been kept before the pen of five White Leghorns and five Buff Orpingtons, and are allowed to eat as much or as little of each kind of food as they desired, the results have been as follows:

They have laid more eggs than any other of the ten feeding-test pens and have eaten the following:

77 pounds oats, principally rolled oats.
66 pounds wheat.
60 pounds corn, principally cracked corn.
36 pounds millet.
24 pounds sunflower seed.
18 pounds Kaffir corn.
12 pounds cane seed.
10 pounds oyster shell.
189 pounds water.
130 pounds buttermilk.

They are allowed to help themselves to either and drink a little more water than buttermilk.

They have eaten but little of anything else than the feeds mentioned above and but very little ground feed of any kind. They have eaten twice as much cracked corn as whole corn. The hens in this pen do not seem to be any fatter than the hens in the other pens. They are in just good laying condition thus far.

Pen No. 64—The Canadian Method of Feeding Laying Hens.

This is one of the most simple methods of feeding hens. Thus far it has proven to be one of the most satisfactory, and the hens are making a good egg record.

In winter months the grain mixture is composed of two-thirds corn and one-third wheat, thrown into the straw litter. In summer, one-third corn and two-thirds wheat. In the spring and fall months, equal parts corn and wheat. We feed about a pint to ten hens in the morning and perhaps a little more at night. Rolled oats are fed from a hopper. The hens are also supplied with grit, shell, charcoal and some wholesome green food. They are given nothing to drink except buttermilk. In our opinion, this is a very well-balanced ration for any farmer to use. It is about as simple as you can make it and still get the best results.

Care of Growing Stock.

Do not fall into the all-too-common habit of thinking that after a chick is past the first three weeks it will raise itself. If a chick is to develop into a healthy, vigorous cockerel or a strong, active pullet that will shell out the eggs next winter, it must have the best of feed and care throughout the entire growing period.

Do Not Overcrowd.—Many of the ills and much of the mortality among growing chicks is due to overcrowding. The brooder or coop should furnish ample room for the little fellows to stretch themselves out at night without coming in contact with each other. Plenty of fresh air should be admitted at all times in such a way that there will be no draughts causing the chicks to huddle together.

Fight Lice and Mitts.—Like the poor, these little pests are always with us, and a continual warfare must be waged to keep them from exacting a heavy toll of dead, dwarfed and stunted chicks. Watch for head lice. Greasing lightly the heads of all chicks over two weeks old with a mixture of kerosene and lard, equal parts, will serve either as a preventative or cure. Also grease lightly under the wings. Be careful not to use too much grease and oil. Application should be repeated in about two weeks if chicks are badly infected. For mitts, paint or spray brooding quarters with a mixture of eight parts kerosene to one part crude carbolic acid. This will also serve as a good disinfectant.

Provide Pure Water.—The importance of an abundance of fresh, cool, pure water cannot be overestimated. Filthy drinking water is one of the most common causes of disease, and lack of water a too common cause of unsatisfactory growth. All drinking vessels should be scalded at least once a week. In cool, damp weather sufficient permanganate of potassium to give the water a deep reddish tinge will assist in preventing cold and bowel trouble.

Good Food Properly Fed.—Good feed and plenty of it, easily accessible at all times, is one of the most important "secrets" of successfully producing the best birds, either for market, laying, or exhibition and breeding purposes. After chicks are six weeks old, if they are on free range, they should have free access to a hopper containing equal parts by weight of cracked corn and cracked wheat. If they are confined to runs in which there is no green food, they should be given, daily, lettuce, sprouted oats or lawn clippings. The grain mixture above mentioned should be sifted and fed in a deep litter of cut clover or alfalfa, or chaff from a barn mow, or finely cut straw, so as to induce plenty of exercise. Plenty of clean, sharp grit should be provided, and a hopper containing the following mixture kept before them at all times. The proportions given are by measure.

Eight parts bran.
Four parts corn meal.
Four parts shorts or middlings.
Two parts fine meat scraps.
One part fine charcoal.

Do not forget that "Eternal vigilance is the price of success" in the poultry business.—T. E. Quisenberry, Director, Mountain Grove, Mo.

Poultry at San Francisco.

D. O. Lively, Chief of the Department of Live Stock, Panama-Pacific International Exposition, to be held in San Francisco, Calif., in 1915, publishes this item in his press bulletin: "Poultry—Nothing less than a 12,000 bird show at San Francisco in 1915 will meet with the expectations of this Department and the leaders in poultry husbandry in this country. A futurity, a national laying contest that will reach its termination at San Francisco, and a truly international show are among the features that will attract attention. Extensive plans are being made by fanciers all over the world to be represented."

POULTRY NEWS AND ITEMS.

Incubators and brooders, efficient and cheap. Send to Belle City Incubator Company, Box 74, Racine, Wis., for free incubator book and it will please you.

A poultry farm in Maine advertises that shipments of day-old chicks to Montana and distant points are entirely successful.

Tells Why Chicks Die

J. C. Reefer, the poultry expert of 1866 Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This wonderful book contains some new scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent. of every hatch. Everyone interested in poultry should certainly write Mr. Reefer for one of these valuable FREE books.

FARM POULTRY HOUSES.

Samples of Bad Locations—Not So Large as They Ought to be—Dampness to be Avoided.

The farm poultry house is often located and constructed with little thought. One of the principal thoughts in its location has often been to have it as conveniently near the house as possible. This is not a good idea, if the poultry are not to be yarded, as it makes them a nuisance near the house. The farther away the house is, the less likely will it be that the fowls will make the life of the housewife a burden by the mud they track on the sidewalks and porches.

There are many poultry houses so badly located that it would be a profitable piece of work to tear them down and locate them elsewhere. The writer has in mind one farm on which the poultry house is a part of the barn and the fowls are given the run of the farm. On a visit to the farm the writer found about seventy Plymouth Rock fowls roosting chiefly on the wagons, carriages, plows and other implements kept in a big shed that was an adjunct to the establishment. It certainly would take a good deal of washing up to undo the dirty work done by the fowls. This man was a tenant and did not feel like going to the expense of constructing a poultry house in the proper location. But it was an illustration of an arrangement that ought not to be.

The location of the farm poultry house should be on high and naturally dry land. In this connection the writer remembers a poultry establishment in the outskirts of a village. It was on low and wet land, and in a wet time one could only get to the poultry houses by walking on boards. On a visit to the establishment, the man occupying it said that he had been there two years and had had poor success on account of the numbers of diseases he had to contend with. He said the previous tenant had abandoned the place for the same reason. In a year or so the last man gave up the effort to raise poultry under such unfavorable conditions. What is true in this establishment is equally true in principle with every poultry house. Farm fowls will not successfully endure dampness when that dampness continues through many months of each year.

Farm poultry houses should be larger than they generally are, or there should be more small ones. Probably the larger number of houses will give better results. It is very seldom that a farmer succeeds well with a large flock. His success is more likely to materialize if he has only a comparatively small number together. Then, if a disease breaks out in one flock, it can be kept from the other flock. If mites and lice get into one house they do not necessarily have to get into both or all of the houses. Moreover, for some reason hard to explain, birds in a small flock seem to thrive better than when many are kept together.

If a poultry house is built on high, dry ground, and is given a large amount of window space on the east, south and west, the best possible conditions will exist for the thrift of the flock, so far as the poultry house is concerned.

It should, as far as possible, be made an ornament to the farm, as should every other building that goes up on the farm. There is a value in beauty for the family and for the possible purchaser in the future, if it ever becomes necessary to place the farm on the market.

Watch These Things

By R. E. Olds, Designer

The leading cars this year have these features in them. They are things you should insist on.

Left Drive

Practically all the great cars of 1913 have the left-side drive. That means, of course, that others must adopt it.

They don't have projecting side lamps. They use electric set-in dash lights, as used on Reo the Fifth.

They are not under-tired. Skimpy tires, which double one's tire bills, are now much out-of-date.

Better Parts

Then today's idea among leading makers is to build enduring cars. To cut down cost of upkeep.

The best cars now, for years and years, will run as well as new. But that isn't so with cars hurried and skimped—cars merely made to sell.

Note what it means to build a really honest car.

Reo the Fifth is built of steel made to formula—steel that we analyze twice.

Its gears are tested in a crushing machine of 50 tons' capacity. Its springs are tested for 100,000 vibrations.

Each driving part, as a margin of safety, is 50 per cent overcapacity.

We use 15 roller bearings, costing five times as much as common ball bearings. We use 190 drop forgings, to avoid the risk of flaws.

A $75 magneto—a doubly-heated carburetor—tires 34x4.

Parts are ground over and over to get utter exactness. Engines are tested for 48 hours. Cars are built slowly and carefully. There are countless tests and inspections.

Every Reo the Fifth marks the best I know after 26 years of car building.

New Control

And it has the new control. All the gear shifting is done by a single rod between the two front seats. It is done by moving this rod only three inches in each of four directions.

There are no levers, side or center. Both brakes are operated by foot pedals. So both front doors are clear.

Men are coming to cars built like this. Last year's demand was twice our factory output. Every man who buys a car for keeps ought to know this car.

Write for our catalog and we will direct you to the nearest Reo showroom. They are everywhere.

R. M. Owen & Co., General Sales Agents for **Reo Motor Car Co., Lansing, Mich.**

Canadian Factory, St. Catharines, Ont.

(Gray & Davis Electric Lighting and Starting System at an extra price, if wanted.) (194)

Poultry News and Items.

"Any poultry flock is better off away from near neighbors. Three or four suburban lots that are handy and vacant will do."

"It is harder to keep the ground sweet, raise good chicks, maintain vigor in the adult birds on the village lot than on the farm."

"If your plot is square and your poultry plant is in the center, you are better off than if it was at one side."

"The idea of a one-man poultry plant is to own and care for hens and chicks to the limit of the single person's ability."

"Old poultry buildings may have red mites in big lots as well as filth and disease of many-years' standing."—N. W. Sanborn, in American Poultry Advocte.

Sales of Shorthorns.

In the year 1912, in Great Britain, were held sixty-seven sales of pure-bred Shorthorn cattle, disposing of 5,377 head at an average price of $176.36 per head.

Late in April old cabbage were selling on the St. Louis market at $9.00 to $12 per ton, and new cabbage from Texas at $24 to $25 per ton.

Read about the Book of Live Stock Champions on page 2. It is the greatest live stock book ever published.

LIVE STOCK BREEDERS' CARDS.

The NATIONAL FARMER and STOCK GROWER

is a first-class medium for the purpose of advertising pure-bred beef or dairy cattle, hogs and sheep, horses, jacks and jennets, goats and poultry. The circulation is always upwards of a hundred thousand copies, and the average of all editions in 1912 was 123,483 copies. We can let live stock breeders state what they have to sell for very little money. Breeders will find it to do astonishingly good service. Send your copy for an estimate to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

CARPENTER'S BEST BARGAINS.

Fifty Poland-Chinas, 40 to 200 pounds; twenty-five Durocs, 100 to 150 pounds. All of the Poland-China Hogs were sired by the great Meddler and Walbrige Boars and from some of the most noted Sows in America. Durocs sired by Mortgage Lifter and the mighty Col. Prince; Dams, TRY-STATE FAIR winners or others just as good. My catalogue and price list are free. Write for it and mention this paper.
THE GRANDVIEW BREEDING FARM, Marmaduke, Ark.

POLAND-CHINA PIGS.

Orders booked now for Spring Pigs. Will do to ship May. $12 and $15. Big, fine Pigs. Best of breeding. Come and see or write.
D. F. BEAUCHAMP, Meredosia, Ill.

TRUMANS' PIONEER STUD FARM,
Ameica's Largest and Oldest.

Importers of
SHIRE, PERCEHERON and HACKNEY STALLIONS.

Write for catalogue.

Address,
J.G.TRUMAN, Manager, Bushnell, Ill.

LARGE STRAIN POLANDCHINAS.

I am offering nothing but Spring Pigs at present. The best that money can buy. They have a tendency to make extra large ones.
S. R. GRIGG, Proprietor,
The Golden Ridge Farm, Mulberry Grove, Ill.

SINGLE COMB WHITE ORPINGTONS,
Cook and Kellerstrass Strains.

Eggs, $3.00 for 30; $7.00 per 100; from heavy-laying, large, massive, true-typed stock. Can fill orders promptly.
RAYMOND RUEBUSH, Sciota, Ill.

SALE OF HOLSTEIN CATTLE.
Cows, Heifers and Young Bulls.

I will sell the following high-grade Holsteins. They have plenty of quality and breeding and are in good condition.

50 Yearling Heifers and 50 1½-year-old Heifers—just being bred to a son of a 24-pound dam.

100 2 to 2½-year-old Heifers and 100 2½ to 3-year-old Heifers—bred to a high-class registered Bull; to freshen from December 1, 1912, to March 1, 1913.

250 Matured Cows, very heavy producers, springing up; ready to freshen soon; most of them in calf from registered Bulls.

A number of high-colored, registered Bulls, ranging in age from six months up, out of heavy producing dams, and selected especially to head choice herds.

Can fill any order, from one animal up. Have a small surplus of excellent registered Cows and Heifers I will dispose of. Write me regarding your wants.
JAMES DORSEY, Dept. F. & S. G., Gilberts, Kane County, Illinois.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.
WILLARD MILLER, R.F.D. 2, Anita, Iowa.

DOGS FOR SALE.—White and Silver Gray Spotted Shepherds, with glass eyes. Natural-born heelers. **J. C. BENTLEY, Brighton, Macoupin County, Ill.**

SADDLERS.

Forty Saddle Stallions, Mares, Colts and Fillies of the best Denmark and Chief blood. Special prices on Stallions for the next thirty days. **J. F. COOK, Lexington, Ky.**

PURE-BRED REGISTERED ANGORA GOATS,

Bred from the choicest strains of imported Angora Goats. Sweepstakes and First-prize Winners at the American Royal Show. Satisfaction guaranteed.
R. O. JOHNSTON, Lawrence, Kansas.

JACKS AND PERCHERONS.

We have twenty-five of the biggest and best mammoth Jacks in Kentucky and a few Percheron Stallions. We will cut the price from $100 to $300 per head on every one. We have a big stock of High-grade Percheron Mares, Hampshire Swine and big Black Pigs. Write your wants and visit the Cloverdale Farm.
H. T. BROWN & CO., Lexington, Ky.

TAMWORTHS FOR SALE. The Bacon Hog; the largest and most prolific breed; early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at the State Fairs of the year 1912, including a bunch of championships. Imported stock owned be me were winners at Royal Show, London, England, 1907. Mature Sows will fatten from 600 to over 700 pounds; Boars 1,000 to 1,200 pounds. **CHAS. FORD, Mortonsville, Woodford County, Kentucky.**

EGGS FOR HATCHING

From stock scoring 90 to 95¾. Write for mating list. Twelve standard varieties.
MUELLER FARM, Wellsville, Mo.

MILL CREEK STOCK FARM.
(The Home of the Starlights.)
THOS. H. EZELL, Proprietor.

Breeder and dealer in registered high-class Starlight Jacks and Jennets from four months to eight years old. (No partial Jacks.) A written guarantee. Send for catalog.

Long Distance Phone, Main 1326.

They Keep It Up

There are some cattle that give more milk when they are fresh than a Jersey, but there isn't any breed that gives as rich milk as

The Jersey

at as small feeding cost, nor is there any breed of cattle that will *keep it up* like Jerseys will, *year in and year out.* That's why you ought to buy Jerseys to increase your herd's efficiency. Send for Jersey facts.

AMERICAN JERSEY CATTLE CLUB
324 W. 23d St., New York

BLOODED STOCK NOTES.

At Atlantic, Iowa, April 8th, fifty-eight head of Aberdeen-Angus cattle were sold at auction at an average of $187 per head. The sale was on behalf of the estate of the late Walter Roberts. Godfrey Dreher, of Audubon, Iowa, paid $500 for a two-year-old bull, and William Williams, of Atlantic, paid $330 for a cow with bull calf at feet, these two purchases representing the high mark in males and females.

At Jackson, Miss., April 8th, W. J. Davis & Co. marketed thirty-nine head of Hereford cattle at an average of $251.41 per head. The twenty-one bulls averaged $273.80, and eighteen females at $225.28. The top price for a bull was $500, paid by Overton Harris, of Harris, Mo., and $490, paid by Lee Bros., of San Angleo, Texas, for another bull; and J. H. McCaskey, of Decatur, Texas, paid $480 for another. The top price, $300 for a female, was paid twice, once by M. A. Burford, of Independence, Miss., and the second time by J. W. Johnson, of Panther Burn, Miss.

The Mueller Farm at Wellsville, Mo., have some prize winners of the following varieties of poultry: S. C. Buff Orpingtons, Light Brahmas, S. and R. C. Rhode Island Reds, S. C. Brown Leghorns, White Wyandottes, Toulouse and Embden geese.

Attention is invited to the card of S. R. Grigg, of Golden Ridge Farm, Mulberry Grove, Ill., advertising large strains of Poland-Chinas. He is on the Vandalia Line, in Bond county, near the crossing of the Burlington Route, having elegant shipping facilities and fine stock to ship.

Under the management of Mr. W. N. Rogers, of McCook, Neb., various breeders sold fifty-five Hereford bulls for an average of $168, and fourteen females at an average of $136, making the grand average of $161 for sixty-nine head. Guy Swabb, of Murray, Iowa, paid $410 for the highest-priced bull, and J. C. Osborne, of Meadow Grove, Mo., paid $355, the highest price for a female. The sale was held at Omaha, Neb., in April.

At Botna, Iowa, April 16th, Chas. Escher & Son marketed nine Aberdeen-Angus bulls at auction for an average of $309 per head. The top-price bull was Bromo, a calf of September, 1911, which sold to R. W. Franks, of Renwick, Iowa, at $1,120. The fifty-two females averaged $269, and the top price, $530, was paid by W. H. Hurdle, of Holly Springs, Miss.

Attention is invited to the card of the American Jersey Cattle Club on page 21. The Jersey breed has many claims to merit in the economy of production and high percentage of butter-fat. Nobody ever lost money by raising and milking Jerseys. They are gilt-edge money makers.

A sale of Shorthorn cattle by D. R. Hanna, of Ravenna, Ohio, at Chicago, April 4th, resulted in an average of $426 for thirty-five head. Seven bulls averaged $482, and twenty-eight females averaged $482. The highest-priced bull was a calf of September, 1911, Village Chieftain, bought by H. G. McMillan & Sons, Rock Rapids, Iowa. The top-price heifer, Village Primrose, sold for $760 to Hearts' Delight Farm, Chazy, N. Y.

Attention is invited to the card of James Dorsey, of Gilberts, Kane county, Ill.. who has Holstein cattle for sale and is able to fit a farmer with some useful grades or a breeder with a top-notch selection of bulls and heifers.

At a sale held by Thos. Stanton, of Wheaton, Ill., held at Chicago, April 4th, the general average for fifty-seven head was $390; average for seven bulls, $588; average for fifty females, $362. Sittyton Sultan, calved June, 1912, a prize-winning bull, sold at $1,825 to James Yule, of Winnipeg, Manitoba; Howell Rees & Son, of Pilger, Neb., bought the cow Lady Cumberland and bull calf for $1,000; and James Yule paid $1,025 for the cow Sittyton Lady.

Attention is invited to the card of Thos. H. Ezell, of Mill Creek Stock Farm, R. F. D. 7, Nashville, Tenn., the home of the Starlight family of jacks and jennets, which includes some of the best in the United States. Mr. Ezell issues a catalogue that is worth looking over.

New York Eggs, April 30th, 1913.

Western fresh, storage-packed, firsts, 20½ to 21c.; fresh-gathered regular firsts, 19 to 20c.; seconds, 17½ to 18c.; do. thirds, 16 to 17c.; do. dirties, 16 to 13½c.; do. checks, 15 to 17c. Duck eggs—Western, 19 to 22c.; do. Southern, 15 to 19c. Goose eggs, 25 to 35c.

Don't get caught with leaky roofs when the spring thaws come

Remember the roof on your house, barn or other buildings that leaked a few drops last fall—a little investigation *now* may mean a *big saving* when you put on a new roof or replace an old one.

Certain-teed

(Quality *Cert*-ified—Durability Guaran-*teed*)

Roofing
in Rolls and Shingles

There is a ***Certain-teed*** Roofing and a simple method of applying it for every building on the farm. Look for the ***Certain-teed*** label of quality and 15-year guarantee on every roll and crate of shingles. Get prices from your local dealer—he will save you money.

General Roofing
The World's largest manufacturer of Roofings and Building Papers

Valuable Book Free You will find many valuable suggestions in our new book, **"Modern Building Ideas and Plans"**—it tells you what to do and what not to do—it suggests economies and conveniences that will save you money. A book of this kind would ordinarily sell for $1—but as it shows the use of our ***Certain-teed*** Roofing on all kinds of model homes and farm buildings, we offer it to you at 25 cents.

We prefer to have you go to your lumber, hardware or building material dealer, who will gladly get you a copy FREE. If you write us, enclose 25c to cover cost, postage and mailing.

Atlas Portland Cement.

Anyone who has cement construction on his mind will gain much information by writing the Atlas Portland Cement Company, Dept. 165, at 30 Broad street, New York City, and ask for a free copy of the Farm Book on Concrete Work. It is very instructive. Read the article in this issue on page 5.

The Great Ensilage Cutter.

Read about the Blizzard Ensilage Cutter advertised on page 5. Ensilage is the key to large and economical production of live stock. The Blizzard is a cutter par excellence.

A Great Horse Story

KATE and QUEEN

By Prof. Jesse Beery

Surpasses the famous "Black Beauty" "Kate" a victim of poor handling is vividly contrasted with "Queen" who was more fortunate. You sympathize with one—rejoice with the other.

Prof. Beery has woven into this intensely interesting story, many valuable suggestions for handling horses—a result of a lifetime's experience. Thousands praise it. Sells for 50c, but a limited number only will be sent for the names and addresses of 5 horse owners and 10c to cover postage and pack'g.

FREE With each book we also send **FREE** a beautiful colored picture of Queen—oil painting effect—suitable for framing. Send today.

Prof. Jesse Beery
Box 714, Pleasant Hill, O.

"Queen"

A BOOST FOR MUTTON.

Particularly Wholesome Food—United States Department of Agriculture Issues a Bulletin—Household Recipes, Etc.

Farmers' Bulletin 526, "Mutton and Its Value in the Diet," which has just been issued by the Department of Agriculture, tells of good ways of preparing old dishes and of new ways to utilize, and new dishes which can be made from mutton, and is the latest of the bulletins which have been given the popular name, "Uncle Sam's Cook Books."

Mutton and lamb have always been regarded as particularly wholesome, and there is reason for this belief, as shown by work of the Department of Agriculture. Of the two meats, lamb has been the more popular in the United States in recent years, perhaps because special attention has been given to raising it for the market and to extending its season. On the other hand, mutton is the favorite in England. The whole question is simply one of taste, and mutton in some form or other has always been a staple and favorite food, used in large quantities, and on account of its good qualities worthy of much more extensive use.

In composition and nutritive value mutton is practically the same as beef, and the average loss in weight in preparing the two kinds of meat for the table is also practically the same, yet mutton has for some time been a cheaper meat in our markets than beef. Buying in quantity is recognized as economical where the housewife has facilities for storage. There are many cases where a side of mutton could be economically purchased for home use where a side of beef would be too large for such a purpose. This would imply an economy in the selection of the mutton.

As regards digestibility, there is no practical difference in beef and mutton, both being very thoroughly assimilated. The characteristic flavor of mutton is commonly said to have its origin in the fat. It is generally relished, and may be developed or modified by various methods of cookery to meet the tastes of the family. That mutton fat can be used in the household in many ways has been demonstrated by experimeets which have been made with it.

The ways in which mutton can be prepared for the table are very numerous. Some of these are well known to the housewife, and others are less familiar. All are worthy of a trial, since the ability to make many dishes with any given foodstuff is an easy way of securing variety in the diet, which is so desirable. The housewife who wishes to economize can make many savory dishes from the inexpensive cuts of mutton, which are palatable as well as wholesome.

Judged by its composition, palatability, wholesomeness, digestibility, relative cost and the number of ways in which it can be prepared for the home table, mutton is an important foodstuff, which is well worth the attention of the housekeeper who wishes to provide her family with an attractive and palatable diet at a reasonable cost.

The Department of Agriculture bulletin on mutton and its value in the diet was prepared by C. F. Langworthy, Chief of Nutrition Investigations, office of Experiment Stations, and Caroline L. Hunt, Expert in Nutrition, who has had much experience in the study of scientific and practical problems relating to food. Miss Hunt made an extensive study of mutton cookery especially for this bulletin.

All who are interested in this subject can obtain a copy of Farmers' Bulletin No. 526 by writing to the Hon. Secretary of Agriculture, Washington, D. C.

Grapevine and Magazine Premium.

We are offering the most extraordinary value in a premium that will be found on page 27. The Ladies' Magazine for the household has no superior; there are some that cost more, but with no more intrinsic value. Then there is also a one-year's subscription to this publication, The National Farmer and Stock Grower; and the third item of the combination is an assortment of eight two-year-old grapevines. These are mailed direct from the most successful grape nursery in New York state, with directions for planting, care, etc. This is the accepted time to receive a dollar's worth that will grow in value and give great pleasure to the family. Fill out the coupon on page 27 and you will not regret it. It will not appear again this season.

CASH GRAIN AT ST. LOUIS.

Quotations on April 30th, 1913.

Wheat.—No. 2 red sold at $1.09 to $1.11; car No. 1 at $1.12; No. 3 red sold at $1.05; No. 4 red quoted at 90c. to $1.01; No. 2 hard quoted at 93 to 95½c.; No. 3 hard quoted at 92 to 93c.; No. 4 hard, about 90c.

Corn.—On track: Unchanged to half cent higher; good demand; No. 2 corn, 57½ to 58c.—mainly 58c.; No. 3 corn, 57c.; No. 4 corn, 56c.; sample grade, 49 to 51c.; No. 2 yellow, 58 to 58½c.—mainly 58c.; No. 3 yellow, 57 to 58c.; No. 4 yellow, 55½c.; No. 2 white, 60 to 60½c.—red cob, 61¼c.; No. 3 white, 58c. for poor.

Oats.—On track: Steady to half cent higher; demand good; No. 2 white, 37c.; standard, 36½c. to 37c.; No. 3 white, 35½ to 36c.; No. 4 white, 33¾ to 34½c.; No. 2 oats, 35c.; No. 3 oats, 34c.; No. 4 oats, 33c.

Hay Sales at St. Louis.

The following hay sales were made at St. Louis on the last day of April: One car No. 2 heavy clover-mixed at $11; part car No. 2 clover-mixed at $13; part car do. at $13.50; part car No. 1 do. at $14. Timothy—Part car thrashed at $9.50; two cars No. 3 at $12; four cars No. 2 at $13; one car part No. 3 at $13 and part No. 1 at $15.50; three cars No. 2 at $13:50; one car good No. 2 at $14; part car do. also at $14; two cars scant No. 1 at $14.50; one car No. 1 at $15; one do. at $16. Prairie—Three cars slough grass at $6.00; one do. at $6.50; four cars common No. 2 at $9.50; one car No. 2 at $11; one car No. 1 at $11.50; one do. at $12. Alfalfa—Three cars No. 2 at $11.50; one do. at $12; two do. at $13; one car scant No. 1 at $14.50; one car high No. 1 at $17; one car part No. 1 clover-mixed and part good No. 2 timothy at $14 round, delivered to St. Louis. Timothy—Two cars good No. 2 at $14; one car No. 1 at $15; one do. at $16, do.; two do. also at $16; one car choice at $17.50, do. Alfalfa—One car scant No. 1 at $14.50.

Goodyear Automobile Tires.

Automobiles wear out tires, that have to be replaced very much as a horse has to be shod. The automobile owner should investigate the tire question before the time comes to buy them, so that he decides in advance what he intends to buy. Automobile tires are now made by experts, and the best makes are well known. Probably the best showing at the present time is being made by the Goodyear Rubber Company, claiming the least cost per mile of any tire that's built. We advise our readers to send to the Goodyear Tire and Rubber Company, Akron, Ohio, and ask for a copy of the Goodyear Tire Book. It tells the whole story of the automobile tire. See page 7 of this edition.

Look Out ... For Worms This Month ... Look Out

Mr. Feil Is a Registered Pharmacist Under Ohio State Laws.

Read These Letters

I have been in the hog business for 30 years and have tried every known remedy for hogs, but have never found anything equal to your Sal-Vet. It certainly does the work and is easy to feed. I feed it to little pigs, boars, pregnant sows and find it O. K. I will never be without Sal-Vet.

C. F. MARSHALL & SON,
Per G. F. M. Monroe, Ia.

"I had a lot of sick hogs and I lost five of them. I began feeding them Sal-Vet, my losses stopped and the hogs soon got into a fine, healthy condition.

V. P. UNDERWOOD,
R. D. No. 1, Roachdale, Ind.

While I cannot say positively Sal-Vet kept my hogs from having Cholera, I had no such sickness while my neighbors almost without exception lost hogs from Cholera. I certainly have great faith in Sal-Vet and it is all and more than you claim for it.

J. C. CONOVER,
Chrisman, Ill.

I used your Sal-Vet regularly while feeding a bunch of fattening hogs and can say it is just the article. It made my hogs double their weight in 50 days. It is a great conditioner and worm destroyer—E. E. SHULL, LaCynge.

I'll Stop Your Worm Losses I'll Prove It Before You Pay

Don't let worms breed **contagious diseases** among your hogs this year. Don't let them kill off the young pigs and rob you of your season's profits. You can **prevent it** if you will just take "a stitch in time." **Now** is the time when worms begin to get in their **deadly** work. **Now** they are breeding, multiplying by the millions in the stomach and intestines, and if you don't get the best of them, they will surely get the best of you. Let me show you how. I'll get rid of stomach and free intestinal worms in your hogs, sheep, horses and cattle and prove it to your satisfaction (not mine) before you pay me a cent. I'll do it with

Beware of Imitations — SAL-VET — Look at the Name Carefully

The Great Worm Destroyer and Conditioner

I've done it for thousands and in addition they write me they never had stock thrive better, look better and bring them such profitable returns. Here is my offer to you.

Send No Money—Just the Coupon

Simply fill in the coupon, tell me how many head of hogs, sheep, horses and cattle you have. I will then ship you enough Sal-Vet to last them 60 days. You pay the small freight charge when it arrives—put it where all your stock can get free access to it—**and they will doctor themselves.** They eat it as they do salt—just as they need it, and at the end of the 60 days if you don't feel **satisfied,** write me and I'll cancel the charge. I take your word as final—I let you act as judge of its merit—I put everything up to you. How can you risk loss—how can you let your stock drag along when they should be thriving, growing into profit when such a fair, open offer like this is put at your disposal? You have all to gain—nothing to risk. Fill out and mail the coupon **now.** Don't put it off—lest you forget. Read the letters above.

Sidney R. Feil, Pres.—*The S. R. FEIL CO.*—Dept. NFSG Cleveland, Ohio

Prices: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12

60-day trial shipments based on 1-lb. of "Sal-Vet" for each hog or sheep, and 4-lbs. for each horse or head of cattle, as near as we can come without breaking regular packages.

[37] No orders filled for less than 40 lbs. on 60 day trial offer.

Sal-Vet always comes in original "Trade-Marked Packages. Never sold loose in bulk or by the pound. Look for the "Sal-Vet" trade-mark.

Sidney R. Feil, Pres. The S. R. Feil Co., Cleveland, O.

Ship me enough SAL-VET to last my stock 60 days. I will pay the freight and report results in 60 days and will then pay for it if it does what you claim. If it does not, you are to cancel the charge.

The Fruitman and Gardener.

We have made arrangements with the publisher of **The Fruitman and Gardener** whereby we can furnish both papers for the price of one. It is a limited arrangement on the co-operative plan that we help each other, giving our efforts towards increasing each other's business. **The Fruitman and Gardener** is all right in every respect, with a special talent in adapting articles for all climates. No better paper is published for the money, and we have selected it as the best of several that have been offered. Anyone who will send us the usual fifty (50) cents for one-year's subscription to The National Farmer and Stock Grower can select **The Fruitman and Gardener** for one year as a subscription premium. This offer will not last long, for the reason that the number we can accept on this half-price arrangement is small. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

WATERMELONS OR CANTALOUPES

How to Grow Paying Crops—Where Commercial Fertilizers Are Helpful and Profitable, and Not Expensive.

Whether one desires to raise watermelons or cantaloupes, the soil must be plowed deep and a good seed bed prepared. The object of deep plowing is to allow an abundance of water to be stored to be used by the crop when fruiting time comes. If the soil is not fertile it should be made so by applications of stable manure or commercial fertilizers, or both. The melon crop is a heavy feeder, and it costs no more to prepare the ground and cultivate it if one raises a crop that will net a hundred or more dollars to the acre, than one that yields little or no profit beyond the cost of labor.

It has been found by actual experiments that if the ground be treated with a complete fertilizer, applying from 500 to 1,000 pounds of a mixture containing four per cent. nitrogen, six per cent. available phosphoric acid and eight per cent. potash half sowed broadcast and the balance scattered along the drills, or in the hills, if this method of planting is preferred, will enable one to grow a very good crop, even if no barnyard fertilizer is available. If the soil is pretty sandy, more potash might be used with good advantage, and if the land has not been planted to a leguminous crop just previously, more nitrogen would also result in a larger yield, but an excess of nitrogen is to be avoided, for, as in other crops, it will result in too much leaf and vine.

A melon grower who never fails to make a good profit uses 200 pounds nitrate of soda, half applied at time of planting and worked well into the soil along the row, and the other half applied at the second cultivation. This hastens the growth of the young plants, and in a backward season is especially valuable in bringing the fruiting period earlier. The nitrogen is supplemented with 500 pounds of acid phosphate or bone meal and 150 pounds sulphate of potash, these fertilizers being broadcasted at the time the ground is prepared for planting.

This method of fertilizing is not expensive, and if a rotation can be followed that would bring cowpeas into the plan of farming the nitrate of soda may be finally dispensed with and no loss result.

For very early melons it is desirable to plant in a hotbed, either putting the seed in little thumb pots made of cones of heavy manilla paper, and filled with rich soil, or else take small squares of sod and cut a hole in each large enough to admit of planting two or three seeds. Pots or sods can be set closely in shallow trays and these can be taken out of the hotbed and carried to the field and the plants be removed to their permanent home without loss.

The field planting is the most general, and the hill and row methods are both used. The writer likes the latter the best, planting the seed in rows as far apart as for corn, thinning the young plants, when the rough leaves appear, to sixteen or eighteen inches apart, at the same time hoeing them pretty thoroughly. This is all the hand work they need, and they soon begin to vine if they are cultivated well, and when the vines once shade the soil they can take care of themselves.

Cucumbers can be grown in the same way and the bearing period hurried by pinching off the end of the vine, thus causing it to throw out laterals. If melons or cucumbers suffer from blight or mildew, the trouble may be checked by spraying with Bordeaux mixture made up of three pounds of copper sulphate, three pounds of fresh stone lime and fifty gallons of water. If one spraying does not check the trouble, follow it up with others.

About the only insect pest that attacks the melon and cucumber is the striped bug or beetle, which may be controlled by sprinkling with lime or tobacco dust. If this bug has been troublesome, all vines and rubbish should be raked from the patch or field in the fall and burned, as the insects may have found shelter there and will be destroyed.—D. C. Cornman.

GOOD ROADS ITEM.

Where Overseers Fail in the Construction of Roads.

It has been said that a good road consists of a tight roof and a dry cellar, and this is true in every particular.

No road can be lasting that absorbs water to any appreciable extent. No road can be lasting that has a subsoil sufficiently wet to keep the earth moist and spongy; these roads will always be rough and rutty, and no amount of surface work can remedy the existing condition.

When new earth is placed on the road and is subjected to the action of hoof and wheel, together with occasional rains, the grinding action of the wheel and the pounding action of hoofs compact the earth, break up its texture, it becomes puddled and then drying forms a hard, dense material practically impervious to moisture, and if the surface of the road is given the correct shape, the water falling from the clouds will drain to the side and away from the road rather than be absorbed by it. In this way an earth road can be made with a tight roof.

If water exists in the subsoil and the water table is sufficiently close to the surface to cause the earth to be continually damp, there is only one remedy, and that is, to drain this land in such a way as to drop the water table sufficiently below the surface that the surface becomes dry and also the ground for some distance below. By this means we get a dry cellar. In Colorado we will not be troubled much with wet soil as indicated above, only in places of small extent will drainage be necessary.

Our road supervisors are familiar with the poor construction of the surface of a road; that is, they give the new road the proper crown. This crown will force the water into the side ditches, as they are called. It runs down these ditches until it is delivered into some draw formed by the natural drainage of the country and passes away from the road.

Here is where more mistakes are made than anywhere else in road construction. Whenever there occurs a bad piece of road, nine chances out of ten it is because of the fact that the side drainage or the water in the side ditches is not taken care of properly. It is allowed to run down these side ditches parallel to the road until it comes to a low spot and there it collects until the whole road surface is flooded, and we have a mud hole formed that prevents heavy loads from being hauled over the road. The remedy for this is of course obvious, and as much care should be taken in the survey of the side ditches and precautions taken to relieve them of water as in giving a road the proper crown.

We must not forget that this water must be taken away from the road and never allowed to collect in ponds at the side of the same.—E. B. House, Colorado Agricultural Collins, Fort Collins, Colorado.

What Milly Learned.

"I guess I can't play with you any more, 'cause you tell things that aren't true," said Milly, and she ran down the path without even a good-bye for Dorothy. She did not see the pain in Dorothy's brown eyes as she looked longingly after her angry little playmate.

"Back so soon?" said Milly's mother when the little girl came into the sitting-room. "Wasn't Dorothy at home?"

"She's at home, but I know you won't want me to play with her any more. She tells awful stories," answered Milly.

"That dear little Dorothy! Why, it can't be; there must be some mistake."

"No: there isn't, mamma. They're out-and-out stories that anybody could tell weren't true. Why, she said she went to a Sunday school out in the woods the day after Christmas and they had swings and ice cream and they picked wild flowers. I told her that couldn't be so, and she said it was, too, and then she said that she went sliding on ice on her birthday in August. Now, aren't those stories?" demanded Milly. "No, dear, you have done Dorothy a great wrong. All that she has told you is true. You are a very little girl and have so much to learn about this big world. I know that Dorothy came from South Australia, and everything there is just the opposite from here, so far as seasons are concerned. When you are picking up bright-colored autumn leaves the children are looking for the first spring flowers. While you are dressed in flannels and furs and go ice skating they are wearing their coolest summer dresses and going picnicking and boating. In the spring, when you are watching for Robin Redbreast to make his first appearance, they are having autumn weather, and during your warm summer vacation they are having their coldest weather."

Milly's face wore a surprised and sorry look as she picked up her hat.

"I'm going over to see Dorothy," she said.

Dorothy, who was a most forgiving little girl, ran to meet her friend as she came up the path, and when Milly said: "You told what was true and I'm sorry I said you storied. I didn't understand, but mamma explained about climates." She gave her a happy kiss and they ran off hand in hand to playing in the doll house.—Janet Thomas Van Osdel.

Calvin—"I have my opinion of your rector. The idea of his preaching on humility! Why, he never goes to church excepting in an automobile!"

Martin—"I know he doesn't; but he uses a 1910 machine."—Judge.

Civic Beauty Pays.

No city in the world spends so much for making the city beautiful as Paris, and no other city receives anything like the same amount of money from the visitors of the world.

On the St. Louis market popcorn is selling on the cob at $1.00 to $1.60 per 100 pounds.

Three Indian Dolls For 30c.

And a year's subscription to the Universal Magazine. These dolls are pictures on linen and are ready to cut out and sew together. They are Indian Dolls—THE PRINCESS TAMBON and her sister and brother. The largest is sixteen inches high and the others six inches. Beautifully lithographed in four colors, all ready to cut out and sew. The handsomest Dolls ever put on the market. These Dolls are artistically garbed in correct Indian costume and require no additional dressing. They have real educational value. This Indian family will delight the heart of every child. The Universal Magazine is a nice, bright, cheerful, illustrated magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication.

Send us thirty (30) cents for one-year's subscription to the Universal Magazine and one set of Dolls, or fifty (50) cents for two subscriptions and two sets of Dolls. The Dolls and Magazine are sent postage paid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE IRON OF THE FUTURE.

The Story of a Valuable Invention—Corrugations Double the Load-carrying Capacity—The Resistance to Corrosion of High-purity Iron.

It has been said that a poet is one who can see romance and beauty in the life of his next-door neighbor; and the saying contains a truth that is applicable to men of genius of any sort. All the possibilities resulting from the power of steam existed before the day of James Watt's meditations of the raising of the kettle cover; the Chinese knew of the explosive force of gunpowder for a thousand years, and never thought of making it send a bullet; and hundreds of generations of men had bent their backs with the toil of the harvest field before one appeared who could apply the ages-old principle of the shears and produce the modern reaper.

In the early nineties, James H Watson was a drug clerk in Crawfordsville, Ind. He was doing exactly the same work as ten thousand other drug clerks, and might have dispensed soda water and ipecac to the end of his days, but for the quality which he shared with the poet and the artist, of discerning the wonder and promise of the things that lay nearest at hand.

Like all the rest of his trade, he had handled bottles without number, encased in the familiar pasteboard coverings designed to protect them from the shocks of travel. Unlike the others, however, he found in the construction of these little cylinders qualities that seemed worthy of close attention. The feature which engrossed his mind was the great strength and rigidity of the contrivance in proportion to the material employed. This he found by experiment was vastly greater than in a plain pasteboard tube of the same weight, and he traced the cause to the corrugated form into which it had been pressed. "I wonder," he said to himself one day, "how that would work in metal." Then and there was the beginning of the corrugated iron culvert.

There soon appeared on the market a new form of pipe. It was made from sheet iron, rolled into circumferential corrugations about half an inch deep and two inches wide. The first corrugation of each two-foot section overlapped with the last corrugation of the preceding, making a joint which was actually stronger than the remainder of the pipe. The strength of the new construction was altogether surprising; the weight which it would sustain seemed almost without limit. After it had run the gauntlet of doubt and criticism and given practical demonstration of its efficiency, the learned ones came forward with the explanation that its load-carrying capacity was due to the fact that its design was practically a constant repetition of the I-beam, and that the rigidity of a sheet of metal rolled into corrugations half an inch deep was more nearly comparable with one half an inch thick than with that of a smooth sheet. In other words, its potential thickness had been enormously increased.

The corrugated culvert was light, strong, easily and quickly installed, and by virtue of its quality of elasticity, especially adapted to situations where it was difficult or impossible to secure a solid and permanent foundation. A shifting in the substratum that would mean the utter downfall of brick, stone or concrete, only caused the new culvert to sink or bend sufficiently to accommodate itself to the new conditions without interfering in the least with its usefulness. It could sustain its own weight and that of the water it carried for a considerable distance, and so was just the thing for many places where the outlet was on a bank or fill. A wagon-load of this material would take care of almost as many road crossings as a car-load of the heavy and rigid constructions which had preceded it.

The earliest makers had an eye to permanence also. They used charcoal iron or other high-grade stock which was fairly rust-resistant; and there are examples of their product which are doing yeoman service today. It was, however, soon evident that all manufacturers were not so scrupulous and that the benefits of the invention would be nullified unless a material were employed which was capable of resisting the action of the elements for very long periods, for the potential thickness of the new pipe in resistance to external pressure shrunk immediately to the actual thickness of the metal employed in respect to resistance to corrosion. With ordinary iron or steel the corrugated culvert is little better than a temporary expedient.

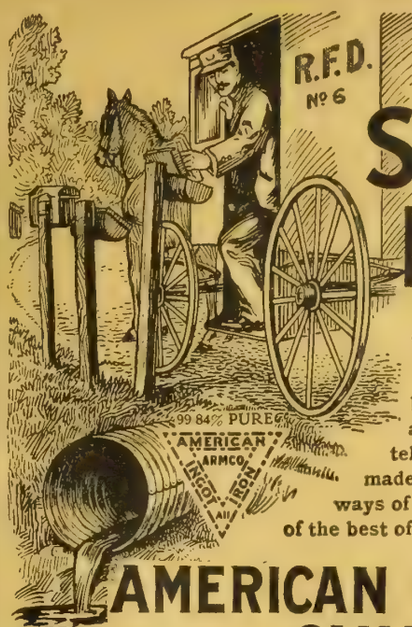
This was the culvert situation at the time of the appearance of high-purity iron. It is doubtful if in the progress of science and invention two discoveries were ever made which so exactly supported and completed one another. The gasoline engine and pneumatic tire, which together have made possible the automobile, constitute perhaps the closest parallel. Here was a form of pipe construction which so multiplied its strength that sixteen or fourteen-gauge metal would do the work of heavy-plate steel; and now came a material of such resistant character as to correspondingly increase its lasting qualities. High-purity iron was adopted by all the better-grade culvert makers, and the corrugated metal conduit became the basis of a great industry.

The remarkable success of pure iron, when used for culverts and storm drains, has very naturally led to a demand for its use for all sorts of exposed iron work. The United States Reclamation Service began specifying iron of the highest possible degree of purity for pipe lines; railroad engineers demanded it for boiler tubes and the roofs of locomotive round-houses; irrigation companies installed gates and outlets of ingot iron and many miles of semi-circular flumes. For these the corrugated form is employed where great strength and rigidity are required, and a smooth type for other conditions. The metal flume is light and easily transported; can be made perfectly water-tight; and, if made from pure iron, will last for a lifetime. It is an interesting fact that the semi-circular form gives the very greatest water-carrying capacity of any type of conduit in proportion to the material used.

Until very recently the field of irrigation pipe was occupied almost wholly by a sheet-steel product. High-purity iron, like every other really good thing, costs more than an indifferent substitute, and the proposition that the actual cost of an article is the price paid, divided by its term of service, is not yet clear to everyone. However, some of the more far-seeing land owners are beginning to install the high-quality product, and the future will no doubt prove the wisdom of their choice.

Quite a serious problem in irrigation is the selection of the best type of small outlet checks or gates. Wood is comparatively cheap and easy to obtain, but in most irrigating sections its period of usefulness is not more than two or three seasons. Concrete is largely used, but it is heavy and clumsy to manipulate, is never very nearly water-tight and is wholly immovable. Many ranchers on the Pacific Coast now believe that they have found a solution in a piece of corrugated pipe, running through the ditch bank, and fitted at the inlet end, with a metal slide, working through a slot cut in the upper half and seated in a groove rolled in the metal. As in the road culverts, the corrugations very much decrease the danger of washing out; but where conditions are such that trouble may still arise from this cause, it is a simple matter to have the pipe fitted with a metal collar or bulkhead. This type of gate is sufficiently water-tight and very light and convenient. The use of a rust-resisting iron makes such a device practicable and reasonably permanent.

Any practically observant person can instance a hundred uses for an iron which will endure exposure. It is probable that we are entering upon a period in all branches of industry wherein there will be less of cheap, rapid and ill-considered construction, less talk of mileage and tonnage, and more effort toward durability, symmetry and permanent worth.—B. G. Marshall.



A Year's Subscription Free to You

THE Highway Magazine devoted to the cause of "Good Roads" is now read by more than 50,000 tax payers and officials every month. It tells about the progress that is being made in the improvement of the highways of the country and advocates the use of the best of road materials, including

AMERICAN INGOT IRON
Guaranteed **CULVERTS** 99.84% Pure

This magazine is beautifully illustrated, with handsome colored covers, and is an addition to the reading table of the home. It explains in readable style the reasons for recommending certain road materials and discouraging the use of others, and points out the fundamental principles of economy in road making and maintenance.

Send us your name and the name of the man who is responsible for the roads in your township, and we will put you on our complimentary mailing list, and send you the Highway Magazine regularly for a year, FREE. Write today.

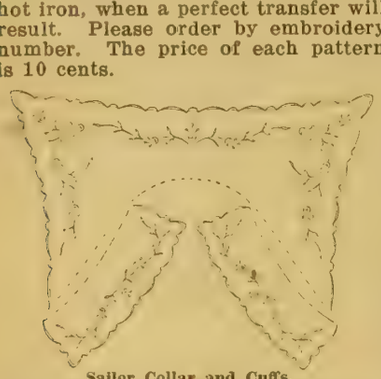
Publisher HIGHWAY MAGAZINE

532 Walnut Street Cincinnati, Ohio

CHARCOAL IRON CORRUGATED CULVERT INSTALLED AT CRAWFORDSVILLE, INDIANA, IN THE YEAR 1896. See article on this page, entitled "The Iron of the Future." See also advertisement of Highway Magazine and send in the name of the Road Overseer of your township.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down, and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number. The price of each pattern is 10 cents.



Sailor Collar and Cuffs.

No. 729.—Design for embroidering a sailor collar and cuffs.

Appropriate Panels and Sprays.

No. 726.—A design for embroidering a blouse front or any object for which small panels and sprays are appropriate. The largest panel is seven and one-quarter inches deep; the shorter panels are five inches deep.

For Yoke and Sleeves.

No. 728.—Design for embroidering the yoke and sleeves of round-neck night gown. Especially adapted to May Manton's Pattern No. 7742.

Collar, Cuffs and Belt.

No. 731.—Design for embroidering the collar, cuffs and belt of a child's dress.

Collar, Sleeves and Belt.

No. 731.—Design for embroidering the collar, sleeves and belt for a child's dress.

Towel End Cross Stitch.

No. 725.—Design for border or towel end in cross-stitch style. Two transfers eighteen inches long are given.

Each embroidery pattern is 10 cents, and is well worth the money.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Rice Recipes.

Rice is the main article of food for a goodly proportion of the human race, and with milk or gravy to supply the other essentials of a balanced ration it contains great food value. It is easily digested, and is therefore a favorite in the sick room, while the great variety of appetizing methods for cooking it should render it a staple produce in a far greater number of homes.

Boiled Rice.—After carefully looking over and washing the rice, pour it gradually into four times its bulk of boiling water. Lift it up carefully with a fork once or twice and shake the kettle to prevent its scorching on the bottom, but avoid stirring, as this will break the grains. Boil twenty minutes, remove from the fire and pour off any water which may be left. Set back where it will dry out and finish swelling but will not burn. The grains should be whole, light and fluffy, instead of the pasty mass which the name so often implies. If milk is used in the cooking instead of water, the product will be much richer. Serve with cream and sugar; or, cooked as a part of the vegetable dinner, it is excellent eaten with gravy like potato.

Rice Omelet.—Beat separately the yolks and whites of three eggs. Add to the yolks one-third cupful of milk or water, one-half cup of boiled rice, two tablespoonfuls butter, salt and pepper, and, last of all, the beaten whites of the eggs. Cook rather slowly.

Rice Snowballs.—One cup cold boiled rice, the whites of three eggs, three spoonfuls sugar, one teaspoonful melted butter; mix well and make into balls. Set in a baking pan and bake for ten minutes, but avoid browning. Pour over the beaten whites of three eggs with three teaspoonfuls pulverized sugar; flavor with lemon and return to the oven to harden but not to brown. Serve with whipped cream.

Rice a la Creole.—Boil six ounces of rice in a kettle of water for five minutes; drain. Fry six ounces of bacon that has considerable lean and cut into inch squares until nicely browned, with a slice of onion and some green pepper. Then add the rice and three cupfuls of the water in which it was cooked. Cook in a double boiler until tender. Season with salt and pepper and a cupful of tomatoo sauce. Garnish with slices of meat.

Rice Pudding.—To nine cupfuls of sweet milk add a cupful of rice and a cupful of sugar. Season with salt and nutmeg. It is better to soak for an hour before putting in the oven. Then bake in a moderate oven, stirring it up frequently from the bottom and also stirring in the brown crust which forms at the top. When the rice is tender and the pudding of a rich creamy consistency, it is done. Serve either hot or cold, as preferred. If bits of butter are placed around the edge of the pan before baking it will be less likely to run over.

Burbank's Crimson Winter Rhubarb.

A PREMIUM worth a fortune. A plant that can be grown in paying quantities on any small piece of ground, also in the house cellar. Returns $1,000 profit per acre. This is a creation by the famous plant specialist, Luther Burbank, of California. Rhubarb is a universal plant, and this Burbank's Crimson Winter Rhubarb is the King of the entire species, producing stalks of medium size, twelve to eighteen inches long, and producing them in all the fifty-two weeks of the year, whereas the productive life of common sorts is twelve weeks.

Burbank's Crimson Winter Rhubarb—Improved by Wagner.

A few roots of Crimson Winter Rhubarb will supply a large family and at the same time increase roots to enlarge the crop. We have decided to use a few roots of Burbank's Crimson Winter Rhubarb in connection with the Subscription Department of The National Farmer and Stock Grower.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains many good poultry facts, etc., etc., etc.

THIS IS A DOLLAR PROPOSITION.

Send us One Dollar ($1.00) and we will credit you with two-years' subscription to The National Farmer and Stock Grower, we will send you by mail prepaid Six Roots of Burbank's Crimson Winter Rhubarb, and we will also send you a copy of J. B. Wagner's booklet, entitled "RHUBARB FOR PROFIT." This premium is in line with the policy of the publishers of The National Farmer and Stock Grower to furnish premiums that can be developed. Rhubarb is never dormant in warm climates, and in any country the roots can be planted any time the frost is out of the ground. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Rice Pie.—Boil half a cup of rice in half a pint of milk and water until very soft; rub through sieve and add half a pint of cream, three beaten eggs, a pinch of salt and a cup of sugar. Pour into the tins previously lined with a rich crust and bake twenty minutes.

Rice Cups.—Butter the inside of as many cups as you wish plates and put into each boiled rice, pressing it firmly against the sides and bottom and hollowing out in the middle. Fill the middle with cooked fruit of any kind, first draining off the juice; cover with rice and set aside to firm. Serve with cream and sugar. Fresh fruit in its season is fine served in the same way.

Lemon Rice Pudding.—Boil a cupful of rice in a quart of milk until soft. Add while hot the beaten yolks of three eggs, juice and grated rind of two lemons, eight tablespoonfuls sugar and a pinch of salt. It should be a little thicker than boiled custard. Turn into a pudding dish, beat the whites of the eggs very stiff with six tablespoonfuls powdered sugar; spread over the top and brown slightly.—Bessie L. Putnam.

Bull Calf Brings $3,000.

From Middletown, N. Y., April 30th, it was reported that John Arfman, of Fairmount Farm, Middletown, N. Y., had sold the six-weeks-old bull calf King Pontiac Alcartra Pietje to Dr. H. B. Hand, of Scranton, Pa., for $3,000. The sire of the calf is the $10,000 bull, King Segis Pontiac Alcartra. The dam of the calf is Fairmount Zerma Segris Pietje. She produced 35.61 pounds of butter in seven days, a junior four-year-old world's record.

Value of the Lingo.

"Learn to speak French. Then things won't cost so much in Paris."

"Oh, you can't make 'em think you are a Frenchman."

"No; but sometimes you can make 'em think you are a Russian or a Spaniard."—Washington Herald.

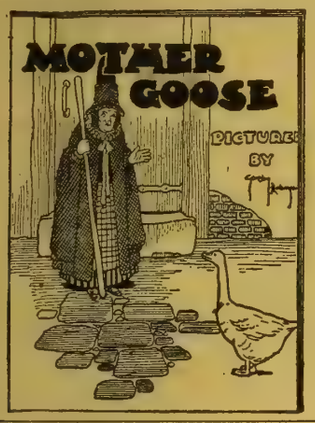
TOY BOOK PREMIUMS.

Pleasure and Instruction For Children, Especially During the Holiday Season.

We are always on the lookout for something that will please the children and at the same time be of an educational advantage to them. Our beautiful toy books, the first we have ever used as a subscription premium, are delighting the hearts of the little ones, and we are greatly pleased to consider these books as one of our very best premiums. We are issuing these toy books as supplementary premiums to The National Farmer and Stock Grower. These toy books are substantial, beautifully colored and illuminated. The illustrations are astonishing in the delightful colorings. There are four sets. They are as follows:

Animal Series.

No. 101—Three Bears.
No. 102—Three Kittens.



No. 103—Ten Little Pigs.
No. 104—Noah's Ark.

Fairy Tale Series.

No. 107—Sleeping Beauty.
No. 108—Little Tom Thumb.
No. 109—Puss in Boots.
No. 110—Little Snowdrop.

Mother Goose Series.

No. 113—Mother Goose.
No. 114—Cinderella.
No. 115—Jack and the Beanstalk.
No. 118—Little Red Riding Hood.

Little Darling Series.

No. 119—A B C at the Zoo.
No. 120—Railway A B C.
No. 121—Dainty Darlings A B C.
No. 122—Nurseryland A B C.

In offering these delightful toy books we make several propositions:

1. Send us twenty-five (25) cents for six-months' subscription to The National Farmer and Stock Grower and you can select one set of four (4) toy books.

2. Send us fifty (50) cents for one-year's subscription to The National Farmer and Stock Grower and select two sets of four (4) toy books as a premium.

3. We publish the Universal Magazine. It is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. Send us twenty-five (25) cents and we will send you the Universal Magazine for one year and you can select a set of four (4) toy books as a premium.

Order toy books by numbers. Select either four you desire. Address your orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Ripping Story, Old Chap!

Sir Donald Mann, of the Canadian Parliament, is stopping at a local hotel.

"The other day," said Sir Donald, "I witnessed a funny scene in a refreshment room of the Canadian Pacific station in Montreal. An Englishman was sitting at one of the large tables, and next to him a man who seemed to belong to the humbler walks of life.

" 'Please pass me those potatoes,' said the man to the elegant gentleman. The latter slowly focussed his eyeglass on the speaker and haughtily asked: 'Did you think I was one of the waiters?' I expected to see our poor friend shrivel up, but he turned and beckoned to a waiter:

" 'George, come here, please.'

" 'What is it, sir?' asked George.

" 'I want to apologize to you. You see, I mistook this party here for you, but I hope you won't be offended at it. And now pass me those potatoes.'

"That's what you call a boomerang, eh, what?" laughed Sir Donald.—New York Press.

Elasticity of Language.

Dr. Osler tells the following to illustrate the elasticity of the English language, as used by the Southern negro.

One day there came to the clinic a negress with a broken jaw. The examining physician, intent on discovering the exact nature and extent of the injury, asked numerous questions. To all of them the negress returned evasive answers. Finally she admitted that she was "hit by an object."

"Was it a large object or a small object?" asked the physician.

"Tolle'by large."

"Was it a hard object or a soft object?"

"Tolle'by hard."

"Was it coming rapidly or slowly?"

"Tolle'by fast."

Then, her patience exhausted, the negress turned to the physician. "To tell the truth, doctor, I was jest kicked in the face by a gen'leman friend."—Everybody's.

Utilizing the Telephone.

"I was standing in the lobby of a New York hotel late one night recently," said H. L. Palmer, District Agent of the New York Telephone Company at Jamaica, "when one of the telephone operators at the hotel switchboard approached the manager, with whom I was talking, and said:

" 'What do you think that man in Suite 23 asked me to do? He said his wife had gone to the theater with some friends and had left him with the two children, who were fast asleep. Could he leave the telephone off the hook while he came downstairs and walked about the lobby for a change, and would I call him if I heard the children wake up and cry?' "—New York Tribune.

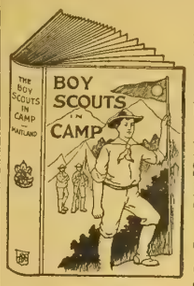
St. Louis is a famous horseradish market, and this season prices are low, $1.50 to $2.50 per barrel being paid for loose supplies delivered by farm wagons.

A PREMIUM FOR BOYS.

A Series of Books Offered as a Premium to The National Farmer and Stock Grower.

This is a proposition for boys who are ambitious to become good, strong men in mind and body. The Boy Scout Movement is by far the greatest and best influence in boys' lives. BIG BOYS, LITTLE BOYS of city, town and country are intensely interested in stories of adventure, the tales that have a dash and go to them, that carry the reader along from beginning to end with absorbing interest and enthusiasm.

We have obtained the books of the Boy Scout Series, written by Colonel George Durston and Major Robert Maitland. These are tales in which the Boy Scouts figure as characters. The books are such that they are never let go for a minute until read through and through. The titles of the books are as follows: No. 1. The Boy Scouts in Camp. No. 2. The Boy Scouts to the Rescue. No. 3. The Boy Scouts on the Trail. No. 4. The Boy Scout Fire Fighters. No. 5. The Boy Scouts Afloat. No. 6. The Boy Scout Pathfinders. No. 7. The Boy Scout Automobilists. No. 8. The Boy Scout Aviators. No. 9. The Boy Scouts' Champion Recruit. No. 10. The Boy Scouts' Defiance. No. 11. The Boy Scouts' Challenge. No. 12. The Boy Scouts' Victory. Each book is nicely bound in cloth, of handy size, and each one is a treasure that any boy will be glad to have.



We are going to make it easy for any boy to get these books. The National Farmer and Stock Grower is published at fifty cents a year. Any boy who will get us one subscriber and send us fifty cents to pay for same can select any two of these books, which we will send as subscription commission, postage paid, safe delivery guaranteed. If he wishes to receive two more books, all he has to do is to send us one more subscription and the fifty cents to pay for it. For six one-year subscriptions the entire set of twelve books will be sent. Boys can start a library with a full set of Boy Scout Books and take it in turns reading them. Address all orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Barb-wire Bargains.

A few cars of new barbed wire that had been under the water for a day or two were sold to A. J. Child & Sons, and it is advertised at bargain prices. See page 12.

A Splendid Seed House.

The A. W. Schisler Grain Company do a splendid business in reliable seeds. It is safe and advantageous to do business with them. Write to the A. W. Schisler Grain Company, 708 North Fourth street, St. Louis, Mo., and ask for the Golden Arrow Seed Catalogue.

Star Brand Shoes on Sale.

A very large proportion of all hides and skins produced by farmers by raising cattle, sheep and goats enter into the making of shoes. Shoemaking used to be an exclusive Eastern industry, and money was expended unnecessarily in freight bills going and coming. Of recent years shoemaking has become a Western industry, and shoes are much better and cheaper by reason of the change, because the waste in transportation and in other ways has been recovered and put into the shoes. Roberts, Johnson & Rand Shoe Company, of St. Louis, have demonstrated that a great shoe business can be built up by them in the West, and on page 4 one of the leading brands is advertised. This firm has cut out the wholesaler's profit as another economy, and sells direct to 20,000 retail merchants, who have proven by handling them that "Star Brand Shoes Are Better." The advertisement on page 4 is worth reading.

Deafness Positively Cured

Cure Yourself at Home.

Five Minute Treatment Will Convince the Most Skeptical. Head Noises Relieved from the First Trial.

You Won't Have to Strain to Hear.

Nature's Own Way Is the Best Cure. Send the Coupon.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. Dr. L. C. Grains Co. (Physicians and Scientists), will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today, or send the coupon to Dr. L. C. Grains Co., 938 Pulsifer Bldg., Chicago, Ill., and get full information of this new and wonderful discovery, absolutely free.

FREE Information Coupon

DR. L. C. GRAINS COMPANY
938 Pulsifer Bldg., Chicago, Ill.

Please send me without cost or obligation on my part, complete information concerning the new method for the treatment and cure of deafness or head noises. If I wish you to make a diagnosis of my case after hearing from you, you are to do so FREE OF CHARGE.

Beautiful Apron Premium.

To introduce our splendid Universal Magazine we are offering a useful fancy apron as a premium. Hand-embroidered tea aprons are always in great demand among ladies and girls, and this is an article anyone would be proud to own. We offer this beautiful apron, stamped on fine white lawn, including piece for pocket and strings, also a year's subscription to our popular Universal Magazine, filled with choice stories, departments for all the family, thirty-two pages, etc., all for only thirty cents. Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE DECORATION OF THE HOME.

Address of Mrs. James C. Bradford, Before the Homemakers' Association.

In speaking of the decoration of the home it is well to consider the influence of environment upon the formation of taste and character, and the importance of surrounding the child with things of beauty and refinement. The home is the center of the life of the family. From the home emanates all the influences that go to build up the character of the family. As the child's home is, so is the child, the boy, the man, the citizen. The home should shape and form his moral, physical and mental character.

The very foundation of the state is the home, and the farm home is the home upon which the very life of the people depends. Hence the great cry: "Back to the farm." We expect the farm home to solve many of the perplexing economic and industrial questions of the day, upon which the judicious reduction of the cost of living so much depends. The farmer's home must be an anchor to keep the farmer on the farm, so that the farm may be an inheritance, a precious legacy to the children of the farmer, who will feel that the great agricultural interests of the country are their own, so that some of the great wealth of the country may remain in the farmer's hands.

The ultimate need is better rural life in the development of community effort and social resources. There is no education without a good school, and no social intercourse without good roads. The farmer's home should be the most important factor in the rural life of the community, contributing to the social, moral, educational and religious life of the community. In this day and generation the school goes hand in hand with the home. In our development they have a most reciprocal influence. But the home must set the standards. So great is the reciprocal influence of home and school that some one has said: "The home may well be made the center of rural school teaching. The school is capable of changing the whole attitude of the home life, and the part that women should play in the development of the best country living."

To attain a more thorough knowledge of better methods of living in the farmer's home, it is necessary to have a better community life in the country, which is accomplished by greater facilities for bringing people together. We need better roads, better educational advantages; clubs for the study of all that pertains to the betterment of the home and school should be formed. Then we will know that which will make the home and the school more beautiful and more attractive, so that children may love the home, and they may love the school.

In considering the beauty of the home, the location, the construction, and its relation to the outside, environments must not be overlooked.

The interior decoration and the construction of the house must conform to all the requirements of the decorator—for good interior decoration has its beginning in good architecture. A room which has good lines, good proportion, requires less decoration, and looks much better than one not so constructed.

Proportion is "good breeding in architecture." There are a few fundamental principles of artistic decoration which one must consider. Proportion of room, its location and its color harmony. In the room to be decorated there must first be good lines. If the room is too high the effect of lowering the ceiling may be attained by allowing the ceiling paper to be dropped to meet the wall paper, and put a picture moulding where the ceiling paper and the wall paper meet. A low ceiling may be made to look higher by using a striped paper from baseboard to ceiling, but one must avoid big stripes, as stripes must be unobtrusive and of same color-tone as background of paper.

Limiting door space adds to the wall paper. After line and proportion comes color scheme. The color treatment of a room depends upon the quantity and the quality of the light in the room and its location. Harmony and appropriateness are to be carefully watched in the selection of colors. Harmony in color is the selection of colors somewhat in the same tone, or of contrasting colors of the same depth of tone. Contrasting colors emphasize each other. Red, green and blue are the primary colors. A knowledge of complimentary colors is important. Colors when combined should make a harmonious tone, altogether harmonious and pleasing to the eye. These colors form the strongest contrast. There are cool colors, such as blues in various grades, grays and apple greens; the warm colors are the reds, golden browns, pure gold, olive green.

Colors are also classified as grave, gay, or sober. In the selection of color schemes for a room, one must first consider the harmonious whole, which depends upon the background. In a room in which the walls are colored bright red, and the floor covered with a bright green rug, the contrast between the two will make both stand out and will be offensive to the eye. If the background of floor and the walls is so striking, it is difficult to have furnishings blend with the color. Better to have one prevailing color as the predominant tone, or, rather, two contrasting ones. The background depends upon the floor color, the wall color and the hangings. In selecting these colors we must be guided by what is called gradation of color. The strongest color should begin at the base, which is the floor. The walls should represent the next lighter color, and the ceilings the last and third lightest color in the gradation. Therefore, the floor, wall and ceiling should have a certain relation to each other, as they are the setting or background of the furnishing, which includes furniture, curtains and other accessories in the decorations. Hangings and furniture cover should blend into the walls and the floor.

In summing up the principles and rules of good taste in furnishings and decoration there are a few simple rules that should guide one. Simplicity of treatment, floor covering, the size of the room, height of ceiling and location of the room, and all that pertains to cleanliness and sanitary conditions. Simplicity is the first law of good taste. The Japanese understood this to a very great degree. The bric-a-brac and dust-catching articles were kept in cupboards.

In decorating begin with the fixed stationary parts, floor, walls, ceiling. Furniture, draperies, pictures, bric-a-brac are used to complete the picture. To secure good results, attend first to the floor. It is the foundation color. Carpet, if used, should conform to the conditions of the room. The size of the room will determine the size of the figure in the carpet. Have your design restful to the eye. Bare floors with rugs are much more sanitary and pleasing. Furniture should conform to the room and its uses. The choice of furniture is determined by the use to which the room is to be put. The cost of an article of furniture is not the measure of its value. Pictures not alone adorn the home, but should be selected for the development of the taste and character of the family. Good photographs and good prints help to educate the taste of the child. Framing and hanging of pictures are essential. Pictures are more desirable than bric-a-brac. Put bric-a-brac, if it is good, in a cabinet.

Plants and flowers add much to the beauty, grace and harmony of the decoration. Window boxes add much to the beauty and pleasure of the home.

Appropriateness and the eternal fitness of things should always be considered in the decoration. One beautiful picture, comfortable chairs, a table that will hold something, will add to the simplicity and comfort of the house. Above all things, study comfort and the restfulness of the home, for it is the place where the good man, after the day's labor is over, goes for rest and comfort.

Girl Makes Corn Record.

One of the many interesting stories in connection with last-year's corn-growing contests is that of Miss Pauline May, of Macon county, Alabama, a girl in her teens, who grew 114 bushels and 51 pounds of corn on one acre, and has a certified record of that achievement. Miss May is believed to be the champion girl corn grower. She did all the work in connection with her crop and wrote to The Southern Field as follows:

"My method of cultivation was this:

"The land was broken March 20 and the corn was planted April 1. It was harrowed, cultivated, scraped, harrowed again and scraped twice.

"The corn when gathered was worth $1.00 a bushel. The total expense was $31.82 and the value of my crop was $114.91."

That's what a girl did on a Southeastern corn field. Doesn't it illustrate what progressive farmers can accomplish in this favored region?

She Didn't Intend To.

A middle-aged couple, made suddenly rich through an unexpected turn of fortune's wheel, were visiting the Senator from their district at his Washington residence.

At breakfast the first morning after their arrival, the woman, nervously trying to chip off the top of her egg with her knife, attacked the problem with so much zeal that the egg was knocked out of the cup and rolled under the table. Not knowing just what was the proper thing to do under the circumstances she nudged her husband.

"Hank! Hank!" she whispered. "I have dropped an egg. What shall I do?"

"Don't cackle," came the matter-of-fact reply.—Exchange.

Intense Torture.

"How dare you advertise that you do painless dentistry?"

"Did I hurt you, miss?"

"Absolute torture. You talked for five minutes at a time when I couldn't interrupt."—Puck.

LICE AND MITES

And how to get rid of them is a problem many poultrymen cannot solve. It is very easy if you use **Licecil Compound.** Simply hang the bottle in the coop, the vapors leaving the bottle are three times heavier than air and descend in a misty form, penetrating feathers, cracks and crevices. Lice have no lungs and breathe through the pores of their body and positively cannot live in this vapor. It is not necessary to paint, spray or dust. **Licecil** is so easy and convenient to use. Write **METZGER CO., No. 28, Quincy, Ill.,** for free circular telling of this marvelous preparation.

25 cts. a week Buys this High Grade Drop Head Sew Easy Sewing Machine Guaranteed 25 years. Shipped direct from factory. We save you money. You use machine while paying for it. It has all the latest improvements. Write us to day. Sheffield Mfg. Co., 1421 Olive St., Dept 271 St. Louis, Mo

The Universal Magazine

Is a splendid monthly publication; nice, bright, cheerful, illustrated; 32 pages, three columns to page. Send for Sample Copy, or, what is better, send fifty cents, and we will send you the **Universal Magazine** for two years; we will also send one set of **Eight Hardy, Everblooming Roses,** one-year plants; the finest collection. They are **Rhea Reid, The Bride, Etoile de Lyon, Brides-maid, Champion of the World, Papa Gontier, Bessie Brown** and **Crimson Rambler.** Nowhere else in the world can they be bought for the money. Address, **HALE PUB. CO., 3550 Vista Ave., St. Louis, Mo.**

THE GRANDEST Subscription Offer.

A Splendid Magazine One Year—The Ladies' World—National Farmer and Stock Grower One Year—Eight Standard Grapevines—All For One Dollar.

This is a startling subscription offer, especially valuable to farmers' wives and families and to anyone who owns a home. **The Ladies' World** is a monthly magazine, forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, lovely stories, splendidly edited, instructive articles, lessons in housekeeping, domestic science, dressmaking, music; amusements, etc. No better, cleaner or more useful paper can possibly enter the farm home.

The National Farmer and Stock Grower is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets and instructive matter concerning general farming, stock raising, dairy, poultry keeping and all the especial features that keep a farmer posted on his own interests in dealing with the world of business.

The subscription offer includes a magnificent collection of **Eight Two-year Standard Grapevines.** These grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe: **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar.

SUBSCRIPTION COUPON.

Please Cut Out and Mail to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar ($1.00) for which send me **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Eight Two-year-old Standard Grapevines** as advertised.

While Swinging in the Hammock.

Spend every possible moment with the little one out in the fresh air. From the hammock all sorts of entertainment will come if we only train our eyes to look for it. One mother is so fortunate as to have her hammock hung in the same tree with that of the oriole. And baby's sharp eyes have been trained to watch the bird movements eagerly, while the birds have learned that the big hammock below contains only friends, and to swing their babies in the wee one in the tree top quite unconcerned.

As soon as the young birds were hatched the labor of the parents in collecting food commenced. And the number of trips in an hour was quite surprising as well as entertaining. Mamma showed the child how hard both birds worked, gathering the worms and then carrying them in their little bills to their own little ones.

Yet they always seemed glad to do it—happy; and sometimes a note of joy came. The gay plumage of the male was a perpetual delight to the child, and the love notes gave to it the foundation for that feeling which leads when older to a fostering of bird life. Later, when the little birds ventured forth from the swinging nest and made their first efforts to fly, there was more amusement for the little one and for mamma. And both thoroughly enjoyed the fact that their hammock and that of the orioles had been hung in the same tree, while the little one learned to love the birds and strive to help them.—Bessie L. Putnam.

Work in the Garden.

Many housewives consider gardening a man's work, and will have nothing to do with it. If the farmer regards it as profitable, good; but if, as in many instances, he has not time or regards it "cheaper to buy," the family usually misses one of the greatest luxuries of farm life; for few spend very much money in fresh vegetables, even if they have the chance to buy them in good condition, which is not often the case.

Really, the woman of average health who so determines, can have, with a little help on the start, a good family garden, the growth of which will supply her table better and cheaper than working over the stove in baking and roasting the articles which it replaces. The small daily work required in the fresh air will prove beneficial instead of the reverse. The health of the family will be improved by the substitution of delicious vegetables for the accustomed pastry.

Those who have experimented, find the rectangular plot much preferable to the square one, giving the long rows so easily adapted to the one-horse cultivator. And with a steady horse one may do a great part of the first hard cultivating in this way. Rows should be three feet apart to insure plenty of working room.

But it is not without some disadvantages, great as is the saving over the old hand hoe. Even the most steady horse will sometimes make a misstep or nip some especially thrifty plantlet. And the wheel hoe, with other attachments, is for this reason still better. It is always ready for work at a moment's notice; never tired or wanting to wait for oats. With it one may plant the rows two feet or less apart, thereby securing a far greater yield from the same amount of ground. Even in midsummer it can be taken in, where the horse cannot go without doing more damage than good, and worked where a new crop takes the place of the early peas or lettuce. It works up very close to the rows, almost entirely eliminating the hand-weeding process, and certainly making the man with the hoe as pictured by the artist a thing of the past.

The various parts are quickly adjustable; you can have a tool with a single wheel if you wish, or with a turn of the wrench you have one with two wheels, which neatly works up on both sides of the small plants at the same time. When the hoes and rakes are attachel, as in working the first time or two, it requires manpower to manage it; but after a little of this treatment the soil becomes so light that the weed cutters are all that is necessary, sharp knives cutting off a thin slice of surface soil, which falls back and crumbles into dust.

With this the garden can be kept practically free from weeds; the soil is constantly kept pulverized in a way that no other tool ever has succeeded in doing. The dust mulch is present in summer, thus helping to solve the dry-weather problem. This tool can be used easily long after the plants are too large to be cultivated with a horse. With the lighter attachments weeds can be kept down and a loose soil maintained easily and in a very much shorter time than by any other method. The dealer who tries to make you think that a wheel hoe is too heavy for a woman, but that the long-handled-rake affair, which is dragged over the ground, is the proper tool, either does not know what he is talking about, or has the other kind to sell. It is very much harder to use, considering the work actually accomplished.—Bessie L. Putnam.

THE COCA-COLA COMPANY, ATLANTA, GA.

Whenever you see an Arrow think of Coca-Cola.

Why He Was Suspicious.

Two friends, a Welshman and a Scotchman, happened to be lunching together recently in a restaurant. The latter kept turning round to see that his hat and coat remained still on the peg where he had left them.

"You are a suspicious chap," said his friend at last. "Who do you think is going to walk in here and steal our coats?"

"Can't say," replied Scotty, "but I'll take good care nobody gets mine; yours went ten minutes ago."—Cardiff Western Mail.

Both Fly.

"Young man, you must learn that time is money," counseled the father.

"Well, dad, at least I have noted points of similarity between them."

"In what way," askd the encouraged parent.

"You know the expression, 'time flies,'" replied the young hopeful.—Buffalo Express.

At St. Louis, prime sorghum is again quoted at 40 cents a gallon.

MAY MANTON PATTERNS.

Easily Made, Advance Styles, Fashion and Perfection—The Standard of the World.

This is the best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original. In One Hour I Learned to Play the Piano at Home

Without Lessons or Knowledge of Music Any One Can Play the Piano or Organ in One Hour.

Wonderful New System that Even a Child Can Use.

He—"You surprised me! You told me yesterday you couldn't play a note!"
She—"I couldn't; I learned to play in one hour by the wonderful 'Easy Method Music!'"

Impossible, you say? Let us prove it at our expense. We will teach you to play the piano or organ and will not ask one cent until you can play.

A musical genius from Chicago has invented a wonderful system whereby anyone can learn to play the Piano or Organ in one hour. With this new method you don't have to know one note from another, yet in an hour of practice you can be playing the popular music with all the fingers of both hands and playing it well.

The invention is so simple that even a child can now master music without costly instruction. Anyone can have this new method on a free trial merely by asking. Simply write saying, "Send me the Easy Form Music Method as announced in The National Farmer and Stock Grower.

FREE TRIAL

The complete system together with 100 pieces of music will then be sent to you Free, all charges prepaid and absolutely not one cent to pay. You keep it seven days to thoroughly prove it is all that is claimed for it, then if you are satisfied, send us $1.50 and one dollar a month until $6.50 in all is paid. If you are not delighted with it, send it back in seven days and you will have risked nothing and will be under no obligations to us.

Be sure to state number of white keys on your piano or organ, also post office and express office. Address Easy Method Music Company, 343 Clarkson Bldg., Chicago, Ill.

In the Home Laundry.

In nearly every house there are curtains and blankets to be laundered at this season of the year, and they can be carefully washed and dried at home, and come from the washing looking as fresh and pretty as ever. After the curtains have been thoroughly dusted, they should be neatly darned before washing, for very small rents are apt to become large holes during the laundering process, unless they are carefully darned or mended.

Lace and muslin curtains that have been exposed to dust and smoke must be put to soak in plenty of cold water for several hours, for cold water washes off the soot and dust, whereas hot water turns the dust speedily into mud and simply soils and discolors the article.

After soaking in the cold water, put the curtains to soak over night in warm water with a little soap and ammonia added; then in the morning they are ready for the clean suds.

With careful washing light-weight comforts will come through a washing soft and light instead of heavy and stiff. Use plenty of warm suds and wash them on a clear, windy day to ensure quick drying. Rinse through clear warm water, press some of the water out and hang over the line without wringing. When nearly dry, whip them on the line with limber switches, and when dry shake thoroughly before bringing them into the house. This treatment lightens up the cotton batting and prevens it from matting together in lumps and wads. They should not be folded over the line, but pinned by one edge or end, so they can hang straight and smooth, and after you pin them to the line, pull and stretch them several times while drying to keep them in good shape.

There is nothing better for washing curtains, blankets and comforts than a soap solution made by dissolving some borax soap chips in hot water and then stirring enough of this soap solution in the wash water to make a strong lather. The chips make the water very soft and this loosens all the soil in the goods, so that the squeezing and pressing between the hands in the suds that they require will get them perfectly clean. Carefully shake the blankets to remove all dust and lint. Half fill two tubs with warm, soft water, then pour enough of the soap solution in one tub to make a strong suds and into the second tub a weak suds, then wash through the two tubs and rinse through two clear, warm waters and run through a loosened wringer. Curtains washed and boiled in suds made with the Twenty Mule Team Soap Chips come out beautifully white and clean and the blankets will be almost as clean and soft as when new, if carefully washed.—M. A. T.

Railroad and the Cow.

It was a cruel thing to say about a nice railroad whose chief aim was the speedy transportation of its passengers, but the conversation had turned to lightning expresses, and Wallace Irwin, the author, simply could not help it.

On the road in question, as Mr. Irwin related the story, a train stopped one day and the passengers were told that a cow had gotten on the track and had to be driven off.

Up the road a few miles farther the train stopped again, and once more the explanation was given that a cow was on the track. Two miles, perhaps, of continuous going, and there came another stop. This time a passenger glanced wearily toward the end of the car.

"Mr. Conductor," he called out in yawnful accents, "could I speak to you a moment?"

"Certainly," answered the conductor, moving down the aisle, "what is it?"

"Do you really mean to say," returned the passenger in a voice that was almost a sigh, "that we have caught up to that cow again?"

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card

cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Why He Went Broke.

"I wonder," said the youthful student, "how the prodigal son came to go broke?"

"I suspect," replied Farmer Corntossel, "it was because he spent his time in town hangin' around talkin' about how to uplift the farmer."—Washington Star.

Meat and Food Choppers.

For catalogue of every possible size of the best sausage stuffers, meat and food choppers, to suit home, farm, butcher shop or packing house, write to the Enterprise Mfg. Co., Dept. 87, Philadelphia, Pa.

Bah! The Materialist!

"Are you interested much in what the cubists are doing?"

"Not much. Takes all my time now looking after the fellow I've hired to do the spring washing around my place."—Exchange.

A Mortgage Lifter.

"Father," boasted the farmer's son, home from college for over the holidays, "I'm the strongest man in our college this year."

"You don't mean to tell me!"

"Yes; they tested me with different kinds of strength-testing machines in the gymnasium, and my record shows that I'm the strongest student enrolled there this year. The physical director says I'm a 'modern Hercules.'"

"My son, I'm glad to hear the good news. Instead of going back to college you can stay home here and help me lift the mortgage off the farm."—Exchange.

Are Growing Shorter.

An Eastern divine remarks that the world is growing better day by day. How about the nights?"—Milwaukee Journal.

THE FINEST CANDY MADE.

A Novel Subscription Premium—The First of the Kind Ever Offered.

This is a subscription proposition in connection with the Universal Magazine. That publication is a nice, bright, cheerful, illustrated magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid magazine, at the low price of 25 cents a year.

The parcels post rates enable us to send out a box of candy at reasonable

The Universal Candy Girl.

rates. Therefore, as a premium to club raisers, we will send a splendid one-pound box of the very best Chocolate Cream Candies to anyone who will send us fifty (50) cents for two one-year subscriptions to the Universal Magazine, or one subscription for two years. We guarantee that no purer or better candy is made. We pay the postage and guarantee satisfaction or money refunded. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages, and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

CONCERNING THE MIDDLEMAN.

Misunderstandings That Ought to be Cleared Away—A Few Remarks on the Commission Man, Also the Speculator.

At the conference on Marketing and Farm Credits, held recently at Chicago, the middleman came in for the great share of condemnation as absorbing too large a share of the money received for farmers' products. But nearly every speaker seemed to think it was the business of the commission man to buy those products, thereby confounding the middleman who is a salesman on commission, with the speculator, who is buying strictly on his own account for the purpose of again selling the goods either at wholesale or by retail transactions. Until these two classes of people—the commission man on the one hand and the speculator on the other—are separated and distinguished as different classes of business men it is useless to expect any improvement on present market conditions.

There are people who combine the two functions of speculator and commission man simply because farmers try to force them to do so. The duty of a commission man is to sell all consignments of the farmer to the best advantage, deducting from the proceeds a fair commission for selling them. But the farmer will often cause the commission man to change into a speculator by asking: "What will you give?"

In our opinion, the commission man as an institution was grown of necessity. In St Louis a man came in to sell his own cattle and remained to sell his neighbors' cattle, hogs and sheep. Someone had to do the selling in town, and all the farmers could not be in to sell the hogs and cattle and sheep; then regular charges were adopted for selling live stock, and thus the commission man was born. And from now on. so long as the sun, moon and stars remain, we will have with us the commission man. In the live stock trade a commission man is well defined and understood. He buys and sells cattle, hogs and sheep for others strictly on commission, never speculating in the consignments entrusted to him for sale. All sales are kept on record, showing the name of the shipper, the name of the buyer, the price paid, and the total amount, less the commission and freight and other charges, is remitted to the owner on the day of sale.

A force of commission salesmen, each one acting independently and trying to excel each other in the results obtained for the consignments entrusted to them, is an element in the interest of the producer that is astonishingly efficient. When supplies are light and conditions favorable, they gain point after point in selling prices, and when times are not so good they hold a steady market; and when conditions are entirely unfavorable and the market is overstocked, it is not easy to stampede a lot of commission men who know their business; the consequence is that the interest of the producer is in good hands and the service is well worth the money it costs; and, as a general proposition, the people who pay for the service do not fail to be satisfied with it. No one complained of the live stock commission men at the conference on Marketing and Farm Credits.

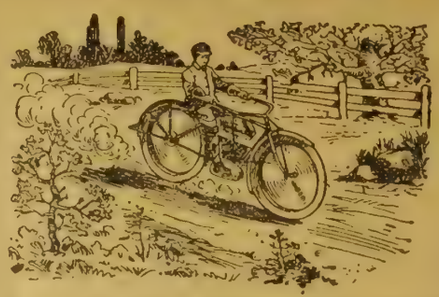
But in other lines, notably in vegetables, the commission man and the speculator are so intimately connected they cannot be separated, and there the trouble begins. A commission man who charges a commission for selling and then sells the consignment to himself is only a common thief, and he who as a commission man receives a consignment and sells it to himself, even if he does not charge a commission, is engaged in a questionable line of business. Many commission men are practically forced to buy remnants of consignments in order to close accounts and pay off the shipper, and there begins the excusable mistake that leads to opening the door to fraudulent practices.

We believe that commission men should conduct a commission business and be debarred from speculating in the goods they sell on commission; that they should not be allowed to sell to any firm they themselves are interested in; that all sale transactions should be recorded and open to inspection of proper authorities, and that commission men should not receive consignments unless licensed by the state, or, what would be better, by the association the shipper belongs to. For instance, the fruit growers' associations practically license the commission houses that handle their fruits on commission. The onion growers designate the commission men who sell their onions, the cattle raisers could easily license commission men to handle their products, leaving each individual shipper to consign his market offerings as he may see fit inside of the number licensed by his association. This applies to all products and all conditions. The St. Louis county vegetable growers can license a number of commission men on the St. Louis market. The fruit growers could do the same. It would not be long before the farmers' associations would control the terms under which their products were sold, and the change would take place without disturbing any people now in the business. It would do away with all fraudulent houses. It would do away with fixing charges first and telling the stockman and the farmer afterwards. We hold that present conditions are very nearly right and that very few changes will be necessary to make everything right, and one of those changes is to separate the commission salesmen from speculators, and each man should be required to say what he is.

By not having shipping units of their own to market many farmers are forced to sell their small lots to local speculators, who make it their business to ship out car-load lots. Their speculative business is perfectly honorable and necessary, and speculative shippers' associations could license their own commission men. Many fruit growers sell their entire crops to speculators. Merchants who deal in butter and eggs and creamery associations could easily better their selling conditions by designating the commission firms they have confidence in. There are also many firms of city dealers who buy direct from country shippers. This is especially so of furs. We need a few strictly commission fur houses.

This subject is too wide and too deep for one article, but we hope we have made ourselves clear in advocating that a commission man should not engage in speculation, and that the different shipping associations should license the commission houses and have some say in regard to the terms of sale.

WONDERFUL MOTORCYCLE OFFER



For Boys Living in Illinois, Indiana, Iowa, Wisconsin, Michigan and Missouri

This picture shows one of our boys riding the famous five horse power Harley Davidson Motorcycle we are giving away. In other parts of the picture are the faces of several other boys. They are hard to find, but by turning and twisting the picture around you will finally locate them. Mark at least two of the faces with a cross (X) and send the picture to me. As a reward I will send you a

FINE FREE PRIZE

that certainly will please and surprise you. Be sure to send me your name and address and I will tell you all about the contest in which you can win a five horse power Motorcycle and many other prizes. In this contest **everybody wins prizes.**

5,000 VOTES FREE. If you answer promptly I will send you a special coupon good for 5,000 votes toward the Motorcycle. All you have to do to get this coupon is to send me your name and address at once.

C. S. NADEN, Ellsworth Building, Chicago, Illinois.

SOIL FERTILITY NOTES.

Analyzing the Soil—Is the Soil Acid or Not?—Wrong Applications of Fertilizers a Dead Loss.

Every farmer should have the various soils of his farm analyzed, that he may be able to fertilize his land intelligently. This will cost a little money, but it will be worth more than it costs. The State Experiment Stations are the institutions on which to call, not for the actual performing of the analyses, but for information as to who can be secured to do this kind of work.

Analyzing farm soils should be a profitable field to be occupied by agricultural students, for the work should be done, and the Stations do not find that doing free work of this kind is a part of their work, though there are many persons who think it is.

The analyzing of the soil of a farm is not so easy a task as one might think, on account of the various treatments that have been given the different parts of any farm, especially any old farm. Some fields have been treated with manure and commercial fertilizers, and leguminous crops have been grown upon them. This latter has increased the nitrogen content. On the other hand, some of the pastures have been cropped year after year with nothing put on them. Of course, the analyses of these soils will show enormous differences. Yet those differences must be known, if the farmer is to understand how to prepare his soils for future crops.

One of the most important items to be found out is whether a soil is acid or not. It has sometimes transpired that a soil that was unproductive was unproductive because it had in it too much acid. Whole counties have been regarded as of little value agriculturally that have later been discovered to be rich agriculturally after it was discovered that the only fault was lack of lime in the soil to neutralize the acid.

Two other points that should be looked after are the presence of potash and the phosphates in the soil. If these two elements are lacking, they must be supplied by the purchase of potash in some form or of phosphorus in some form of the phosphates, such as ground bone. For, with a soil relieved of its acidity, clover, soy beans, cow peas, common field beans or some other legumes may be grown to bring in the nitrogen.

In hard soils, one of the best plants to grow to get the nitrogen into the soil is the common sweet clover, known as melilotus. There are two varieties of this, the white and the yellow, known botanically as melilotus alba (white) and melilotus officinalis. It does not make any difference which of these two is grown, but the white variety is the most common. The writer saw this being grown in one Illinois field where it stood so high that the man and the mowing machine were hidden from sight when driving through it when it was being cut, preparatory to turning under the sod.

There is an immense waste of money in the fertilizers that are annually wrongly applied to the land on American farms. To know just what kind of fertilizer to apply to each field and each crop is an essential of careful farming.

At Chicago, April 23d, A. C. Barr, a prominent feeder of Warren county, Illinois, was on the market with a car of choice Hereford steers that sold for nine cents a pound and averaged 1,357 pounds.

5 Year Guarantee

98 cents

To advertise our business, make new friends and introduce our great catalogue of Elgin watches we will send this elegant watch to any address by mail postpaid for **Only 98 cents.** Regular gentlemen's size, open face, full engraved, high grade gold plate finish, Arabic or Roman dial, lever escapement, stem wind and stem set, a marvelously correct timekeeper and fully **Guaranteed for 5 Years.** Send this advertisement to us with your name and address and 98 cents and watch will be sent by return mail postpaid. A GARDEN OF ROSES.

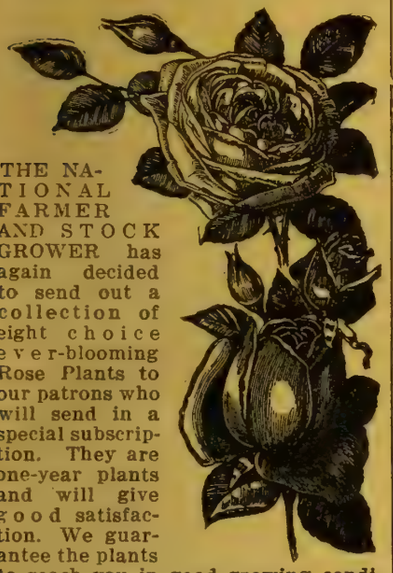
Fine, Sturdy Plants—The Most Delightful Premium Offered by Any Farm Paper.



THE NATIONAL FARMER AND STOCK GROWER has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription. They are one-year plants and will give good satisfaction. We guarantee the plants to reach you in good growing condition, and with each package we send complete directions for planting. care and culture. The time to send the order is now—before you forget it—and you will receive the plants at the best time for planting in your section.

The collection consists of:

1. THE OLIVIA—A most gorgeous, distinct rose of deep, brilliant rosy red, and one which excites the admiration of everyone beholding it.
2. THE SUNBURST—An intense exquisitely beautiful rose of orange-copper and golden yellow.
3. THE BRIDE—The most satisfactory white rose of dainty, chaste, beautiful flowers and healthy growth.
4. MY MARYLAND — A pink beauty, rapidly developing a sturdy, shapely plant and large flowers.
5. SOUV. DE PRESIDENT CARNOT — A wonderfully handsome rosy-blush color creation.
6. THE METEOR—For intense, rich, velvety, crimson color no other rose compares. The flowers are large and double.
7. THE BLUMENSCHMIDT — A pure citron-yellow; a first-prize winner at every show.
8. DOROTHY PERKINS—A shell-pink, hardy climber and one that should be extensively planted.

Our Grand Special Offer.

Send us a money order for fifty cents. ONLY fifty (50) cents. We will credit you with ten-months' subscription to THE NATIONAL FARMER AND STOCK GROWER, and at the proper time we will also send you the full set of EIGHT ONE-YEAR ROSE PLANTS as described. The roses are sent out directly it is safe to dig them in the spring. Send in your order at once with fifty (50) cents and it will receive prompt attention.

Here is a Subscription Blank.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:—Gentlemen: — Herewith please find fifty (50) cents. Please send me THE NATIONAL FARMER AND STOCK GROWER for ten months, and the full set of EIGHT HARDY, EVER-BLOOMING ROSES, one-year plants, postpaid, safe delivery guaranteed.

SELECTED POETRY.

THE VEGETABLE DOCTOR.

What's the use to call a doctor
When you have got a pain or ache,
Just go out and get the gardener,
And there won't be any wake.
If an onion's good for smallpox,
Would a carrot cure the pip?
Would a dose of spuds cure colic,
Or a parsnip knock the grip?
Would an allopathic pumpkin
Put pneumonia on the blink?
Or a modicum of spinach
Tie the measles in a kink?
Would the scallops on the squashes
Put a polish on the spleen?
Could you catch a floating kidney
If you'd eat a kidney bean?
Would a head of curly lettuces
Cure a misery in the head?
Would the place for an insomniac
Be in a parsley bed?
Would a sweet potato sweeten up
A disposition sour?
If so, we know a lot of folks
Should take one every hour!
Horseradish, which is very hot,
Should surely cure a cold,
Would radishes preserve us all
From ever growing old?

—W. H. James.

THE LOST WATCH.

Some ten or fifteen years ago,
But just how long I do not know,
A man, while crossing in a boat,
A Western river of some note,
Dropped in the stream, as I was told,
Ah! sad mishap, a watch of gold.
He saw it sink, 'twas new and bright,
Down, down and down, quite out of sight.
He made long search, but all in vain;
The watch could not be found again.
Who knows, says he, at last, but what
Some hungry fish just in that spot
Has quickly seized it for his prey,
And then as quickly fled away?
So in despair he leaves the river,
And gives it up as lost forever.

Well, years rolled by when on a day,
As fortune led him round that way,
And times were dull, he felt inclined
To see if he some fish could find
Perchance in that unlucky stream.
But still he did not hope or dream,
By fishing then to find the prize
So long concealed from human eyes.
He only hoped with fair success
To catch enough for one good mess.

He cast his line, but needs must wait,
And many times renew his bait—
The hours passed by, 'twas getting late—
And not one fish, such was his fate,
When suddenly, to his delight,
He felt a most uncommon bite,
And hauling in with skill and care,
Lest from the hook the fish should tear,
Up comes at length to greet his eyes,
A salmon trout of largest size.
It was enough, he did not stay
For more, but homeward took his way,
With lighter heart but heavier load
Than when he traveled that same road
The day he lost his watch, you know,
Some ten or fifteen years ago.

As through the streets he lugged his prize
It drew the notice of all eyes,
And many wanted much to buy it,
But "No," says he, "my wife shall fry it.
I'll have to-night as rich a treat
As ever lord or king did eat."
Ah, lucky man was he to hold it,
How sad indeed if he had sold it.

But still the thought ne'er crossed his mind
That in the fish his watch he'd find.
It had been lost so long ago,
Some ten or fifteen years, you know.
Right on he keeps his homeward way,
Arriving just at close of day.
He lays his load upon the table,
And says: "Dear wife, if you are able,
Come dress this fish, 'tis something nice,
Then cook it well and in a trice.
The dinner hour is long since past,
I've had a long and weary fast."

So now his wife whets up a knife,
And straightway goes to dress it,
When lo! indeed, need I proceed?
You all no doubt will guess it.
But this I'll state, at any rate,
'Twill take me but a minute—
She dressed the fish as he did wish,
And took out what was in it,
Then with the roe, that's good, you know—
Believe it if you will. She cooked the fish,
They ate the fish;
The watch is missing still.

—Unknown Author.

TO WHOM DOES THE RIVER BELONG?

The river belongs to the nation:
The levee, they say, to the state;
The government runs navigation,
The commonwealth, though, pays the freight.
Now, here is the problem that's heavy—
Please, which is the right or the wrong?
When water runs over the levee,
To whom does the river belong?

It's the government's river in summer,
When the stage of the water is low;
But in spring, when it gets on a hummer
And starts o'er the levee to flow,
When the river gets suddenly dippy,
The state must dig down in its till
And push back the old Mississippi
Away from the farm and the mill.

I know very little of lawing:
I've made little study of courts;
I've done little geeing and hawing
Through verdicts, opinions, reports;
Why need there be anything more said
When the river starts levees to climb?
If the government owns the aforesaid
It must own it all of the time.

If the bull you are leading should bellow
And jump over somebody's fence,
There isn't much doubt you're the fellow
Expected to bear the expense.
If it follows a Sunday school teacher
And chases the maid up a tree,
You're owner the same of the creature,
Undoubtedly all will agree.

If it's your Mississippi in drytime,
It's yours, Uncle Sam, when it's wet;
If it's your Mississippi in flytime,
In floodtime it's your river yet.
There's no other way you can make it,
And so, when I give the alarm,
Come and get your darned river and take it
Away from the timber and farm!

—American Lumberman.

SHE KNEW.

She knew she was wrong when they quarreled that night
And heartlessly sent him away.
She knew that his conduct was perfectly right,
But she scorned everything that he'd say.
She knew that the fault was all hers, and she knew
That she meant not a word that she said:
She knew that the charges she made were not true,
And she knew that her love wasn't dead.

She knew when she told him that she'd never be
At home when he wanted to call;
That never again did she wish him to see
That she didn't mean it at all.
And she knew when he said that he'd never return,
And grabbed up his hat and his cane
And angrily left, that to-morrow she'd yearn
And long to be with him again.

She knew, yes, she knew, she was wronging him then.
But you'd never have guessed it to hear
The way she denounced him that night in the den,
There was never a sign or a tear.
She heartlessly kept up her verbal attack
And her real feelings skillfully hid,
For she knew in her heart that he'd surely come back,
And the very next evening—he did.

—Detroit Free Press.

DON'T BE A GROUCH.

Don't be a grouch; kind words and smiles are best;
None but the pessimist need be oppressed
By constant gloom and doubt of all mankind;
Blessings and sorrows are ofttimes combined.
Don't grumble if the plans on which you dote
Go oft awry. Just pause and note
That sunshine follows storms in every case,
And after winter spring smiles lighten Nature's face.

Don't be a grouch. You're not of Fate the only victim left;
While health is yours, you're not of hope bereft.
And out of dire disaster, if you choose,
May make a winning, where you thought to lose.
Be brave; keep cool your head and steel your nerve
To meet reverses. Let your judgment serve
To turn the lessons of the past to good account;
Stop sliding down and strive your best to mount.

There's always sun behind the darkest cloud,
There's often joy in the most somber crowd;
Life's cares are but the trials set to place
A due restraint upon gay pleasure's pace.
Look up, not down! Face trouble like a man;
Press on; don't tarry with the halting clan;
Don't rail at thorns when roses line your couch,
Just think that all is best. Don't be a grouch!

—J. L. Nixon, Boston.

$27.00 TO $40.00 PER WEEK

Old Potatoes Weak.

Late in April, on the St. Louis market, old potatoes were giving place to the new. The old potatoes had to be good to sell in car lots at 40 to 50 cents a bushel. The highest price was paid for Russet Burbanks.

FENCE BARGAINS.

We are just in receipt of a letter from James Brown, President of the Brown Fence and Wire Company, of Cleveland, Ohio, in which Mr. Brown invites every one of our readers to write for his new 1913 Catalogue. If you need fencing of any kind, for any purpose, or if you will need fencing later it will pay you to write to Mr. Brown at once. Brown Fence is sold direct from factory, all freight prepaid wherever you live, and the prices are exceedingly low. Brown Fence quality is such that over 25,000,000 rods have already been sold direct from factory to customers in all parts of the country. Brown's catalogue tells all the facts. Write a postal now; address Dept. 45, Brown Fence and Wire Company, Cleveland, Ohio, and mail at once.

LAME BACK and KIDNEY TROUBLE

CAN BE CURED WITHOUT A DROP OF MEDICINE

According to the words of those who say they have been cured to stay cured by using MAGNETIC SHIELDS, which do what all the medicine on earth cannot do; they ACTUALLY INSTILL NEW LIFE AND ENERGY INTO THE SYSTEM, overcoming congestion, soreness and pain.

WE PROVE IT TO YOU POSITIVELY

Not in one case or a dozen cases but in multitudes of cases, where people say they have been cured of Paralysis, Rheumatism, Lung Troubles, Kidney, Liver, Stomach and Bowel Troubles, nervousness and most every other form of disease after medicine failed.

Our MAGNETIC ABDOMINAL AND KIDNEY VITALIZER for ladies and gentlemen here illustrated is only one of the many Shields we make. IT IS A WONDERFUL INVENTION, scientifically constructed and floods the system with magnetism, supplying LIFE, STRENGTH and VIGOR to the BACK, KIDNEYS, STOMACH, LIVER, BOWELS and BLADDER, giving that buoyancy, tone and renewed vitality to the system that Magnetic force alone can supply.

SENT ON TRIAL TO PROVE IT'S VALUE

Write to-day for full information and free book, "PLAIN ROAD TO HEALTH," by C. J. Thacher, M. D. Describe your case fully, we advise you free how to apply MAGNETISM for treating any form of weakness or disease.

THACHER MAGNETIC SHIELD CO., Inc., Suite 452, 110 So. Wabash Ave., Chicago, Ill.

Where Emmy's Mother Failed.

"But how can I tell whether things are cotton or linen, or whether they're imitation or real?" cried Emmy with tears of vexation in her eyes as she wrapped up a mercerized tablecloth and threw it aside. Its beautiful rose pattern and its glossy finish had attracted Emmy's eye. When she learned that the price was only fifty cents a yard she purchased two yards and rushed over, jubilant, to show her bargain. She had to be told that there was not a thread of linen in the cloth, and that in the first laundering the beautiful sheen would all be lost. Thereafter she would have a flimsy, cheap-looking tablecloth, easily soiled, hard to keep white and of poor wearing qualities.

Emmy is a bride and she has not a dollar to spend foolishly. Now, Emmy has a mother living several hundred miles awaw who has kept house for over a quarter of a century. From Emmy's reports her mother is undoubtedly an excellent housekeeper. She would probably be highly indignant should anyone tell her that she had failed in the training of her daughter, for Emmy has very pretty manners and knows just the right thing to say and do on every occasion. Socially she has been well trained, but she has not been taught the business of running a home.

Take only one branch of this business—the purchasing end. Suppose Emmy's mother had taken her little girl along frequently when she went shopping and let the child help select goods, explaining wherein her choice was good or bad, as the case might be. On the shopping expeditions she should have learned the tests of linen, not only in tablecloths, but also in bedding, towels, dress goods, handkerchiefs and laces. She should have learned to tell the difference between all-wool goods and shoddy; th durability of various textures, and the chemical composition of coloring, so that she would know how to select sun-proof and waterproof colors.

Not long ago Emmy bought a cotton ingrain rug for a back room. Poor Emmy has shed bitter tears over the five dollars lost in that cotton rug. For twice the money she might have had a body Brussells that would have worn ten times as long and looked better on its last day than did the cotton ingrain on its first. It was on those shopping expeditions with her mother years ago that Emmy should have learned the difference in the makes of rugs, how the prices vary and why, and the wearing qualities of each make.

In her tiny kitchen Emmy makes delicious and expensive desserts, whipped cream and many eggs figuring largely in these delectable concoctions. But Emmy doesn't know the difference between a porterhouse steak and a piece of beefsteak in its uncooked state. She does not know how to go to the market and buy for fifty cents a piece of meat that will serve for three meals instead of for one. And the young couple are already worrying about the bills and talking about the high cost of living. —Janet Thomas Van Osdel.

Silos in the Buffalo Range.

From San Angelo, Texas, quite recently, it was reported that C. H. Rathje, ranching in that section, had sold 600 steers that he had fed on cotton-seed meal and sorghum ensilage. The steers brought an average of $96.12 per head. Mr. Rathje was one of the first men to construct a concrete silo in Tom Green county, which was thirty-five years ago the feeding and stamping ground of two millions of buffalo.

The High Rate of Interest on Farm Loans.

A Petition by Farmers of the United States Asking That the Moneys Received as Deposits at Postal Savings Banks be Loaned Out to Farmers Upon Proper Security at Fair Rates of Interest.

To His Excellency, the President of the United States, and to the Senate and House of Representatives:

WE, the undersigned farmers, ranchmen, land owners and citizens of the United States, do hereby present this petition for your consideration, and represent that the rates of interest usually charged upon farm loans are uniformly too high, and that in hundreds and thousands of instances the rate is so burdensome and unreasonable as to perpetuate loans and interest charges and cause many honorable, industrious farmers to lay down their burdens and forsake agricultural pursuits. Furthermore, other loans on crops and upon collateral securities when made by individuals or banks to farmers are in many cases so exorbitant as to become unbearable. We also represent that these facts, being of common knowledge, a great movement is on foot to ameliorate these conditions and to find ways and means to give the tillers of the soil the necessary loans required for the conduct of their business, based upon security of the land or upon the joint security of co-operative associations of farmers. We believe that a short cut towards solving this entire problem is for the United States government to undertake to see that the funds are furnished under supervision in regard to the rates of interest, fees and expenses to be charged in making said loans.

The great purpose of this petition is to request that suitable and necessary laws be passed requiring that the moneys received on deposit by the Postal Savings Banks be made available for the purpose of loans to individuals upon farm land securities or upon the credit of responsible associations of farmers duly organized for the purpose of assisting each other to obtain and repay such loans.

With a Commission now appointed to investigate the farm loan associations of Europe and now at work to that end, we do not assume to specify by what methods our desires and wishes be carried out, but the point we wish to make is that as farm lands represent the best security in the world they should constitute the preferred security in loaning out the money which the government as a banker is receiving on deposit for such a purpose.

Believing it to be the policy of the United States government to build up a nation upon a foundation of farm homes for the people who cultivate the soil, and believing that the good intention of the government is being defeated by the present system which establishes and maintains high rates of interest which the majority of the farming people are unable to pay and many are unable to obtain, we therefore ask the immediate consideration of this subject that a better and more wholesome condition of affairs may be brought about by patriotic and conservative legislation.

Sign the Full Name Here.	Rural Route.	Postoffice.	State.

☞ When ten signatures have been obtained to this petition, it should be neatly cut out from the paper and sent by mail to PHILIP H. HALE, Editor, 3550 Vista Ave., St. Louis, Mo. Copies of this petition can be had by writing for them.

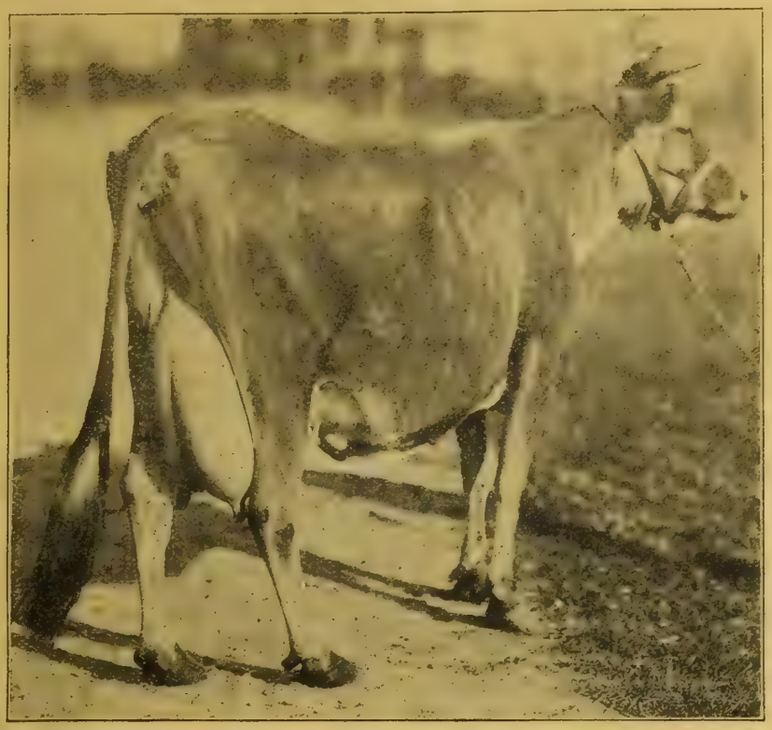

FIGGIS—FAMOUS JERSEY COW. At the Louisiana Purchase Exposition, 1904, FIGGIS was the grand champion Jersey cow and had a calf during the progress of the Fair. Bred on the Hood Farm, Lowell, Mass., but exhibited by Thos. W. Lawson. Her picture is on page 233 of the Book of Live Stock Champions advertised on page 3.

The Book of Live Stock Champions.

It is difficult to understand how such an elegantly-printed and bound book as the Book of Live Stock Champions can be sold for a dollar and include a subscription to The National Farmer and Stock Grower, but it is the large edition that accounts for it. The first copy cost five thousand dollars, because there are seven hundred and fifty pictures in the book, to say nothing of the continuous work of collecting and editing the book, the paper, the printing and the binding. The book is 6x9¼ inches; 352 pages; weighs 25 ounces; costs 15 cents in postage to mail it; is elegantly bound in dark blue cloth and with gilt title. We have several thousand more to be disposed of. There never was such an elegant book issued before for the money, and may never be again. See page 3.

Panama Car-lot Classes.

The Live Stock Department of the Panama-Pacific International Exposition has set aside $7,500 to be paid as premiums for car-lots of cattle, sheep and swine at San Francisco in 1915. This early announcement is made so that breeders may select animals to enter into this competition. In addition to a liberal premium list, there will be sales at auction of the animals that will insure attractive prices.

and Stock GROWER

Involved Fertility Problems.

The problems of agriculture are never simple. All of them are so mixed up with other problems that any fixed rule of procedure along any line is impossible. The fertility problem is one of extreme complication. This is why people having but a few ideas on the subject are likely to go wrong. The few facts they think they have learned are each one true only under certain conditions.

We have an illustration of this in the case of the enriching of the soil by the growing of clover. The fact that clover is an enricher of the soil has become quite firmly fixed in the minds of many farmers, who, however, do not understand the limitations that go with the principle involved.

It is a mistake to assume that the growing of clover alone will take the place of all others' efforts along fertilizing lines. In fact, the continuous growing of clover on certain kinds of land will reduce the crop-producing power of those lands, unless other kinds of fertilizers are supplied.

If a piece of land is very low in its content of potassium or phosphorus, every crop of clover grown reduces the quantity of those two in the soil and the time will soon come when the supplies of available potassium and phosphorus will be reduced to a point where even a good crop of clover cannot be produced. For, it must be remembered, the fertility element in the soil that is least in supply is the one that determines how much of a crop can be grown.

If the potash in the soil be insufficient for a good crop, it does not matter how rich the soil may be in the other elements—a good crop cannot possibly be grown. Just such a case as this was found in the marsh lands along the Kankakee river. The potash was very low in supply, so low that often not more than five bushels of corn could be grown to the acre. Yet that same land was very rich in nitrogen and had a fair supply of phosphorus. Addition of potash worked wonders, and the corn crop jumped to seventy bushels per acre. Here was a condition where even a good crop of clover would have been impossible, though the soil had in it a great supply of nitrogen.

If a man does not know how his soil is constituted he must assume that it needs all kinds of fertility, and he must give all, if his land is running down. The right way is to find out what a soil needs and go at the matter intelligently.

It is not possible to get away from the truth that ultimately all soils must have added to them lime, phosphorus (called generally phosphate), potassium (spoken of commonly as potash), and nitrogen, with some other elements that are usually in sufficient supply. The four mentioned are the ones most likely to become exhausted by continuous cropping.

The other great factor in the soil is organic matter, which, in a decayed form, we speak of as humus. This, while not a fertilizing element, is a great help to crop production, as it holds moisture and assists the true fertilizers in other ways.

The Old Farmer on the Big Farm.

A prosperous farmer helpless on his big farm is the mental view the writer has of an acquaintance of his. The farm is located in one of the middle states, noted for its agriculture. The farmer has spent his whole life on it and has become rich, but in his old age he finds it impossible to get help to carry on his farm to a profit. He has over 300 acres of land. The buildings cost him $14,000. He has an up-to-date dairy with over forty cows, and yet he has just sold out for $11,000, which is less than the mere cost of the buildings, constructed when building materials were cheap, and in good repair now. The secret is, that this man found himself marooned on this big farm. His son had died and his daughters have become school teachers in a big city. He finds it impossible to work the big farm.

Many a man is killing himself and his family trying to increase the number of his acres, adding farm to farm, to be confronted in old age by the proposition of the farm too big to live on. It is not wise to labor merely for more acres. The wise farmer knows when to quit in his grasping for more land.

The old farmer on the little farm is not worried to death trying to find someone to manage in his place. He can do the managing with little trouble from his windows, if he has to, and the expenses of the hired labor do not become the problem they do on the big farm. The little farm usually means a comfortable old age, even if no big bank account.

There is another thing that affects the old farmer on the big farm, and that is the fact that his social intercourse is vanishing. The big farms make dwelling houses far apart. It was not so bad in the younger days of the old farmer and his wife, for their bodily activity made little note of distances; but it is different now, and the old friends seldom meet. Most of them have moved away and their farms are being cut up into smaller ones.

In some of the old-settled localities it looks as if the big farm were destined to go. This is especially true in the localities given over to milk production and the raising of truck crops.

A friend of the old farmer on the big farm took a ride for a few miles round the farm in question. He found several farms abandoned, the farm houses being without tenants. The explanation given by local inhabitants was: "Boys and girls all went to the city; the old folks couldn't do the work, and so went, too."

Yet that locality is a rich one agriculturally, and the land has been kept up in its fertility. Their ancestors had lived on those farms for a hundred years before and had prospered, multiplying their live stock. But the modern changes have upset the old conditions and have drawn away the younger generation to more illuring fields. These well-to-do farmers gave their children a good education and this education weaned them away from the farm to the attractions of the cities and the pursuits of commerce.

Comment on the Wheat Report.

An authority on the Board of Trade, commenting on the May wheat report, said:

"As far as the crop outlook is concerned, there is nothing in the situation to indicate that the crop can go back materially from its present favorable position, unless the unexpected happens, as it did in 1905, when the May 1 condition was 92.5 and at harvest 82.7, and in 1903, when in May it was 92.6, and at harvest 78.8.

"In only six years in the past twenty-five has the crop shown a betterment from May 1. That was in 1888, 1892, 1893, 1894, 1898 and 1904. This improvement was mostly a slight one in June.

"In 1899 the May condition dropped from 76.2 to 67.3 by June 1; in 1895 from 82.9 to 71.1. The biggest gain in the twenty-five years between May and June was from 84 to 88.3 in 1892."

Co-operative Beef Clubs.

Co-operative beef clubs or rings are beginning to solve the problem of furnishing fresh meat for the farm home during the summer months at a nominal cost.

Such a club is composed of about twenty or more farmers, who organize and form a club to dispose of at least one beef a week. This is operated in connection with a creamery or some convenient place in the community.

A beef is slaughtered once a week, usually on Friday evening, and put in a cellar to cool over night. The next morning the carcass is cut and divided into twenty portions, or as many portions as there are members in the club. A sliding scale is followed, and each person gets a different portion of meat each week, until each has received a whole carcass.

A price per pound is agreed upon and cash paid for the meat. The proceeds are used for buying the animal and paying for the labor spent in dressing and cutting the carcass.

Several of these clubs have been successfully operated in Minnesota during the past summer and the farmers have had fresh meat all the season at from five to twelve cents per pound.

Concrete Farm House

Why erect a perishable farm building

when fire, rat and vermin proof concrete construction is cheaper in the end? (Write us for a free blueprint of the farm house pictured above.)

When you decide on concrete remember that the cement is what makes it good. That's why the U. S. Government was so careful to order more Atlas to complete the Panama Canal after we had shipped 5,000,000 barrels down there, and every barrel O. K. You get the identical quality. (The manufacture of Atlas is scientific, not accidental.)

How you our FREE 168 page Farm Book on concrete work? Write us for it now.

If your dealer cannot supply you with Atlas, write to

THE ATLAS PORTLAND CEMENT CO., Dept 165-30 Broad St., N.Y.

Chicago—Philadelphia

Largest productive capacity of any cement company in the world. Over 50,000 barrels per day

ATLAS PORTLAND CEMENT

The Good Was in Him.

Is It Safe to Pasture Cane?

A Missouri correspondent asks if cane will make good pasture for young stock? I do not recommend cane alone for pasture, for many instances are on record where stock died from eating young cane, and also it is claimed that second growth of cane will be fatal to stock. A safe method of feeding the crop is to cut it for hay when the seeds begin to harden, and then cure it well before it is offered to stock. Cane is quite difficult to cure and should be handled promptly. Where it is grown on a large scale it may be economically handled with a mower and the big self-dumping rakes.—L.C.Brown.

Good Hay Crops in Ontario.

United States Consul H. J. Harvey at Fort Erie, Canada, repors that in Ontario, Canada, there was a large hay crop harvested last year. The high price prevailing in 1911 and 1912, caused by the unusual demand from the United States, induced Canadian farmers to hold their last crop too high to interest purchasers, and they have a surplus on hand. Hay did not winter kill last winter, and the indications are that this year's crop will be enormous. Clover looks better than for the past six years.

Russia Would Win at Tulsa.

Russia will be at the International Dry-farming Congress to be held in Tulsa, Okla., next October with crop exhibits from six provinces. The Russian government has made a special appropriation to cover the expense of collecting and transporting to Tulsa a representative lot of crop products grown in that country, and the Russian Agricultural Department announces that the exhibit will be made with a direct view to capturing some of the world's prizes to be offered here. Alexander Kol, Agricultural Commissioner for Russia in the United States, of St. Louis, will have charge of the exhibit on its arrival in this country. The Dry-farming Congress begins October 22d and continues to November 1st, 1913.

Cane For Silage.

A Kansas correspondent asks if cane will make good silage for horses and cattle? Cane is used in this way, but results are more uncertain than with silage made from common dent corn. Cane or Kaffir silage must be put up at the right stage, and good results are reported from using part cane and part corn. All through Kansas and Oklahoma, Kaffir corn is used quite extensively for silage, and farther north frequently one-third cane and two-thirds corn are used. Still where good dent corn is grown I would prefer to use straight corn silage to any mixture with cane.—L.C.Brown.

For Speed and Power.

The Western Horseman, published at Indianapolis, said recently that the common idea on horse conformation is expressed in these words: "Long muscles for speed; short muscles for power." Long muscles, true enough, enable a horse to get over the ground rapidly. Short muscles, however, are not powerful because they are short, but because in horses constructed on that plan the muscles are thicker and contain more fibres, all of which, pulling together when contracted, exert a much greater pulling force than a long, more slender muscle.

One of the greatest barb-wire offers will be found advertised on the top of page 6 of this publication.

THE BOOK OF LIVE STOCK CHAMPIONS.

Published in 1912.

THE LATEST AND COMPLETE EDITION.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

Seven Hundred and Fifty Pictures of Grand Champions in a Book Bound in Blue Cloth and Gold Title.

The List Includes Three Hundred and Twenty-five Beef and Dairy Cattle Pictures, Two Hundred and Eighty-four Magnificent Horse Pictures; Also Splendid Representation of Hogs, Sheep, Jacks and Jennets, Goats and Ponies. All the Breeds Represented With the Very Best Ever Grown.

THIS is the latest edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented magnificently. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements

To Old and New Friends and Patrons.

We offer single copies of the best edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. Every copy is handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title.

This is An Extraordinary Offer.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of The Book of Live Stock Champions, latest cloth-bound edition.

FOR THE DAIRY BARN.

Method of Laying Sanitary Concrete Floors With Farm Labor.

In the voluntary movement of farmers for better milk at better prices, the first step toward improvement is the making of the barn more sanitary by laying concrete floors. The method is so simple that any man can do his own work. The cost is so small and the cash returns are so great that the floors soon pay for themselves in preventing the breeding of flies, in the saving of liquid manure, in the reduction of labor, and in the increased flow and improved quality of milk. The plan described below is for a barn in which the two rows of cows stand heels toward each other, with a driveway between. It is easily modified to the opposite arrangement. Likewise the method is adaptable to both old and new barns.

Planning and Grading the Floor.

For average conditions lay out the stalls on three-foot six-inch centers and four feet six inches in length from six-inch manger wall to drop-gutter. The manger is two feet six inches wide at the top and two feet at the bottom, with one face sloping up to the feed-alley floor. The depth is seven inches, measured from the stanchion setting, and eight inches from the alley floor. The feed alley is four feet six inches wide. The drop-gutter has a width of eighteen inches. It is eight inches deep gauged from the stall floor, which is two inches higher than the eight-foot driveway. For establishing grade lines a carpenter's spirit level (or a water level) and a chalk line are very helpful.

To prevent possibility of the floor settling, remove all manure before grading the surface of the earthen floor. Carefully tamp back the dirt around water pipes and the drains which carry waste water and liquid manure to the water-tight concrete manure pit. Do all filling as long as possible before building the concrete floor. As a foundation for the stall floors proper, place a six-inch thickness of coarse broken stone or screened gravel to keep the floor from direct contact with the ground. Since the stall floors are of prime importance, it is well to make them first. During this operation the unpaved driveway and alleys can be used as working space. Then finish, in the order named, the feed alleys, the driveways, the mangers, and, lastly, the gutters.

Mixing and Laying the Concrete.

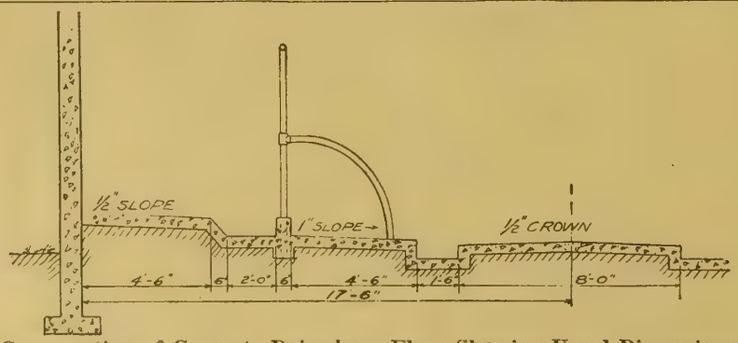
For the plan given, five feet six inches from the center line of the driveway stake on edge (and to line and grade) a two by twelve-inch plank, to serve as a form for the stall floor at the gutter. Likewise set a similar board, five feet distant, to mold the six-inch manger wall and stanchion setting. Bear in mind that the stall floor has a slope of one inch toward the gutter and the stanchion setting rises seven inches above the stall floor. Drainage for gutters and mangers will be provided by sloping their concrete bottoms.

Proportion the concrete one bag of Portland cement to two and one-half cubic feet of sand and five cubic feet of crushed rock, or one bag of cement to five cubic feet of clean pit gravel. At one operation lay the full five-inch thickness of the stall floor and finish three stalls the same as one section of sidewalk. No surfacing mortar is needed. For setting patented stall divisions, follow the manufacturer's directions; for home-made divisions, make mortises by tamping the concrete around greased tapering wooden cores, which are withdrawn as soon as the concrete stiffens. A wooden float is best for finishing the floor. A steel trowel yields a surface entirely too smooth, and such a finish should always be roughened by brushing with a stable broom.

Sanitary Floor With Concrete Manger and Swinging Stanchions.

While the concrete of the three stalls is still soft, mold the stanchion-setting (six inches thick) upon it. As forms use the projecting seven-inch height of the two by twelve piece already in place and two one by six-inch boards toe-nailed together so as to provide another seven-inch height and a bearing plate to rest on the green concrete. These forms may be made dish-shaped for swinging stanchions. Fill the forms with mushy wet concrete, trowel the surface, round the corners and set the stanchion holders. Repeat the operation until all stall floors are completed. The feed alleys and driveway are easily built; they are merely rough-finished sidewalks. Place the waste-water outlets in the mangers at intervals of twenty-eight feet and give the bottom a slope of one inch toward each outlet for a distance of fourteen feet on each side of it. The drop gutters may be drained in like manner or can be sloped slightly in one direction for their full length. For ease in cleaning, round all angles and corners (except at the bottom of the drop-gutters) by applying a one to two cement-sand mortar immediately after removing the forms.

With the proportions and thickness given above, four bags (one barrel) of cement, ten cubic feet of sand (say three-eighths cubic yard) and twenty cubic feet of crushed rock (about three-fourths cubic yard) will lay forty-five to fifty square feet of floor. The usual cost of this much material alone is $2.50. The floor soon pays for itself many times over.



Cross-section of Concrete Dairy-barn Floor Showing Usual Dimensions.

Caring For Cattle and Floor.

Regardless of the kind of floor, bedding of straw or litter is an absolute necessity; it keeps the cow clean and absorbs the valuable liquid manure. If the help can not be depended on to bed the cows properly, it is advisable to use a removable wooden grating or platform. Cork bricks also give satisfactory results, but are somewhat expensive. They are set in a two-inch depression in the floor and are held in position on all sides by the concrete acting as a curb.

SCIENTIFIC AGRICULTURE.

The Large Increase in German Productions Compared With Smaller Results in the United States.

Dean Homer C. Price, College of Agriculture, Ohio State University, Columbus, writing on "Increasing the food supply of the nation," says:

"A nation's food supply may be increased either by increasing the area cultivated or by increasing the yield per acre. In America we have been using the former method, and in Germany the latter method has been used. Within twenty years the cultivated area of grains in Germany has not increased over 5 per cent., but within this time the total product has increased over 60 per cent., due to the increased yield per acre. This increase has been due to the application of science to the practice of agriculture, and has resulted from a better cultivation and handling of the soil, from the more abundant and intelligent use of stable manures and commercial fertilizers and from the selection and breeding of more productive varieties of crops.

"A comparison of yields between single years is of little value because one year the crop may be abnormal, due to an unusual season, but by taking an average for a period of years a representative yield is given that is a safe basis for comparison. In taking the government statistics of Germany, and making a comparison between the average yields for the ten years from 1883 to 1892 and for the five years from 1906 to 1910, they show that the following increases in crop yields have been secured by the German farmers within twenty years:

Increase in Yield in Farm Crops of Germany in Twenty Years.

Crop.	Period. 1886-95. Bushels.	Period. 1906-10. Bushels.	Increase in 20 Years. Per Cent.
Wheat	21.2	31.2	47.3
Rye	16.6	38.3	70.0
Oats	34.1	57.5	68.6
Barley	24.5	37.2	51.8
Potatoes	130.0	210.1	71.6

"Practically the same figures for the United States present a very different picture. Our yields are not only in most cases less than one-half what they are in Germany, but the percentage of increase has been very much less, as shown by the following table:

Crop.	Period. 1886-95. Bushels.	Period. 1906-10. Bushels.	Increase in 20 Years. Per Cent.
Wheat	12.7	14.7	15.7
Rye	12.7	16.4	29.2
Oats	25.6	29.0	13.3
Barley	22.6	24.6	8.8
Potatoes	73.2	96.9	32.3

"While the yield of wheat per acre in Germany has increased 47.8 per cent. in twenty years, in the United States it has increased only 15.7 per cent., notwithstanding the fact that the yield in Germany is over twice as great as in America. A comparison of the tables will show that what is true of the wheat crop is true of the other crop yields. The German farmer is not only producing much more on the same area, but he is increasing his yield much more rapidly than the American farmer. And yet the German farmer has not reached his limit by any means, and one of the leading German agricultural authorities, Prof. Wohltmann, said recently that he was confident the German farmers could increase their present yields 40 per cent. within the next twenty years. However this may be, it can at least be pointed out that the German crop yields are constantly increasing from year to year, and as yet there is no tendency to go back or even stand still.

"What has made this rapid increase and why are the yields so much greater than in America, is the question that naturally arises. Primarily, it is due to more intensive systems of farming, and certainly not to land that is naturally more fertile than in America. The German farmer spends much more labor and capital in the growing of his crops than the American farmer. His fields are prepared so that they look like a garden, and the soil is in fine condition before the crop is planted. He is more careful in the selection of his seed and his stand of the crop on the ground is more perfect. He has also learned how to feed his crops with fertilizers. In the first place, he scrupulously saves every bit of waste on the farm and returns it to the land. Stable manures are carefull preserved and then generously supplemented with commercial fertilizers. The German farmer has learned how to use commercial fertilizers, and he knows they are not to be used to replace stable manures, but only to supplement them. He has also learned the necessity of keeping his land filled with humus to make it 'crumbly,' so that it may be easy to cultivate and will hold rain water that falls on it. He does this by growing alfalfa and legumes, by plowing green crops under and by the use of stable manures."

South America.

South America has on the average five and one-tenth inhabitants to the square mile.

WHEAT MARKET SITUATION.

In May the Price of Cash Wheat Declined Sharply, and So Did Contract Wheat a Fraction.

Article Written May 31st, After the Close of the Market.

We hope we will not be put out of the church for stating that we regret the absence of speculation. When the housewife pays ten cents for five cents' worth of bread and complains of the high cost of living, we hope that somebody will come along and say: "Well, I don't understand it, because there was a total absence of speculation." The only day of activity was May 31st, and that on account of adverse crop reports.

There has been monotony in the wheat market, and the first thing noticeable is, that in the trading in cash wheat the soft and the hard wheats are nearer together, not because hard wheat has gone up, for it has not, but because soft wheat has come down.

On April 30th, on the cash market at St. Louis, soft No. 2 wheat was selling at $1.09 to $1.11 per bushel, and on May 31st the prices had come down to $1.03 to $1.06½ per bushel, whereas hard wheat that had sold at 93 to 95½ cents a bushel on April 30th had changed to a range of 93 to 94 cents a bushel. A difference of 3 cents a bushel in favor of soft wheat is recognized by the trade, and any other difference in speculative prices may be attributed to unusual conditions.

The speculative market of Chicago (in which there has been little or no speculation) is based on deliveries of hard wheat, and on April 30th we left the May quotation at 92⅛ cents, and when it closed out on May 31st the quotation had been changed to 91⅞ cents a bushel. Thus is closed out in a very quiet manner the option that in other years has caused great excitement.

The July quotation behaved very much the same, declining from 92⅜ cents a bushel on April 30th to 92¼ cents a bushel on May 31st.

The September quotation during the same period declined from 92⅛ cents on April 30th to 91⅞ cents on May 31st. This is followed by a new quotation for December of 94⅛ cents a bushel, and we regard it as the most significant figure that is mentioned in the wheat trade.

Our readers must remember that there is a cloud hovering over the wheat market. Congress has about agreed to let foreign wheats come into this country free of duty. Wheat is undoubtedly a world's crop, and if duties are taken off there will be a settling of the wholesale market and wheat growers of this country will have to grow wheat again, for a time at least, at a loss, if they raise any wheat at all. Wheat at 91 cents a bushel, out of which freight and selling charges have to be paid, does not represent a profit to the farmer. It may represent swapping dollars, and that is all.

THE CORN MARKET SITUATION.

Not a Bad Showing For the Month of May—Article Written May 31st, After the Close of Market.

The practical independence of the American farmer in regard to the corn crop is well known. That situation was sized up to the editor of this paper thirty years ago when a farmer said: "When corn is scarce and high, I sell all the corn I am able to spare; and when corn is cheap and plentiful, I borrow money to buy corn." The corn crop is not purely American, but it is one crop at least in which farmers lose no sleep on account of expected importations. Corn and hogs go together, and when all other grains and live stock will go back on them, corn and hogs will continue to be the mainstay of the American farmer.

We all know that one large corn crop followed another and reached the largest figure on record, and yet since last November the corn market has advanced. It advanced because farmers were willing to stand by the crop, and if other people did not or would not or could not buy it, they could, would and did. Later on it may be different, because cattle, hogs, sheep and horses may be lowered in price, and then corn would have to come down also, and all the congressional investigations would not stop the downward trend of the market.

Let us congratulate ourselves while we can, first that corn is a good crop to raise; next, that hogs generally pay for the corn they eat, and that probably the last industries that Congress can injure beyond recognition are corn growing and hog raising.

On April 30th, cash corn at St Louis sold at 57½ to 58 cents, and on May 31st the price of No. 2 corn had advanced to 58¼ cents a bushel.

On April 30th, at Chicago, the May corn option at the close of the market was 55½ cents, and on May 31st the aforesaid May option was closed out at 59 cents, and that is, as compared with 80 cents, the closing figure of the May option last year.

On April 30th, the July corn quotation was 56⅛ cents, and on May 31st the July option closed for the day at 57½ cents, which is not enough advance to talk about.

On April 30th, the September corn quotation was 56¾ cents, and on May 31st the price had advanced to 58¼ cents. There was also a December corn quotation of 56⅝ cents a bushel.

Here we will leave the corn prices. We are cleaning up the immense corn crop in good shape, and in view of the large and ever-increasing population that have to be fed, it is proper and patriotic for farmers to raise more corn.

OUR INDUSTRIAL POLICY.

The article entitled "Our Industrial Policy," appears on page 23. This is a very opportune article, and we wish it to be understood that The National Farmer and Stock Grower has had something like it in every issue for over a year. The editor of The National Farmer and Stock Grower is a consistent advocate of moderate duties being levied upon all foreign so-called raw materials and upon manufactured goods on arrival in this country; that these foreign manufactures carry at least the same charge as would be against them in the taxation that all of our people have to pay to a half a dozen taxing powers before we get our products on the market. Why all the burdens of this country shall be borne by our own citizens and all the benefits should go to foreign producers we do not understand and we do not intend to understand. The language of the article entitled "Our Industrial Policy," is plain enough, and it does not require an interpreter.

Texas Steers Bring $8.00.

Sixty-eight head of 1,479-pound steers, shipped by Chas. McFarland, of Aledo, Texas, sold at $8.00 per 100 pounds at the St. Louis National Stock Yards, June 1st.

Over 600,000 Wearers

Style No. 2231

LAST year 646,448 people bought this famous shoe, because it is better than any other medium-priced shoe in existence.

It is the "Our Family" shoe, and it is made in several styles—all sizes for men, boys, women and children.

It is honestly made of good leather, with sole leather heels, counters and soles. No substitutes for leather are ever used.

The "Our Family" is a "Star Brand" shoe. This means that it is better than other shoes of the same kind at the same price.

The "Star Brand" merchant has an "Our Family" Shoe cut up so you can see how it is made. Ask to see it.

Grow More Cowpeas.

As a hay crop, green-manure crop or as a pasture crop, cowpeas are filling a gap where other crops fail. In feeding value I place cowpea hay right alongside of alfalfa, and it has the advantage over clover and alfalfa in that it will produce a good crop of hay from 80 to 100 days from time of seeding. Where clover utterly fails or makes but feeble growth, where alfalfa is difficult to start, cowpeas thrive and make the cheapest feed. Besides, cowpeas may be grown from Texas to Wisconsin, although its real home is in the central and southern corn belts. Sow cowpeas for hay, sow them for soil improvement, and they will make good.

Sow them alone for hay; or, for pasture or green manure; sow them among corn after the corn is laid by. Instead of broadcasting, I believe that much better results may be had by drilling the peas in between the rows of corn. This will cover them enough to insure quick germination. The trouble with sowing broadcast is, that many of the peas are not covered.

Young hogs are good harvesters of cowpeas. Turn them in when the peas are well podded, and, with the corn, they will make remarkable gains. I do not know of any cheaper method of making pork, for an acre of cowpeas with the corn will feed twenty young hogs for five or six weeks, and the droppings from the hogs will almost equal the total value of the crop as green manure.

As a hay crop cowpeas are worth as much as clover, stand ahead of timothy, and millet is not in the same class at all, and if one is careful to not put the crop up too green, it may be cared for as easily as clover.—L. C. Brown.

Too Much Wheat.

In many sections of the winter-wheat belt lands are becoming "wheat sick," as are large areas of lands in the corn belt becoming "corn sick." Wheat following wheat, with shiftless methods naturally following increased acreage, pests are encouraged and the condition of the ground becomes worse year after year. Already some counties in Kansas are showing the inevitable results of this one-crop practice. A Kansas farmer reports his wheat literally alive with a small white grub, which authorities are unable to identify. These pests are new to wheat growers, and they urge the necessity of giving wheat a rest and growing other crops for two or three years.

Discing and plowing early would help matters, or some early-sown leguminous crop plowed under will build up, and earlier seeding will be a good thing. In Illinois we have thousands of acres of lands so infested with the corn-root louse that it is almost impossible to produce a decent crop.—L. C. Brown.

Alfalfa For Kentucky.

A Kentucky subscriber asks these questions about alfalfa: "Will alfalfa do well here? Will it be necessary to treat with lime and inoculate? Sweet clover grows all over this country. When is the best time to sow the seed?"

If the ground is well drained and reasonably good, alfalfa should do well in Kentucky. I should apply two or three tons of ground limestone per acre before plowing this ground and would also inoculate by using soil from some other alfalfa field, or from some spot where sweet clover is growing. Then if our correspondent will thoroughly prepare his seed bed and sow his seed during the first part of August he should have no trouble in getting a good stand.—L. C. Brown.

Raising the Average Yield Per Acre of Corn and Other Crops.

The agitation of better methods of growing corn through different agencies interested in promoting the welfare of the farmer has resulted in much good to both single individuals and to communities, and we may expect a substantial increase in the average yield, resulting not so much from phenomenal crops in isolated instances as from a general awakening on the part of farmers to the opportunities that they have too long neglected. Every corn field that shows the effect of better soil preparation, a better system of fertilization and seed selection is an object lesson that will, like Scripture says, "leaven the whole lump," or, in other words, quicken the spirit of better farming.

When land is made to produce well there will not be so much lying idle, for it will be too great a loss to the owner to grow a crop of weeds, when he could just as well have a revenue from his holdings. The farmer will realize that his soil is his chief asset, and whether it gives him an income or not largely depends on himself. If he does not grow corn, he will find some other crop that better suits his soil or the conditions that are before him, to which he will apply the same methods that make big yields of the "King of the Cereals," for all crops are governed by the same laws.

Good seed, fertile soil and a well-prepared seed bed with well-timed cultivation will win success, and all are so important that if not provided for there is danger of partial failure. Any one of these factors to successful farming will be a strong aid, but all are required before it can be said of the farmer "he has done what he could."

When we read the history of the prize-winning yields produced by members of corn clubs, we find that the soil was made as fertile as the means at hand would allow. Not only was barn-yard manure used in abundance, but commercial fertilizers as well, particularly in those sections where the use of such plant food is common. There is no question that barn-yard fertilizer is valuable, as it contains much plant food and also by the fermentation set up by its decay probably liberates some mineral elements useful to the crop that might otherwise have remained unavailable. It also improves the mechanical condition of the soil by the organic matter it contains, but if it is applied in large enough quantities to supply the potash and phosphoric acid needed by most crops, much of its nitrogen is wasted, as the growing plans cannot assimilate the excess and it is leached away and lost. It is better therefore to make only moderate applications such as would supply the needed nitrogen and make up the deficiency of potash and phosphorus in the manure by purchasing these elements of plant food in commercial form.

Sulphate and muriate of potash are cheap, and kainit still cheaper, but only one-fourth as effective, pound for pound, and in these days of home mixing the farmer does not care to buy any kind of fertilizer low in plant food, for freight rates are the same on high and low-grade stuff. This is the reason why acid phosphate or bone meal are favored as sources of phosphorus, and when the effect on the crops of these fertilizers has once been shown in connection with manure or leguminous crops, there are very few farmers that hesitate to make the outlay required for their purchase.

Analysis of the soil is not always conclusive; clay soils are assumed to contain plenty of potash, but the writer is acquainted with land of this nature that has been farmed for several decades and the best crop yields have been made when potash has been applied in addition to the other fertilizers. No doubt the virgin soil had plenty of available potash, but after successive crops had been fed there was not enough to supply the wants of a heavy yield of corn, wheat, potatoes or other staple, and it certainly pays better to make a small outlay and secure such yields that a profit can be made on time and money invested in producing the crop. Another point, too, in favor of high fertilization—if the season is backward, plants on rich soil will grow much faster and thus make up for lost time that cannot be regained, and the crop will come to vigorous maturity, while that on poor soil is making a feeble growth that does not promise a profit.—D.C.Cornman.

Swift & Co. in Australia.

Consul General Jno. P. Bray at Sydney, Australia, in a report to the Department of Commerce, said: "Swift & Co., trading in Australia as the Australian Meat Export Company (Ltd.), more than a year ago obtained a tract of land 120 acres in extent on the banks of the Brisbane river, Queensland, near the city of Brisbane, upon which a fully-equipped slaughtering and packing plant is being constructed. This will be ready to begin practical work in about a year."

On May 22d, the best native steers at Chicago averaged 1,509 pounds and sold at $8.80 per 100 pounds.

How to Treat the Strawberry Patch After Picking is Over.

Much of the expense of strawberry growing is in the cost of the plants and setting them, and if the bed or patch can be made over after the first fruiting year, so that it will bear as heavily the next season as the first, there is an additional profit the second season from saving in this direction, hence the net gain from the crop is proportionately greater.

It is not hard to thus rejuvenate the bed, patch or field by cutting the plants down to the crown the very next day after the last picking of berries and let the plants and any weeds that have fallen before the mower lay till dry, then burn off. If there are not many weeds, so that the dry litter is continuous, it would be best to rake it directly in the row, where the fire may sweep over the plants. Choose a day when the wind is stirring to do this. If loose straw be scattered evenly and thinly over the patch the burning will be general, and it serves a double purpose—it has a favorable action on the soil and kills all insects and also spores of fungi.

Immediately after burning, cultivate close to the row, and, if there is room between the plants, stir the surface with a narrow-bladed hoe. If poultry droppings are available, scatter freely between the plants, also in the row. The droppings should be dry and as fine as possible, and may be mixed with dry earth to make the application more uniform.

Rotted stable manure may be applied in this way, too, if it is at hand, and the coarse, fresh barn-yard product makes a very good mulch, if placed in the "middles," thus saving much cultivation, as it will keep the soil loose and free from weeds and hold moisture in it. Keep up cultivation between the plants till there is a new crop of leaves so luxuriant as to shade the ground from the sun. In the absence of the above home-made fertilizers, nitrate of soda may be used to feed the plant, so that new leaves will start and grow freely. An application of 150 pounds to the acre is sufficient, unless the soil is low in fertility.

To balance the fertilizers that produce leaf growth, we must use wood ashes or some form of commercial plant food supplying potash. In a three-years' growth an acre of strawberries uses up 223 pounds of nitrogen, 83 pounds of phosphoric acid and 375 pounds of potash, according to good authorities, therefore with or without the application of manure we need potash for best results. If seven tons of barn-yard manure were applied to the acre it would hardly supply the phosphoric acid needed, as it has been estimated this amount of fertilizer contains 57 pounds of that element, and it is believed that the three-years' growth exhausts only 83 pounds, but the seven tons contain only 74 pounds of potash, while the strawberry uses 375 pounds.

This shows how necessary it is that we add potash, either in the form of unleached wood ashes, if it can be secured locally and cheaply, or sulphate of potash, using 150 pounds of the latter, if the former cannot be had without much trouble or expense.

If no manure is used, 200 pounds of acid phosphate will be a valuable addition to the other fertilizers, all of which should be applied around, not on the plants. The strawberry, like all other fruits, is making ready in the fall for the next year's crop, and it is essential to encourage luxuriant growth by cultivating and fertilizing. When the crowns send out new leaves, cut out all plants that appear weak and not up to the average. These take up room and will not bear large berries nor many of them, and their places can be filled by runners from the more vigorous plants.

Keep up cultivation as long as is needed to encourage growth and to destroy weeds and the late fall will find a bed as fine appearing as it was the first year, and we have followed the same plan after the second fruiting, securing a most abundant third crop. When the ground is frozen, mulch with straw or any other material that will protect the plants without smothering them. Where the winters are like in Central Missouri, the mulch does most good in preventing alternate thawing and freezing during mild spells and so does away with the heaving that is weakening to the plants.

When the cold of winter is gone, uncover the plants, placing the mulch around them, so the fruit cannot come in contact with the ground, and the pickers will not tramp the soil so hard if there is a cushion from the mulch; therefore, if a dry spell should come in fruiting time, the berries will not suffer. If there are no very late varieties in the patch, the fruiting time can be prolonged by leaving the mulch on a part of the patch a few days longer than on the larger portion, thus keeping the plants dormant.—D. C. Cornman.

No-Rim-Cut Tires 10% Oversize

11% Less This Year

Rubber has dropped a little. And our factory cost, because of multiplied output, has dropped a little more. Our new factories are completed, and we've equipped them with the latest labor-saving machinery.

Now we have a capacity pretty close to 8,000 motor tires daily.

As a result, No-Rim-Cut tires are costing about 11 per cent less than last year.

What You Save

You save, by using these new-type tires, all the ruin of rim-cutting. And that is what wrecks 23 per cent of the old-type clincher tires.

You get extra capacity. No-Rim-Cut tires are 10 per cent larger than the same rated size in clinchers. And that oversize, under average conditions, adds 25 per cent to the tire mileage.

And now you save on price—11 per cent under what these tires cost last year.

No Extra Price

No standard tire of any type costs less than No-Rim-Cut tires today.

Hooked-base tires—tires which rim-cut—now cost the same as these new-type tires which don't.

Tires just rated size now cost as much as these oversize tires.

Consider how it pays to insist on these savings when they cost you nothing extra.

Their Records

No-Rim-Cut tires, when they cost more than clinchers, came to outsell all others.

The demand for these tires has doubled over and over. It has become the sensation of Tiredom.

More Goodyear tires were sold last year than in the previous 12 years put together. And car makers alone have contracted this year for 890,680 of them.

Now No-Rim-Cut tires cost no more than old-types, and our demand from users so far this year has jumped 85 per cent.

Just Be Fair

All we urge is fairness to yourself. Test the tires which, on countless cars, have shown the lowest cost per mile.

One glance will show that these tires can't rim-cut, that they are over rated size. Find out how this lowers tire bills.

Hundreds of thousands of men who have done that now use Goodyear tires.

Also be fair to us. For 14 years our experts have worked to lessen tire upkeep. And we are still spending $100,000 yearly on research and experiment.

Now comes this 11 per cent reduction. Doesn't this record, in your estimation, call for a test of these tires?

AUSTRALIAN BEEF.

California Gets a Touch of It and Cattle Growers Feel the Effects.

A few years ago the duty on dressed beef imported into this country was two cents a pound, but Congress took off one-half cent a pound when the duty was taken off hides, and at the present time the duty is only 1½ cents a pound, and that is what the Australian beef paid as duty when 650,000 pounds of it arrived at San Francisco during the month of May.

We were reading the speech of Hon. William Kent, member of Congress from Marin county, California, on the subject of the tariff on meats, and he said that "this talk of the farmer being wrecked and ruined by the advent of free meat from Argentina and other places is the veriest nonsense."

He said he was selling upwards of 5,000 corn-fed cattle a year beside a good many grass cattle, and he was not afraid.

The next week the Australian meat arrived, and, although subject to the duty of 1½ cents a pound, did for the time being demoralize the wholesale market of San Francisco for meats to the amount of three cents a pound, although it is not known that it had even a cent a pound difference in the price of beef cuts as bought by the housewife from the retail butcher.

The reason that meat went to San Francisco is because Melleville Schweitzer, a wholesale butcher, went after it. He could not get any from New Zealand, because the New Zealanders are separating with cream separators, selling butter-fat instead of beef, and the same ship that brought the meat brought in butter that supported the United States government to the extent of six cents a pound.

Mr. Schweitzer is credited with saying that with the low duty now collected, Australian meats could be sold below the market (he means the wholesale market) price of home production, but to make a sure thing all the time, so as to insure prosperity to the shipper, the steamboat company and the wholesaler, the United States government must give up the cent and a half a pound, and the cattle raiser will have to take his medicine in the loss of what little protection he has.

There is no doubt about it, the Congress of the United States can bring about a considerable improvement in the condition of the beef growers and mutton and wool raisers of Australia at the expense of the beef growers, mutton and wool producers of the United States, and appear bound to do so before they get through, but they will not cheapen anything to the beloved and so-called consumer until by reason of distressful conditions brought about in other industries by the same means, the alleged and beloved consumer has not the money to fill the market basket.

For the sake of the unafraid Hon. Mr. Kent we are glad that the meat that will come in before the Panama Canal is completed will be largely distributed on the Pacific Coast.

LICENSED COMMISSION MEN.

A New York Law Placing the Commission Business Under the Espionage of the Commissioner of Agriculture.

In New York state the government has done what the farmers and shippers failed to do. The state has licensed commission men and requires them to give bonds for the faithful performance of their duties.

In several articles appearing in this publication we have advocated that each stock raisers' association, each dairy association, each cotton raisers' association, and each association representing any kind or class of farm produce, should issue licenses to a number of commission men in each market where their shipments are usually sold for the purpose of designating the firms that have entered into agreements as to certain rules of sale and charges for the service.

Although the New York law goes much farther than is necessary and is full of complications, all it really does is to provide for faithful rendition of accounts and to prevent certain forms of skulduggery that are popularly supposed to belong to the city commission men who receive farmers' products for sale on commission, either from the hands of the farmer or some other man who may have come into possession by purchase or otherwise.

The Cole Commission Act, as it is called in New York, requires each and every firm engaging in the commission business to file a bond amounting to $3,000 and pay ten dollars to take out a license.

Some of the provisions of the law are as follows:

No. 1. The Commissioner of Agriculture may decline to grant a license or may revoke a license already granted where he is satisfied of the existence of the following cases or any of them. 1. Where a money judgment has been entered against such commission merchant and upon which execution has been returned unsatisfied.

2. Where false charges have been imposed for handling or services rendered.

3. Where there has been a failure to account promptly and properly or to make settlements with intent to defraud.

4. Where there have been false statements as to condition, quality or quantity of goods received or held for sale on commission when the same might be known on reasonable inspection.

5. Where there have been false or misleading statement or statements as to market conditions with intent to deceive.

6. Where there has been a combination or combinations to fix prices.

7. Where the commission merchant directly or indirectly purchases the goods for his own account without prior authority therefor or without notifying the consignor thereof.

The license to do business will be the main qualification. Joining the Fruit Growers' Exchange will not make a man a commission man, neither will the Merchants' Exchange be able to license a commission man, but there will be no obstacle that will keep a properly-organized commission house out of business. There will be no excuse for shippers to consign to fake commission houses because of the high figures quoted in circulars, which some shippers seem to take a delight in doing. The New York law goes into effect immediately and has been signed by the Governor.

OUR WEBSTER'S DICTIONARY.

Webster's Dictionary of the English Language was originally compiled by one of the greatest Americans that ever lived. It is the standard dictionary for a hundred million of people. Noah Webster, the originator of the Dictionary, died in 1843, and since that time different editions have been issued, all containing the original wordings but some of them greatly enlarged and improved. What is really entitled the authentic unabridged edition costs ten dollars or more per copy, and it is used in all colleges where the complete work is necessary. But other editions have been completed for the purpose of eliminating the extra matter of little value in business and farm life and yet furnish all that is absolutely necessary. There are several such Dictionaries, and the one we adopted is, in our opinion, the best of them all. It is also so cheap that we can include it as a premium with a two-year subscription of the paper. Our Webster's Dictionary is advertised on page 27. It is not overstated, and we wish to say that we do not expect always to furnish so well printed a volume. The high cost of living is affecting almost everything that we buy, but it has not reached brain food yet, to any extent, but we do expect to see the price put up so that we cannot afford to use such a valuable book for premium purposes.

The Silo to Perfection.

Many ranchmen and stock farmers have come to the conclusion that a well-constructed silo is worth forty-four acres of fertile soil added to the farm. So much of a necessity has the silo become since it is demonstrated that silage-fed stock are the most economical meat producers; that manufacturers are competing for the trade in a manner never known before. The fir silo is the great competitor to-day, and the advertisement on page 10 is worth studying. You can buy a silo, and woodwork for a house or barn, and have the car delivered at your nearest railroad. It is claimed that you get a better, stronger and more lasting silo at a saving of 40 to 60 per cent. on the cost of the average timber silo. Do not hesitate to write to Hewitt-Lea-Funck Co., 488 Union Avenue, Seattle, Washingon, and enclose the coupon on page 10. There are distributing centers on all railroads, and you will be dealing with the lumber producer direct.

To Market Apples Extensively.

Apple growers are getting a move on themselves for the purpose of marketing their product to the best advantage, and, what is more important, to increase the demand for the apple. We recollect very well the meeting of the American Apple Growers' Congress held in 1906, when October 16th was declared to be "Apple Day," and to be celebrated from that time forward. We published the same in a booklet entitled "The Date Book History of Live Stock and Agriculture." We have celebrated Apple Day ever since, but we have an idea that the apple growers have forgotten all about it and we believe Apple Day ought to be revived.

BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed because either paper is worth considerably more than the full price. The papers are as follows:

The National Farmer and Stock Grower—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.

The American Swineherd—issued monthly—a leader in its class. The hog paper. the pig paper, the brood sow paper, and strictly first-class in teaching how to top the market by producing top hogs.

The Shepherds' Journal is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

The Reliable Poultry Journal—the best and most elegant poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. **The Reliable Poultry Journal** is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read **The Reliable Poultry Journal.**

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — For One Dollar ($1.00) enclosed herewith please send us the Big Four Subscription Combination one year, consisting of **The National Farmer and Stock Grower, The American Swineherd, The Shepherds' Journal** and **The Reliable Poultry Journal.**

Editor's Note.—The Fruitman and Gardener, published monthly, a first-class paper, can be substituted for either of the above papers if desired.

MONEY FOR FARM LOANS.

Postal Savings Banks Deposits Ought to be Used For the Purpose of Making Loans to Farmers on the Security on Their Lands and on Other Securities to Co-operative Associations of Farmers.

All the world is interested in financing the farmer. The matter is opportune. There is a Commission from the United States in Europe investigating the subject with a view of adopting Eurpean methods. That Commission will probably make some practical recommendation. The subject of trying to find means to reduce the high• rates of interest originated in this paper, when in the year 1906 we forwarded petitions on the subject to the Honorable James Wilson, who was then the Secretary of Agriculture. We have now reached the second stage of the same matter by getting up another petition asking that the money be provided for that purpose.

In The National Farmer and Stock Grower of December, 1912, the suggestion was first advanced that the money deposited in postal savings banks ought to be devoted to the purpose of making loans to farmers, under proper regulations, at low rates of interest, in order that farmers who have the best security to offer of any class of people may be able to obtain money at least on equal terms with other business interests

Since then it appears that this view is receiving some attention and favorable comment, and if the subject has the consideration it merits it will not be long before the idea will receive the sanction of Congress and money heretofore locked up and hoarded will be available for the best possible purpose in which it can be used.

On page 32 of this publication will be found a **Petition to Congress** that ought to be presented with not less than a million signatures. Each farmer who is interested in this movement should get the blank signed up and tear the page out of the paper and mail it to this office. We will then send more blanks to be delivered to other farmers.

The whole story is this: The United States government is now in the banking business, receiving deposits at postal savings banks that will eventually amount to hundred millions of dollars. Upon most of this money the government pays an interest charge of two and a half per cent., and a little of it bears three per cent. We insist upon it that the government should not tax the people to pay interest on these deposits, but that the money be loaned out again, and under proper regulation it should be made available for farm loans at a rate not over one or one and a half per cent. more than the government pays for it.

We contend that the money should be loaned out through banks and trust companies, if they will accept the proposition to do so, at a fair rate; but rather than have the banks use these deposits at high rates of interest the Postoffice Department should be enlarged to take charge of all the loans to farmers.

Don't fail to understand the situation and get to work and do something for the common good of the farming industry. We are now receiving signed-up petitions. A few are coming in every day, but not one-tenth are coming. During the month of June we hope to receive a thousand petitions all ready to be forwarded to Washington. Farmers ought to attend to this business without delay.

California Meat Quotations.

The following were wholesale meat quotations at San Francisco when the Australian beef arrived in the month of May: Beef, 11½ to 12 cents a pound for steers; 10½ to 12½ cents a pound for heifers; veal, 10 to 12½ cents a pound for large; 11 to 12½ cents a pound for small: mutton, wethers, 10 to 10⅞ cents a pound; ewes, 8 to 9 cents a pound; lambs, 11½ to 12½ cents a pound.

California Live Stock Quotations.

The following were the San Francisco live stock quotations before the Australian meats arrived in the month of May: No. 1 steers over 950 pounds, $7.50 to $7.75 per 100 pounds; under 950 pounds, first-class steers, $7.25 to $7.50; second-quality steers, fat, $6.25 to $7.00; thin, $4.50 to $5.00; No. 1 cows and heifers, $6.50 to $6.75; second quality, $5.75 to $6.25; common, $4.00 to $4.50; bulls and stags, desirable, $4.00 to $4.50; half fat or thin, $2.00 to $3.00; calves, light-weight, $7.25 to $7.50; medium, $6.50 to $7.00; heavy, $5.00 to $6.00; sheep, desirable, wethers unshorn, $5.50 to $6.00; ewes, $4.50 to $5.00; shorn, 50 to 75 cents per 100 pounds less; suckling lambs, $6.00 to $6.25; hogs, hard-grain-fed, 100 to 150 pounds, $7.75 to $8.00; 150 to 275 pounds, $8.00 per 100 pounds; and 250 pounds and upward at $7.50 per 100 pounds.

California Butcher Prices For Beef.

When the Australian frozen meat was on sale in San Francisco, a daily paper, the San Francisco Call, published the prices charged at retail for the native and foreign meats, as follows:

	Australian.	American.
Porterhouse steak.	20 c.	25 to 30c.
Sirloin steak	15 c.	17½ to 20c.
Rump steak	12½ c.	17½ c.
Soup meat	7 c.	10 c.
Corned beef	10 c.	12½ c.

The amount of Australian meat that the butchers said they could sell in San Francisco from one year's end to the other was placed at 2,000 tons a month, and arrangements were made to provide that much refrigerating space on the ships of the Union Steamship Line. It must be remembered that under the present laws, admitting foreign meats by paying a duty of 1½ cents a pound, there is nothing to prevent the Australian shipments being kept up. The burning question is, "Shall the law be changed so as to present the 1½ cents per pound to the carriers instead of letting it go, as now, to pay the expenses of the United States government?" Thus far it is a revenue matter, although it involves a small measure of incidental protection to the American meat producer.

Weaning Calves With Ease.

No matter what our problem, it seems there is always some one to solve it. Where we often had considerable trouble weaning calves, now it can be done with ease, thanks to the Humane Calf Weaner.

This little device absolutely prevents sucking; allows the calves to eat and drink with perfect freedom and they can run with the cows while being weaned.

Considering the price, 25 cents for the small size and 35 cents for the large size, postpaid, and the efficiency of the Humane Calf Weaner, certainly no farm should be without them. Address, Jacobsen Farm Supplies, Dept. A, Racine, Wis., and let the Humane solve your weaning problem.

Book of Champions on page 3.

GOOD BOOKS AND PAPERS.

DAIRY FARMING AND BUTTERMAKING.—The dairy agent of the Southern Railway has written a nice, practical, clever booklet on the subject of dairying, with special reference to the Southern States. He characterizes the cow as the most economical producer of human food and proceeds to prove it. Naturally, the dairy expert is in favor of cleanly methods, and he goes through the entire process of milking and buttermaking. He is also strong for the use of the cream separator whenever the farmer has three cows or more. Anyone who will take the trouble to write for it to M. V. Richards, Land and Industrial Agent, Southern Railway, Room 71, Washington, D. C., will receive a free copy of the booklet entitled "Dairy Farming and Buttermaking."

FERTILIZING PEACHES.—This is one of the valuable booklets issued by the German Kali Works and more particularly refers to potash in its relation to peach growing. Potash is one of the three principal fertilizing elements, and in the case of peaches twice as much is required than nitrogen and four times as much phosphoric acid. There is considerable of interest to the peach grower outside of the subject of potash, and to read it is to obtain the benefit of a valuable lesson in horticulture. In this connection it is in order to say that we rely upon such pamphlets for the clear-cut statements of fact that we can understand, more than we do on compilations from almost any other source. The German Kali Works is certain of all positions taken before publication. All who are interested in peach growing will find it to their advantage to write to the German Kali Works, 1901 McCormick Building, Chicago, Ill., and ask for a copy of "Fertilizing Peaches."

THE FARMER OF TO-MORROW.—A well-written book, dealing chiefly with the important subject of "fertility of the soil." This article is written in a simple, smooth and interesting manner and makes an excellent addition to the business farmer's library. Price, $1.50. By Frederick Irving Anderson, and issued by The MacMillan Company, New York City.

WITTE ENGINE CATALOGUE.—These engines are only sold from the factory to the user. For that reason it is a user's catalogue, giving price of each size and variety of engine in plain figures, with particulars of sixty-day free trial and the five-year guarantee. The catalogues shows the works, the officers, interior and exterior, and every engine made. Witte claims thirty distinct points of superiority, which are carefully set forth and explained. Not the least of all is the Witte Portable Saw Rig that appears to be a scorcher and was unknown to us until we saw the catalogue. There is too much in the catalogue to be described in a notice. Send for one and see for yourself. Address, Ed. H. Witte, 1721 Oakland Avenue, Kansas City, Mo.

St. Louis Wool Market.

Quotations for wool are not very high, but it will be found that St. Louis is a very good market. Missouri, Illinois, Northern Arkansas and Southeastern Iowa wools were selling at 12 to 18 cents for fine wools, and 18 to 21 cents for medium fleeces. Texas and Western wools were quoted from 15 to 18 cents. The uncertainty of the tariff question, or rather the unsettled condition of the manufacturing interest, because it is expected that the duties will be taken off woolen goods, is even now costing wool producers several cents a pound. At the same time it is well to understand that the St. Louis market recovers quicker than any other. Mills buy direct from St. Louis. A. J. Child & Sons, strictly commission merchants in wool, engaged in business since 1874, are capable and reliable. If you will write for their latest wool report you will get up-to-date facts and your sales will be equal to any representations they may make. Address, A. J. Child & Sons, 517 North Main street, St. Louis, Mo.

The Most Useful College.

Our readers are reminded of the card of Highland Park College on page 25. This is no ordinary college. It turns out capable men who can earn large pay and fits them to be heads of manufacturing enterprises. Willing youths with an aptitude for mechanics are soon put through the necessary course that in older countries require a four-year apprenticeship. There is a home study to which 8,000 students are enrolled. It is without doubt the best correspondence course. The terms at the college begin June 10th, another September 2d, another October 13th. Business and trade-school courses begin every month. Expenses are reasonable. Do not forget to mention The National Farmer and Stock Grower when you write. It will be a good introduction.

Cash Grain at St. Louis.

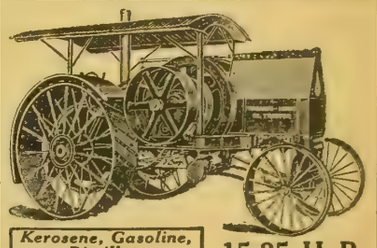
These figures represent the trade in cash grain on the St. Louis market May 31st, 1913:

Wheat.—No. 2 red at $1.03 to $1.06½; No. 3 red at 95 to 98c. (choice more); No. 4 red at 94c.; No. 2 hard at 93 to 94c; Turkey at 97½c. No. 3 hard at 91c.; Turkey at 96½c.

Corn.—No. 2 corn, 58 to 58¼c.; No. 3 corn, 57½c.; No. 2 yellow, 58¼c.—couple cars 58½c.; No. 3 yellow, 57¾ to 58c.; No. 4 yellow, 56c.; No. 2 white, 59½ to 60½c.; No. 3 white, 58½ to 59½c.

Oats.—No. 2 white, 38¾ to 39½c.; standard, 38½ to 39c.; No. 3 white, 37 to 38½c.—mainly at 38c.; No. 4 white, 37 to 38c.; No. 2 oats, 37 to 37½c.—mainly latter—car 38½c.; No. 3 oats, 37¼c.; No. 4 oats, 36 to 36¼c.

Fairbanks-Morse Oil Tractors



Kerosene, Gasoline, Distillate

15-25 H. P.

The power of 15 horses concentrated in a single machine.

Easily handled—everything that requires the operator's attention in easy reach.

Single Lever Control. This patented feature simplifies handling and makes stripping gears absolutely impossible.

Economical. Develops more than rated power on Kerosene, Gasoline or Distillate.

Engine is our well-known horizontal type, used by farmers everywhere. Simple. Dependable. You can handle it from the start.

Details of construction and actual service records gladly forwarded on request. State size of your farm and general character of soil. Ask for Catalog No. FM692

Also build 30-60 H. P.

Economy in Dairy Distribution.

At the recent meeting held in the interest of Farm Marketing and Credits, one of the speakers, a lecturer of the National Grange, spoke of the waste in distribution of farm products and with special reference to the delivery of milk and cream, stating that four wagons delivering on one block, representing four different distributers, was an example of waste that could be corrected to the advantage of all concerned. The speaker said that the four concerns distributing on one block were not willing to combine for delivery purposes only, and, of course, they could not, because it would lead to carrying all the milk in one can, lead to joint collections of bills, joint price lists, and finally to avoid the penalties of anti-trust laws would lead to all selling out to one concern that would be a monopoly in restraint of trade. If the course of waste leads to monopoly, waste is very likely to be preferable to the remedy.

But the subject cannot be let drop here, because if we are not doing it others may and prove that the lecturer of the National Grange was right. We read in the reports of the United States Department of Commerce as follows:

"The high cost of distributing merchandise to the consumer is one of the foremost questions of the day. It has especially been mentioned that in the daily delivery of milk, bread, etc., many supply wagons pass over the same street, each serving only a few of the residents. This adds greatly to the cost of the articles. Out in Sydney, Australia, one of the plans presented to the Parliamentary Food Commission is for the block system of bread delivery. A calculation made by the chairman showed that, taking the government statistician's figures, two loaves per head were consumed by each of Sydney's population of 670,000. On this basis the block system of delivery would save $70,000 per week, or 6 cents per family, while the baker's profit would remain the same."

Dairy Loans the Safest.

At one of the meetings of the North Dakota Dairy Association a member said that the banks in his town were willing to loan money to the farmers to buy cows, when they refused the same men the money to buy more land. The reason for this attitude on the part of the bankers was summed up in a few figures which he quoted. A farmer in his neighborhood went to the bank in the fall of 1911, after a partial crop failure, and wanted to borrow $300 to keep his family during the winter. The banker refused him the money, but said he would let him have all he wanted upon condition that he purchase cows with it. The farmer took the money and purchased two calves and six cows. He already had two cows and two calves, which made him a herd of eight cows and four calves. He fed these cattle roughage of the farm during the winter and the family lived off from the proceeds of the herd. A year later he had sold $354 worth of cream and young stock, and the herd he had on hand was worth something like $400. Had he simply existed during the winter on the $300 he would have had nothing left at the end of the year, but as it was, he had lived off the proceeds of the herd and had the herd left. A few dairy cows will make a living for a family every year and make a better living the last year than the first.

The Winter Wheat Crop.

On May 8th, at Washington, D. C., the first official estimate of the size of the crop of winter wheat was made in the May crop report of the Crop Reporting Bureau, Bureau of Statistics, United States Department of Agriculture.

The report shows the condition on May 1 of winter wheat, rye, meadow lands, pastures, etc.

Winter Wheat.—The average condition of winter wheat on May 1 was 91.9 per cent. of a normal, compared with 91.6 per cent. on April 1, 79.7 per cent. on May 1, 1912, and 85.6 per cent., the average for the last ten years for May 1.

The area of winter wheat remaining on May 1 to be harvested was about 80,938,000 acres, or 1,449,000 acres less than the area planted last autumn, but 4,367,000 acres more than the area harvested last year (26,571,000 acres).

The condition on May 1 in indicative of a yield per acre of approximately 16.6 bushels, assuming average variations to prevail thereafter. On the estimated area to be harvested this would produce a final crop of 513,571,000 bushels, compared with 399,919,000 bushels in 1912, 430,656,000 bushels in 1911, 434,142,000 bushels in 1910, and 417,780,000 bushels in 1909. The outturn of the crop probably will be above or below the figures here given according to the conditions from May 1 to time of harvest is above or below the average change.

Rye.—The condition of rye on May 1 was 91 per cent. of a normal, compared with 89.3 per cent. on April 1, 87.5 per cent. on May 1, 1912, and 89.6 per cent., the average for the last ten years on May 1.

Meadow or Hay Lands.—The average condition of meadow or hay lands on May 1 was 88.5 per cent. of a normal, compared with 85.7 per cent. on May 1, 1912, and a ten-year average on May 1 of 88.5 per cent

Hay on Farms.—The stocks of hay on farms on May 1 were estimated to be 10,828,000 tons, compared with 4,744,000 tons on May 1, 1912, and 8,673,000 tons on May 1, 1911.

Pastures.—The average condition of pastures on May 1 was 87.1 per cent. of a normal, compared with 81.7 per cent. on May 1, 1912, and a ten-year average on May 1 of 86.1 per cent.

Spring Plowing.—Of spring plowing 67.2 per cent. was completed up to May 1, compared with 52.8 per cent. on May 1, 1912, and a ten-year average on May 1 of 65.7 per cent.

Spring Planting.—Of spring planting 57 per cent. was completed up to May 1, compared with 48.9 per cent. on May 1, 1912, and a six-year average on May 1 of 54.3 per cent.

Clear Fir Silo
at 40% to 60% Saving
Buy your silo of us, and you buy direct, not only from the maker but from the lumber producer as well.
We own forests, railroads and six big mills
There are thousands of acres of timber in our tracts. The fir is the finest in the land. Tall, straight and close of grain. Only the choicest goes into Seattle Silo Staves. They show no knots, sap or other defects. Do not warp, shrink or swell. The toughest, best wearing wood in existence. All the cutting, logging and manufacturing of this timber is handled by us. One continuous operation. One overhead expense. Hence the big saving that we effect in producing cost—and why we save you 40% to 60% on a silo of better quality. Mail the coupon for catalog.
Seattle Silos
have patented swinging doors
These are far the best silo doors ever devised.
Quick detachable with special iron cross-bar or hoop connection. The steel bars on the door provide a solid ladder from which hoops can be tightened—the result of a new invention. They close absolutely air-tight. Cannot stick or bind—never have to be lifted. They swing in or out readily on their hinges.
When silos are ordered without additional lumber to make full cars, we can usually arrange to ship with other cars to nearby points.
To one farmer in every township we offer the chance to get a silo, at a great saving, by helping get together a carload order.
Mail the coupon today.
Save 40% to 60%
on Lumber and Millwork
Five middlemen come between the mill and you when you buy of your local lumber dealer. All get a fat profit; no wonder lumber is high. We put an end to this hold-up game. Sell you direct. Give you better materials at our mill price. Save you 40% to 60%.
We make shipments within 24 to 48 hours after receiving orders. Our shipments get to destination within an average of two weeks. Write today for price list. Better still, send your list of materials for our prepaid prices. Money back unless satisfied. Mail coupon today.

DAIRY AND CREAMERY NOTES.

At a sale of Holstein cattle held recently at Lake Mills, Wis., ten bulls averaged $156.50, and seventy-one females averaged $226.20. The sale included old and young from well-known breeders.

At a sale of pure-bred Jersey cattle held April 17th at Worthington Ranch, W. Va., one hundred and thirty head averaged $154.10, or a total of $20,034.

The dairy cattle premium list for the Eighth National Dairy Exposition, to be held at Chicago, October 23d to November 1st, has been published in the form of a twenty-page pamphlet. Copies may be obtained by addressing W. E. Skinner, General Manager, 819 Exchange avenue, Chicago, Ill.

New York prices for milk: At present, in the 26-cent freight zone, shippers are paid 3¼ cents a quart, net, for Grade B, and 3 cents for Grade C. The cost delivered in New York is $1.61 for Grade B and $1.51 for Grade C, per 40-quart can.

Australian Live Stock.

Reporting to the United States Department of Commerce, Consul General Jno. P. Bray at Sydney, Australial said:

"At the close of 1911 there were estimated to be in the Commonwealth 93,003,521 sheep, 11,828, 954 cattle, 2,279,027 horses and 1,110,-721 pigs. It is probable that the 1912 returns will be found to vary little from those of 1911, save in the number of sheep, which have suffered a reduction of about 6,000,000 owing to bad weather and bad lambing." In considering these figures it must be remembered that Australia is a large country with a small market at home and therefore a great surplus.

California Cattle, Hogs and Sheep.

During the census year 1910 California was credited with having on farms 467,332 dairy cows, 576,989 other cows, 218,480 yearling heifers, 267,799 calves and 485,712 steers and bulls, a total of 2,016,232 classified cattle.

California was also credited with 482,810 mature hogs and 283,741 pigs, a total of 766,551 hogs of all ages.

California was also credited with 1,217,515 ewes, 307,773 rams and wethers and 892,189 lambs, a total of 2,417,477 sheep.

California has as many cattle as Oklahoma, as many dairy cows as Georgia, as many swine as Virginia, and as many sheep as Michigan.

No Sale.

Hubby had arrived home while wifey slept and at the breakfast table there was a cold silence.

"A penny for your thoughts, my love," he daringly ventured.

"For two cents I'd tell you what I think of you," she retorted, with a dangerous gleam in her eye.

He did not raise his bid.—Boston Transcript.

CO-OPERATIVE CREAMERY.

The True Organization Thereof is on Basis of Patronage and Not on Capital Stock.

Co-operative creamery organization based on true co-operative principles distributes its profits on the basis of patronage and not on capital stock. Capital stock which is necessary to establish such an enterprise should receive compensation. A just rate of interest must be paid out of any profits accumulated, above interest on capital stock and cost of operation, which shall be divided pro-rata according to patronage. Indeed, such a division would be only fair, since the success of the creamery business is directly dtermined by their patronage.

There have been failures among co-operative enterprises, but with sufficient patronage and proper business management these would never have occurred. The co-operative creamery has been a great success in Minnesota, Wisconsin and Iowa, our leading dairy states. Insufficient patronage has been the cause of most of the failures. It is absolutely necessary that there be on hand enough butter-fat so that interest on capital and cost of operation will not reduce the price to the patron below current prices. Therefore a creamery should not be organized unless at least four hundred cows can be secured within convenient reach of the creamery. It is also advisable to have the patrons own the capital stock, so that they will stay with the organization during unfair competition.

The organization should also get the right start and be properly organized under proper business management. If a group of farmers are interested, let them call a meeting and invite a representative from their agricultural college or United States Dairy Division to attend and discuss plans of organization and management of a creamery, instead of a dairy supply house promoter.

The co-operative creamery is not as popular as it should be, chiefly because many have been started prematurely or else were started by promoters who robbed the farmers of three to four thousand dollars on buildings and equipment, thus putting them out of business right in the start. It is sure, however, that if Colorado farmers will go into this enterprise more advisedly the co-operative creamery will prove a great success, as it has elsewhere.—H. E. Dvorachek, Colorado Agricultural College.

CONDEMNED MILK.

How to Find a Way to Utilize It Instead of Emptying the Cans in the Gutter.

It is the custom of officials in many cities to condemn milk because of the failure of the milk dealers to comply with certain temperature standards. Usually this milk is disposed of by emptying it into the gutter, though some attempts have been made to denature the milk by adding certain substances which would render it unfit for use in its fluid state. It is unfortunate that this milk, which is valuable for feeding farm animals, should be heedlessly wasted. This loss can be prevented if the milk is returned to the farms, where it can be utilized for feeding live stock. Condemned milk could also be used in the city for making casein and for other purposes.

The Dairy Division of the Bureau of Animal Industry, United States Department of Agriculture, has recently conducted some experiments in order to devise some practical method of denaturing milk so that its sale as market milk may be prevented and yet leave it in a condition suitable for feeding farm animals. The work thus far has proved that the use of a rennet solution is effective for this purpose at the temperature at which milk is condemned.

In these experiments a three per cent. water solution made from powdered rennet of a strength of 1 to 30,000 was used, and forty cubic centimeters of this solution were added to five-gallon cans of milk at different temperatures. The tests were made in a room where the temperature was eighty degrees Fahrenheit, as that is about the temperature of the air in summer, when most of the milk is consumed. In one test the rennet solution was added to a five-gallon can of milk at a temperature of fifty degrees Fahrenheit. In one hour and fifteen minutes the milk was slightly thickened, its temperature then being fifty-seven degrees. Thirty minutes later the temperature had reached fifty-nine degrees and a soft curd formed. An equal amount of milk at an initial temperature of sixty-five degrees was treated at the same time. In one hour and ten minutes the milk in this can firmly coagulated, and it is probable that the rennet had produced the desired effect in much less time. At the end of this period the temperature had been raised only one and two-tenths degrees, or to sixty-six and two-tenths degrees.

In the light of these experiments it is believed that if a rennet solution of this strength is added to condemned market milk satisfactory results can be secured under ordinary conditions without the disadvantages of the other methods which have been tried.

If a three per cent. solution is made from rennet, strength of 1 to 30,000, about two and one-half ounces (eighty cubic centimeters) of this solution will be required for a ten-gallon can of milk at a temperature of fifty-three degrees or higher. The cost of the material for this method of denaturing is very small, being only about three and one-third cents for a ten-gallon can when powdered rennet costs $7.00 a pound.

It is recommended that those who contemplate using this method should test their solutions in the laboratory before using them in practice, so as to know definitely the strength of each solution prepared.

ECONOMICAL DAIRYING.

Selling the Cream Instead of Milk the Better Plan.

In a recent edition of Kimball's Dairy Farmer, Lynford J. Haynes has a word to say in favor of selling cream instead of milk, as follows:

"Progressive farmers are beginning to appreciate the advantages of separating milk on the farm in preference to sending the whole milk to a creamery. Each year more separators are introduced on farms and a greater number of farmers do the separating at home and deliver the cream to its destination.

"When a creamery is patronized and the whole milk is delivered, there is a needless haul of large quantities of milk both ways. For example, if the daily output is 300 pounds and whole milk is delivered, this quantity must be hauled to the creamery. Here it is separated and about forty pounds of cream are removed. The skim milk, about 240 pounds, must be hauled back home again. Thus in order to deliver only forty pounds of cream, the farmer must haul both ways the total amount of milk.

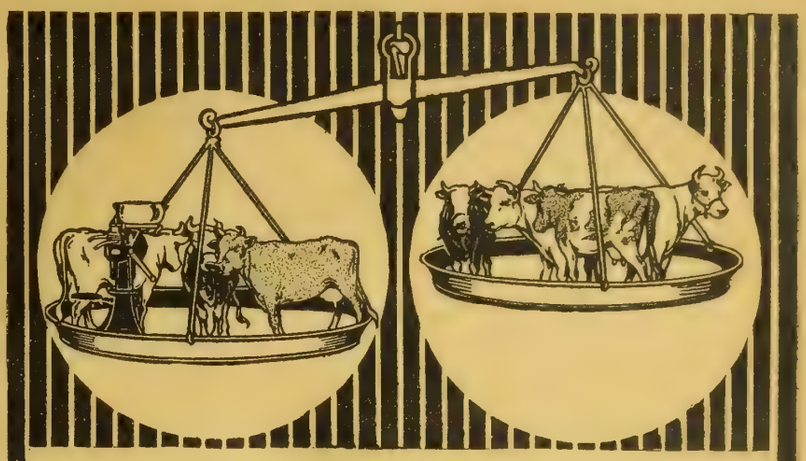
"When it is separated on the farm, the skim milk has a greater feeding value for the calves. Then it can be fed to them while it is yet warm with the original animal heat. The milk is always sweet, being only a few hours old. When one has to depend upon that brought from a creamery, there is always more or less trouble with sour milk, especially in hot weather. It is not available for feeding until the return trip from the creamery is made. This delays the morning feed, and, as half of the milk is held over until night, this is often sour.

"When whole milk is delivered to a creamery, one may not get a correct test of the milk. After cream has set once on the milk it is difficult for the buttermaker to get a representative sample. Unless it is most thoroughly mixed at the creamery, the sample for testing is apt to be either too low or too high in butter-fat. When cream is delivered, there is less danger of making this error.

"Another reason in favor of delivering cream is the time saved both going to and from the creamery and in not having to wait one's turn at the creamery for the milk to be weighed. Every one who has had experience in drawing milk knows what it is to wait in line behind a dozen or more milk wagons for an hour or more and then often have to wait again in line for the separated milk to take home. When cream is delivered, one can drive up to a side door with a small can of cream and it is received without any waiting on the part of the farmer. On account of the several hundred pounds lighter load which can be taken in a buggy, quicker time can be made in going back and forth. This saving, when one's time and the horse are needed for pressing farm work, is an important consideration.

The practice of sending cream is becoming more popular each year. Farm separators have been perfected, so that the work can be done easily and quickly. The separators are durable, easily taken care of and are valuable machines for each dairy farm."

Remember to send for a copy of the Book of Live Stock Champions advertised on page 3.



Three cows and a

DE LAVAL CREAM SEPARATOR

will make more money than four cows with gravity setting

Thousands upon thousands of cow owners have already proved this statement; any experienced dairyman will verify it for you.

With such a big saving it is hard to understand why any cow owner should try to get along without a De Laval Cream Separator.

If you are selling cream or making butter, and have no separator, or else an inferior machine, we know if we could put a De Laval on your place we would be doing you a personal favor.

If you haven't a separator don't make the mistake of starting with a "cheap" or inferior machine. When you do buy a separator—as sooner or later you surely will—be sure to get the best—the De Laval.

Remember, you can't make money by trying to save money in the purchase price of a cream separator. A De Laval costs only a little more than the cheapest and will save you twice as much and last five to ten times as long as other separators.

THE DE LAVAL SEPARATOR CO.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Melons at St. Louis.

On Friday, May 29th, the first car of watermelons of the season arrived in St. Louis. The car was of 25,000 pounds capacity and was shipped to P. M. Kiely by J. W. Fry, of Barton, Fla. There were 1,040 melons of the Watson variety, light green in color, and weighing an average of 24 pounds.

Mr. Kiely said the first shipment this year is about two weeks earlier than it was last year. He said this car was five days on the road and cost $400. The first car-load last year cost $500 delivered, owing to the scarcity of the melons.

Razorback Seed Corn.

H. M. Cottrell, of Rock Island, Ill., says: "I recently saw a razorback pig four years old that had good feed for four years and weighed 85 pounds. In the same yard were eight-months-old pure-bred pigs that averaged 300 pounds. There is just as much difference between scrub and pure-bred corn as there is between razorback and pure-bred hogs. There is too great a proportion of razorback seed corn planted."—National Crop Improvement Service.

Concerning Red Peppers.

Red peppers form the subject of Bulletin 163, by L. M. Tolman and L. C. Mitchell, issued by the Bureau of Chemistry of the United States Department of Agriculture. In it all varieties of red pepper used in the United States are described and analyzed.

The same variety of red peppers, grown under different climatic and cultural conditions, yields products adapted to different uses. We import wild chillies from Mombasa and Zanzibar, gathered by a semi-civilized population and dried on the ground, so that they come to us covered with dirt and sand and must be cleaned before grinding. They are ground and used principally as spices. On the other hand, the cultivated Japanese chillies are used unground in the preparation of chilli sauce. Similarly the Hugarian paprika is prized as a spice, while the Spanish paprika has a distinct commercial use as a coloring for such products as sausage and tomato ketchup.

The investigators of the Bureau sought to determine the normal composition of the various red peppers, with special reference to the deviations in amounts of ash, sand, ether extract and crude fibre, and also to study the distinctive odor, flavor and taste, that the part of the fruit to which the characteristic properties are due may be known. Another object has been to investigate the effect on the composition of ground pepper of including or excluding seeds or stems, for the purpose of detecting their presence or absence.

An interesting point noted is that the pungent principle occurs almost exclusively in the placenta, a thin, membraneous partition inside the shell. In some cases, however, a better result is obtained by grinding the seed with the rest of the fruit, as the oil freed in this way dissolves the color of the product and apparently develops the flavor and aroma.

We presume the term "floating population" originated with Noah and the ark.

THE OATS MARKET SITUATION.

Quite a Little Gain in Selling Values During the Month of May.

Lower Than Last Year, But Stronger Than Almost Anyone Expected —Written May 31st, 1913.

If we claimed that The National Farmer and Stock Grower had exercised a beneficial influence upon the oats market, so far as strengthening the situation in the interest of oat growers is concerned, it is possible that many people would doubt it. But the circulation of the paper is in the neighborhood of 125,000 copies each edition, and quite sufficient of the farmers reached by the paper are growers of the oats, that, when all is said and done, represents the oat surplus which finally reaches the grain market.

We advised oats growers to have confidence in the outcome and not to be scared into marketing the oats on a low basis. Furthermore, we have reason to believe that our words were not wasted, and that some little good came of the advice that we constantly gave.

It must be remembered that the crop of oats amounted to the largest on record. It may also be well to remember that the world's crop of oats was the largest on record, and a simple guess would most likely have been that the oats market would be lower. But we argued that all the oats sold for table consumption were sold as oatmeal so much higher than the best oats on the market, that buyers, if they wanted oats, would not be particular about a few cents; and three times three are nine, and that represents the advance that has taken place since the crop was harvested. Allowing that we have no foreign shipments to contend with, the same crop, if repeated again, would sell as well or better. And that is not saying much, for at present prices oats are selling very little better than a cent a pound and not above a cent and a quarter.

On April 30th we left cash oats selling at St. Louis at 35 cents a bushel, and we find them on May 31st at 38½ cents. On August 31st last, cash oats sold at 31 and 32 cents, but a full year ago, on the previous year's light harvest, cash oats sold at 54½ to 55½ cents a bushel.

When we pass from the cash market at St. Louis and place ourselves on the contract market of Chicago we find not only substantial gains in regard to the old crop, but we also find a cheerful comparative prospect for the new crop. Our readers will notice that we take but little concern in regard to the causes that effect changes in prices, and that is because we accept without argument the accomplished fact. It requires all the skill of the traders competing one against another to arrange a scale of prices, and every man well posted as to conditions, and having no money up, should not dispute with them as regards the reasons that have brought about a certain range of prices. And we advise our friends and patrons not to quarrel wtih market figures and accomplished facts.

On April 30th we left the May oats option at 35⅝ cents a bushel, and thirty-one days later the option closed out at 43 cents and against 36¾ cents, the first May figure we saw quoted last July.

On April 30th we left the July quotation at 35 cents, and we find it again on May 31st at 39 cents. Not so great an advance, you will say, as the May option, and that is so, but the July option is not yet ripe, and before it is ripe the extent of the new crop and its quality will be considerably better known. The September option, also influenced by the new crop, was left at 34½ cents and was found again, May 31st, at 38⅝ cents. But there is one quotation we have not had before, and that is December, and on May 31st that quotation was 39⅛ cents. And there we must leave it for thirty days, remembering that the composite opinion of the greatest traders in the world is, that new-crop oats delivered next December will be worth 39⅛ cents a bushel on the Chicago market.

BINKLEY MEDICAL CO., Dept. H, Nappanee, Ind.

THE PANAMA-PACIFIC.

Prominent Agriculturist in Charge of Exhibits at the Panama-Pacific International Exposition.

The Directors of the Panama-Pacific International Exposition, which will be held at San Francisco in 1915, have appointed Thomas G. Stallsmith, of Chicago, as Chief of the Agricultural Department in the Division of Exhibits.

Mr. Stallsmith has spent a number of years representing large manufacturers of agricultural implements, both in America and abroad, and is recognized as an expert in his field. His assumption of duties as Agricultural Director for the Exposition is endorsed by the agricultural interests of the country.

The Agricultural Department of the Exposition will be one of the largest and most comprehensive ever presented. Every exhibit in that department will represent some international phase of the land industry, and the applications which have been received from exhibitors throughout the world have already far exceeded the space allotted to the department.

The newly-appointed Director, who will take up his duties immediately, will have charge of the Agricultural Building and the pure-foods exhibit. At the very outset of his work Mr. Stallsmith is able to announce with confidence that the largest agricultural implement manufacturing interests in the world will have a full representation at San Francisco in 1915.

For about twelve years Mr. Stallsmith was the representative of an amalgamation of agricultural implement manufacturers in foreign countries, during which time he became intimately acquainted with the leaders of this industry all over the world. His personal experience on the business side of the agricultural industry will be invaluable both to him and the Exposition.

Agricultural implements and farm machinery form one of the most important of the many groups in the Department of Agriculture, under the wonderful classification of exhibits just prepared for the Panama-Pacific International Exposition, which opens in San Francisco, February 20, 1915, to commemorate the completion and opening of the Panama Canal. No less than seven distinct classes will be required for the exhibits relative to this one group. These classes will comprise implements, machines and appliances for agricultural preparation, for seeding, for cultivation, for harvesting, portable agricultural power generating machines and apparatus for preparing food for animals. Under the class of miscellaneous implements and machinery will be exhibited the feed cutters and grinders, cider millls, machines for ginning and baling cotton, hay-baling machines, horse-clipping machines, sheep-shearing machines, windmills, tanks, pumps and other water-lifting apparatus for agricultural use, machines for use on farms for grinding, weighing, etc.

In addition to this one group of implements and machinery the Department of Agriculture, to which one of the fourteen magnificent exhibit palaces will be entirely devoted, will include displays of farm equipment and methods of improving lands, of appliances and methods used in agricultural industries, of the theory of agriculture and agricultural statistics, of fertilizers, of tobacco culture, and of the inedible agricultural products. Forestry, treated as a product of the soil, is grouped under the head of Agriculture, and the exhibits relative to this subject will be displayed in the Agricultural Building instead of in a separate building, as at previous Expositions.

While food products naturally are grouped under the head of Agriculture, a separate and splendid exhibit palace will be devoted to them. In the group of animal food products the dairy exhibits will play an important part. There will be separate classes of milk and cream, fresh or condensed; sterilized milk; butter and cheese in all forms; eggs; albuminoid foods and preparations; dairy fittings and appliances; churns, butter workers, cans, pails, cheese presses, vats, separators, testers, pasteurizers, etc., including all fittings and appliances for the preparation, transportation, preservation and distribution and delivery of milk for the supply of cities and towns. Thirteen other groups, subdivided into many classes, complete the food-products exhibits.

The live stock exhibit will be of peculiar interest to dairymen, not alone because of the immense exhibits of thoroughbred cattle which are being arranged for, but because of the breed milking contests and other special features which are being prepared. The Live Stock Department is under the supervision of D. O. Lively, one of the most prominent live stock men of the Northwest. It will include horses and mules, cattle, sheep, goats, swine, dogs, cats, ferrets, poultry and birds.

A SILO ON EVERY FARM.

The Silo Committee in Every Farm Bureau Should Get Busy at Once—Farmers Should Build Silos Early—Bankers Ready to Finance a County-wide Campaign.

The average farmer waits until his corn is almost in the milk before planning his silo, when, as a matter of fact, he should be planning it the winter previous, said a noted agricultural expert recently. The farmer should plan his silo before he plants his crops, otherwise he cannot tell how much corn to plant for ensilage purposes.

As the winter is past, the next best thing the farmer can do is to figure out right now how big a silo he wants and plant his corn crop accordingly. If he has also read up some good literature on silos, such as he can get free from Uncle Sam's Agricultural Department at Washington, from the State Agricultural Schools, or the leading cement companies, he probably knows how large a silo he wants. Experts say that it is better to get the capacity by having a tall, narrow silo than a short, wide one, as at least two inches must be fed off every day after the silo is unsealed and feeding commenced.

If the farmer is far-seeing, he will put in the foundation for his silo immediately after the spring plowing and planting, and then, in the first days of late spring and early summer he can economically build his concrete silo. Long before the corn has begun to ripen his silo will be finished. As a silo should not be filled for at least three weeks after being erected, so that the concrete may properly harden, it can readily be seen that the early building is most advantageous to the farmer, not only on account of the labor, but also because the silage will be 100 per cent. better if cut in a succulent state, just when the corn is in the milk.

Bankers' associations all over the country are discussing farm credits, and in many places the plans are being laid to finance all permanent improvements at a very reasonable rate, either on long time or short time.—National Crop Improvement Service.

WOOL MEN!

We can interest you. Do you know that St. Louis is a **Spot Cash** market? In 20 years we have handled **more separate lots** of wool, each season, than any other commission house here. Over **40 years' experience** in the business, and your shipments receive our personal attention. We guarantee **top prices, quick sales** and **prompt cash returns.** Write for our 1913 Wool Circular, giving full particulars and points in regard to the preparation of wool for market. Wool Sacks, Shipping Tags, Market Reports, etc., sent Free upon request.

Write what you have to offer. Estab. 1874.

A. J. CHILD & SONS, St. Louis, Mo.

[Please mention National Farmer and Stock Grower.]

Sample Day in Strawberries.

It is impossible to quote strawberries because the market changes rapidly. The following report represents the trade on the last Thursday in May at St. Louis: Aggregate supply was smaller, although wagon receipts of home-grown berries were fully as large; offerings ample, however, and prices about steady. Local consumptive demand fairly active, but shipping business in home-grown berries is being restricted on account of the style of boxes now being used, as many places that formerly drew supplies from here have legislated against short measure, hence shippers must demand full-quart boxes to avoid discrimination and loss. About 200 cases received by express from Southeast Missouri and sold at extreme range of 80 cents to $1.25 per six-gallon case, mainly at $1.15; light express run from Southern Illinois (Gandys) sold at $1.25 to $1.40, and Arkansas Aromas (overripe) at 75 cents to $1.00 per six-gallon case. Home-grown wagon receipts were about 7,000 trays, and sales ranged in extremes at from 50 cents to 90 cents per three-gallon tray loose—bulk of sales of choice berries at 75 to 80 cents.

St. Louis Broom Corn.

On May 31st, at the St. Louis market, broom corn sold as follows: Receipts normal and demand fair—best for selections. Per ton, at first hands, on track: Parlor stock, dwarf—Fair, $50 to $55; medium, $65 to $75; bright green hurl, $85 to $90. Standard brush—Fair at $65 to $75; medium, $80 to $90; choice, $90 to $100. Coarse or common parlor, crooked, damaged, etc., less.

Beans and Peas.

Late May market at St. Louis—quote by the 100 pounds: White beans—Choice hand-picked at $2.45, prime at $2.35; screened at $2.10 to $2.15—inferior and artificially dried at $2.05 to $2.10; Blackeye at $2.00 to $2.15 for Southern to $2.80 to $2.90 for California; Scotch peas at $2.75 per bushel; split peas at $2.70 per bushel for yellow and $3.25 for green; pink beans at 5¼ cents per pound; Lima beans at 6½ cents per pound; lentils at 5 cents; red kidney at 4¾ cents.

First Get Your Roots.

We have continual inquiry in regard to roots, but few say what they have to ship. The following prices were paid at St. Louis for country consignments during the last few days in May. Quote by the pound: Spring-dug—Golden Seal at $3.00; Lady Slipper, 14c.; Seneca, 36 to 38c.; Pink, 20c.; Black, 7c.—damp, dirty, less; May Apple, 4c.; Snake, 27 to 29c.—stemmy and leaf less; Kansas Black Snake (Echinacea), 9c.—split root half price; Oklahoma Black Snake, 8c.—Missouri worthless; Angelica, 5c.; Wahoo—Bark of root at 20c.; bark of tree at 5c.; Blood, 4½c.; Blueflag, 2½c.; Sassafras—Bark of root, 5c.; Wild Ginger, 7c.; Spikenard, 3c.; Skullcap leaves—Bright at 8c.; dark less; Wild Ginseng, $6.50 to $6.90; cultivated at $2.00 to $3.50.

Cattle From South to North.

According to the Miles City Stock Growers' Journal of May 21st, a train-load of twenty-six cars of cattle from El Paso, Texas, consigned to the Powder River Land and Cattle Company, were due to pass through over the Northern Pacific. The stock were to be unloaded at Blatchford, near the junction of the Powder river and the Yellowstone.

DISEASE GERMS.

The distemper germ is a deadly enemy to healthy, growing colts. And just as sure as you do not take steps to stop the ravages of this germ, just so sure will your colts come down with distemper, pink-eye, coughs, influenza and catarrhal diseases. The above disease may be prevented by using Frazier's Distemper Cure. It purifies the blood, kills the germs and cleans the system of all contagion. Send postal card to-day for free horse booklet. A $1.00 size bottle holds eight ounces, three times the quantity of the 50-cent size. Sold by druggists or prepaid from the manufacturers, Binkley Medical Co., Dept. H, Nappanee, Ind.

Hay Sales at St. Louis.

The following are a few of the sales of hay on the St. Louis market during the last days in May: On St. Louis Side—Part car damaged clover-mixed at $5.00; two parts of cars do. at $6.00; part car at No. 2 clover-mixed at $11; part car do. at $12.50; half car do. at $13. Timothy—One car threshed at $8.00; part car do. at $10; part car no-grade at $10; one car at $10.50; part car No. 2 at $12.50; one car do. at $13; one car do. at $13.50; part car do. also at $13.50; two cars good do. at $14; two cars No. 1 at $14.50; five cars No. 1 at $15; one car part No. 1 at $15 and part car threshed at $10; three cars No. 1 at $15.50; two cars at $16; two cars at $16.50. Prairie—One car no-grade at $8.00; one car No. 2 at $10.50; one car at $11; three cars scant No. 1 at $12; one car No. 1 at $12.50; three cars at $13. Alfalfa—Old, one car rejected at $10.50; one car No. 2 part at $12 and part at $14; new, five cars No. 1 at $16. On East Side—One car part No. 1 timothy and part No. 1 clover at $16, round. Timothy—One car No. 3 at $11; one car No. 2 at $13, delivered to St. Louis; one car at $13.50 do.; two cars at $14; two cars No. 1 at $15; five cars at $15.50; one car at $16; four cars at $16.50, two switched. Wheat and oats straw sold at $6 50 per ton.

Boston Wool Shipments.

The shipments of wool from Boston, January 1 to May 28, were 74,531,368 pounds, against 115,549,995 pounds last year. The receipts were 70,292,732 pounds, against 110,542,567 pounds last year.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages, and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Truths About Hogs.

The continuing high prices for ham and bacon are but one of the collective evidences of the world-wide use made of both of them. On the sea, and in the great armies, the hog is the most popular food animal, and the world of farmers does not seem to be able to grow enough of them to satisfy the demand at reasonable prices. For the hog is being grown everywhere in the temperate regions of the earth.

Wherever he is grown, the hog's food is the great problem, and this is easiest solved in the regions where cows and corn are also produced. That great by-product of the farm, dairy skim milk, is one of the most economical of feeds where butter is still made. It is rich in the nitrogenous elements, and, when added to corn and pasture, is a great stimulant of growth. The loss of this by-product is one of the great arguments against selling whole milk, and the question will become more and more acute as the selling price of the hog increases.

The leguminous pasture is the great hope of American hog raisers. The soaring prices for grains and mill products make more important than ever the pasture for the hogs. Where alfalfa can be easily grown the alfalfa hog is becoming an institution. In other localities the red-clover pasture is, as of old, the most profitable food producer. The American hog raiser is thus having the legume in its various forms forced upon him as a field crop to be harvested by the hogs.

The prices for ham and bacon are having an influence on the agitation for improved breeds of swine on every farm. The old-fashioned, nondescript hog does not produce the right kind of ham or the right quality of bacon, and is not much wanted anywhere. The man that expects to make money out of hogs will have not only to grow hogs of an improved breed, but he will have to select the best of the improved breeds. The word quality now means more money than perhaps ever before.

The pig that can reach a weight of about 275 pounds in seven to nine months, and that will finish well in a few weeks, is the kind that is sure to make money if the pasturage is available and finishing feed is at hand. The northern half of the United States has a great advantage in this respect over regions farther north or farther south, and is likely to remain the great area of profitable hog production.

The feeding of hogs and pigs is sure to develop into more of a science than it is to-day, though much work has already been done on this problem, both by energetic breeders and Experiment Station men. The effort has been to the present time to find suitable feeds and learn their comparative values. Little has as yet been done to find out just the quantity that should be fed per day to a pig or hog of a certain weight. It is fairly well established that a hog or pig eats much that he does not digest by reason of an oversupply in the stomach. This means waste, but it will require some very close work to get at the underlying principles.

What Grade of Hay Are You Making?

The farmer who can answer this question with pride, conscious that he is doing his best to feed the animals that consume his crop, is not yet one of the majority, as there is not as much attention paid to quality as it should be, because except in certain localities hay is not a cash crop grown by the general farmer, and what he sells, if any, is only the surplus above the needs of his own stock.

But whether fed at home or sold, hay is most valuable if cut at the right stage of growth, which is when it contains the most digestible nutrients. This period is when the plant is in full bloom. The stem and leaves then contain material to mature the seed that is still in embroy; but if the seed is allowed to ripen, these valuable elements are transferred to it and there is mostly dry, indigestible fibre left, which is of very little account for feeding.

Many farmers do not realize this, but instinct teaches their stock that there is little nourishment in hay cut when the plant is ripe, or else it is their palates that guide them to choose the early-cut hay when they can have their choice. Even wild creatures that store their winter food when plants are green always select those which are in bloom in preference to those more mature. A friend in Montana writes that alfalfa in bloom is the winter food of some little furred brothers of the squirrel family, and this is stored against the cold season, but in uncovering the places where they have "cached" their supply he says he has never found a ripe head of alfalfa, and yet there is a difference of opinion among men as to the time when forage plants are at their best for saving.

Aside from the time of cutting there is also the matter of curing that makes for quality in hay; but growers pay more attention to this phase of making hay, probably because it affects the appearance of it to get wet while curing. If hay can be cut early on a bright, sunny day, and as soon as well wilted be raked and cocked and let cure free from rain, we have a green, attractive product that has not lost its nourishment either by leaching or bleaching. Incidentally, we might mention that when it is possible to meet the expense it is a good investment to get canvas covers to protect the hay from the rain, and it is also money well spent to build a shed to store the hay under, for there is then no discolored stuff to be wasted, except the little exposed at the sides and ends.

The next consideration is to have the hay free from weeds. This is secured by feeding the meadow well, so that the grass does not lose out and weeds, plants less particular in their requirements, take its place. If the hay is fed at home, the least that one can do is to return to the meadow as a top dressing all stable manure that can be spared from the garden and truck patches and make the growing of hay a part of a regular rotation that will include some leguminous plant, having the soil full of organic matter at time of each seeding. This will make the meadow less liable to suffer from protracted drouth, for the ground that is full of humus, as we commonly understand that term, is very greedy for water and holds it till needed.

Successful growers of hay—the late Mr. Clark, of Connecticut, for instance—used large quantities of commercial fertilizers for their land, and they made it possible to make seven tons to the acre, which when sold at the nearby city markets at a high price, gave them a good profit in spite of the money spent for the plant foods that they had to buy. Any grower would find it profitable to give his meadow a light application of nitrate of soda after cutting, so as to stimulate the aftermath, so that there would be good protection for the roots during the following winter and at the same time two hundred pounds of acid phosphate and sixty pounds of muriate of potash be broadcasted, running over the meadow lengthwise and crosswise with the harrow, so that the fertilizers may be partly incorporated with the top soil, and the surface will not become so hard and dry if given this treatment. If the growth of grass is very heavy in the fall, burn off the following spring, as soon as dry enough, choosing a windy day, so that the fire will be carried rapidly over the meadow. This has a beneficial action on the soil and destroys the old grass that might affect the quality of the hay. —D. C. Cornman.

THIS WILL PROVE That Your Hogs Have Worms

For years and years I have been telling you farmers that a great part of hog sickness can be traced directly to worms—just ordinary, every-day **hog worms.** Yes, sir! and what's more I say to you that many of the hogs you own have worms **right now,** unless you have already cleaned them out with MERRY WAR POWDERED LYE.

Here's an easy way to **prove** the absolute truth of that statement: Go to your dealer's and get a 10c can of

Merry War Powdered Lye

Mix ¼ of it thoroughly with one barrel of swill and feed from it **twice each day, night and morning.** If your hogs are on dry ration, mix ¼ can in each barrel of drinking water. You'll shortly see vast quantities of dead worms coming away from those hogs. **Seeing is believing.** You can't get away from **facts.**

Now then, as a practical farmer, do you believe that a hog can be well, thrive and put on fat—in fact, can he **live** long, if he's filled with worms? **Not much—he can't!**

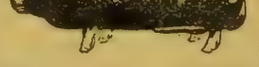
Another thing: Don't imagine that just because your hogs are beginning to fall off in weight, snoop around, droop their heads and tails, cough and refuse to eat, that they have cholera. It's very likely worms—and you can easily and quickly **prove** it in the **safe** and inexpensive way I have pointed out.

So don't lose your hogs—it's not necessary. And don't vaccinate your hogs simply because you think they have cholera. **Vaccination won't kill a single worm.** And, take my word for it, **if you rid your hogs of worms they will be in prime strength to resist hog cholera.**

This Man Tried It And Knows

A. U. PATE, Blue Jacket, Okla., writes: "I have been feeding MERRY WAR POWDERED LYE to my hogs for worms. It beats anything I ever saw." Hundreds of other practical hog raisers have written telling of similar experiences with MERRY WAR POWDERED LYE as a destroyer of hog worms. Read their letters in our free booklet.

10c a Can at all Dealers MERRY WAR POWDERED LYE is for sale at most grocers, druggists and feed dealers everywhere, 10c per can (**120 feeds**). It is convenient to buy in case lots—4 dozen cans $4.80. **Costs only 5c per hog, per month, to feed regularly**—by far the best and much the cheapest hog insurance you can buy. If your dealers can't supply you, write us, stating their names. We will see that you are supplied and also send you, **free,** a valuable booklet, "How To Get The Biggest Profits From Hog Raising." **Order direct from us in case lots (4 dozen cans $4.80) if your dealer won't supply you.**



There Are No Substitutes

Don't experiment with ordinary, old-fashioned lye. **It might prove dangerous.** MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed to hogs. Full directions on each can.

Which Kind Do You Want?

E. Myers Lye Co., Dept 22 St. Louis, Mo.

Chief of Market Division.

From Washington, D. C., on May 17th, it was reported that Secretary of Agriculture Houston had appointed Charles J. Brand, of Illinois, Chief of the new Division of Markets in the Department of Agriculture. This division was created by Congress and $60,000 made available for its work.

The work will be along the lines of the general extension of the co-operative method of handling, marketing and distributing farm products, and the elimination of waste, loss and unnecessary charges.

Somewhat better prices for the producer and lower costs or better products for the consumer and manufacturer are the aim of the work. Savings in selling and handling expense and reduction of loss through waste and improper business organization will be important features of the Department's activity.

"When there is born in a nation an individual capable of producing a great thought, another one is born capable of understanding and admitting it."—Joubert.

Book of Champions on page 3.

The American Swineherd.

We have been requested by our patrons and friends to arrange a club whereby we can offer them a swine raiser's paper as a premium with The National Farmer and Stock Grower, and we have succeeded in doing so. **The American Swineherd** is published monthly, and is usually a seventy-two-page, three-column paper, splendidly edited from practical standards and always interesting from the very beginning to the end. It is a satisfactory paper, and all who subscribe are very much pleased with it. We have entered into a co-operative arrangement with the publishers of **The American Swineherd,** whereby we can offer for a limited time The National Farmer and Stock Grower and **The American Swineherd,** both papers, for the price of one. Anyone who will send us a money order for fifty (50) cents in answer to this proposition will be supplied with both papers for one year. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

NECESSARY ON A FARM.

The Crocodile Wrench—Actually Six Handy Farm Tools in One.

Yes, an absolute necessity. The Crocodile Wrench means business. Every farm ought to have an extra wrench or two, especially when the wrench is a Crocodile Wrench premium, which is a pipe wrench, a nut wrench, has three dies for cleaning or cutting threads, and a screwdriver. The picture is small, but the Crocodile Wrench is twice as long, and it is full size for any purpose. It is drop-forged from the best tool steel, scientifically tempered. Requires no adjustment. Simple and always ready for use. Nothing to get out of order. Dies will fit threads on all standard farm machinery. Light, strong and durable. No farmer can afford to be without it.

Special Inducements.

Our Subscription Proposition: Send us One Dollar and we will send you THE NATIONAL FARMER AND STOCK GROWER for two years, and we will send you, postage paid, safe delivery guaranteed, ONE CROCODILE WRENCH. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Holes in Highway Management.

Millions are spent every year in the keeping up of our rural highways. Of this amount a very large proportion is annually wasted because of the inadequacy of information at the disposal of the men that have the work in charge. It cannot be otherwise, seeing that a new crop of road commissioners are elected at frequent intervals, and most of these lack the scientific knowledge needed to make their work the most effective.

The writer was once in attendance on a road convention in a certain state. It was brought out in the discussions that the concerns that make a specialty of building iron and steel bridges for use in country towns were charging twice the amount they should charge and could do this because they had a combination among themselves to keep up prices. Though several firms bid on each piece of work called for, there was an understanding beforehand as to who should get the contract. It was asserted by an expert on bridge building that if the price were cut in two there would still be the regular profit in the transaction. The green highway commissioners fell an easy prey to combinations of this sort.

The weakness about our road management is that each township goes its own way making the same mistakes that have been made by innumerable other persons acting as highway commissioners, yet having no way of finding out what others have learned.

There is no doubt that the present system will remain till there is an alliance between each township and the state, by which the local authorities can have the advantage of the skilled men employed by the state. A little advice by letter is not enough—an expert needs to be on the ground. By this means the graft to various persons could be squeezed out of the contracts for road building and the public would profit thereby.

We need not only a saving of money but an increase in efficiency in the work. The public purse is not the only thing that has to be considered. The interests of the people that are using the roads must also be looked after. Many a bridge put up in the rural localities is too weak to carry the traffic that is possible over it. Many a strip of road badly constructed neutralizes the whole strip through a township, for the worst piece of road it is that determines the size of load that can be carried.

A short time ago a local merchant in a small village sent out his auto truck with a big load for a farmer some miles distant. When several miles from the village and a mile away from the farmer's house he came to a piece of road that had been newly graveled but not rolled. It was a powerful auto truck, but in trying to drag its load over that stretch of loose gravel a heavy bar of iron in the gearing broke in two and the whole load was hopelessly stalled. It meant a loss of time and money for repairs, as well as the incidental loss due to reshipping the load. This incident might be multiplied wihout number, and the truth not be violated. Bad pieces of road are expensive to the users, if for no one else.

Discing Stubble Ground.

Plowing of stubble ground is frequently put off until late in the summer, and in many cases plowing is then out of the question, unless there should be ample moisture. I have seen stubble fields so baked that they would turn up like a hard trodden roadway. Discing as soon as grain is harvested checks waste of moisture and puts the ground in good condition for later handling, and, besides, it starts weeds which will be killed later and thus helps clear up the ground. I believe it will pay to disc early and frequently all ground where crops are not growing. The best-conditioned fields I see in my travels are those which are handled in just this manner. Early last spring I saw a piece of rather low ground in Southern Illinois which made the record yield of the township of corn. That ground was disced twice before it was plowed, and, although it was quite late before it was planted, it actually led all other corn fields in that section. When small grain is harvested in June and July, start the discs into action and it will pay to keep them going until near plowing time.—L. C. Brown.

Disappointments For Consumers.

"A dispatch from Buenos Aires states that foreign capitalists, chiefly Americans engaged in trust operations, have practically cornered the beef and mutton supply of Argentina and are ready to turn to their own advantage any reduction that may be made by tariff revisers in duties on meats. These trust representatives are reported to be paying more for sound animals on the hoof than recent prices for the dressed meats sent to England, and independent packers in Argentina find themselvves in straits. If the removal of a duty were surely followed by a corresponding reduction of prices to consumers, tariff problems would be simpler. But the man with the market basket knows that no such rule can be depended on. Sometimes an article put on the free list is advanced in price by various agencies between producers and consumers, and a home industry is injured without any decline in the cost of living.

"It can be assumed that the meats of Australia will be marketed up also if American tariff schedules are foreshadowed by the final approval of the bill as it passed the House. The great rivers reaching up from Argentina into the heart of South America have long given access to a great supply of cattle cheaper than that of the United States, but of a poorer quality. In these times dressed meats can be sent far on ships with facilities for refrigeration. Cattle also are transported readily on vessels equipped for the trade. But speculative monopolists are quicker to act than is a legislative body. They calculate the probable action of lawmakers and place themselves in advance at the points of trade advantage. This country once suspended the duty on coal without the slightest resulting gain to consumers. The present tariff admits hides free, but shoes are no lower. Coffee has long been on the free list and is a great deal higher than in former years. These are facts that Congress should weigh with an open mind and with due concern for the whole people."—Editorial in the St. Louis Globe-Democrat, May 21st, 1913.

Sale of a Cattle Ranch.

From Midland, Tex., on May 17th, it was reported that a syndicate of British capitalists had just closed a deal for the purchase of the "C" Ranch, situated near there, from the estate of the late Nelson Morris, the meat packer of Chicago. The consideration was placed at $1,355,000. The ranch embraces 224,000 acres. It will be divided into farms and colonized.

Canadian Grain Crops.

According to the United States Department of Commerce, the Canadian area under wheat in 1912 was 9,758,400 acres, and the total wheat production was 199,236,000 bushels, valued at $123,522,000. Oats upon 9,216,000 acres yielded 361,733,000 bushels, valued at $116,996,000. Barley upon 1,415,200 acres yielded 44,014,000 bushels, valued at $20,405,000, and flax upon 1,677,800 acres yielded 21,681,500 bushels, valued at $19,626,000.

Australian Meat Shipments.

During the year 1911 the Australian commonwealth shipped out 2,338,299 pounds of bacon, 108,786,417 pounds of beef, 41,567,366 pounds of lamb, 87,193,188 pounds of mutton, 1,641,013 pounds of pork, 8,362,901 pounds of rabbits and hares, and 40,768,074 pounds of preserved or tinned meats.

St. Louis County Fair Dates.

The St. Louis County Fair Association has selected September 18, 19, 20 and 21 as the dates for holding their 1913 Fair. The grounds of the Little Creve Coeur Lake are to be improved. Secretary George B. Bowles has begun to prepare the catalogue.

Don't forget to get the petition signed that is prepared for the purpose in this edition.

Read about our magnificent Webster's Dictionary on page 27.

Roof That Building With Edwards STEEL Shingles

Yes, **STEEL** Shingles—the kind that never **rot, rust** nor **burn**—cost much less than **wood**—made **rust-proof** by famous "Tightcote" Process—made **leak-proof** by patent Interlocking Device—$10,000 guarantee against lightning loss—come in sheets of 100 or more shingles—easy to lay as a carpet—lay them on old roof or sheathing.

Sold direct from **factory** at factory **prices**—freight **PREPAID**—postal brings special price and latest catalog 657 by **return mail.** Give size of roof if possible.

WESTERN RANGE HORSE SALES.

Horsemen East and West are advised that the great market for Western Range Horses is at St.Louis. The announcement is hereby made that twelve of these Auction Sales of Range Horses will be held at the National Stock Yards, Ill., during the season of 1913 by

Campbell & Reid and Western Sale Stables Co.

At each of these sales from 1,200 to 2,500 Horses will be offered in suitable lots and sold at auction for the high dollar without reserve. The offerings are always selected with the utmost care from the very best Horse Ranches of the Western and Northern country. The best Horses now being sold in the domestic sale rings were originally well-bred Range Horses, fed, educated and mannered to be good work stock. The first Auction of the season will be held on

THURSDAY, JUNE 12,

And every two weeks thereafter a sale on Thursday will be held until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address

J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

A NEW TRADE IN STOCK HOGS.

From Tennessee and Kentucky to Iowa and Nebraska.

Quite recently it was reported that arrangements were made to vaccinate about three thousand hogs in the state of Tennessee for the purpose of rendering them immune from cholera, so that they could be transported to Iowa and Nebraska with safety to themselves and to any hogs they might come in contact with on the journey or after reaching the new pastures. Dr. George A. White, State Veterinary Officer of Tennessee, and Dr. N. C. Nelson, of the St. Louis National Stock Yards, were the experts vaccinating the swine.

Under the old dispensation, before serums were invented and hog cholera was as great a mystery as Southern cattle fever, then the most expeditious way of introducing hog cholera on the farm was to go out and purchase some stock pigs and mix them with your own. It was a good thing at that time, for we are talking of the day when good, fat, corn-fed hogs sold for $3.50 to $4.25 per 100 pounds, and the dead hogs decreasing the number to be marketed prevented the prices from going lower.

Happily to-day it is doubtful if the quantity of hogs that will be raised will at any time of their own weight and numbers, without other contributing causes, depress the markets of the country, therefore it is a good thing if stock hogs can be safely transported from state to state without danger of contagion or infection. At the same time be it known that almost any country can raise and fatten the pigs which are farrowed inside the borders thereof, and it is not to be expected that a continuous movement of stock hogs will take place. In this, however, we are willing to be mistaken, for it is in the possibilities that pigs may be shipped with the same expedition and numbers as day-old chicks, and that is, comparatively speaking, a new industry also.

SELDOM SEE

Beef Cattle at St. Louis.

The National Live Stock Reporter, published daily at the St. Louis National Stock Yards, reviews the native cattle market for the last week in May as follows:

"The weightiest steers received came in on Tuesday. They averaged 1,429 pounds and the sale on them established a top for the week on car-loads of $8.45. Odd lots sold as high as $8.50. The bulk of extreme heavy weights cleared in a range of $8.35 to $8.45 at all times during the week; medium weights sold from $7.85 to $8.20, while lights went at $7.75 to $8.40. At the close of the week there was a decline of 10 to 15 cents all the way through as compared to the previous period. Kansas-fed beeves sold for $7.65 to $7.85; Colorado "sugars" at $7.80 and a string of native Mississippi steers at $8.00 per 100 pounds."

WESTERN RANGE HORSES.

A Splendid Trade Built Up by Campbell & Reid and Western Sale Stables Company at the St. Louis National Stock Yards.

As we have already been authorized to announce, the fifteenth season of range horse sales at public auction at the St. Louis National Stock Yards will commence on Thursday, June 12th, and be held thereafter on every second Thursday until Thursday, November 13th. This accounts for twelve sales, the same as last year.

The offerings at these sales range from twelve hundred to fifteen hundred head, and they are sold in lots that favor the bidding. The total offerings one season with another have ranged from 15,000 to 27,000 head, and it is not possible in advance to say what the sale average in numbers or prices will be. These are by far the most important of all the range horse sales held in the United States and are conducted with absolute fairness to all concerned

Most of the offerings come from Montana, Wyoming, Utah and Colorado. They are all gentle bred and none are of the wild, mustang or broncho order. Many are sired by large trotting stallions, but the majority of them are of draft breeding and eventually grow and are fed to be hardy, healthy draft horses and matched teams.

Naturally, the horses find their way to farms, where they are handled, mannered, fed and trained to become good work horses, and

when any of them are returned to the auction to be resold in the domestic horse auction ring they sell all the better when it is known that they have have had prairie air in their lungs as colts.

Last year a number of sucking colts sold in lots at $26 to $40 per head; yearlings at $40 to $70; and two-year-olds from $60 to $130. Matured draft geldings averaged about $110, and the average of lighter horses was about $60 per head. Some strictly common mares sold at $10 to $12, but very few sold under $20, and large numbers of pretty good mares sold at $70 to $80, and some extra fine mares on the Kentucky order sold fresh from the range at $150 to $160 per head.

These horses are usually distributed in a good many states, a majority of them going eastward. Not many remain in Missouri, although some loads are handled to good advantage there; large numbers are placed on farms in Illinois, and Indiana farmers delight to handle them. A considerable demand comes from Pennsylvania, where they handle numbers of heavy horses for the New York market, and all of the draft horse colts sold originally at St. Louis, when on the Eastern markets, outsell the average draft horse of domestic origin. Anyone wishing further information concerning these St. Louis sales should address J. J. Searcy, Sale Manager, National Stock Yards, Ill.

Oil Traction Machines.

It is several years since we announced that in working tests oil-power traction machines were making the steam-power machines take a back seat. Economy and efficiency tests did it. Nearly all large agricultural implement factories are making oil tractors, and one of the best, handiest and most economical working outfits is made by Fairbanks, Morse & Co. They build the thirty and sixty-horse power tractors, but the favorite is the fifteen to twenty-five horse power engine, that can be handled by any farmer, and he does not have to own ten thousand acres of land to bring it into use. When you write, ask for Catalogue F M 692. Address, Fairbanks, Morse & Co. at the nearest city to you—either at St. Louis, Chicago, Kansas City or Omaha.

Buying Cavalry Horses.

All horses suitable for cavalry service should be shipped to the St. Louis National Stock Yards. The demand is for a few car-loads to fill an old contract. They must be 15.1 to 15.3, with some substance.

S. Y. Burks, of Bolivar, Mo., has a fine herd of Berkshire swine, and he is also breeder of a superior strain of S. C. Brown Leghorn chickens. His advertisement appears with the other breeders.

HORSE AND MULE SALESMEN.

Holland, Nugent & Maxwell Brothers.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

Concerning Cold Storage.

The United States Department of Agriculture has issued a bulletin that ought to interest many people because it is on the much-abused and much-misrepresented cold storage. It contains facts and figures in regard to the storage of meat and eggs, clearly exploding many imaginary cases in which meats are stored for years in the interest of monopoly. For instance, fresh beef averaged in storage 2½ months; fresh mutton, 4.45 months; fresh pork less than one month; dressed poultry was kept an average of 2.42 months, and eggs 5.93 months. It appears that only 3.1 per cent. of beef production went into cold storage; 4.1 per cent. of mutton; 11.8 per cent. of pork; 9.6 per cent. of butter, and 15 per cent. of eggs. The bulletin on cold storage can be had by interested parties by writing to the Honorable Secretary of Agriculture, Washington, D. C., and asking for a copy of it.

Death to Heaves
"Guaranteed or Money Back. Coughs, Distemper, Indigestion. **NEWTON'S** 50c, $1.00 per can. Large for Heaves. At druggists' or sent postpaid.
THE NEWTON REMEDY CO., TOLEDO, OHIO

Cuts, bruises, soreness, lameness, swollen glands, etc., all cut into your profits. **Stop This Loss Now. 10 DAYS' FREE TRIAL.** Send us your name and address at once and we will ship you our regular full-sized bottle with directions and absorbent cotton. Try it ten days. If satisfied, send us One Dollar. If not, return us the empty bottle. It will cost you nothing.

GRAND CHEMICAL CO., Dept. C,
1426 So. Grand Ave.,
ST. LOUIS, MO.

At Towanda, Kas., J. C. Robinson, breeder of Percheron horses, held a sale at auction. The thirty-nine head sold averaged $388; twenty-two mares averaged $387; seventeen stallions averaged $389; and the offerings included twenty-six yearlings that averaged $360. W. S. Roff, of Thomas, Oklahoma, paid $610, the top for a female, and D. G. Shirk, of Sedgwick, Kas., paid $905 for the three-year-old grey stallion Otto.

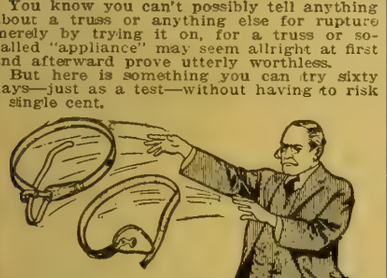
St. Louis Hog Prices.

On May 31st, at the St. Louis National Stock Yards, top-price hogs averaged 214 pounds and sold at $8,85 per 100 pounds. The bulk of the hogs sold at $8.70 to $8.75. Milton-Marshall Commission Company at the National Stock Yards, Ill., state that many loads of hogs shipped to Omaha, St. Joseph and Kansas City would net shippers more money if shipped to St. Louis.

Ruptured People—Get This On 60 Days Trial

You know you can't possibly tell anything about a truss or anything else for rupture merely by trying it on, for a truss or so-called "appliance" may seem allright at first and afterward prove utterly worthless.

But here is something you can try sixty days—just as a test—without having to risk a single cent.



Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why druggists should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

Box 776—Cluthe Co., 125 E. 23rd St., New York City

RECORD PRICE FOR A DRAFT COLT

Sired by Imported Shire Stallion and Brought $625 on the St. Louis Market.

"Holland, Nugent & Maxwell Bros. Commission Company, National Stock Yards, Ill., sold the highest-priced three-year-old draft colt ever sold at the National Stock Yards. This colt was purchased by Pillsbury & Co., at Paris, Ill., and consigned to the above firm, and they sold him to J. G. Truman, of Bushnell, Ill. He weighed 2,140 pounds. He was sired by the imported Shire stallion 'Milestone Harold,' 23,495, who was imported by Trumans' Pioneer Stud Farm, Bushnell, Ill, and sold to Sunkel & Co., Redmon, Ill. This gelding will be shown at the leading State Fairs and Horse Shows the coming fall. The price was $625. Seventeen head of draft horses consigned to Holland, Nugent & Maxwell Bros. Commission Company by Halstead Bros., Tecumseh, Neb., sold for $5,012.50."—National Live Stock Reporter, May 15th, 1913.

The Best Horse and Mule Market.

Shippers of horses should remember that a quick clearance is essential to money making in shipping horses to market, and that for this reason alone the market that has a steady demand for all kinds of horses is liable to relieve the shipper of his load quickly and enable the buyer also to ship out without delay. The St. Louis market is especially an all-round market, and when accounts are made up it will be found that shipments in and out of St. Louis in time and money take the least out of the price of the horse. That is why T. H. Holland, Chief Auctioneer and Manager of the firm of Holland, Nugent & Maxwell Bros., left Kansas City and established himself at St. Louis. It is the same with mules. It matters little whether the order be for a car-load or a full train of mules, the St. Louis market can furnish them at an hour's notice. All shippers of horses or mules who wish to obtain quick and satisfactory results will find it to their advantage to be upon the mailing list of Holland, Nugent & Maxwell Bros., National Stock Yards, Ill.

The Harvester Engine.

Remember that Fairbanks, Morse & Co. manufacture an engine to be attached to the grain binder. It is ready for attachment to any standard binder frame. If you are interested, write to Fairbanks, Morse & Co. at St. Louis, Chicago, or Kansas City, and ask for Catalogue EE 692.

First-class Commission House.

The best-organized live stock market is St. Louis, and one of the best firms doing business in that market is the Milton-Marshall Live Stock Commission Company. Shippers who consign stock to this firm to be sold can be assured of obtaining the best results possible. Mr. A. J. Milton, President of the company, is an expert cattle salesman, and, assisted by his brother, L. H. Milton, make splendid sales. J. S. Jackson and J. S. Mulberry, selling hogs, are equally expert in their department, and Andrew K. Miller, Sheep Salesman, is noted for skill, ability and good judgment. It is a finely-equipped firm, doing business efficiently in the interest of their customers. All who will apply to Mr. R. E. Marshall, Secretary, P. O. Box 94, National Stock Yards, Ill., stating what they have to ship, will receive special information concerning the market prospect, coming directly from the salesmen.

MOVEMENT OF SOUTHERN CATTLE

Shipments From Florida to Oklahoma, to Kansas, and Incidentally to St. Louis.

Although the Southern cotton-raising states are supposed to have no cattle or but very few surplus cattle, yet whenever there is an apparent shortage the states of Georgia, Alabama, Louisiana and Mississippi have often filled the gap and provided stockers for the cattle raisers of other states and beef for the markets. A recent movement of no small proportions, made possible by the government dipping regulations, amounted to about 20,000 head shipped from Florida to Oklahoma and a fair proportion to Kansas. The main purchasers were the Miller Bros., of the 101 Ranch at Bliss, Okla., and Mr. McAllister, who is ranching in the vicinity of Garden City, Kas. Incidentally, a few of these cattle, not being good for stockers or for feeders, were sold at the cattle markets of Oklahoma City and St. Louis. The original point of shipment was Kissimmee,, Fla., and the entire shipping, transit and receiving arrangements were under the supervision of Mr. W. G. Harding, the General Live Stock Agent of the Mobile and Ohio Railroad.

The movement is a natural one, because the states of Oklahoma and Kansas can mature far more cattle than are raised there, and Florida has a surplus that can be spared for the purpose. During the census year in 1910 the enumeration counted in Florida 845,188 cattle in all. Of these, 117,326 were unclassified, 116,041 were known to be dairy cows, 319,181 were cows on farms and ranges not used for dairying, 70,480 were heifers born in 1900, 94,253 were calves born after January, 1910, 58,906 were yearling steers and bulls, and 63,001 were two-year-old steers and bulls.

Southern Cattle at St. Louis.

Milton-Marshall Live Stock Commission Company reported on May 31st, saying: "It looks like canner stuff will sell high all season unless we get exceptionally heavy receipts, which are not looked for." That referred to Mississippi cattle. They also said: "We sold some canners today from Grenada county, Mississippi, at $4.50 per 100 pounds; also sold some cows and heifers at $5.75 per 100 pounds, which looked like good prices; also sold some veal calves at $8.50 per 100 pounds." Quotations also included 633-pound Alabama steers at $5.25; cows at $4.75 to $6.50, and 780-pound bulls at $5.25 per 100 pounds.

Lambs at St. Louis.

On the last day of May, at St. Louis, Tennessee spring lambs, 66 pounds average, sold at $8.75 per 100 pounds. A string of clipped Western lambs, 92 pounds average, sold for $6.75 per 100 pounds. The highest price for Tennessee lambs during the week was $9.00 per 100 pounds.

At a sale of Guernsey cattle held at Waukesha, Wis., May 28th, sixty females averaged $305.85; eleven bulls averaged $184.55, and the general average for seventy-seven head was $288.50. The top price at the sale was for Glenwood Eventide, a cow with a record as a two-year-old, and bought by Fred B. Smith, of Terre Haute, Ind., for $700.

Milton, Marshall LIVE STOCK Commission Company

Shipments of Cattle, Hogs and Sheep solicited for sale upon the St. Louis Live Stock Market.

The St. Louis Market is the most active and competitive of all markets. Many shippers selling elsewhere will obtain better returns at St. Louis.

We are thoroughly equipped to obtain the very best results in the interests of our customers, and in all market matters we will be found to be leading the procession.

For market information, special letters on Native and Southern Cattle, Stock Cattle and Feeders, Hog Prospects, Stock Sheep, Fat Sheep and Lambs, write to

Barbed-wire Bargains.

It is not often that any merchant gets a chance at barbed-wire bargains, but this year the floods caught a few train-loads under water, and, although it is just as good as new, it has to be sold as damaged goods. The advertisement of this wire is on page 6. A. J. Child & Sons, 517 North Main street, St. Louis, Mo., have 400,000 pounds to sell and will dispose of it at rock-bottom figures.

DR. LE GEAR'S ANTISEPTIC HEALING POWDER

The healing power of this famous remedy is wonderful. We have letters from all parts of the U. S. telling of fine animals that have been cured of sores, barbed wire cuts, collar and saddle galls, without leaving a blemish.

Druggists and Dealers everywhere carry a complete line of Dr. LeGear's Famous Stock and Poultry Remedies.

Write for copy of Dr. LeGear's Stock Book of 112 pages—it's free.

715 Howard St. St. Louis, Mo.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have therefore made arrangements to furnish our subscribers with the **Reliable Poultry Journal** on the most advantageous terms, and we know that the publishers are getting out such a magnificent paper the arrangement cannot possibly last long. All who are interested in poultry raising should consult their own interest and subscribe at once. We will send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

CHICKS AND LICE.

A Colorado Authority on the Subject.

The greatest enemy of the chick, and that which causes more loss than any other one cause, is chilling; the second enemy in importance because of amount of loss is lice; both lice and chilling are the indirect cause of bowel troubles, because both sap the vitality and life of the chick, making it impossible for the little fellow to resist the organisms of disease which are always ready to attack it.

Dusting the setting hen helps, but some lice are quite sure to escape and can later be found on the head of the chick; rub a dab of lard on top of the chick's head, getting it into the down thoroughly, and you will get there; repeat the dose in a week, and if the hen is furnished a good dusting place, the lice are not likely to give any more trouble; but whenever you see a chick that seems unhappy, eyes closed, droopy, look for lice.

The brood coops should be thoroughly sprayed before using with some coal tar preparation, sheep dip, whitewash, or a mixture of four parts coal oil and one part crude carbolic acid. It pays to be ahead, and that explains why so few of us are making anything on our poultry. We neglect these little things; because of neglect disease gets the start of us, we become discouraged because of the losses and give up and blame our luck, when all the bad luck might have been prevented by a little careful preparation.

Give the chicks a clean place; all the heat they can stand; keep them free of vermin, and you can safely count them before they are raised.—W. E. Vaplon, Poultryman, Colorado Agricultural College.

A New York Chicken Ration.

A New York poultryman has the following schedule laid out for feeding his chickens. His success makes it worth while to consider his methods:

In the morning the birds are given all they will eat of a mixture of one-half bran, one-fourth corn and one-fourth oats and wheat. This is mixed with milk or boiling water. Meat scraps and charcoal are also placed before the chickens. At noon the flock receives whole grain, consisting of two parts oats, one part buckwheat and one part wheat. At night the same whole grain is given as at noon. The birds are given pure water to drink, and, when it is to be had, milk is placed before them.

Would Not Buy "Fed-up" Chickens.

From New York City,on May 20th, the report was sent out that more than 50,000 chickens were being held unsold owing to a determined stand by the wholesale dealers in live poultry against buying overweighted "fed-up" fowl.

For a week the crates of live fowl were piling higher in the market, as the sales began to drop off. The climax came and on the 20th not a live chicken was bought. The fowl in the market represented only a small part of those cooped in the live stock cars across the river waiting to be placed on the market.

The claim advanced by the regular buyers was that the crops of the chickens were stuffed with gravel and sand; in other words, the "fill" of the chicken was out of proportion to the size. Furthermore, if there is any stuffing to be done, the wholesale dealers intend to do it themselves.

Illinois Poultry Plant.

The New York Produce Review and American Creamery, published by Urner-Barry Company, of New York City, gives us an idea of a modern plant for handling and fattening poultry, saying:

"Work on the construction of the new $25,000 plant of Frank Grampp & Co., at Princeton, Ill., has commenced. There will be two separate buildings, each 50x100 feet and two stories high. In the main building will be the offices, packing and shipping room. Back of this the cooling room, and in the rear the live room and picking room. On the second floor will be the storage and box-making rooms. Here the boxes for shipping poultry and eggs are made; from 20,000 to 50,000 boxes are carried on hand, which are made during the slack seasons.

In the summer the cooling rooms will be used for the storage of butter, cream and eggs, which, by the way, are nearly as large an item in this industry as the shipping of poultry. With this cold-storage plant Mr. Grampp states he will be in a position to manufacture ice, and that he may in the future use the plant for this purpose.

A second building immediately west of the main building, which is also to be 50x100 feet, will be used as a feed and conditioning building. In this building will be room for 25,000 birds at one time.

As the birds are brought in from the country they will be placed in pens in this building and fed for two weeks before being dressed and shipped to market. In this building will be automatic machinery for grinding and mixing the different feeds."

He Found Ten of Them.

A city woman who recently passed a few days at a farm bought some poultry from the farmer with a view to providing fresh eggs for breakfast every morning. She sent them to town by messenger, at the same time dispatching a note to her husband, telling him to look out for the consignment. Her husband, on reaching his home that night, asked if the poultry had arrived. He was informed that it had, but, explained the servant, he had carelessly left the basement door open and all the chickens had escaped. A fowl hunt was immediately organized. The next day, the husband, meeting his wife on her return, exclaimed: "A nice time I had with your poultry. I spent three hours and only found ten."

"You may consider yourself lucky, then," replied his wife, "for I bought only six."—Harper's Weekly.

"MAKING THE FARM PAY."

A New and Valuable Book Premium Offered by the Subscription Department of The National Farmer and Stock Grower.

Many of our readers have a copy of the book we used to furnish entitled "Profitable Farming and Gardening," and the book entitled "MAKING THE FARM PAY" is the same book improved. "MAKING THE FARM PAY" is a book that should be in every farm library—

1. Because it tells you how to care for and enrich your soil, giving the latest ideas in soil treatment and drainage. Without good soil you cannot have good crops.

2. Because it takes up the proper rotation of field crops for different soils; their adaptation and economic relations, and explains the culture directions of crops.

3. Because it explains fruit culture and forestry, showing how to bud, spray, graft and prune; how to kill injurious insects that affect fruit and shade trees; also insects that destroy field crops and garden products.

4. Because it tells how to make vegetable gardening and trucking pay; how hundreds of dollars can be made, by using proper methods, on only a few acres.

5. Because it tells you how to select and feed farm animals for the greatest net profits, explaining the balanced ration and how much feed and many dollars can be saved by proper feeding. The colored feeding chart, indicating the amount of digestible protein, carbohydrates, fats, ash, water and indigestible residue in principal feed stuffs, is alone worth a ten-dollar bill to a stock feeder.

6. Because it takes up the diseases of farm animals, giving the causes, symptoms and treatments of each, which will save you the loss of many dollars' worth of stock. These are explained in common terms that anyone can read and understand. The treatments are common remedies that you should have in your home.

7. Because it shows how to make and fill a silo and explains the value of silage to the average farmer. It gives many rules on measuring feed and grain and many valuable hints and helps for every farmer.

8. Because it tells how to make poultry pay and discusses the different breeds—the "sitting" and "non-sitting," the "general-purpose" and "fancy" breeds. The work tells how to caponize poultry, giving illustrations and cuts; also describes the diseases of poultry and their cure.

9. Because "MAKING THE FARM PAY" is written by the best, practical authorities, and takes up improved methods of modern agriculture in all branches of farming. It is written by men who have done what they advise others to do.

10. Because "it is the most in agriculture for the money." It is a ready-reference library in practical, scientific farming, giving you hundreds of money-saving methods and explaining the successful principles that every wide-awake farmer wishes to know—how to make his farm pay. A couple of dollars invested in practical and scientific methods will bring hundreds of dollars in scientific results.

Our Subscription Proposition.

Anyone who will send one dollar to this office will receive The National Farmer and Stock Grower for two years and can select one copy of the book "MAKING THE FARM PAY," and it will be sent as a subscription premium, by mail, prepaid, safe delivery and satisfaction guaranteed.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find one dollair to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery and satisfaction guaranteed, one copy of the book "MAKING THE FARM PAY."

Frozen Hares From Argentina.

"The Minister of Public Works of the Argentine Province of Buenos Aires has received an application from an establishment in Pergamino, which freezes hares for export, for assistance with respect to obtaining more supplies for its factory. The concern states that the principal difficulty is the lack of trappers. France is a steady market, having taken 360,000 frozen hares this season. The preserved hares have obtained awards at the exhibitions in Paris, Naples, Liege, London and Rome. Great Britain alone imports over 50,000,000 pounds of frozen rabbits annually."—United States Department of Commerce Report.

Missouri Egg-laying Contest.

The Second National Egg-laying Contest conducted at Mountain Grove, Mo., under the management of T. E. Quisenberry, Director, passed the first five and a half months on May 1st, having commenced on November 15th, 1912.

There are seventy pens, ten hens to the pen, 700 birds in all. Thus far the hens averaged fifteen more eggs each than last year in same period.

In the five and a half months the first ten pens laid from 832 to 1,117 eggs, the English pen of S. C. White Leghorns leading with 1,117, against a pen of Illinois Silver Wyandottes with a record of 948.

In the thirty days of April the best ten-pen records ranged from 218 to 240 eggs during the month, the leading pen being a Missouri pen of Buff Wyandottes.

In the five and a half months, 166 days, the best ten individual records ranged from 122 to 141 eggs, a Vermont pen of Buff Wyandottes laying 136, and a Single Comb White Leghorn of the English pen leading with 141 eggs.

Great interest is manifested in the leading pen of English White Leghorns that were bred from females with high records, also sired by males bred from high-laying hens.

In this contest there are only three pens of each breed. Twenty-four pens each laid over 200 eggs during the month of April. Out of the 700 pens, over half of them laid more than twenty eggs in thirty days, in spite of the fact that 195 hens had to be broken from broodiness.

LICE KILLER Liceoil, strongest lice killing compound made. Works like magic. Simply put a few drops in nests and hang bottle in coop. Powerful evaporating vapors go into feathers, cracks and crevices. No painting, spraying or dusting. Easy to use. Circular free. Pound bottle prepaid 50c. Money back if it fails. Agents wanted W. H. Metzger Co., No. 28, Quincy, Ill.

SHOEMAKER'S BOOK on **POULTRY**

and Almanac for 1913 has 224 pages with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies. All about Incubators, their prices and their operation. All about poultry houses and how to build them. It's an encyclopedia of chickendom. You need it. Only 16c. C. C. SHOEMAKER, Box 945 Freeport, Ill.

Big Poultry Houses or Many Poultry Houses?

The farmer that is going into the raising of poultry on a large scale must decide on whether he will have a few big poultry houses or whether he will have many small ones. The answer to the question with him will depend on surrounding conditions, especially of the amount of pasturage possible and on the amount of help he can secure at a reasonable figure.

If labor is his principal concern, he will build big houses and few of them. If pasturage is of most importance, he will have many small houses scattered over a large territory. The latter is doubtless the desirable thing to do, if conditions permit.

When the farm is large enough so that unlimited pasturage is possible, this pasturage should be made much of and the fowls distributed in small houses at a considerable distance apart, so that the fowls may have all the herbage they can possibly eat. This is a great item when all other foods are so high in price. Also on a large area there will be an immense population of insects, which are a far greater proportion of the food of fowls in a wild state than we generally consider. Beetles and like insects are exceedingly rich in nitrogen and are really an extremely concentrated food.

The drawbacks are the greatly-increased labor in taking care of the fowls and in gathering their eggs. But if cheap labor can be obtained, this is not of so much importance. There is, however, another factor against the distribution of the small flocks in small houses over many acres, and that is the invitation it is to thieves, and the difficulty of protection, especially at night. There is also more danger from the presence of hawks, in localities where those birds of prey abound.

For reasons like these we find most of the large poultry farms maintaining a few large houses, some of them hundreds of feet long. There seem to be two general types of these, one type where the doors and windows are all on one side and the yards all on one side, and the other type where the house is so built that a passage way runs down the center and pens are on both sides of the passage way, with doors opening into narrow yards that run out a long distance from the house. This type is the logical one when pasturage is an important consideration.

The writer has at times visited many of these large buildings, but has found few of them where any provision seemed to be made for doing work to advantage. One, however, was an exception. There several large houses were connected with a central house in which the feed for the birds was prepared in immense quantities and distributed by means of trucks to all parts of the buildings. The efficiency scheme had been worked down to a point where one man could do the work of two or possibly more.

For experimental purposes the large houses are the most convenient, unless the experiments be those connected with pasturing. One of the worst features of the large poultry house is the danger of the spread of any disease that appears among the fowls.

Coming Features

By R. E. Olds, Designer

From this time on, when you buy a car, these are things to watch for.

Left-side drive—
Center control—
Oversize tires—
Set-in dash lights—
Free entrance in front—

Right-side drive has been abandoned by the leading cars. Hereafter drivers will sit close to the cars they pass.

Skimpy tires are out-of-date. So are projecting side lamps. So is a blocked front door. These features are absent in the best cars now. They'll be absent in all cars soon.

Reo Rod Control

Note that Reo the Fifth has all these new features. And our center control is a one-rod control—an exclusive Reo feature.

All the gear-shifting is done by moving this rod three inches in each of four directions. It's as simple as moving the spark lever.

There are no levers, side or center. Both brakes are operated by foot pedals. So the driver's entrance on either side is clear. He need never dismount in the street.

When you see these features you'll not want a car without them.

Other Advances

Then the Reo marks the latest practice in some other great respects:

Analyzed steel—
Vast overcapacity—
15 roller bearings—
190 drop forgings—
A $75 magneto—
Doubly-heated carburetor—

Roller bearings cost five times what common bearings cost, but they do not break. Drop forgings cost twice as much as steel castings, but they don't have flaws.

In Reo the Fifth, steel is all made to formula. The gears are tested in a 50-ton crushing machine. The springs are tested for 100,000 vibrations.

Each driving part, for big margin of safety, is tested for 45 horsepower requirements. Each engine is given five long tests—48 hours altogether.

Parts are ground over and over. Important parts are hand-fitted. Nothing is left untested.

What They Cost

These things are costly. Oversize tires cost us $60 extra. Our unusual features, all combined, add $200 per car to our cost.

But we save this for you by building only one model. That saves about 20 per cent.

And these things are essential in a car that endures. A car without them may run well for a while, but the second season repairs and troubles come.

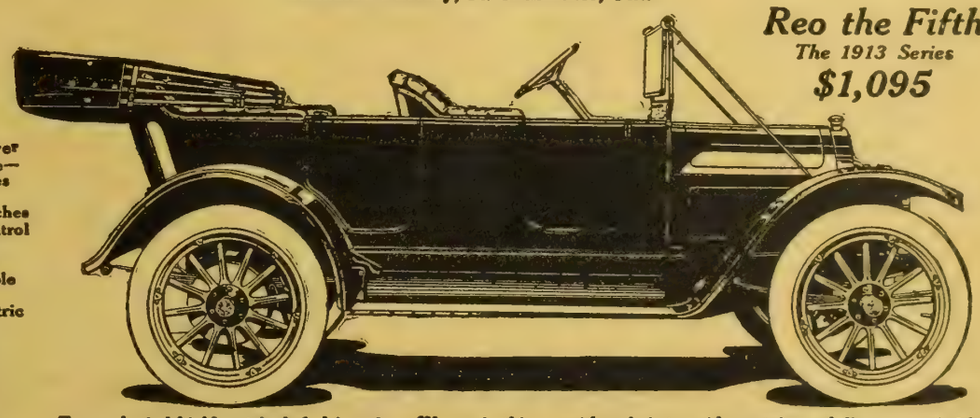
Reo the Fifth marks the best I know after 26 years of car building. I would not buy a lesser car myself, so I shall never build one.

In the years to come you'll save hundreds of dollars by having a car built like this.

Sold by 1,000 dealers. Showrooms almost everywhere. Catalog on request.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.
Canadian Factory, St. Catharines, Ont.

Reo the Fifth
The 1913 Series
$1,095



30-35 Horsepower
Wheel Base—112 Inches
Tires—34 x 4 Inches
Center Control
15 Roller Bearings
Demountable Rims
Three Electric Lights
190 Drop Forgings
Speed—45 Miles per Hour
Made with 5 and 2 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, Prest-O-Lite gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170). (Gray & Davis Electric Lighting and Starting System at an extra price, if wanted.) (203)

Extensive Sale of Ducks.

The extent of the duck-raising business on Long Island, New York, can be imagined when it is announced that A. Silz, a dealer in poultry and game in New York City, has contracted for, will handle and sell the entire output of the famous A. J. Hallock duck farm of Speonk, L. I., amounting to more than 600,000 pounds. Three other Long Island duck farms will also market their output through A. Silz, and the house will probably handle more than 2,000,000 pounds of Long Island ducks this season.

Bulletin on Poultry Diseases.

Farmers 'Bulletin No. 530, issued by the United States Department of Agriculture, is by Dr. D. E. Salmon, D. V. M., a former Chief of the Bureau of Animal Industry, and it is a pamphlet of thirty-six pages, which farmers can obtain by writing to the Hon. Secretary of Agriculture, Washington, D. C.

Chapters include the introduction: how to prevent disease; lice powders and their application; disinfectants and their application; cholera and cholera-like diseases; roup or contagious catarrh; diphtheria; bird pox (chicken pox); blackhead; tuberculosis; brooder pneumonia; gapes; liver disease; etc. It is well to have all this veterinary information at hand.

Good Seed Potatoes.

Farmers' Bulletin No. 533, issued by the United States Department of Agriculture, is entitled "Good Seed Potatoes and How to Produce Them." It is by Willam Stuart, Horticulturist of the Bureau of Plant Industry. It thoroughly covers the subject in sixteen pages with illustrations.

LIVE STOCK BREEDERS' CARDS.

CARPENTER'S BEST BARGAINS.

Fifty Poland-Chinas, 40 to 200 pounds; twenty-five Durocs, 100 to 150 pounds. All of the Poland-China Hogs were sired by the great Meddler and Wallbrige Boars and from some of the most noted Sows in America. Durocs sired by Mortgage Lifter and the mighty Col. Prince; Dams, TRY-STATE FAIR winners or others just as good. My catalogue and price list are free. Write for it and mention this paper.

THE GRANDVIEW BREEDING FARM, Marmaduke, Ark.

POLAND-CHINA PIGS.

Orders booked now for Spring Pigs. Will do to ship May. $12 and $15. Big, fine Pigs. Best of breeding. Come and see or write.

D. F. BEAUCHAMP, Meredosia, Ill.

TRUMANS' PIONEER STUD FARM,

Ameica's Largest and Oldest.

Importers of

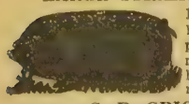
SHIRE, PERCEHERON and HACKNEY STALLIONS.

Write for catalogue.

Address,

J.G.TRUMAN, Manager, Bushnell, Ill.

LARGE STRAIN POLANDCHINAS.



I am offering nothing but Spring Pigs at present. The best that money can buy. They have a tendency to make extra large ones.

S. R. GRIGG, Proprietor, The Golden Ridge Farm, Mulberry Grove, Ill.

O. I. C. AND CHESTER WHITES.

February, March, April and May Boars and Gilts; no kin. Bred Sows, prolific, large kind. Pedigrees furnished. Prices reasonable. Also S. C. White Orpington Eggs at half price.

RAYMOND RUEBUSH, Sciota, Ill.

SALE OF HOSLTEIN CATTLE.

Cows, Heifers and Young Bulls.

I will sell the following high-grade Holsteins. They have plenty of quality and breeding and are in good condition.

50 Yearling Heifers and 50 1½-year-old Heifers—just being bred to a son of a 24-pound dam.

100 2 to 2½-year-old Heifers and 100 2½ to 3-year-old Heifers—bred to a high-class registered Bull; to freshen from December 1, 1912,. to March 1, 1913.

250 Matured Cows, very heavy producers, springing up ready to freshen soon; most of them in calf from registered bulls.

A number of high-colored, registered Bulls, ranging in age from six months up, out of heavy producing dams, and selected especially to head choice herds.

Can fill any order, from one animal up. Have a small surplus of excellent registered Cows and Heifers I will dispose of. Write me concerning your yants.

JAMES DORSEY, Dept. F. & S. G., Gilberts, Kane County, Illinois.

DUROC-JERSEY SWINE.

I have some choice Fall Gilts bred for September farrow. These are sired by Our Professor and H.'s Col., and bred to a son of Col. Wonder and Belle's Professor. Am selling these at $30.00 to $40.00 for choice.

H. H. HOFMANN, R. R. 1, Belleville, Ill.

BLUE GRASS FLOCK OF SHROPSHIRES.

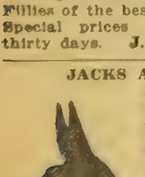
Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.

WILLARD MILLER, R. F. D. 2, Anita, Iowa.

SADDLERS.

Forty Saddle Stallions, Mares, Colts and Fillies of the best Denmark and Chief blood. Special prices on Stallions for the next thirty days. J. F. COOK, Lexington, Ky.

JACKS AND PERCHERONS.



We have twenty-five of the biggest and best mammoth Jacks in Kentucky and a few Percheron Stallions. We will cut the price from $100 to $300 per head on every one. We have a big stock of High-grade Percheron Mares, Hampshire Swine and big Black Pigs. Write your wants and visit the Cloverdale Farm.

H. T. BROWN & CO., Lexington, Ky.

PURE-BRED REGISTERED ANGORA GOATS.

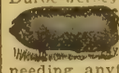
Bred from the choicest strains of imported Angora Goats. Sweepstakes and First-prize Winners at the American Royal Show. Satisfaction guaranteed.

R. C. JOHNSTON, Lawrence, Kansas.

TAMWORTHS FOR SALE. The Bacon Hog; the largest and most prolific breed; early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at the State Fairs of the year 1912, including a bunch of championships. Imported stock owned be me were winners at Royal Show, London, England. 1907. Mature Sows will fatten from 600 to over 700 pounds; Boars 1,000 to 1,200 pounds. **CHAS. FORD, Mortonsville, Woodford County, Kentucky.**

SPLENDID DUROC-JERSEY PIGS.

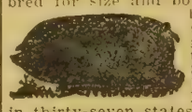
I have for sale seventy-five registered Duroc-Jersey Pigs, March farrow. Some fine Gilts bred for August and September farrow. Prices from $12.50 to $35. Good individuals, well bred. Write me if needing anything in this line.



J. E. WELLER, Faucett, Mo.

POLAND-CHINAS OF THE BEST STRAINS

bred for size and bone, with quality; wide-backed, deep-bodied, good bone, good heads; growthy Spring Pigs by the great Longfellow's Special, 61,200, at $20. Pedigree with each. Many satisfied customers in thirty-seven states. Catalogues free. We will send by parcels post, prepaid, at $1.00 for 15 of our Thompson Ringlet Barred Plymouth Rock Eggs. Cockerels in fall.



A. F. SIEFKER, Defiance, Mo.

HOGS! HOGS! FOR SALE!

Big Registered Poland-Chinas and English Berkshires that weigh and win; S. C. Brown Leghorn Chickens that lay. See or write

S. Y. BURKS, Bolivar, Mo.

THE HARDY, PROLIFIC, MULE-FOOT HOG.

350 Big-Type, Mule-Foot Hogs of all ages for sale. They are the best and hardiest for the average farmer; also Shetland Ponies and White Leghorn Eggs for sale. **J. H. DUNLAP, Box 373, - Williamsport, Ohio.**

MILL CREEK STOCK FARM.

(The Home of the Starlights.)

THOS. H. EZELL, Proprietor.

Breeder and dealer in registered high-class Starlight Jacks and Jennets from four months to eight years old. (No partial Jacks.) A written guarantee. Send for catalog.

R. F. D. 7, - NASHVILLE, TENN. Long Distance Phone, Main 1326.

Butter Profits

You ought to get more butter profits. Jersey Cattle mean more butter profits, because they yield more butter fat at less net cost of keep than any other breed.

THE JERSEY

excels in beauty of dairy type. She is a persistent milker. Jerseys are easily acclimated. They live long and keep healthy. They mean *steady* butter profits. Write now for Jersey facts. Free for the asking.

AMERICAN JERSEY CATTLE CLUB 324 W. 23d St., New York

BLOODED STOCK NOTES.

Mr. John H. Dunlap, Box 373, Williamsport, Ohio, whose advertisement appears with other breeders' cards, is President of the American Mule-foot Hog Association. He has sixty magnificent sows on his farm that farrow twice a year, and he has ten prize-winning stock boars. All who are willing to investigate these black, silky-coated hogs can do no better than go to the fountain head for stock and information.

The advertisement of J. E. Weller, of Faucett, Buchanan county, Mo., on the Great Western Line, not far from St. Joseph, is in this issue. He is offering some pure-bred and registered Jersey swine of his own superior breeding. The Weller herd of Durocs is one of the best in the state of Missouri. His pigs are specially good, having large bone, lengthy and smooth body and of the fancy cherry red color. The stock is good enough to suit the breeder who wishes to improve his registered herd and robust enough to suit the stock farmer who intends to top the sales when he ships a loads of fat hogs to market.

Whenever considering the dairy business as a field of operations and you wish to investigate the breed you will adopt and stand by, do not fail to look over the claims and merit of Jersey cattle. For high content of butter-fat, economy of production, for many other traits that cause the dairy cow to be the greatest live stock money maker of the present day, the Jersey has a strong place in the front rank of all dairy breeds. Particulars as to what the Jersey is doing and has done can be had by addressing the American Jersey Cattle Club, 324 West 23d street, New York City. See card in breeders' column.

At Villa Nova, Pa., on May 15th, Frederick Phillips, a breeder of international reputation, sold ninety-five head of Guernsey cattle at auction, realizing the splendid average of $316.20 per head. Eight bulls sold for an average of $409.35, and eighty-seven females averaged $307.65. Two thousand dollars was the top price for a bull, Rockingham, a three-year-old son of May Rose, and the top price for a female was $1,500, paid for Imp. Polly, 8th, of the Beaulieu. Branford Farms, of Groton, Conn., bought both of the top-priced cattle and many others besides.

At Wanatah, Ind., on April 29th, Taylor & Welty held a dissolution sale of Hereford cattle. Fifty-one head sold for an average of $183; nine bulls averaged $165; and the general average for fifty-one head was $182. The highest price for a bull was $300, paid by John Terry, of Wanatah, Ind., and the highest price for a female was $505, paid by W. J. Davis, of Jackson, Miss., for the mature cow Handsome, 3d.

At Lake Fork, Ill., towards the end of April, Mr. W. H. Bryson sold fifty-nine head of Shorthorn cattle at auction at an average of $153 per head. Sixteen bulls averaged $170, and forty-three females at $147. J. H. Horn of McLean, Ill., paid $350 for the bull Golden Edgewood, and A. G. Danforth & Son, of Washington, Ill., bought Belle and female calf for $250, the top price in that class.

At Shelbyville, Ky., on May 27th, W. R. Spann & Sons held a sale of Jersey cattle at auction and realized an average of $373 for 102 head. The top price of the sale was $1,500 for Noble's Eminent Lad, a son of Noble of Oaklands, bought by Ed. C. Lasater, of Falfurias, Texas.

The National Farmer and Stock Grower does not make any attempt to solicit large-size breeders' cards. Two inches single column is enough for any breeder to use. We have live stock breeders who sell all their spare breeding stock by advertising in this paper, and the expense is not over one per cent. of the sales.

Raymond Ruebush, of Sciota, Ill., has changed his card this month in order to invite special attention to his Ohio Improved Chester White Swine. His herd is characterized by heavy bone, strong muscle, with typical ears and back and good coat of hair. They also stand well on legs and feet. Mr. Ruebush issues a descriptive circular describing his Chester swine and White Orpington fowls.

Star Brand Shoes on Sale.

A very large proportion of all hides and skins produced by farmers by raising cattle, sheep and goats enter into the making of shoes. Shoemaking used to be an exclusive Eastern industry, and money was expended unnecesarily in freight bills going and coming. Of recent years shoemaking has become a Western industry, and shoes are much better and cheaper by reason of the change, because the waste in transportation and in other ways has been recovered and put into the shoes. Roberts, Johnson & Rand Shoe Company, of St. Louis, have demonstrated that a great shoe business can be built up by them in the West and on page 5 one of the leading brands is advertised. This firm has cut out the wholesaler's profit as another economy, and sells direct to 20,000 retail merchants, who have proven by keeping a full stock on hand that "Star Brand Shoes are Better." The advertisement on page 5 is worth reading.

THE TRADE IN CASINGS.

Showing What Appears to be a Small Matter Can Cut a Considerable Figure in International Trade.

We have received from the United States Department of Commerce a copy of a report dated April 26, 1913, by the American Consul General at Hamburg, in Germany, on the subject of the international trade in casings:

"Continuing a report on the above subject transmitted March 27, 1913, it is now possible to furnish a review from the Hamburg Chamber of Commerce in regard to the class of goods named.

"The year 1912 witnessed the highest quotations known for cattle casings. The advance in prices was caused principally by unusually small shipments of cattle to the American packing houses, the number of cattle killed in the United States having decreased as compared with preceding years to such an extent that the production of casings was considerably reduced. Similarly the number of cattle killed decreased in nearly all the countries of the world. The poor crop of feeding materials in 1911 had forced producers to dispose of large portions of their herds, so that during 1912 a reduced number of cattle came into the market for slaughter. In South America the number of cattle killed in 1912 increased about 190,000, as compared with 1911, but this was not sufficient to cover business in other quarters of the globe. While the importations of casings from South America increased, the importations into Germany from North America and Australia declined.

The number of hogs killed in the United States during the first half of 1912 was in excess of the number killed during the same period of 1911, but there was a decrease in the number slaughtered toward autumn and prices of swine casings were subjected to fluctuations, December quotations being equal to those of the beginning of the year.

"Early in 1912 there was a lively demand for middle-sized cattle casings. While up to October the small quantities of cattle slaughtered caused a rapid decrease in the prices for casings of a middle size, the increasing shortage of meat and the high prices paid for swine and cattle brought about a partial standstill in sausage manufactories, so that at times the consumption of casings of middle sizes ceased absolutely, the importers meeting with difficulties in selling their goods. In November the American packers lowered the prices of casings of middle size, as the consumption in the United States also had decreased and stocks had begun to accumulate.

Ring casings were in continuously good demand, but as North American prices at times rose to 1.10 marks (26.1 cents) per bundle, buyers preferred cheaper South American goods. Imports of North American ring casings decreased on account of disproportionately high prices, and the German market in the meantime formed the habit of using cheaper Australian casings.

German buyers were not in a position to pay the enormous prices of American sellers of beef butts. In the beginning of 1912 packers asked 55 marks ($13.09) per 100 pieces, and in the course of the year prices increased to about 80 marks ($19.04). In the meantime, German connsumers covered their requirements with goods from South America or Australia, for which they paid high prices, as imports from North America almost ceased. At the end of the year prices decreased.

"As before stated, shipments of South American cattle casings to Germany were larger in 1912 than in 1911 partly because of the increased number of cattle killed and also because South American packing plants are now in a position to clean all casings, rendering a larger quantity available for export. The quality of the South American casings improved and the output of the more important houses showed that care was being taken in preparing them. Good prices were obtained during the year for English casings from which the fat had been extracted. It is said that for 1913 large contracts at high prices have been closed already. Although the market for casings in Germany was good, it was difficult to sell Australian casings on account of their disproportionately high prices. The facts above stated refer principally to casings of middle size, for which prices were often asked which were not in keeping with the quality offered.

"Quotations for hog bungs packed in barrels containing 600 pieces were in general lower than in 1911, whereas for barrels containing 400, 450 and 500 pieces the same prices as in the preceding year were obtained.

"During 1912 offers for sheep casings were larger than the demand, but prices were not satisfactory. As usual, the demand for first-quality goods was excellent and the prices demanded in most cases could be paid."

Holstein Advanced Records.

Malcolm H. Gardner, Superintendent of Advanced Registry, reports that records for 443 cows were received recently and have been accepted for entry in the Holstein-Friesian Advanced Register. This herd of 443 animals, of which over one-half were heifers with first or second calves, produced in seven consecutive days **184,949**.9 pounds of milk, containing **6,673**.543 pounds of butter-fat, thus showing an average of **3**.61 per cent. fat. The average production for each animal was **417**.5 pounds milk, containing **15**.064 pounds of butter-fat, equivalent to **50**.64 pounds, or **28**.4 quarts of milk per day, and **17**.58 pounds of commercial butter per week.

Carlotta Pontiac at the College of Agriculture, University of Missouri.

Carlotta Pontiac is the name of the greatest Holstein cow in Missouri today. She is owned by the Missouri College of Agriculture. Last year she produced 22,000 pounds of milk, which contained 827 pounds of butter. She is the greatest cow owned by the college since Josephine, in milk and butter production. She is producing daily at the present time 90 pounds of milk, which is 10½ gallons. This remarkable cow will be one of the chief exhibits at the great annual County Fair given by the students of the College of Agriculture during Commencement Week.

The Dog Was Ahead.

A Maine man tells a story of a friend of his in the West who was induced by a stranger to buy what was claimed by the latter to be the best wolf dog in the country. A few days later the man took his new purchase and started out early in the morning to try him out. The dog soon picked up the scent and started off, the man following on horseback. The dog was soon out of sight, but the man could hear him bark occasionally and followed on. About noon he met another man coming from the opposite direction, and inquired if he had seen a wolf and a dog anywhere, to which the man replied that the had.

"And how were they going?" queried the man. "Was the dog nearly onto him?"

"Well," answered the other, "if I remember correctly, the dog was just a trifle ahead."—Harper's Magazine.

Goodyear Automobile Tires.

Automobile owners can profitably make a study of automobile tires. The tire wears out like the sole of a shoe and has to be replaced when the time comes. The automobile owner should investigate the tire question before the time comes to buy them, so that he decides in advance what he intends to buy. Automobile tires are now made by experts, and the best makes are well known. Probably the best showing at the present time is being made by the Goodyear Rubber Company, claiming the least cost per mile of any tire that's built. We advise our readers to send to the Goodyear Tire and Rubber Company, Akron, Ohio, and ask for a copy of the Goodyear Tire Book. It tells the whole story of the automobile tire. See page 7 of this edition.

Good Business Education.

The Gem City Business College advertised on page 25 is no ordinary establishment. It seems strange that one private institution unaided by government taxation should have given final instruction to 35,000 young men and women, and whenever necessary to do so have found their graduates good positions. But such is the record. Write to D. L. Musselman, President, Lock Box 37, Quincy, Ill., and ask for Catalogue and Year Book.

The Mule's Direction.

A man had occasion to ship a mule by rail to another county. He sent the animal to the station in the care of a darky. When the freight was put on the car the darky looked through the bars and saw that the mule was eating the tag upon which his destination was marked. The darky at once ran home.

"Massa! Massa! Dat mule, he done gone and et up de place where he's gwine to!"—Harper's Magazine.

"Two are company." "Yes, until they are made one."—Exchange.

The Shepherds' Journal.

The inquiry in regard to the management of sheep on the farm and on the range can best be answered by furnishing our readers with a splendid paper that is devoted to Sheep Husbandry. We have therefore made arrangements whereby we can offer The National Farmer and Stock Grower and **The Shepherds' Journal**, both papers, for one year, for fifty cents. This is getting the producer close to the consumer without the help of the middleman. **The Shepherds' Journal** is a magnificent paper, issued monthly on superfine paper and adorned to the last degree with illustrations from life. The National Farmer and Stock Grower has some claims to be a good paper, and **The Shepherds' Journal** is doing something for us. We therefore offer that anyone sending fifty (50) cents to pay for The National Farmer and Stock Grower for one year can select **The Shepherds' Journal** for one year as a premium. We guarantee satisfaction. Address, **HALE PUBLISHING CO., 3550 Vista Ave.,St.Louis,Mo.**

I'll Stop Your LOSSES
FROM WORMS

"There is no doubt that Sal-Vet saved my entire herd of hogs. On all sides of my farm other farmers lost nearly every hog they had. I shall always aim to keep "Sal-Vet" or no hogs."
PETER V. CAREY,
Route No. 5
Fairfield,
Ill.

I'll Feed Your Stock 60 Days Before You Pay

I'll SAVE Your Sheep and Hogs

More Proof
"My sheep were sick and dying, but "Sal-Vet" stopped my losses. I was out of the preparation for about a month, and the animals again commenced to die. As soon as I began to feed the second lot of "Sal-Vet" the losses again stopped and I have not lost one since."
Silas C. Milleson,
Springfield, W. Va.

Don't let worms breed contagious diseases among your hogs this year. Don't let them kill off the young pigs and lambs—and rob you of your season's profits. You can prevent it if you will just take "a stitch in time." Now is the time when worms get in their deadly work. Now they are breeding—multiplying by the millions in the stomach and intestines and if you don't get the best of them they will surely get the best of you. I'll rid all your stock of these destructive pests. I'll prove it before you pay.

PRICES: 40 lbs., $2.25; 100 lbs., $5; 200 lbs. $9; 300 lbs. $12; 500 lbs. $21.12. No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk, only in Trade-Marked Sal-Vet packages. Shipments for 60 days' trial are based on 1 lb. of Sal-Vet for each sheep or hog, and 4 lbs. for each horse or head of cattle as near as we can come without breaking regular size packages.

The Great Worm Destroyer — SAL-VET — The Great Live Stock Conditioner

is a wonder working medicated salt to which your hogs, sheep and other farm animals can run freely and *doctor themselves*. It requires no dosing, starving or drenching. Costs only 1-12 of a cent a day for a sheep or hog and a trifle more for larger animals.

That Which Remains.

"I never talk with—," remarked a friend, "without getting some good out of the conversation; something which makes me feel that my time has been profitably spent." Yet the person referred to was neither brilliant nor profound, but just a plain, common-sense individual, such as any one may become who starts out with character as the foundation.

Of how many of our associates can as much be said? Which ones among them leave us a little purer or nobler for the association? Which drop a hint here and there that will enable us to do our own work easier and more completely? Which add a bit of something that will render our lives more worthy? It may not come in the form of a preachment, or even a precept. There are the influences which are perceptible if not easily described; those which come through the utterance of a single thought. There is the humor which entertains without leaving a trace of acidity, and the best humor has in it a depth of feeling which means far more than the mere laugh. The one who can leave some permanent good while provoking a smile is the one whom we are glad to see again.

As we shun evil associates for the harm which they may bring to us, the good which remains should serve as a key to worthy friendships. We know that the face habitually serious is not necessarily the best one, and that pleasure and good works go hand in hand. The idle talk which means nothing, leaves nothing, is a very unsatisfactory product. We cannot afford to indulge in it to any great extent. There are too many ways to be useful for a single individual to be justified in wasting his time thus.

And how about the impress which we are making upon others? Some one will necessarily be thinking about it. If we are popular, there is a reason for it. This may be worthy, or the reverse, but we are having some influence upon others, or we are mere ciphers. In some path we are leaving a trail of shining light, or only the dregs of time wasted. Even the hod-carrier may teach a lesson of faithfulness to the best that he knows.

The greatest men and women were great not so much for their works alone as for their influence. We can each call to mind those who never came in contact with others without leaving some good. This was the real spirit inculcated at Bethlehem two thousand years ago, and the nearer we approach to the only perfect model ever given the more helpful may we become. Our influence, our real worth in this world hinges upon what we leave among our associates in our daily life. We may prove ourselves helpful, even though we are neither witty nor wise.

In the words of Blanche Fearing, who worked and won where many would have given up in despair:

"Let our chiefest mission be,
To make ourselves the noblest that we may;
And, second, to ennoble other men;
Because the great Christ-passion to redeem
Burns in our hearts, and life is but half lived,
Unless we feel that men have touched our robes,
And virtue has gone out from us."

—Bessie L. Putnam.

When Washing Knitted Goods.

White and dainty colored woolen articles can be washed so that they will lose none of their beauty, and they may be kept soft and clean as long as they last if they are carefully washed and dried. Much, however, of the success depends upon the drying process, as woolen articles will shrink, unless they are pulled into shape while wet and then kept stretched into perfect shape until they become dry.

White summer shawls made of soft wools can be kept a good color by shaving enough wool soap into quite hot, soft water to make a good lather and then adding a teaspoonful of ammonia. The articles must be squeezed through this suds until clean, then rinsed in water of same temperature as first water and a little soapy, but instead of ammonia a little bluing should be added. Squeeze out the water and put the articles in a clean, large platter near the stove to dry, and turn and pull the articles into shape often while drying.

In no case rub or wring knitted goods, as that stretches the stitches and spoils the shape of the article.

A crocheted shawl or scarf can be placed flat on a piece of cloth sufficiently large to cover it and basted several times around to hold it firmly in place, and then covered with another piece of cheese cloth, and this must be basted enough to hold in place, then the cloth can be pinned to a sheet on the line after washing and rinsing the article. If the first bath has been very soapy, two rinsing waters will be necessary, and all changes of water must be of the same temperature.

Very dainty colors should be washed through suds made with soap bark, as the most delicate colors can be washed in this white lather without the slightest injury. The best way to use the bark is to put a small quantity in a tub half full of cold water and stir with the hands until a good lather is made, then add hot water till the whole is moderately warm, then it is ready for use.

A nice white sweater that had turned yellow from careless washing was colored a rich, dark red with Diamond dye for wool and it looked as nice as a new garment; and a faded pink shawl was colored at the same time, but a different shade of red was produced by weakening the dye. Another sweater was colored a pretty shade of tan, and by keeping them pulled into shape while drying they did not shrink, and as there is nothing nicer for cool days in summer than a nice sweater or pretty wool shawl, it is worth while to learn how to renew them; and the all-white articles should be washed before they become very soiled, so that a very light squeezing in warm suds will get them perfectly clean.—A. M. H.

The Power of Music in the Home.

"How I have learned to love that," sighed Milly as the last strain of exquisite music died away. I looked at Milly in amazement.

"Why, I thought this was your first time at grand opera!" I exclaimed.

"So it is," replied Milly, with a laugh for my astonishment. "But, nevertheless, I have heard Schuman-Heink many times, as well as many others of the world's greatest singers. I have listened to Melba, Gadski, Farrar, Tattrazzini, Caruso, Martin, and ever so many others. I expect to hear them many more times, and that right in my own home."

"Oh, I suppose you mean a talking machine," I said.

"Call it that or a singing machine or a melody maker or a wonder box, I don't care. All that I care for is that our still, almost gloomy old home has been transformed. But this is only part of our musical feast, for father bought a player attachment for the piano that has been silent since Eileen died. Nobody in our house but she could play. But now we have the master musicians with us all of the time and it is good to hear Eileen's beloved instrument so wonderfully handled. Have you ever heard 'The Wanderer' reallly played, or 'Sweet Evening Star?' Evening after evening we hear only the best music, for we have made our selections carefully. Mother and father and the boys are quite as enthusiastic about it as I am. Why, you cannot get the boys away from the house evenings now, and they are always inviting their friends over to enjoy the music. It was only a few months that Fred talked of nothing but getting away from the farm. But we never hear a word about it now. And though we may none of us ever play or sing, we are all of us having a musical education. It was this home training that made me so determined to hear Schuman-Heink to-night. And to hear mother, father and the boys discussing the merits of our various entertainers would make you think them all musical artists. It seems to me that the one thing needed to make our country life ideal came when we were able to introduce some of the world's greatest musicians into our little home and to have them take an abiding place there."—Janet Thomas Van Osdel.

TO LOVERS OF THE BEAUTIFUL.

Picture Premiums to be Obtained by Sending Just One—Only One—Single Subscription to the Monthly Publication Entitled the

UNIVERSAL MAGAZINE

The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, current literature, poetry—a splendid publication for the money. To introduce this interesting publication to new readers this year we are offering a premium of

FIFTEEN 5x8-INCH PICTURES.

They are colored reproductions of paintings by the greatest artists; all these fifteen pictures one premium.

LIST OF PICTURE SUPPLEMENTS.

No. 1—THE RETURN. Return of the Fishing Fleet.
No. 2—THE MILL STREAM. A Land and Water Scene.
No. 3—VENETIAN TRADERS. The Galleys of Venice.
No. 4—THE ARABS. Mounted Warriors in Battle Array.
No. 5—LIFE SAVERS. A Storm on the Sea Coast.
No. 6—THE SULTANA. A Beautiful Woman in Eastern Costume.
No. 7—TRUMPS. A Game at Cards.
No. 8—COUNTRY LIFE. The Homestead and Lane.
No. 9—IN FAIR JAPAN. The Homes of the Natives.
No. 10—THE PATRIARCH. An Eastern Picture.
No. 11—THE GRAND CANAL. At Venice.
No. 12—THE FISHERMAN. On the Eastern Coast.
No. 13—IN SUNNY ITALY. Scene in Naples.
No. 14—THE GILDED CAGE. Beautiful Female Picture.
No. 15—THE ARGUMENT. Old-fashioned Picture.

All these pictures are worth mounting and framing. We desire to say that these pictures are most beautiful. We buy large numbers and we selected them as the fifteen best out of one hundred elegant works of art. The pictures are all 5x8 inches, and are on art paper, and will be mailed together in one large, strong envelope, safe delivery guaranteed.

OUR SUBSCRIPTION OFFER.

Anyone who will send us twenty-five (25) cents in coin, money order or one-cent postage stamps for one-year's subscription to the UNIVERSAL MAGAZINE can select the fifteen 5x8-inch pictures as a premium. We guarantee safe delivery and satisfaction or money refunded.

Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Regular shipments of Australian meats to the Pacific Coast will turn stock raisers into fruit growers.

National Farmer and STOCK GROWER,

Monthly Farm Paper. Useful on grain, stock, dairy, poultry, fruit and vetgetable farms. Send for Free Sample Copy, or, what is better, send fifty cents for one year's subscription, and receive as a premium **Eight Hardy, Everblooming Roses,** one-year plants, the richest colors, the best varieties. They are **Rhea Reid, The Bride, Etoile de Lyon, Bridesmaid, Champion of the World, Papa Gontier, Bessie Brown** and **Crimson Rambler.** Nowhere else in the world can they be bought for the money. Address, **HALE PUB. CO., 3550 Vista Ave., St. Louis, Mo.**

OUR INDUSTRIAL POLICY.

We Are in Favor of All Foreign Farm Productions Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

The most important item we can publish at the present day is our industrial policy, so far as it relates to the tariff which is now under consideration at Washington. A bill detrimental to all American interests, especially the interests of the manufacturers and farmers, has already passed the House and is now in the Senate. We therefore repeat our views on that question.

The National Farmer and Stock Grower is in favor of the United States Custom House collecting by law a reasonable range of duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, the amount of said duties to be applied to the support of the national government.

By the tariff policy that we advocate fully one-half the money required for the support of the national government can be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed on our own people. We are in favor of duties being levied upon all manufactured goods for the double purpose of furnishing revenue and for the protection of our manufactures, for the reason that all interests are entitled to protection, if it is accorded to anyone.

We look with seriousness at what we regard as a great and unnecessary blow to the best-producing industries of this country in the tariff bill that has just passed the House. This country has had some experience in that line. Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time foreign goods are placed on the free list there is the same result.

With moderate import duties received by the United States on various products as now collected the total that is covered into the United States treasury is over three hundreds of millions of dollars a year; and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty displace home productions and result in higher prices to the American consumer and higher taxation also upon our own products to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives far better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and general discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and be the greatest sufferers. The farmers who can provide for themselves will be slow to increase their products in the face of injurious legislation.

Look Out For Worms.

A little precaution right now in ridding your farm animals of the treacherous stomach and free intestinal worms may save you a good many hard-earned dollars before the end of the year.

It is not only positively known that these pests kill millions of lambs and pigs every year, but they also keep stock in a thin, weak and half-starved condition, rendering them money losers instead of money makers.

But the gravest danger from these destructive pests is the weakening of the animals' constitutional and resistive powers, making them easy victims to hog cholera, swine plague, horse plague and other contagious diseases.

It is well known that the best way to fight off these plagues is to keep every animal in the healthiest condition, so it can resist the contagion, and one of the first steps is to drive out the worms. If you do this, your chances of loss will be decreased about 98 per cent.

Speaking of the different remedies recommended to destroy these worms, Mr. E. C. Evans, well-known live stock authority and Secretary of the American Hampshire Swine Record Association, says: "There is nothing within my knowledge as good or as cheap as 'Sal-Vet.'" He is supported in this claim by many agricultural colleges, and by such prominent breeders as Henry L. Wardwell, Hon. A. J. Lovejoy, President of the International Live Stock Exposition, Geo. McKerrow & Sons, Robert Blastook, Robert Evans, Roscoe Wood, C. O. Judd, C. A. Tyler, and hundreds of other leading lights in the live stock industry.

We do not hesitate to recommend "Sal-Vet" to our readers because of the good reports we have heard and because of the extremely liberal manner in which it is sold. Mr. Sidney R. Feil, President of The S. R. Feil Co., Manufacturing Chemists, Cleveland, Ohio, who make this preparation, offers in his advertisement on page 21 to send any reader of this paper a full sixty-days' supply of "Sal-Vet" without a cent of pay in advance and with the plain understanding that if it does not do what is claimed for it, no charge will be made.

NOVEL USE OF ENSILAGE CUTTER

Lumbering Concern Used Giant Model of Blizzard Ensilage Cutter For Making Kindling Wood.

A favorite stunt of agricultural implement men, when exhibiting Blizzard Ensilage Cutters at the Fairs, is feeding the machine pieces of inch board.

Quick as a flash the board is all chewed up into tiny bits, just as if it were corn stalks, and tossed high into the air (for the outlet pipe is taken off when giving this demonstration).

A lumberman from the Adirondacks, while visiting the New York State Fair, saw one of these machines reducing board to splinters, and it gave him an idea.

He got in touch with the manufacturer of the Blizzard and ordered a cutter, built on exactly the same lines as the ensilage-cutting machine, but many times bigger and heavier. You never could guess for what purpose he wanted this machine.

He had it shipped to his lumber camp in the Adirondack Mountains, and hitched to a big gasoline engine.

Then he put a gang of men to work hauling to the machine all the branches and limbs of the trees that were not large enough to use as lumber.

These branches are fed into the rollers, and like magic are chopped into small pieces suitable for kindling wood. This wood is shipped to New York City by the car-load, and sold to the poor families of the East Side far cheaper than if the chopping had been done by any other known methods.

The Jos. Dick Mfg. Co. will be glad to send you a book telling all about the Blizzard Ensilage Cutter, if you care to write them. Address, Jos. Dick Mfg. Co., 1416 Tuscarawas street, Canton, Ohio.

Watermelons From Florida.

On Monday, May 12th, the first watermelons to be received in St. Louis in 1913 arrived. They were shipped from Sanibel, Fla., to P. M. Kiely & Co., the shipment consisting of one barrel containing sixteen small melons, all about half the usual size. The melons weigh seven to ten pounds each, but sold quickly at from 50 cents to $1.00 each, most of them for restaurant display purposes. The sample of the new crop appeared about ten days earlier than ever before.

The World's Crop of Wheat.

The supply of wheat at present is keeping pace with the increasing demand. That is the conclusion of the best authorities. Last year the world's crop of wheat was 3,758,000,000 bushels, the largest crop ever grown.

DRESSMAKING PREMIUM.

A Complete Course of Instruction at Home in Ten Weeks.

The best book we have been able to find on the subject is "Dressmaking in Ten Weeks." It is by Mrs. Edith M. Carens, who is Principal of a College of Dressmaking, and is a condensed course of twenty complete lessons, and especially arranged for home study work. Each line is the result of careful preparation by an artist. There is information found here that can be obtained nowhere else.

The book instructs you on the buying of materials, the preparing of the cloth before it is cut, the designing, cutting, fitting and finishing of every kind of clothing in a woman's wardrobe. The size of the book is 5x8 inches, contains 127 pages, and has fifty illustrations.

Our Subscription Proposition.

What we wish to do is to please every girl and woman on the farm. We wish them to say to husband, to father, or brother, or to uncle: "I would like you to subscribe for The National Farmer and Stock Grower. It pleases me and will please you. The price is 50 cents a year. It is full of good articles on general farming and stock and poultry raising in all branches. And besides all that, if you do subscribe, I will receive as a commission or premium a copy of the book 'Dressmaking in Ten Weeks,' postage free and safe delivery guaranteed. I need that book, and the best way to get it is to send 50 cents for one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE HOUSEHOLD.

A Chapter on Genuine and Bogus Linens.

We have on the market to-day three kinds of table damask—the Irish, the German and the mercerized cotton.

The Irish linens are noted for their beauty of design as well as fineness of thread with firmness and evenness of weave. The German linens have more conventional designs, as dots, squares, etc. The thread is heavier and coarser. German linens are not placed very extensively on the market, so a well-known linen firm tells us. Both Irish and German linen come in the bleached and unbleached.

The mercerized table linen is only cotton woven in damask patterns and treated with caustic alkali, the cloth being held in tension during the treatment. This produces a gloss, which, after repeated washings, is lost. This kind of table linen is hard to launder, as stains seem more firmly fixed in it than in linen. A linen table cloth becomes more beautiful after repeated laundrying, while a mercerized one looks like an old rag. Mercerized table linen cost very little less than linen.

Table linens come in 68, 72 and 96-inch widths. It is quite as cheap to buy pattern cloths as table linen by the yard. It has the advantage, too, of a border all around. They come in a great variety of sizes, from two yards square up.

The best towels for kitchen use, either as hand towels or those for drying dishes, are the linen crashes. These vary in price from 8⅓ to 35 cents a yard, according to the fineness of the weave and whether they are bleached or unbleached. There are cotton crashes on the market, which the clerk tells you are just as good and cheaper. They are not enough cheaper to pay for the trouble in laundering them. They also leave a lint on dishes. There is a special linen crash on the market for roller towels. It has an extra strong selvedge and consequently does not tear easily.

Huck makes the best toweling for bedroom use. It has a rough surface and absorbs water readily. It may be procured either in a plain or figured design. All-linen huck cannot be bought for less than 40 cents a yard.

Damask towels are beautiful in weave and design, but on account of the smooth surface do not absorb water readily. Their use is best confined to scarfs for dresses, etc.

In buying Turkish towels, fold the towel over the finger and observe the spaces between the loops of thread. A towel in which the loops are close together is the best one to buy, as it wears longer and absorbs water more easily.

All towels should be of such material and trimming that they may be boiled in laundering. This is only a necessary precaution to prevent the spread of infectious diseases.

All materials, such as toweling and table linen, are often adulterated with cotton when they are put on the market as all-linen. It behooves the housewife to know means of distinguishing between cotton and linen. The old test of moistening the finger and putting it under the cloth is not always sure. It is better to put on a drop of olive oil and dry slightly between blotters. The linen is much more transparent than the cotton.

It is a good plan to ravel out the cloth and examine the fibres. Cotton thread is made up of short fibres, which project from the surface of the thread. This gives a fuzzy appearance if you rub the thread. If you break a cotton thread you find the end is tufted, while a linen one breaks unevenly, leaving the end pointed. Linen thread is stronger than cotton, and is uneven in appearance. It is also more lustrous.

It certainly pays to buy of a reputable firm, for unless a person is a good judge of linens, one is very liable to pay for experience of bargain hunting.—Bulletin from the Colorado Agricultural College, Fort Collins, Colo.

Good Summer Remedies.

A remedy that is good for summer complaint in children or grown persons is made as follows: Pour a cup of boiling water over one heaping teaspoonful of pulverized Turkish rhubarb, and when cool add one teaspoonful essence of peppermint and the same of common baking soda, then sweeten, put in a bottle and keep in a cool place. Give one teaspoonful every hour until relieved, then lengthen time between doses. This is for a child one to two years of age. Give more for older persons.

A good remedy for poisoning by ivy and other poisonous vines and plants is rich buttermilk in which has been beaten some green tansy leaves until the milk is thoroughly tinctured and bathe the parts often until relieved.

A mixture of equal parts of quinine and lard or cream makes an excellent salve to use for the poison.

To relieve pain caused by mosquito bites, moisten a small piece of yellow soap and spread it thickly over the spot; and for ant stings use common wash bluing. Apply the liquid immediately to the fresh injury, and use turpentine for a wasp sting. For a bee sting, crush a plantain leaf and bind over the sting and it will soon drive the pain away.

Excessive perspiration in summer is often due to a poor condition of the general health, in which case an iron tonic will often give relief for this trouble, and a sponging in water softened with ammonia will usually destroy the odor. Those persons who are unfortunate enough to have their feet perspire will find by bathing them with an oak-bark solution it will tend to lessen it. Get one pound of oak bark, steep it half an hour in two quarts of boiling water, strain and bottle, and use a little of this in the water when bathing the feet.

An excellent powder to use for perspiration is made with one ounce of baking soda, one-half pound of pure borax and one drachm of sachet powder.

One of the best powders to use for prickly heat and other slight skin eruptions before they have time to develop into those distressing rashes so prevalent among children is made with plain starch pulverized and sifted with a little soda and a teaspoonful of borax added, then this can be put in a talcum-powder can ready for use.

There is nothing more useful through the summer months than a bottle of borax solution prepared by dissolving a heaping tablespoonful of the powder in a quart of hot water, then this can be kept in a bottle, and a little of this solution used in the water night and morning when bathing the face will help to keep the skin soft and white; and a saturated solution of borax and rose water is an excellent wash for freckled skin and should be used several times a day by applying with a soft cloth and allowing it to dry on the skin.—M. A. T.

Big Tin Producers.

Bolivia is the world's second largest producer of tin, the main supply coming from the Malay straits.

Burbank's Crimson Winter Rhubarb.

A PREMIUM worth a fortune. A plant that can be grown in paying quantities on any small piece of ground, also in the house cellar, Returns $1,000 profit per acre. This is a creation by the famous plant specialist, Luther Burbank, of California. Rhubarb is a universal plant, and this Burbank's Crimson Winter Rhubarb is the King of the entire species, producing stalks of medium size, twelve to eighteen inches long, and producing them in all the fifty-two weeks of the year, whereas the productive life of common sorts is twelve weeks.

Burbank's Crimson Winter Rhubarb—Improved by Wagner.

A few roots of Crimson Winter Rhubarb will supply a large family and at the same time increase roots to enlarge the crop. We have decided to use a few roots of Burbank's Crimson Winter Rhubarb in connection with the Subscription Department of The National Farmer and Stock Grower.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains many good poultry facts, etc., etc., etc.

THIS IS A DOLLAR PROPOSITION.

Send us One Dollar ($1.00) and we will credit you with two-years' subscription to The National Farmer and Stock Grower, we will send you by mail prepaid Six Roots of Burbank's Crimson Winter Rhubarb, and we will also send you a copy of J. B. Wagner's booklet, entitled "RHUBARB FOR PROFIT." This premium is in line with the policy of the publishers of The National Farmer and Stock Grower to furnish premiums that can be developed. Rhubarb is never dormant in warm climates, and in any country the roots can be planted any time the frost is out of the ground. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

TOY BOOK PREMIUMS.

Pleasure and Instruction For Children, Especially During the Holiday Season.

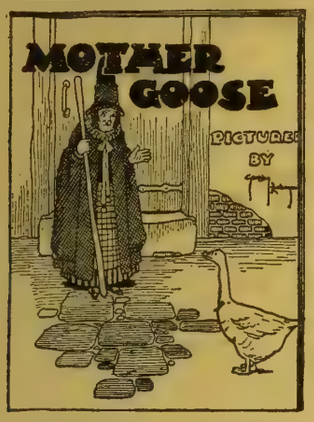
We are always on the lookout for something that will please the children and at the same time be of an educational advantage to them. Our beautiful toy books, the first we have ever used as a subscription premium, are delighting the hearts of the little ones, and we are greatly pleased to consider these books as one of our very best premiums. We are issuing these toy books as supplementary premiums to The National Farmer and Stock Grower. These toy books are substantial, beautifully colored and illuminated. The illustrations are astonishing in the delightful colorings. There are four sets. They are as follows:

Animal Series.

No. 101—Three Bears.
No. 102—Three Kittens.
No. 103—Ten Little Pigs.
No. 104—Noah's Ark.

Fairy Tale Series.

No. 107—Sleeping Beauty.
No. 108—Little Tom Thumb.
No. 109—Puss in Boots.
No. 110—Little Snowdrop.



Mother Goose Series.

No. 113—Mother Goose..
No. 114—Cinderella.
No. 115—Jack and the eBanstalk.
No. 118—Little Red Riding Hood.

Little Darling Series.

No. 119—A B C at the Zoo.
No. 120—Railway A B C.
No. 121—Dainty Darlings A B C.
No. 122—Nurseryland A B C.

1. Send us twenty-five (25) cents for six-months' subscription to The National Farmer and Stock Grower and you can select one set of four (4) toy books.

Order toy books by numbers. Select either four you desire. Address your orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Variety in Farm Life.

The objection that farm life is narrow may have been true in the last century, but it is now true only of the individual that is narrow-minded. If he chooses to tie himself to the plow and milking stool, he will have little difficulty in succeeding. But he has no business to do this and the man who does would in all probability have a contracted horizon in any other walk of life.

To the broad-minded person farm life offers rare opportunities in many directions. No other occupation is so well adapted to infinite enlargement of ideas. Duties vary with the seasons, thereby relieving the monotony of work. There is constant room for observation and learning something new about the work. And with these should come an insight into the higher culture that is a resultant from true communion with nature.

The panorama of the seasons may be a source of perpetual delight. The quickening of the streams, the green veil which comes over the weeds in a single night, the first blue bird song, are only a few of the exquisite touches of spring. The untiring labors of the birds in caring for their nestlings, the rustle of growing corn, the maturing of the grain, are pleasing features of summer life. We are too apt to smile only when the skies are blue, forgetful of the fact that clouds sometimes enhance the value of the picture.

The farm is a favored spot for observations along practical lines. Each day brings some new idea to the thoughtful, some improved plan which will render labor easier or more fruitful. The field is equally fertile for developing the aesthetic in our nature. Beautiful things are constantly moving in cycles through life. Where, then, is the monotony of the farm, unless we treasure it in the barrenness of our hearts? The trained eye and ear, the willing hand and the sympathetic heart will see the world beautiful daily upon the farm.—Bessie L. Putnam.

The Scourge of Dishwashing.

This is one of the bugbears to the average housewife, and yet there is no escape, though there are new ways which lighten the labor. There are patent dishwashers now in the field which do the work well, sterilizing everything; yet most of them are scarcely perfected in a way to seem available to the average housewife. They take considerable water and are limited in capacity or too bulky to be convenient in the kitchen. Yet they prove to us that the real thing in compact form is a possibility near at hand.

Meantime we can save ourselves in many ways. There is the dishmop and the iron dishcloth, which save the hands from much contact. The clearing of the table counts for much in saving time. Scrape the plates clean and then finish with wiping out the gravy plate with a crust of bread for the cat or dog; or, if the left-over bread is to be made into stuffing, it will be the better for the meaty flavor imparted by the gravy. Soak all cooking utensils, putting in a little water as soon as the food is removed. If one is scorched, a little wood ashes and water boiled up in it will loosen the scorched particles and save the wear and tear of scraping them away.

Wash the glassware first, the silverware next, and then the china that is free from grease, leaving the greasy things for the last. Use hot water and a good soap or washing powder. Rinse in very hot water and drain in a rack for the purpose. Or, if you have no rack, spread a cloth on papers in the sink, take the cups out of the boiling water and invert upon it, then place the saucers, plates and other dishes on their side, leaning around the cups. After a few minutes the water will have drained off and a whisk from the cloth will finish them, saving most of the work of dishwashing and leaving them bright and free from lint.—Bessie L. Putnam.

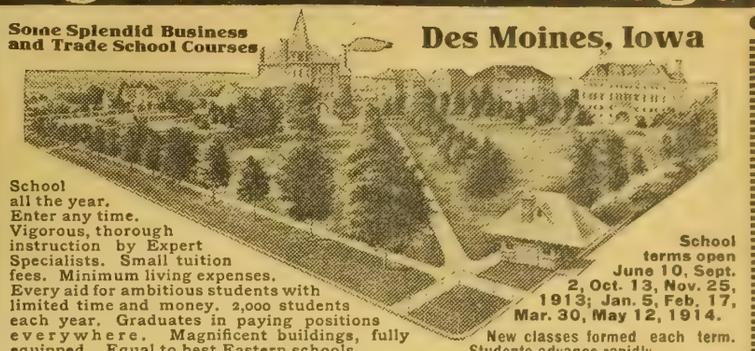
The Automobile, Reo the Fifth.

We continue to receive the most enthusiastic letters from our patrons upon the reliability, economy and efficiency of the Reo the Fifth Automobile advertised on page 19, and particularly upon its unique smokeless oiling system. Willis Barber writes that he has just completed a run of 17,000 miles with his Reo the Fifth, in which he used but two gallons of lubricating oil. He says that it is next to impossible to get his Reo engine to smoke, and that he is astonished at the small amount of water which the Reo cooling system requires, which is another good proof of the perfect design and smooth-running qualities of its motor. This is the same model Reo which R. M. Owen drove 1,460 miles as the official pilot car in the last Glidden tour from New York to Jacksonville on less than a quart of water. For full particulars and car catalogue please write to R. M. Owen & Co., Lansing, Mich., and kindly mention this paper.

Highland Park College

Some Splendid Business and Trade School Courses

Des Moines, Iowa



School all the year. Enter any time. Vigorous, thorough instruction by Expert Specialists. Small tuition fees. Minimum living expenses. Every aid for ambitious students with limited time and money. 2,000 students each year. Graduates in paying positions everywhere. Magnificent buildings, fully equipped. Equal to best Eastern schools.

School terms open June 10, Sept. 2, Oct. 13, Nov. 25, 1913; Jan. 5, Feb. 17, Mar. 30, May 12, 1914. New classes formed each term. Students advance rapidly.

Colleges and Schools

Liberal Arts Standard, Classical and Scientific Courses. Also Preparatory and Elementary Preparatory Courses, in which students of all degrees of advancement are admitted.

Normal Didactic, State Certificate, County Certificate, Primary Training—most complete training for teachers in the West. Graduates receive state certificates.

Engineering Civil, Electrical, Mechanical. Also one-year Telephone, Electrical, Steam, Machinist's and Automobile Machinist's courses. 12-weeks courses in Gas, Automobile and Traction Engineering. Shop work from beginning.

Pharmacy 1. Regular Ph. G., Ph. C., Pure Food and Iowa Courses. 2. Practitioner's Course and Extension Courses for Druggists. One of the largest, best equipped Colleges of Pharmacy in the United States.

Oratory A thoroughly equipped College of Oratory directed by most competent teachers.

Music A complete College of Music. Piano, Violin, Voice, Orchestra, Band, Chorus, Harmony, Mandolin, Guitar, and Supervisor's Course in Public School Music. A fine faculty of teachers, each an artist in his line.

Commerce Business, Shorthand, Telegraphy, Penmanship, and Civil Service. "Not simply a course in bookkeeping in a Literary College, but a thoroughly equipped Business College with the finest business exchange department in the U. S." Graduates of combined Business and Shorthand, Shorthand and Telegraph Courses guaranteed positions.

Home Study Over 8,000 Students Enrolled in the Correspondence School. Almost any subject you wish by correspondence.

Expenses Board, $1.75, $2.25 and $2.75 per week. Tuition in Preparatory College, Normal and Business Courses, $18.00 a quarter. Send for catalogue. State Course in which you are interested. Address

REV. GEORGE P. MAGILL, D. D., Acting President, Des Moines, Iowa

Boiled Water For Drinking Purposes.

Much of the so-called "summer complaint," which is common during the heated season of the year, is due to the use of impure drinking water. The microscopic forms of life present in the raw water of the ditches and rivers produce certain fermentations in the stomach and bowels which give rise to the characteristic diarrhoea and griping pains.

Such discomfort can be prevented almost entirely if taken before the illness occurs, by drinking boiled water exclusively during the summer months. If it is not convenient to get boiled water when away from home, the liquid diet should be confined to tea or coffee; milk may be as dangerous as water and is often more so. A tea-kettle of water boiled for five minutes and poured into a stone jar on the back porch to cool over night furnishes every household with a supply of drinking water which is perfectly safe and inexpensive.

The flat taste of boiled water to which some persons object is almost entirely removed by exposure to the free air over night. Some suitable covering for the jar, such as several thicknesses of clean cheese-cloth, should be provided, which will keep out the dust and other foreign matter, but which will not exclude air.

When the habit of boiling the drinking water has become established once, the little time which it requires will never be missed, and the freedom from sickness resulting will more than compensate for the trouble.—Walter G. Sackett, Colorado Experiment Station, Fort Collins, Colo.

STERLING SILVER THIMBLE.

Given as a Premium With That Nice Family Publication, the Universal Magazine.

Every woman, whether she sews much or little, should have a Silver Thimble. No need to use a rusty steel or dangerous brass thimble, when a Solid Silver Thimble can be had for the cost of packing and mailing.

If you are not now a subscriber to the UNIVERSAL MAGAZINE you are missing one of the most delightful publications, and as a trial offer we will send the UNIVERSAL MAGAZINE for a year and one of these Thimbles for thirty cents in stamps or coin. The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication. The sizes of the Thimble are 7, 8, 9 and 10; order by size. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Beautiful Apron Premium.

To introduce our splendid Universal Magazine we are offering a useful fancy apron as a premium. Hand-embroidered tea aprons are always in great demand among ladies and girls, and this is an article anyone would be proud to own. We offer this beautiful apron stamped on fine white lawn, including piece for pocket and strings, also a year's subscription to our popular Universal Magazine, filled with choice stories, departments for all the family, thirty-two pages, etc., all for only thirty cents. Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Strawberry Ways.

It has been well said that "God might have made a better berry than the strawberry, but He never did." It comes at a time when nature's offerings fresh from the field are limited in number. It is relished by almost every person, and it is so healthful as well as refreshing that its value is ever apparent. It contains lime, soda and potash, and is especially healthful to those rheumatic or of a bilious temperament. A little of the juice added to water is a most refreshing drink on a hot day, yet so delicate in flavor that the sick may take it without injury.

While there are many ways devised for the serving of this fruit, it is doubtful if any surpass the old-fashioned dressing of sugar and cream, and the numerous variations which most closely approach the method of our grandmothers are still equally sure of royal welcome. But the combinations may sometimes fit more closely into our supplies at hand, and variety, even in the serving of strawberries, is a pleasure.

They make a delicious breakfast dish when alternated with layers of a warm cereal, as rolled oats, placed in a buttered mold and let it become cold. Then cut in slices and serve with sugar and cream.

Strawberries combine with boiled rice in a similar manner. Place the rice in cups, having it an inch thick in the bottom and around the sides. Fill the hollow with fresh strawberries or canned ones from which the juice has been drained. Cover with rice and eat with sugar and cream.

Soda biscuit with strawberries make a meal fit for the gods. To three teacupfuls of rich sour buttermilk add a teaspoonful of soda; if half a cupful of cream is available it will be an improvement. Stir into a dough stiff enough to be readily handled. Roll a little less than an inch thick, cut in rounds and bake in a quick oven. A part of this dough may be reserved for a berry shortcake. Roll two pieces a quarter of an inch thick and the size of the desired cake. Brush over the top of one with melted butter and place the other upon it. When baked they will readily separate. Then spread butter on both, cover the lower one with fresh strawberries and sugar and add the upper layer. Serve warm with cream and sugar.

Strawberry Pie.—Make a crust in the ordinary way. Fill with a thick layer of berries, sugar and sprinkle a tablespoonful of flour over the top. If the fruit has stood for an hour in sugar it will furnish its own juice; otherwise, add water, also small bits of butter. Serve with two crusts.

Strawberry Pie No. 2.—Bake a crust of rich pastry in a deep pie pan; also another just large enough to cover it on a flat surface, pricking both well to avoid blisters forming. While hot, fill the lower crust with fresh berries and sugar, and then put on the upper crust. This will furnish heat enough to shape the berries down and yet they will have the fresh taste, superior to the cooked fruit.

Strawberry Pie No. 3.—Make a rich crust and bake. Fill it with fresh berries. Cover with sugar and cream, then beat the whites of three eggs to a stiff froth with half a cup of sugar, flavor with lemon and place in the oven until slightly browned.

Strawberry Tapioca.—Soak a cupful of pearl tapioca two hours; place in a double kettle with one pint of water and a cupful of white sugar and cook until clear. Hull and wash a cupful of berries, and when the tapioca is partly cold, stir them into it, being careful not to break the berries. Pour into a mould and serve cold with cream and sugar.

Strawberry Pudding.—Break two eggs into a teacup and fill it with cream or rich milk, one cup sugar, one and one-half cups flour, one-half teaspoonful soda, and if the milk or cream is not sour, mix one teaspoonful of cream tartar with the flour. Bake in moderate oven. Serve with a sauce made from one pint of sweet milk or water. When boiling, stir in a cupful of berries, sugar to taste, a small piece of butter, and thicken to the consistency of rich cream by stirring in a spoonful of flour moistened until it will not make lumps in the sauce. Serve warm or cold.

Strawberry Charlotte. — Make a custard by beating together the yolks of two eggs, three heaping tablespoonfuls of sugar (brown preferred) and a heaping tablespoonful of flour. Mix the flour and sugar, to avoid lumps, and then add the eggs. When well beaten add a quart of milk and cook until it thickens, flavor to taste. Line a glass dish with pieces of sponge cake or any stale cake dipped in sweet cream, then add a layer of fresh strawberries with sugar, and thus alternate cake and berries until the dish is nearly full. When the custard is quite cold, pour over the whole. Beat the whites of the eggs to a stiff froth, sweeten and put over the top just before serving. Decorate with ripe berries.

Fruit Punch.—Boil one quart granulated sugar and one pint of water together for five minutes; when cool add the grated pulp of eight oranges and eight lemons with one pint of rich syrup from strawberries, fresh or canned. Let stand half an hour and strain through coarse cloth, squeezing hard to extract the juice. Add enough ice water to make two gallons. Place a six-inch piece of ice in the punch bowl, pour the liquid over, and add a teacupful of fresh or preserved berries. This is sufficient to serve seventy-five persons.—Bessie L. Putnam.

Simple Cure For Tuberculosis.

Dr. Seviers S. Warren, a member of the Medical Relief Corps of the United States Army, located at San Angelo, Tex., claims that common phenol-petroleum, or carbolated vaseline, will relieve many cases of tuberculosis, either by use hypodermically or by inoculations.

Dr. Warren has been working on this treatment for years. In San Angelo he has treated in the past year a number of patients and many of them have made remarkable recoveries.

Dr. Warren is a strictly ethical physician and wishes the whole world to know of his discovery. He has nothing to sell and does not expect to make one cent out of his discovery.

Says the new Secretary of Agriculture: "Co-operation is a word I dislike. Many co-operative enterprises are fakes. They are no more than private combinations run for personal profit."

The Universal Magazine

is a splendid monthly publication; nice, bright, cheerful, illustrated; 32 pages, three columns to page. Send for Sample Copy, or, what is better, send fifty cents, and we will send you the **Universal Magazine** for two years; we will also send one set of **Eight Hardy, Everblooming Roses,** one-year plants; the finest collection. They are **Rhea Reid, The Bride, Etoile de Lyon, Bridesmaid, Champion of the World, Papa Gontier, Bessie Brown** and **Crimson Rambler.** Nowhere else in the world can they be bought for the money. Address, **HALE PUB. CO., 3550 Vista Ave., St. Louis, Mo.**

At Chicago, May 22d, a car of 1,395-pound distillery-fed bulls sold at $7.35 per 100 pounds.

Don't Wear a Truss!

Brooks' New Scientific Appliance--Adjustable to Any Size Person--Easy, Comfortable, Affording Instant Relief--Made for Men, Women and Children.

SENT ON TRIAL.

No risk in ordering--Money will be refunded if not satisfied.

After thirty years' experience in curing rupture, I have invented an Appliance which will absolutely hold the rupture and never slip, yet is light, cool and comfortable. It conforms to every movement of the body without chafing or hurting, and costs less than many common trusses. There are no springs or hard, lumpy pads, and yet it holds the rupture safely and firmly without pain or inconvenience. I make it to your measure, and send it to you on a **strict guarantee of satisfaction or money refunded,** and I have put my price so low that anybody, rich or poor, can buy it.

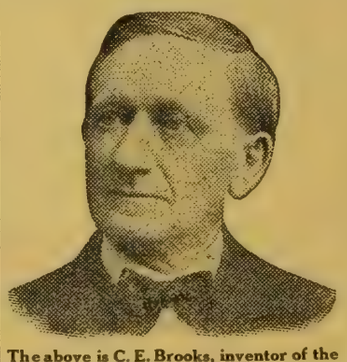
DOUBLE RUPTURE CURED.

Lecompton, Kans.,
R. F. D. No. 2, Feb. 7, 1911.

Mr. Brooks.

Dear Sir:—I drop you these few lines to say I am well pleased with your Appliance, as it has effected a permanent cure in my case. I have been ruptured eighteen years. Am now forty-two and wore a great many trusses before I got your Appliance. The ruptures disappeared after wearing the Appliance a few months. Mr. Brooks, I will do all in my power to recommend your Appliance, not only for your benefit, but to help others who suffer from rupture.

Your True Friend,
W. F. BUCHHEIM.



The above is C. E. Brooks, inventor of the Appliance, who cured himself and who has been curing others for over 30 years. If ruptured, write him today at Marshall, Mich.

"COMPLETELY CURED."

Hebron, Douglas Co., Mo.,
June 12, 1911.

C. E. Brooks.

Dear Sir:—Some time ago I purchased an Appliance from you and am now pleased to inform you I am not wearing it nor will I ever need it again, for to my great surprise, it has completely cured me. I hardly hoped to be cured at all, but the cure was effected in about seven months. Many thanks for the kind way in which you have treated me.

Yours gratefully,
S. B. LITTELL.

I have received thousands of letters like these from grateful patients the world over. This appliance gives **instant relief,** and effects permanent cures when everything else has failed. Remember, I use no salves, no harness, no lies. Fill out the attached coupon and mail today, and I will send you free my illustrated Book on Rupture and its Cure, showing my Appliance, and giving you the names of many people who have tried it and are now permanently and soundly cured. Remember, I send my appliance **on trial** to prove what I say is true. You are to be the judge. Send free coupon now.

C. E. BROOKS,
59-F State St., Marshall, Mich.

FREE INFORMATION COUPON.

C. E. BROOKS, 59-F State St.,
Marshall, Mich.

Please send me by mail, in plain wrapper, your illustrated book and full information about your Appliance for the cure of rupture.

Some Fireless-cooker Dishes.

During the warm weather the fireless cooker is especially a boon in a kitchen, where the only facility for cooking is a wood or coal stove, though even where gasoline, gas or electricity is the cooking medium hours of labor and strain are saved by the use of the fireless cooker. On Sundays, or when a trip to town is necessary, it is especially appreciated, as the entire dinner can be put in the cooker before leaving home and it will be ready to serve upon the return. The cooker stews, roasts, fries or bakes the food, and in most cases this slow, sure process of cooking brings out richer flavors and a greater amount of nourishment than is possible in the quick cooking of food over a fire.

It is easy to learn the use of the fireless cooker. The food to be cooked must first be placed over a fire and heated to the point where it steams. In the case of a large piece of meat, the outside may be hot and steaming while the inside is still unheated. To give satisfactory results the meat must remain over the fire until, in the judgment of the cook, it is steaming throughout. The fireless cooker does its work by the retention of the heat produced over the fire, so the more heat there is put into the food before it is placed into the cooker the sooner it will be cooked. For this reason, also, all foods to be boiled should but put in full kettles of water, as this large quantity of water will retain the heat longer than a small quantity.

The following recipes may be satisfactorily tried:

Beef Pot Roast.—Select a piece of beef weighing about four pounds and a fair quantity of fat in it. Season and place this over a quick fire. Keep turning the meat until the outside is seared to a rich brown. Then add one-half cup of water, a small onion and half a dozen small carrots. Cook for ten minutes, then place in the fireless cooker for four hours. The gravy may be thickened with a tablespoonful of flour before serving. Four hours is the least time in which this quantity of meat will cook, but it may remain in the cooker much longer and the meat will be all the better.

Wax Beans.—Wash, trim and cut the wax beans, than place in a kettle of boiling water and add salt for seasoning. Cook for five minutes, then place in the fireless cooker and allow them to remain for two hours.

Fireless Cooker Baked Beans.—Cook a quart of navy beans for half an hour, then add a teaspoonful of baking soda, boil up for five minutes and pour off the water. Then add a seasoning of salt and three teaspoonfuls of prepared mustard, and lay upon the top one-half pound of salt pork cut into thin slices. Add one-half cup of water and cook on the fire for fifteen minutes, than put in the fireless cooker for four hours.

Custard.—Scald one pint of milk; beat two eggs and add to them one-half cup of sugar and a teaspoonful of vanilla or a pinch of cinnamon; add the milk. Heat this in a double boiler over the fire to the boiling point, then place in the fireless cooker for half an hour. Have at least a pint of hot water in the boiler. The custard may be cooked in cups if preferred.—Janet Thomas Van Osdel.

Canadian Live Stock.

According to the United States Department of Commerce, in 1912 there were on Canadian farms 2,336,800 horses, 2,890,100 milch cows, 4,093,600 other cattle, 2,360,600 sheep, and 2,656,400 swine.

GREATEST VALUE EVER OFFERED FOR $1.00.

THE VERY BEST MONTHLY FARM PAPER FOR TWO YEARS AND A COPY OF LAIRD & LEE'S

Webster's New Standard Dictionary

Which is the Most Compact, Useful, Handy, Instructive Book Ever Issued by the American Press.

Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Rabbits From Argentine.

From Washington, D. C., on May 31st came the startling news that in addition to the meat which we are expecting from Argentine, which will consist mainly of beef and mutton, there will also be a supply of hares. The only drawback to this development is, that they do not appear to be able to catch the hares fast enough.

Then comes the inevitable remark that Great Britain imports more than 50,000,000 pounds of rabbits each year. That statement is very true, but the great supply is neither from Australia or Argentine but from Belgium, and they are imported dressed from Ostend, leaving Ostend one day and appearing in the city of London the next day, and nearly all the Ostend rabbits are sold by so-called costermongers (English for hucksters) and bought by families from off the wagons. Had the Belgian hare people tried to raise meat instead of trying to sell breeding stock at fancy prices we would to-day have a meat supply of our own that would be profitable to raise and if distributed properly would be an instance of wholesome food at a low price.

Universal Salt and Pepper Shakers.

The Universal Magazine ought to be known to all our readers, for the reason that it is a nice publication that is very good company on a farm.

The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing about the Universal Magazine is, that it is not loaded down with advertisements.

When we send out the Universal Magazine we also like to send out a useful and meritorious subscription premium with it.

Universal Salt and Pepper Shakers—Reduced Size.

To this end we have adopted a pair of Aluminum Salt and Pepper Shakers, regulation size, 2¾ inches, mailing weight six ounces. They are artistic and elegant, and aluminum ware is always light, always bright, and will last a lifetime.

To anyone who will send us twenty-five (25) cents we will send the Universal Magazine for ten months, and we will send the pair of Universal Alumium Salt and Pepper Shakers as a premium, postage paid, safe delivery and satisfaction guaranteed.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find Twenty-five (25) Cents to pay for ten-months' subscription to the Universal Magazine, for which please give me credit. You will please send me as a subscription premium, post free, safe delivery guaranteed, one pair of Universal Salt and Pepper Shakers.

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Know the Goods You Buy.

A penny saved is a penny gained, says the old adage, and it applies to larger amounts of money as well. One way of saving is to buy goods that are what they are represented to be, and, unless dealing with a merchant who can be depended on, take nothing unless you know it to be genuine. Do not buy mercerized cotton, expecting that you are getting linen or silk because of its gloss.

Anthony Mercer did a great thing for cotton when he discovered the process that made it possible for this material to masquerade as something more aristocratic, but it has not helped the housewife, who is so often deceived by appearances.

Until there is a law that compels the manufacturer of fabrics to state their composition, like the maker of food products must label his wares, so the consumer buys with full knowledge of what he is getting, there is need for knowledge in detecting adulterations. Time was when the manufacturer made his goods all wool, or wool filling and cotton warp, or else all cotton, and it was not hard to tell the difference after comparisons had been carefully made of the different classes; but now the wool and cotton are skillfully mixed by carding the fibres of the two together, and the process of weaving makes a uniform fabric that many mistake for all wool.

Take a thread between the thumb and finger of each hand and pull till it breaks. If all wool, the fibres will not break evenly, but will have "curly" ends. If all cotton, the thread will be smooth and will snap short. If mixed, the thread will partake of both characteristics. If a woolen thread is burned, it will sizzle and give off a disagreeable animal odor, like burning feathers, while the cotton thread or cloth burns in a quick flare with a smell more like paper or wood. If samples of cloth are put in a pint of water in which a tablespoonful of lye has been dissolved, the wool will be eaten up, as our grandmothers used to say, while the cotton is not affected. This is a hint not to use too caustic soaps on wool goods.

Linen may be made to pass for cotton by the mercerizing process, which gives gloss to the fabric, but no art that the writer knows of can impart the smell of flax, neither will the cotton have the weight of linen. Then there is another test that is conclusive: Get a sample of the goods and wet with glycerine. If linen, it will become opaque; but if cotton, it will become more translucent.

Silk, too, is frequently adulterated with mercerized cotton. This does not detract from its wearing qualities, but it spoils its appearance after a time. The same tests that are recommended for recognizing wool will serve for silk, both being classed as animal products. Silk is also adulterated with tin, which gives the fabric weight, but such silks split and do not wear at all well. A piece of tinned silk burns very slowly, owing to the presence of the metal and this is the only indication that the unprofessional can discover that will prevent disappointment and loss.

The question of color has something to do with the value of materials, as some colors fade more easily than others. The only remedy is to avoid delicate lavender, blue, pink and green in strong sunshine, for though this dye is entirely fast to washing, these light tints lose their beauty when exposed to a hot sun. Of course, they may be redyed at home with little expense, if one cares to take the necessary trouble, but it is well to bear in mind the use that one intends to put a fabric to before buying it.

One more adulteration that nearly escaped mention, namely shoddy. This is made of old wool cloth or rags, shredded into a sort of pulp, then twisted into thread for weaving. It takes the gloss of wool and is used to make cheap "wool" clothing, the warp of such cloth being very fine cotton "filled" with the shoddy wool. The shoddy can be easily detected by breaking the thread, which has little resistance, not being made of the natural fibre.

The suggestions given here have saved the writer much disappointment and loss, and they are passed on to younger women who want to make every dollar count in comfort for themselves and others, a worthy ambition, and one that will tend to make happy homes.—Cena S. Cornman.

The Real Trouble Was Mother.

The old lady from the country and her small son were driving to town when a huge motor car bore down upon them. The horse began to prance, whereupon the old lady jumped out, screaming at the top of her voice. The chauffeur stopped and offered to help.

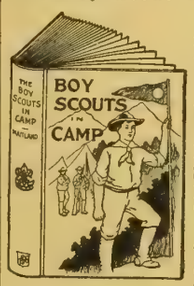
"That's all right," said the boy, composedly. "I can manage the horse. You just lead mother past."—From Tit-Bits.

A PREMIUM FOR BOYS.

A Series of Books Offered as a Premium to The National Farmer and Stock Grower.

This is a proposition for boys who are ambitious to become good, strong men in mind and body. The Boy Scout Movement is by far the greatest and best influence in boys' lives. BIG BOYS, LITTLE BOYS of city, town and country are intensely interested in stories of adventure, the tales that have a dash and go to them, that carry the reader along from beginning to end with absorbing interest and enthusiasm.

We have obtained the books of the Boy Scout Series, written by Colonel George Durston and Major Robert Maitland. These are tales in which the Boy Scouts figure as characters. The books are such that they are never let go for a minute until read through and through. The titles of the books are as follows: No. 1. The Boy Scouts in Camp. No. 2. The Boy Scouts to the Rescue. No. 3. The Boy Scouts on the Trail. No. 4. The Boy Scout Fire Fighters. No. 5. The Boy Scouts Afloat. No. 6. The Boy Scout Pathfinders. No. 7. The Boy Scout Automobilists. No. 8. The Boy Scout Aviators. No. 9. The Boy Scouts' Champion Recruit. No. 10. The Boy Scouts' Defiance. No. 11. The Boy Scouts' Challenge. No. 12. The Boy Scouts' Victory. Each book is nicely bound in cloth, of handy size, and each one is a treasure that any boy will be glad to have.



We are going to make it easy for any boy to get these books. The National Farmer and Stock Grower is published at fifty cents a year. Any boy who will get us one subscriber and send us fifty cents to pay for same can select any two of these books, which we will send as subscription commission, postage paid, safe delivery guaranteed. If he wishes to receive two more books, all he has to do is to send us one more subscription and the fifty cents to pay for it. For six one-year subscriptions the entire set of twelve books will be sent. Boys can start a library with a full set of Boy Scout Books and take it in turns reading them. Address all orders to HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Beautiful Eyes.

"Daisy and me were just over to grandma's house, mother," said Dorothy. "Aunt May was on the porch with her friend and Aunt May was talking about us, but she couldn't see Daisy and me on account of the lilac bush at the corner of the porch. We were playing behind it, and she was telling her friend that we'd be the loveliest twins if only 'twasn't for Daisy's eyes; that they're little, squinty, blue ones, and spoil all of Daisy's looks. And now Daisy's in the summer house crying just as hard, and I can't make her stop nor come in to you."

The mother's face became serious as she listened to Dorothy. Then, taking Dorothy's hand, she said: "We will find Daisy and talk it over."

In the little arbor Daisy still lay sobbing. Close in her mother's arms she was comforted for a moment and then the mother said: "Listen, little twins. There are many things your Aunt May has yet to learn, and one of them is what beautiful eyes really are. You have heard all of us tell so much about Aunt Margaret; what a lovely woman she is, and how her friends admire her. Some people who do not understand about beautiful eyes might say that Aunt Margaret's are crossed and that they are not of a very pretty color; but those who know her best think only of the beautiful way in which she uses her eyes. She never sees ugliness where she can possibly see any beauty; she never sees evil if she can see good. When it is snowing and so many are complaining about the bad weather, Aunt Margaret will very likely exclaim: 'What beautiful white weather! Even the old truck in the back yard has on a pretty white dress!' And if it is raining you might hear her say: 'God's good rain means that we shall see the blossoms soon.' When little crippled Johnny Brinks came into her school room she made her pupils see his bright smile and learn to love it so that they forgot all about his crippled back. Her kind eyes see good in every man and woman and in every little girl and boy that she knows. They are such loving eyes that they are lovely. If my Daisy and Dorothy have such eyes, it is the best I can ask for them, and the color and size make no difference."

Now the tears had left Daisy's blue eyes and Dorothy's brown ones shone happily.

"Let's go and 'splain to Aunt May and her friend about beautiful eyes," said Dorothy, and they scampered away with sunny faces.—Janet Thomas Van Osdel.

Without a Hat.

"To wear a hat, or not to wear one," that is the question. Most girls answer it by going bare-headed—but they have to pay for their recklessness later.

"But it's good for the hair," one argues.

I admit that the hair should, like a plant, have plenty of light and air in order to grow well, but a too ardent summer sun scorches and fades the hair, and in general does it more harm than good. It is not the hair, however, which constitutes the most important reason for or against the custom.

The effect upon the head, the eyes, the expression of the face, and the complexion is much more serious. Without a hat the eyes are dazzled with the brightness of the summer glare, and the result is that the forehead becomes wrinkled and furrowed with the attempt to lower the eyebrows and protect the eyes in that way. Wrinkles appear at the corners of the eyes and folds form below in the process of squinting to keep out the excessive brightness. A permanent scowl develops and headaches are often frequent.—The Ladies' World for June.

Ladies at the University.

A new list of dormitory rules governing the co-eds who live in Willard Hall, the young women's dormitory of Northwestern University, were promulgated in May. They are as follows:

Don't study too hard. People may think you are planning to earn your own living.

Don't retire with undrawn curtains. The rubber industry flourishes in Evanston as well as in Peru.

Don't knock the food. Remember that it's your money that's paying for it.

Don't raise your voice above a whisper. People may think you were raised in a factory.

Don't chew gum on the campus. If you must chew, try the rag.

Don't swear or use bad language. Not because we object to it, but because it sounds bad.

Don't kiss each other in public. It's awful to see a woman doing a man's work.

Don't be a freak. The squirrels have enough nuts to attend to now.

The City Girl's Question.

Little Dorothy had never before visited her grandfather, who lived in the country. The chickens occupied her undivided attention for half her first day at the farm. Finally she sought her grandfather and shyly asked:

"Grandpa, do all hens eat with their noses?"

Any farmer who will read this publication through will find that it will help him in his business, the family in the household and the employes in their work.

A Pocket Book Circulation Premium.

THE NATIONAL FARMER Folding Bill Book.

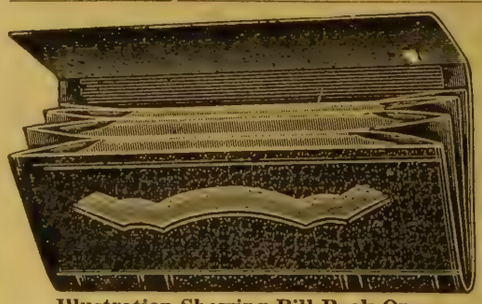

Illustration Showing Bill Book Open.

Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

SELECTED POETRY.

THE FARMER'S IDEAL WIFE.

In a government report it is said: "The
rmer's wife is now so occupied with social
ffairs that she has lost the art of making
utter and jam and doing the work of the
rm that her grandmother did. This
sults in a great economic loss to the
ountry."

he farmer's wife, in early days, got up at
half-past two,
nd shined the plows and milked the cows
and put the prunes to stew.
he breakfast for the hands she set upon
the stroke of four,
nd then she'd bake her bread and cake
and scrub the kitchen floor.
ut nowadays the farmer's wife has time
to call her own.
Good gracious!" says the government,
"how idle she has grown!"

he farmer's wife, in times gone by, brought
up the calves and lambs,
nd sacked the oats and fed the shoats
and smoked the hickory hams,
nd when she'd cooked three great big
meals she cheerfully arose
nd with her churn sat down to earn the
money for her clothes.
ut now she often visits 'round and gossips,
like as not;
My goodness!" says the government, "how
worthless she has got!"

he farmer's wife, some years ago, was
wholly free from nerves;
welve hours a day she'd slave away at
putting up preserves.
ix children dangling at her skirts, a
seventh on her arm,
he'd gamely set herself to get the mort-
gage off the farm.
ut now she sometimes takes a rest, like
city women do.
Great heavens!" cries the government,
"what is she coming to?"

he farmer's wife departed from this vale
of toil and tears
or happier climes, in those old times, when
under thirty years.
he farmer got another mate, he somehow
always found
he ideal wife who toiled through life and
rested—underground.
ut now sometimes her years add up their
full allotted sum.
Great Scott!" exclaims the government,
"how shiftless she's become!"
-James J. Montague, in San Francisco
Examiner.

RHAPSODY ON A MISSOURI FARM.

he waking rooster greets the breaking day,
The farm expert springs lightly from his
cot,
he hired man is throwing down the hay,
And the busy housewife's battercakes are
hot.

he agile farmer, with his big oil can,
Vaults here and there among his patent
plows,
nd the pretty milkmaid with her face
of tan
Bobs in and out among the blooded cows.

he south wind turns the great windmill
around,
And water splashes in the barn-yard tub.
he breakfast bell intones its pleasant
sound,
And the hungry farm hands scramble in
for grub.

t breakfast, while the mind is fresh and
keen,
The expert reads from page four forty-
two,
oncerning corn rows and the space between.
And what a proper planting ought to do.

he biscuit plate sails blithely in and out,
The ham and eggs begin to go around,
nd the expert, eating meantime, tells about
The whims and habits of some kinds of
ground.

'ull many a field of rich and fertile loam
Is unproductive for the want of rule,
nd many a debt rests on a country home
For lack of what they have found out at
school.

he old-time farmer, with his thin corn
rows,
Calls in the sheriff and departs the scene.
he modern farmer, in his tailored clothes,
Tools up the highway in his limousine.

he listening farm hand's eyes begin to bug,
The hopeful housewife stirs around the
room,
nd the expert's words, like some magi-
cian's drug,
Invest the coffee with a rare perfume.

he happy farmer cries: "Well, boys—let's
go!"
And, like Phedippides, they dash away.
hey scurry fieldward through the morning
glow,
And the great round sun begins his
fleeting sway.
—Clark McAdams, in Post-Dispatch.

OUR PREACHER.

Our preacher is a common man;
He don't put on no airs;
Don't preach no college sermons, and'
Don't pray no college prayers.
He just talks plain an' simple like,
So folks kin understand;
Like he was talkin' to a child,
An' yet his preachin's grand.

It makes a man look up to God,
An' fills his soul with grace;
It makes him see in every cloud
The Father's smilin' face;
It falls with gentle, healin' touch,
On hearts bowed down with woe,
An' makes 'em see as plain as print
The way they orto go.

Some folks do say he don't dress right,
(Don't seem to keer for style);
Don't ever wear no long-tailed coat,
Nor high and shiny tile;
But goes 'round dressed like other folks,
And don't purtend to be
No better than the common run
Of folks like you an' me.

The rich folk in our church don't like
His plain and common ways;
His simple style o' preachin',
Nor the simple prayers he prays;
They say he has no polish,
That's he's just an ignorant clod;
But, all the same, I'd bet my boots
HE MAKES A HIT WITH GOD!
—Will Thomas Withrow.

OWNERSHIP.

Jim Bloggins bought a handsome horse—
A sorrel that could go;
He took great pride in it, of course—
His speech would fairly glow
When he was praising, in full meed,
That race horse, neat and trim;
Jim thought 'twas he that owned the steed,
But the horse was owning Jim.

Old Gotrox bought some Wall-street stock,
Which paid great dividends;
He praised it hours, by the clock,
Among his weary friends;
He could not talk of aught beside
The thick cream that he'd skim;
That he was owner was denied—
The Wall-street stock owned him.

Young Homeboy bought a bungalow
On the installment plan;
There was no doubt, as such things go,
He was a happy man;
He talked of it in the morning light
And in the evening dim;
He thought he owned the house all right,
But Homeboy's home owned him.
—Denver Republican.

PARCEL POSTLUDES.

O'er many a weary, aching mile
The parcel postman ambled,
And when he reached our domicile,
The eggs he brought were scrambled.

The hat he left for Mable, too,
Caused her poor heart to flutter;
'Twas saturated through and through,
With some one's melted butter.

And brother Bill is tearing hot;
He doesn't think it funny.
The socks and ties and shirts he got
By mail were smeared with honey.

But father's smile is soft and bland;
We all know by that token
His snake-bite cure, though contraband,
Came through the mail unbroken.
—Springfield Union.

ON THE FARM.

Now the horny-handed farmer
Calls his house a "bungalow,"
Or rechristens it a "villa,"
For the farmer isn't slow;
Turns his barn into a "garage;"
Calls his place "The Mountain View,"
Or some other rustic title
That sounds pretty good to you.

Now the farmer trims his whiskers
And puts on some fancy clothes,
And his wife, too, is resplendent
In her dresses, hats and bows.
He puts canned goods in the cellar;
Thinks it isn't any harm
If he works them through the season
As "fresh gathered from the farm."

All the rooms have been repapered,
And some fuzzy-wuzzy stuff
Has been poked into bed ticking
So's to show a little puff.
There are also new wash basins,
Some of stoneware, some of tin,
And a sign down on the gate post,
Reading: "Boarders Taken In."
—New York Press.

THE INDIGNANT FARMER.

"I'm just as mad as I can be!"
An angry farmer said;
"Those early strawberries of mine
Desire a folding bed!

"And my potatoes have declined
To ripen underground,
Unless, to keep dust from their eyes,
Smoked goggles I have found!

The cabbage-heads, among themselves,
Indulge in secret chats;
But I have overheard them, and
They vow they'll have straw hats!

"Such foolishness I cannot stand;
And now—just I feared—
Each single stalk of wheat demands
A barber for its beard!

"The squashes, too, are getting proud;
It almost makes me smile;
They want the very finest neckwear,
Of the very latest style!

"But now the very limit's reached!
I learn, with stifled groan—
Each ear of corn insists upon
A private telephone!"
—Carolyn Wells, in Harper's.

FOR AGENTS

It takes women by storm. Quick, easy sales. Grandest aid to women ever invented. Entirely new. Sells almost on sight. Show 10 people—sell 8. Even 2 or 3 sales a day net you $27.00 to $40.00 a week. No experience required. No need to stop your regular work. Sell evenings. Go right into home and demonstrate. Everybody is interested. Women make as much money as men. Saves its cost every month. Women simply can't resist. Selling is almost as easy as giving them away. All year business. Field hardly touched. Every home a prospect. Not sold in stores. Sells on its merit. Right size—right weight—right price. Looks good. Is good. Carry it anywhere. Iron anywhere. No stove needed. Six sales a day should be easy. Double that isn't hard work. Think of the profit. Write quick for FREE SAMPLE PROPOSITION and agents selling plan.

A RED HOT SELLER

VAMPIRES THREE.

Wind speaks:
I speed the sailor and whirl the mills
And make a harp of the tree;
I waft the showers that bring the flowers
To dapple each dale and lea.
But woeful the ways that in hunger I choose
To blast with my awful breath,
For I shatter and wreck and naught may
check
My terrible dance of death.

Water speaks:
I bear the vessel and turn the wheels,
And give the desert the rose;
I ripple in rills and leap down the hills
Or lie in a glassy repose.
Though I do man's best without spoil or
need,
Cooped up in river or lake,
When I surge in wrath from my wonted
path
Wild ruin I leave in my wake.

Fire speaks:
I am vassal of man and I do his will
In many a wondrous way.
If he chain me sure I am fain to endure
His mastery night and day.
But should I escape from my dungeon red,
By charring bolts and bars,
I chasten my master with hell's disaster
And flaunt my head to the stars.

All three speak:
Aye, puppets are we of the tyrant man
So long as our passions slumber;
But woe to the day that we make him our
prey—
Ah, who may our victims number!
For harpies relentless we mangle and tear
Our puny lord and his city,
Then mock at his moans and jeer at his
groans,
Devoid of mercy or pity.
—O. H. Roesner, in New York Tribune.

THE DEPARTED FRIEND.

Though he that ever kind and true
Kept stoutly step by step with you,
Your whole, long, gusty, lifetime through,
Be gone a while before—
Be now a moment gone before,
Yet doubt not; anon the seasons shall restore
Your friend to you.

He has turned a corner—still
He pushes on with right good will
Through mire and marsh, by heugh and hill,
That self-same, arduous way—
That self-same, upland, hopeful way
That you and he through many a doubtful
day
Attempted still.

He is not dead, this friend—not dead,
But in the path we mortals tread
Got some few, trifling steps ahead
And nearer to the end,
So that you, too, once past the bend,
Shall meet again, as face to face, this
friend
You fancy dead.

Push gayly on, strong heart; the while
You travel forward, mile by mile,
He loiters with a backward smile,
Till you can overtake,
And strains his eyes to search his wake,
Or, whistling, as he sees you through the
brake,
Waits on a stile.
—Robert Louis Stevenson.

INTO ARCADY.

There is no highway, broad and free,
Straignt to the goal of our pilgrim kind,
There's only a path into Arcady.
Were it a road that the crowd could see,
Even the halt might lead the blind,
There is no highway broad and free.

Somewhere, by hill and tangled lead,
Hither and thither the way is twined—
There's only a path into Arcady.
Thou who are seeking the road with me,
Cities and streets we must leave behind—
There is no highway, broad and free.

Dear heart—what shall our goldstar be?
(Close—watch close—where the footsteps
wind.)
There's only a path into Arcady.
Thousands are seeking in vain, but we—
(God be willing)—the way shall find
There is no highway, broad and free—
There's only a path into Arcady.
—Mark K. Powers, in Smart Set.

THE HIDDEN SONG.

To him who listens with a friendly ear
The tumult of our time—the grim, harsh
strains
Of traffic, cry of factions, toil's refrains
That soar from meadow, city, mountain
sheer—

Is not discordancy in wild career;
To him it is the sound that e'er obtains
Before the orchestra in tuning gains
The common key and tones are blended
clear

Some day from this great, busy land shall
rise,
When, after years, the singing pitch is
found,
The mighty song of civic brotherhood,
The hymning of a people whose emprise
Has made them one at heart, and brightly
crowned
Their earnest toil with guerdons, rich and
good!
—New York Sun.

LAME BACK and KIDNEY TROUBLE

CAN BE CURED WITHOUT A DROP OF MEDICINE

According to the words of those who say they have been cured to stay cured by using MAGNETIC SHIELDS, which do what all the medicine on earth cannot do; they ACTUALLY INSTILL NEW LIFE AND ENERGY INTO THE SYSTEM, overcoming congestion, soreness and pain.

WE PROVE IT TO YOU POSITIVELY

Not in one case or a dozen cases but in multitudes of cases where people say they have been cured of Paralysis, Rheumatism, Lung Troubles, Kidney, Liver, Stomach and Bowel Troubles, nervousness and most every other form of disease after medicine failed.

Our MAGNETIC ABDOMINAL AND KIDNEY VITALIZER for ladies and gentlemen here illustrated is only one of the many Shields we make. IT IS A WONDERFUL INVENTION, scientifically constructed and floods the system with magnetism, supplying LIFE, STRENGTH and VIGOR to the BACK, KIDNEYS, STOMACH, LIVER, BOWELS and BLADDER, giving that buoyancy, tone and renewed vitality to the system that Magnetic force alone can supply.

SENT ON TRIAL TO PROVE IT'S VALUE

Write to-day for full information and free book, "PLAIN ROAD TO HEALTH," by C. J. Thacher, M. D. Describe your case fully, we advise you free how to apply MAGNETISM for treating any form of weakness or disease.
THACHER MAGNETIC SHIELD CO., Inc., Suite 452, 110 So. Wabash Ave., Chicago, Ill.

Texas Industrial Congress.

Approximately 11,000 farmers, by entering its $10,000 prize crop contest for the largest yields, cost of production considered, of corn, cotton, Kaffir, milk and cowpeas, have agreed to study better cultural methods this year according to the instructions of the Texas Industrial Congress.

Entries in the contest closed April 1, with 10,816 contestants from 214 counties. In less than three years the number of farmers earnestly engaged in studying soil conservation, crop rotation, diversification and the best methods of increasing acreage yields under the direction of the Congress, has grown from 1,746 in 1911 to almost 11,000 in 1913, and the number of counties represented has increased from 161 to 214.

The greatest interest has been shown by the boys and girls, the chief reason for this being due to the fact that the County School Superintendents and teachers have taken a personal interest in the work. The School Superintendents of Bexar, Ellis, Tarrant, Hunt, Kaufman, Cooke, Navarro, Dallas, Jack, Collin and Denton counties have been especially active in assisting the Congress.

County Demonstration Agents, officials of the A. & M. College and the State Department of Agriculture have also been very helpful and the agricultural demonstration trains operated by the Rock Island, Texas and Pacific and the International and Great Northern Railroads have been of material assistance through the distribution of prize announcements and application blanks.

The great increase in the number of farmers who are now co-operating with the Congress entails a larger office force to properly conduct this practical school of agriculture. Thousand of questions are answered by personal letters, crop reports are prepared, read and recorded, bulletins on cultural methods at frequent intervals are sent to each contestant and numerous articles on agricultural matters are written and given publicity through the generous co-operation of the newspapers of the state.

Both press and public have united in unqualified endorsement of the work inaugurated by Col. Henry Exall, who, as President of the Congress, has directed its energies so wisely that Texas is rapidly taking rank as the foremost state in the Union in the interest manifested by its citizens in agricultural development, resulting in increased acreage yields, larger profits and more prosperous and happier homes.

Berry Growers of Southwest Missouri.

From Monette, Mo., on May 26th, it was reported that all strawberry growers and their families remained away from church, Sunday, and worked in the fields with their regular forces of pickers. The berry crop came in so suddenly after two cold days that all available pickers were pressed into service.

Five hundred cars already had been shipped from that district, bringing a total of $500,000 into the community. The shipments by June 1st reached 1,000 cars. Berries were priced at $2.25 a crate of the choicest fruit, with $1.85 for the low-grade.

What Congress Has Done.

"What has Congress done for us?"

"A heap," replied Farmer Corntossel. "For years it has provided men we sent them with a place to do their talkin' where it wouldn't disturb us folks at our regular work."—Washington Star.

The High Rate of Interest on Farm Loans.

A Petition by Farmers of the United States Asking That the Moneys Received as Deposits at Postal Savings Banks be Loaned Out to Farmers Upon Proper Security at Fair Rates of Interest.

To His Excellency, the President of the United States, and to the Senate and House of Representatives:

WE, the undersigned farmers, ranchmen, land owners and citizens of the United States, do hereby present this petition for your consideration, and represent that the rates of interest usually charged upon farm loans are uniformly too high, and that in hundreds and thousands of instances the rate is so burdensome and unreasonable as to perpetuate loans and interest charges and cause many honorable, industrious farmers to lay down their burdens and forsake agricultural pursuits. Furthermore, other loans on crops and upon collateral securities when made by individuals or banks to farmers are in many cases so exorbitant as to become unbearable. We also represent that these facts, being of common knowledge, a great movement is on foot to ameliorate these conditions and to find ways and means to give the tillers of the soil the necessary loans required for the conduct of their business, based upon security of the land or upon the joint security of co-operative associations of farmers. We believe that a short cut towards solving this entire problem is for the United States government to undertake to see that the funds are furnished under supervision in regard to the rates of interest, fees and expenses to be charged in making said loans.

The great purpose of this petition is to request that suitable and necessary laws be passed requiring that the moneys received on deposit by the Postal Savings Banks be made available for the purpose of loans to individuals upon farm land securities or upon the credit of responsible associations of farmers duly organized for the purpose of assisting each other to obtain and repay such loans.

With a Commission now appointed to investigate the farm loan associations of Europe and now at work to that end, we do not assume to specify by what methods our desires and wishes be carried out, but the point we wish to make is that as farm lands represent the best security in the world they should constitute the preferred security in loaning out the money which the government as a banker is receiving on deposit for such a purpose.

Believing it to be the policy of the United States government to build up a nation upon a foundation of farm homes for the people who cultivate the soil, and believing that the good intention of the government is being defeated by the present system which establishes and maintains high rates of interest which the majority of the farming people are unable to pay and many are unable to obtain, we therefore ask the immediate consideration of this subject that a better and more wholesome condition of affairs may be brought about by patriotic and conservative legislation.

Sign the Full Name Here.	Rural Route.	Postoffice.	State.

☞ When ten signatures have been obtained to this petition, it should be neatly cut out from the paper and sent by mail to PHILIP H. HALE, Editor, 3550 Vista Ave., St. Louis, Mo. Copies of this petition can be had by writing for them.
